With joy and relief one turns to 'Fédor: Pages de la Vie' (E. Flammarion), knowing that M. Alphonse Daudet will give us an artistic presentation of anything, however slight. And so it is, in spite of the somewhat lugubrious subjects of the collection. Leaving out one or two evidently put in to fill space, his lightness of touch, his charming language, his trained instinct in the selection of just the significant detail, make the sketches well worth reading. In 'Fédor' especially, the light of the happy domestic life and the shadow of former sin and its hideous consequences are pathetically contrasted, but nothing is forced. Such writing is like hearing the story told by a good talker.

Two years have now gone by since M. Massenet has given a new opera to the stage, but not on this account must it be imagined that the prolific composer has been idle. On the other hand, he has been very active, for it is reported that within the brief space he has completed three considerable operatic works, and, indefatigable, is now busy upon a fourth. The three operas already finished, "Sapho," "Cendrillon," "Grisélidis," will appear in succession at the Opéra Comique, where "Sapho" is already in rehearsal and its stage setting and decorations are being carefully prepared. It is anticipated that a striking effect will be produced in one of the scenes by a chorus of bicyclists. The *Débats* sees in this a shocking anachronism, since at the time when M. Daudet's romance was published, only the very high wheel was in use, and there were no women riders. But really such an anachronism as this is need disturb no one's peace. The subject of Daudet's book has been contemporaneous with many centuries, and seems likely enough to survive all the bicycle fashions.

The *American Antiquarian* has removed its seat of publication to Chicago (at No 5327 Madison Avenue).

Ginn & Co. have issued No. 1, for August, of the *Zoölogical Bulletin*, a companion serial to the *Journal of Morphology*, designed for shorter contributions, and with no illustrations beyond text figures. Bibliographical lists will not be attempted. The editors are C. O. Whitman and W. M. Wheeler.

The August number of the *Alumni Bulletin* of the University of Virginia is noticeable for the majority and minority reports of a committee appointed to consider the expediency of substituting for Jefferson's scheme of having the executive officer of the University a member of the Faculty a President in the usual fashion. In connection with this discussion should be read the communication from Prof. Edward S. Joynes in the same number. Of interest also is Mr. W. C. N. Randolph's account of the transfers of Monticello since Jefferson's death. After a varied fate of sale, confiscation during the civil war, and dilapidation, the place has been put in good order by the present owner, Mr. Jefferson M. Levy, who admits visitors without fee.

The *Geographical Journal* for August opens with a suggestive technical paper on suboceanic changes, by John Milne, F.R.S., the well-known authority on seismology. On the greater part of the ocean floor these changes are very slow, but on the steep slopes of submarine plateaus, at the mouths of great rivers, and at the exits of submarine rivers, they are great, sudden, and numerous. In Japan, for instance, which lies close to the edge of the "Tuscarora Deep," between 1885 and 1892 there were recorded 8,331 earthquakes, of which half originated beneath the sea. These are apparently due to slow geological movements, volcanic action, and landslips from overloading or basal crush. An account of explorations in the region west of Lake Nyasa includes a sketch of the history of the Ngoni, its dominant tribe. The desolating influence of slave-raiding here was shown in the discovery in an uninhabited district of numerous disused iron-smelting furnaces. The Astronomer Royal for Scotland, Prof. R. Copeland, contributes a revised map of Franz-Josef Land, with accompanying notes. An examination of the recent Russian census tables, by P. Kropotkin, shows that the centre of gravity of the population of European Russia has been shifted within the last fifty years southward. That is, the Baltic is losing more and more of its importance to Russia, and the Black and Caspian Seas are gaining in proportion. All the large cities, with the exception of St. Petersburg and Riga, are situated to the south of Moscow, and the Prince mentions nine towns, of from 91,000 to 170,000 inhabitants, which fifty years ago were "quite insignificant spots." They are either centres of a considerable trade or of some important branch of industry.

The article of greatest general interest in *Petermann's Mitteilungen*, No. 6, is by the editor, Dr. Supan, on the Nansen expedition. After referring to some of its scientific results, he adds that it solved two other problems, that of an "eisfest" ship and of a "polarfest" man. That is, the *Fram* had demonstrated that the best shape and build to resist ice-pressure had been devised, and the equipment of her crew had been equally successful in enabling them to endure without injury the hardships of a polar region. Of these the monotony was probably hardest to bear, and Dr. Supan, calling attention to the signs of growing weariness and impatience shown in the leader's narrative and the captain's diary, suggests that the limit of their endurance had been nearly reached. If they had been out a fourth year, it is not impossible that their "Spannkraft," or power of resistance, would have completely broken down. This is an important consideration in view of Dr. Nansen's proposition for another expedition starting from Bering Straits, which should last five years. Other articles are the conclusion of Prof. Schuchardt's account of the South Caucasians, chiefly Georgians, who speak the Karthli language, and a note accompanying three colored maps showing the rainfall of northern Central America, a complement and correction in some places of Prof. M. W. Harrington's work on the Central American rainfall.

In the death of Frederick D. Stone, librarian of the Historical Society of Pennsylvania, the Society has experienced a severe loss. Mr. Stone was one of those able, modest, and hard-working students of American history who accumulate for the use of others, and his genial kindness led him to offer freely his great knowledge of history and biography, general and local, to all who sought information. Under his direction the Society's library has become one of the best historical libraries in the country, if not the best, and his many services will long be remembered by those who have had occasion to use the collections in his keeping. His broad policy has built up a great depository of manuscript and printed material of exceeding richness, and in beginning a systematic copying of the English records in London he has laid a lasting foundation for the study of history in the United States. Mr. Stone published little, but his laborious and painstaking 'Pennsylvania and the Federal Constitution' will stand as proof of his ability in compilation. His endeavor to make the Society's library a centre of research by generously giving access to its stores to any

one who could show an honest intention, has furnished a notable example of liberality of management which would alone suffice to cause him to be held in grateful remembrance.

— The second volume (new series) of the 'Register of the Members of St. Mary Magdalen College, Oxford' (Henry Frowde), contains an account of the Fellows admitted between 1522 and 1575. We are still but inadequately acquainted with the changes in academic life which accompanied the Reformation; and the editor, Mr. Macray, has done well to enrich the present volume with an interesting selection of extracts from the bursary account books and other college records. These enable us, among other things, to trace the rise and development of the Long Vacation; to observe some of the more visible results of the abolition of compulsory clerical celibacy, such as the construction in 1562 of a seat for the President's wife in the chapel near the chancel; and to realize the difficulties which the authorities found in enforcing any sort of decent uniformity among the Fellows in dress and behavior during the early years of Elizabeth. Among the scraps of curious information with which the volume abounds may be noticed the charitable practice of bestowing putrid fish and flesh upon prisoners; the establishment in 1535 of a Greek lectureship, so as to abolish "sophistry, Duns, and such-like stuff"; the regulation in 1555 that Fellows should not cut their hair after the manner of courtiers, nor wear beards; the command (addressed to a couple of Fellows who had shaved their heads in 1559, in derision of the tonsure) that they should wear night-caps until their hair had grown again; and the manumission of serfs, attached to various manors, as late as 1563. It must be confessed that the Fellows of this period were hardly a distinguished lot; perhaps the only man among them whose name is known to the present generation was Fox, the martyrologist. The complaints laid before the Visiter in 1584 (pp. 100-118) are worth comparing with the evidence given upon the visitation of the monasteries before the Dissolution. They show either that celibate clerics living a collegiate life had not improved in sexual morality, or else that they were just as uncharitably suspicious of one another.

—It is hard to say whether the translator of Aristotle's scientific writings ought to be primarily a Hellenist or a Scientist. Mr. W. Ogle, M.A., M.D., F.R.C.P., sometime fellow of Corpus Christi College, Oxford, and translator of Aristotle 'On the Parts of Animals,' appears to be a very fair Grecian. His scientific knowledge has enabled him to make an extremely interesting book of his new translation of the minor Aristotelian treatises on Youth and Old Age, Life and Death, and Respiration (Longmans). He deals with his somewhat corrupt text in a light-hearted way, interpolating, emending, transposing, expanding, and elucidating with more regard for the convenience of the modern reader and his own conception of what the meaning ought to be than for the requirements of strict philological method. Some of his interpolations and transpositions are obviously due to a misunderstanding of Aristotle's peculiar style and method of exposition. But they rarely destroy the general sense. In 477 b 12, καθ' αὐτὰ τὴν ἐπίσκεψιν εἴληφεν means: "I have discussed the subject elsewhere," not, "[Empedocles] made unsupported assertions." Especially interesting is the Introduction, which, after a lucid account of the Aristotelian and other early theories of respiration, traces down to our day the history of the gradual discovery of the true functions of the heart and lungs and the part played by the oxidization of the blood in the vital economy. The Aristotelian doctrine that respiration is a refrigeration which preserves the vital heat from flaming itself away, died hard. Savants were found to defend it even after it was known that animals can live in an atmosphere possessing a temperature higher than that of the blood, and after Boyle had shown experimentally that the death of an animal confined in a limited amount of unrenewed air is not delayed by chilling the air. The lesson of this interesting chapter from the history of science is identical with the text from which Pasteur once preached to the "literary fellows" of the French Academy—the fundamental distinction between experiment and mere observation. Every distinct advance in the understanding of the subject was brought about by the appeal to some Baconian "experiment of the crossways." Speculation and mere observation were alike impotent.

— The Civil Court at Paris, before which the Goncourt will case was tried, announced its decision on August 8. This sustains the will of M. Edmond de Goncourt in every particular, rather against the expectation of the lawyers. The judges seem to have been moved more by the principle of giving great weight to the known wishes of a testator—"potius ut valeant quam ut pereant," as they quote—than by legal technicalities. The wishes of no testator could possibly be more clear than those of M. Edmond de Goncourt were; and in view of this fact the court did not hesitate to pass over the objections that were made as to the uncertain date of the will and as to the vagueness of some of its provisions. As soon as the decision was made known the newspaper reporters naturally flocked at once about M. Alphonse Daudet, who had not very much information to give them. He did not, he said, wish to be more prominent in the new Academy than any other member. It was his intention to propose that the Academy should have no President nor head of any sort. As soon as it could be conveniently managed, he meant to propose a meeting of his colleagues, probably at some rustic cabaret, where they could breakfast together and talk matters over in the most informal fashion, "les coudes sur la table." At this first reunion will probably be elected the two members whom the Academy still lacks to make up the number of ten that Goncourt prescribed. As to who these will be, Daudet had, of course, nothing to say. The names of Rodenbach, of Paul Alexis, of Descaves, had been mentioned, and others besides, but the choice lay with the Academy, and not with him. Their first care would be the foundation of the Goncourt prize for the best book of each year, written in prose. The 5,000 francs for this is of the nature of a first charge upon the estate. No writer who is a candidate for any prize of the French Academy will be permitted to compete for this. As to the question of the *traitements* coming to the Academicians, that is a question which will be considered later. It is Daudet's hope that the reunions of the Académie Goncourt may come to be known as the "Goncourt dinners," for he does not like the word "Academy"—"c'est bien gros, bien officiel, bien solennel." The amount of the Goncourt bequest, all sales made, is reckoned to be somewhat more than 1,300,000 francs. The Academicians designated by Goncourt himself are Alphonse Daudet, Léon Hennique, Huysmans, the two brothers J. H. Rosny, Gustave Geffroy, Paul Margueritte, and Octave Mirbeau.

—The ascent of Mount St. Elias, which was accomplished by Prince Louis of Savoy and his associates on the 31st of July last, apart from its simple success, is remarkable for the methodical and convincing manner in which it was executed, and fully demonstrates the special adaptability of the Swiss and Italian mountaineers for this class of work. That a mountain rising the better part of half a mile above the summit of Mont Blanc, and in a region where the snow-line descends to within 2,000 to 3,000 feet of the sea-level, or even lower, should have been ascended in a first effort, is evidence of surprising advances that have been made of late years in mountaineering craft. Although by no means rising to the height of the Karakoram Himalayas (Pioneer Peak, some 23,000 feet), whose conquest was the brilliant achievement of Mr. (now Sir) William Conway, or of Aconcagua, which was scaled for the first time in January of the present year by the Swiss guide (also Conway's associate) Zurbriggen, or even of the Ibi Gamin, upwards of 22,000 feet, the ascent of which was made by the Schlagintweit brothers nearly a half century ago, Mt. St. Elias has in its prodigiously extended snow-mantle, and in the hazardous approach to it over the backs of gigantic and greatly rifted glaciers, certain elements associated with it which have been thought to render the mountain one of the most difficult to climb of any on the surface of the earth. But few attempts in this direction have heretofore been made; that of July, 1891, when Prof. Israel Russell reached an elevation, perhaps somewhat indefinitely determined, of 14,000 feet, being the most noteworthy. The American expedition of the present year, under command of Mr. Henry G. Bryant, Vice-President of the Geographical Society of Philadelphia, which preceded the party of Prince Louis by some two weeks, appears not to have reached an elevation exceeding 10,000 feet.

—The two facts of special significance to which the dispatches announcing Prince Louis's success call attention are: the determination of the mountain's altitude, and the demonstration that it is not of volcanic origin, but simply a mass of elevated and partially upturned sedimentary strata, largely fossiliferous in character. The altitude, as computed by the mercurial barometer, is 18,060 feet, a result surprisingly in accord with the determination, by angle measurement, of Prof. Russell, who obtained "18,100, plus or minus a probable error of 100 feet." Earlier measurements of the mountain ranged from less than 13,000 feet (La Pérouse, in 1786) to approximately 19,500 feet (Dall, 1874). It is probably safe to accept the present measurement, which places St. Elias—barring a possible excess in favor of the neighboring Mount Logan—as the second mountain in point of elevation on the North American continent, the place of honor belonging to the Citlaltepetl, the

Star Mountain—better known as the Peak of Orizaba—of Mexico, to which the determinations of Heilprin (1890, aneroid), Scovell (1891, triangulation), and Kaska (1897, mercurial barometer) give 18,2(3)00 feet. The non-volcanic nature of Mount St. Elias had already virtually been determined by Prof. Russell, but it will be a satisfaction to geologists to know that Prince Louis's studies of the mountain for the 4,000 feet left untouched by Russell confirm this investigator's general conclusions.

— Families in search of the best opportunities for art-study for daughters, or women seeking such opportunities for themselves, are no longer rare; and as intelligent and reliable information is often difficult to obtain, we call attention to two pertinent articles in the July and August numbers of *Wege und Ziele* (Stuttgart: Schelosky), a new monthly edited by Agnes Willms-Wildermuth, a daughter of Ottilie Wildermuth. The articles signed "Corvina" are by Fräulein Raabe, daughter of the well-known novelist Wilhelm Raabe ("Corvinus"), who has herself for some years been pursuing art-studies at Munich. She writes of the facilities open to women in that city from the standpoint of a professional artist, for those who feel capable of becoming such. First of all, she warns against illusions. Nobody can become an artist in two or three years; seven or eight years of earnest study and hard work are required, at least half of which is to be given to drawing, the rest to painting. Then she emphasizes the matter of health, which we prefer to do in the words of Becker-Gundahl, who, the other day, told an American girl among his pupils: "The talent is there; the perseverance is there, too; but it takes the constitution of a bear." Miss Raabe also discusses at some length the financial question, and the best ways of living at Munich; but for all these details we must refer the reader to the articles mentioned. Of the various ways of obtaining instruction, also, we have space to name only the one combining the most advantages, viz., the school of the Künstlerinnenverein (89 Türkenstrasse, opposite the Academy). At this institution the students receive two or three weekly "corrections" from the best teachers, besides profiting by those given to their fellow-students, at an expense much less than that incurred in private studios. About two hundred women have joined the various classes this year. The state gives its aid to the new school to the modest amount of 20,000 marks a year—one-tenth of the annual grant to the Academy for men. The work of students exhibited last spring won the praise even of critics who confessedly had to overcome their prejudice against students' exhibitions, and especially against female students.

EVELYN BARING, LORD CROMER.

Lord Cromer: A Biography. By H. D. Traill. Illustrated. Edward Arnold. 8vo, pp. 350.

Lord Cromer, the distinguished representative of English power in Egypt, is still living and in the prime of life. His biography, therefore, reminds us of the "campaign lives" of our aspirants to office; yet with a difference. We are used to cheap editions for universal circulation, badly printed, on poor paper, and the matter apt to be as cheap as the price. This is a fine octavo, beautifully printed on heavy paper, with portraits and scenes in photogravure and half-tone. It is plain that the appeal is to a select class of readers. This is no effort to introduce an unknown man to general popular favor. It is an analysis of the career of a man who has made his mark in a long course of years, spent mostly in subordinate though important public service. If it has a political motive (and it is not unfair to suppose it has), we must regard it as intended to show that the man who has won distinction enough in great administrative and diplomatic functions to satisfy ordinary ambition, is pointed out by natural selection for still more responsible posts, possibly a place in the cabinet or a viceroyalty.

The book is addressed, on this supposition, to the most thoughtful reading class of his countrymen, and to those, the world over, who are interested in the highest problems of statesmanship. It hints that one who from his youth has devoted himself to the public service, has in that service proved his fitness for the highest confidence of his party friends and the greatest responsibilities a statesman can be called to. The ambition is an honorable one, and the personal history which the book reveals is a good illustration of some of the advantages of a trained and permanent civil service.

Hitherto, Lord Cromer's work has been non-partisan. The rules and customs of the English Government have demanded this. He has served Liberal administrations and Conservative ones; his private political opinions being no barrier to equally faithful subordination to Gladstone or to Salisbury. This book, however, is plainly meant for the eye of the Conservative Unionists, now in power. It tells them that, if Lord Cromer passes from non-partisan diplomatic work into party leadership, it will be as a Conservative. It labors to show that his own opinions have never been in full accord with those of Liberal statesmen, and emphasizes such differences as could be found when hereditary connections and personal action both marked him as a Liberal in the suite of his cousin Lord Northbrook in India. From our side of the ocean, this looks like the weak point in the book. The schism in the Liberal ranks over Home Rule makes a new starting-point in British politics, and we doubt if any member of such a coalition as is now in power gains anything by abating a jot of the liberalism he professed when following Gladstone.

The Barings were types of the business class which has been the strength of English liberalism. As bankers and promoters of great enterprises, they long led in that commercial activity which has been the soul of British prosperity and the pride of the progressive statesmen of the Empire. Prominence in the commercial world and in finance carried the first Lord Ashburton into the House of Peers, where, in the next generation, two more of the descendants of the first Sir Francis appeared with the titles of Northbrook and Revelstoke, and in 1892 Lord Cromer made the fourth of his family who reached the peerage. Evelyn Baring seemed, in his youth, to have chosen a line of life at the antipodes of that for which the family was noted. He prepared for military service, and entered the army as an artillerist. After fifteen years of uneventful army life, he accepted the position of private secretary to his kinsman Lord Northbrook, Viceroy of India, and with the transfer to the civil service what may seem a hereditary tendency revived, for he gave himself up to the study of financial administration, in which he first won distinction.

In 1876 he was made English Commissioner of the Egyptian debt, when an international control by European nations sought to bring system and solvency into Egyptian finance, bankrupted by the recklessness of Ismail Pasha. Here his clear business sense, his firmness, probity, and thrift soon proved his capacity and led logically to his future career. In 1880 he was promoted to the position of Finance Minister in India, where his reputation grew; and when, in 1883, English occupation of Egypt followed the downfall of Arabi Pasha, he was knighted and appointed Consul-General at Cairo, with the rank of Minister Plenipotentiary in the diplomatic service. Since that day his importance has grown with the growth of English power in the Nile valley, for he has been in a peculiar sense the organ of England's tightening grasp on the country, and of the exercise of its real government in the name of the obedient Khedive.

Sir Evelyn Baring's return to Egypt was practically coincident with the destruction of General Hicks and his army by the fanatical hordes of the new Mahdi. It was a startling crisis. Whether the disaster was due to the worthlessness of the Egyptian army or to the reckless courage of the Mahdi's followers, or (as the event proved) to both, the Liberal Government of England had to face a most perplexing problem. It had disavowed the purpose of extending the Empire, and was committed to the withdrawal from Egypt as soon as order and safe government could be solidly restored. Its leaders had condemned the Khedive's occupation of the Sudan, both upon principle and on policy. A power which could hardly stand alone was in no condition to make conquests fifteen hundred miles away, or to administer the conquered country. The English ministry was bound to consider the question as one to be solved on the basis of the Khedive's policy and power, assuming that he would soon be restored to the complete government of his dominions. It was not at all the question what would be British policy if Egypt and the Sudan had been dependencies like India.

In the presence of European jealousies and the probability that war would follow any attempt to extend the temporary occupation into annexation, there was no radical difference between English parties. Their disputes were on matters of detail. As soon as it was known that Hicks and his army were destroyed, Baring called together Gens. Stephenson, Wood, and Baker, the most competent military advisers within reach, and took their opinion. It was unanimous that Egypt had not the force to hold the Sudan, and that it was necessary to withdraw the garrisons and fall back from Khartum upon Egypt proper. In this opinion Baring explicitly concurred, and it was also adopted as the policy of the English Government. When, then, Lord Cromer's biographer seeks to create the impression that he was only acquiescing in the resolve of his Government "to wash their hands of the Sudan," an impartial reader will feel that it shows more partisanship than candor. Baring had given it as his "own opinion" that it was "wiser" to "withdraw to whatever point on the Nile they can be sure of

defending." This policy may fairly be said to have been accepted *nem. con.* Remaining questions would be simply of time and method.

When Gen. Gordon was appointed and sent to Khartum, it was to carry out this policy; and he seems to have been confident that he could do it, gaining time by his personal influence in the Sudan and with the Mahdi himself, "who is nephew to my old guide in Darfur, who was a very good fellow." On reaching Khartum, however, the gravity of the situation dawned rapidly on Gordon. He found that instead of a small storm centre of fanaticism, a strange religious epidemic was sweeping the whole Mohammedan population into a wild crusade, if we may apply a Christian term to this upheaval of African Islam. But instead of seeing that this only made it more imperative to organize everything rapidly for his retreat, his combative ardor took flame, and he began to cry out that the "Mahdi must be smashed up," and that evacuation would be an "indelible disgrace." Instead of doing the duty of a military subordinate to make a success of a plan arranged with his own approval, he assumed the functions of the ministry and planned to hold Khartum and force the Government to sustain him there. His genius, his heroism, and his tragic end cannot change this fact.

In the essentials of all this, Baring was wholly in accord with his Government, and the Government was right: right not only from the point of view statesmen then occupied, but right when all the knowledge after the fact is weighed. For Europe, for Egypt, for the Sudan itself, it was better that that wild region should be left for a dozen years to "stew in its own juice." It was better to let the Mahdi's power ripen and decay. It was wiser and better use of the time to make Egypt solvent and thrifty; to reorganize its army so that it be fit to meet the fierce hordes of which the fellaheen were afraid in 1883; to watch carefully the progress of European influences in other parts of the dark continent, and to resume a vigorous policy when the time was ripe. The event has equally justified Baring's original opinion that it was wiser to withdraw in '84, and Gen. Kitchener's recent advance to Dongola, also approved by Lord Cromer. It seems from this distance, therefore, the mere wantonness of partisanship for the biographer to rail at the Gladstone ministry, and to say that, to it, "no advice about Egypt commended or could commend itself unless in some form or other it spelt 'scuttle.'" The history, reasonably read, would make Lord Cromer a statesman whose clear judgment and wise forecast were powerful in both parts of a great policy. The biographer, to make him out a Conservative partisan, rakes the subordinate and immaterial details to prove that he was not in harmony with what the event has shown to be sound and wise.

The truth is, that the real strength of England's position is found in the general confidence of Europe that the occupation of Egypt was really an unwelcome necessity, and that its liberal statesmen were honestly anxious to terminate it as soon as it could be safely done. It was this that made the obstructiveness and jealousy of France seem unreasonable, and disjointed French schemes to create embarrassment. It was better than any craftily planned opportunism, for it has been followed by all the advantages of such plans while it had the merit of being sincere. To have put large bodies of English troops into Egypt in '84 would have been understood to mean conquest and annexation, and would have stimulated the antagonism of every rival Power in the world. As matters actually went, there was abroad a half-amused satisfaction at seeing the British Government wrestling with what seemed likely to prove an insoluble problem. Lord Cromer's best claim to statesmanship is that, being heartily in accord with his Government, he strongly grasped the conditions of the problem, laid the foundation of success in fostering, not exploiting, the resources of the country; in honest thrift in financial expenditure; in thorough and steady elevation of the efficiency of the army; and in absolute firmness in the principle that these reforms must be real, and not superficial shams.

The Mahdi's career and that of his successor proved more important than was expected, and it was not till Slatin Bey made his escape and told the wonderful story of his captivity that we could fully understand what had happened. He has taught us how the cloud like a man's hand grew till it became a tempest. The rumors of a great revival were received in Darfur first with languid curiosity, then with deep but vague interest. The hopes that were excited were such as appealed to the strongest sentiments of Mohammedans with their traditions of sweeping conquests over the Christian dogs. Spies sent for information caught the contagion and came back zealots for the Mahdi. The virus spread everywhere; the soldiers were infected, and even before it was known that Khartum had fallen, there was no authority which could stand against the popular wave. There had been months when Slatin Bey might have taken part in a concentric retreat out of Darfur upon Dongola; but promptness in the evacuation had been a necessary condition of success. After the fall of Khartum and the death of Gordon, there was nothing for it but to recognize the truth that a new and powerful empire had been born at the head-waters of the Nile, and, though it might be short-lived, it would be madness to attack it without first regenerating Egypt.

The task was no small one and demanded all the practical sense, steady judgment, inflexible will, and unflinching courage which have given the English race its power over less civilized nations. To have been a brilliant type of these national qualities, and to have been fully up to the demands of his great task, is very high praise for Lord Cromer, but it seems to be deserved. His dominant will has often seemed tyrannical to the Khedive and his native ministers, but this was one of the necessities of the situation. The principle was correctly stated by Lord Granville at the start, "that in important questions where the administration and safety of Egypt are at stake, it is indispensable that her Majesty's Government should, so long as the provisional occupation of the country by English troops continues, be assured that the advice which, after full consideration of the views of the Egyptian Government they may feel it their duty to tender to the Khedive, should be followed." This is only the diplomatic form of saying that responsibility for safety implies dictation of the means. It was the misfortune of the Khedive and his Egyptian advisers that they must accept subordination. It was the embarrassing part of Lord Cromer's duty that he had to be the mouthpiece and the right arm of his Government in a dictation which could not fail at times to be chafing. That no worse charge than "brusqueness" has been made against him, is pretty good evidence of the good temper and consideration with which he has performed his task.

The results for the Egyptian people have been such as every generous mind must glory in. If Ismail, Tewfik, and Abbas have passed from the list of rulers of men into that of nominal dignitaries only, the history of three generations and the wrongs of the fellaheen show that only justice has been done. It will be a sad day for Egypt if power shall return to her old rulers before the reforms so well begun shall be rooted so deep that no Khedive can undo them. What more telling proof of this could be imagined than that the son of a prominent supporter of Arabi Pasha, the man who wrecked a great career in what he thought a patriotic effort to throw off the foreign dominion, should now be among the most emphatic witnesses to the good England has wrought for the Egyptian people?

Friends of good government everywhere will readily admit that Lord Cromer has well earned his advancement in his country's service, and that he may fairly aspire to still higher and more responsible duties, if indeed such can be found. They may wish that his biographer had not sought to narrow into party lines a career that might otherwise seem to be "meant for mankind"; but this is only a minor blemish in the lesson we may learn of the true methods by which a practical and business-like civil service educates men for a great career.

FARNELL'S CULTS OF THE GREEK STATES.

The Cults of the Greek States. By L. R. Farnell. Longmans.

The gods of Greece are, for literature and art, self-renewing ideal types, remaining, "in midst of other woe," to teach the lesson, "Beauty is truth, truth beauty." To the scientific student of origins they are among the most perplexing of problems. What is the relation of the Diana of the Louvre to the mysterious goddess, half-fish, half-woman, whose image, fastened by a chain, was worshipped at Phigalia in a temple surrounded by cypresses and opened only once in a year? Why were young Athenian girls required to don imitation bearskins and dance fantastic rounds in honor of the "queen and huntress chaste and fair" of the Hippolytus? How shall we associate the face of the Ludovisi Hera with her who hid herself from Zeus in a pet on Mount Cithæron, and was brought back in a fit of jealous rage by his mock marriage with a wooden puppet? How did the cone-shaped column of Apollo Aguieus become the Apollo Belvedere? What have the "Zeus Shoo-fly" (ἀπόμυιος) of Olympia and the Arcadian Zeus of the wolf clan and the cannibal rite —what have these grotesque or hideous imaginations to do with the Zeus of the choruses of the "Agamemnon" and the "Antigone"? We are all familiar with the answers to these problems devised by ingenious men: The Greek gods are the colored refraction of the white ray of an original monotheistic tradition. They are the pro-

ducts of a disease of language—*numina* born of *nomina*—a misunderstanding of highly figurative talk about the weather. They are allegorical embodiments of early philosophical speculations. They are the ghosts of dead ancestors haunting the dreams of prehistoric man. They are mere survivals of primitive animism, fetishism, totemism, or plant worship.

The vigorous and rigorous application of any one of these theories to the interpretation of all the phenomena is a delightful pastime for ingenious and erudite minds; but in time we weary of the game. Pallas Athene may conceivably have been the queen of the air, the lightning bursting through the storm-cloud, the dawn leaping from the forehead of the sky, or the ideal reflection of Athenian life and character. She is not demonstrably any one of them. Our minds are baffled by a science which proves to be a kind of Baconian cryptogram for expressing everything through everything. The horse is the familiar of Agni because he is swift and fire is swift. He goes with Aphrodite because he is the corn spirit and she is the genius of vegetation, and accompanies Neptune because waves are horses of the sea. Aphrodite is Venus Marina because of "a social necessity of early maritime commerce in the Mediterranean"; or, if you prefer, because she is the sun, and sunset and sunrise are of peculiar beauty on Greek waters. Deference to the erudition of our teachers makes us accept a certain amount of this logic with docility; but, sooner or later, we are driven to open revolt, it may be by some such argument as Roscher's proof that Hera must be the moon because she is called "large-eyed," and Æschylus and Pindar speak of the moon as the "eye of night."

To this mood Mr. Farnell's sober and scholarly volumes on the cults of the Greek States will be very welcome. The title indicates a method rather than a limitation. The author rightly deems it essential to distinguish between the "embroidery" of the poets and the religious epithets and conceptions actually attested for the public worship of the Greeks. But he has neglected nothing in the literary record of serious significance for the illustration of Greek religion, and his chapters on Zeus, Hera, Athena, Artemis, and Aphrodite are virtually monographs that in completeness and accuracy will bear comparison with the best chapters in Welcker or Preller, or the fullest articles in Roscher's Lexicon. What distinguishes his method from theirs is that, instead of assuming in his first paragraph a root or fundamental conception of a god to be followed through all the ramifications of tradition, he begins with a plain statement of the earliest discoverable traces of the cult in Greece. When, as usually happens, the evidence does not justify dogmatic affirmation as to etymologies and origins, Mr. Farnell makes this plain by destructive criticism of the more prominent German theories, and then passes on to enumerate, as nearly as may be in historic sequence, the chief local cults and trace their development. Finally, the religious and ideal significance of the deity as revealed in the literature is brought out. Especially interesting here are the last twenty pages of the chapter on Zeus, dealing with the conceptions of Nemesis and Fate, and the tendency of the religion of Zeus towards monotheism. In each case separate chapters, excellently illustrated by beautiful plates, are devoted first to the surviving cult monuments, and, second, to the chief ideal types of the divinity in Greek art. Last, but by no means least, the author gives us for each god a full systematic citation of the Greek sources, extending in the case of Zeus to some forty pages of Greek text.

Detailed criticism of this mass of material is beyond our scope. Mr. Farnell has faithfully studied the German authorities; but he writes in a spirit of reaction against philological and meteorological mythology. The authors whom he quotes with most respect are Robertson Smith, Frazer, Mannhardt, and Andrew Lang. He rarely resorts to etymology or nature symbolism in the explanation of a myth; solar mythology must relinquish Zeus, he tells us. We have no right to say that the name Demeter means Mother Earth. The Titanomachy has no meaning as a myth of thunder and lightning; it is more probably a vague reminiscence of the conflict of religions in the Greek world. The sacred marriage of Zeus and Hera never symbolized the bridal of the earth and sky. The dark ægis which Athena wore and which Zeus brandished over the perjured Trojans, is not the storm-cloud, but the hide of the theanthropic goat. These are hard sayings. It is doubtless true, as a matter of method, that the study of cults, survivals, folk lore, and the psychology of primitive man will carry us further in the interpretation of mythology than the direct application of our sophisticated nature symbolism. But such a generality avails little in particular cases. Each one of the competing theories represents doubtless a *vera causa*, but none may be safely used as a *passepartout*. And when we recall that Mr. Frazer succeeded in convincing himself that Zeus (the Shining) is not the bright sky, but a tree god, the bright fire having originally come from the friction of wood; and when Mr. Farnell, after showing that Aphrodite is a divinity of vegetation because Adonis is the boar and the boar is the corn spirit, meets the objection that the horse also is sacred to Aphrodite by the rejoinder that "the horse is one of the most common embodiments of the corn spirit"—we begin to suspect that, when the trick is once known, the corn spirit may prove as easy to work as the dawn or the twilight.

In the uncertainty of the etymologies of proper names the problem of the comparative mythologist is what that of the comparative philologist would become were it not for the guidance of exact phonetic law. He is required to determine the actual historical association of ideas among many conflicting possible or plausible associations. The plurality of causes and the defectiveness of the record forbid dogmatism in the majority of instances. The early imagination may have had intuitions of identities and analogies in nature, for which we have lost the feeling, and the "lively Grecian in a land of hills" may have personified such apprehensions in deities whose attributes seem disparate and unrelated to our duller sense until an artist, such as Mr. Pater shows himself in his Study of Dionysus, restores us to imaginative sympathy with the creators of the myth.

But, again, the incongruous attribute or rite may be due to contamination with other deities, brought about by migration, commerce, or conquest; it may be a reflection of the developing life of the worshippers, or of the struggle for existence of competing religions; it may be a survival, a popular etymology, or an accidental accretion from the general stock of savage folk lore. The ideal of science would be to take a developed divinity with all his epithets, attributes, ritual, legends, and associated religious sentiment, and show in what precise intuition or wild fancy of the primitive mind he took his origin, and by what definite process of development all these accretions attached to the original germ. Possibly some future scholar endowed with the *ondoyant* and *divers* genius of a Pater or a Renan will be able to construct for us a credible history of how the thing might have come to be, that shall retain its typical value independently of the validity of the special hypotheses employed as scaffolding. In default of such a work of genius, we must heartily commend the good sense and restraint of Mr. Farnell, despite the "dryness and coldness of tone" to which he deprecatingly refers in his preface. His book will doubtless exercise a steadying and sobering effect on English scholarship. Mr. Pater would hardly have affirmed so confidently that mythological science tells us that Nike is the victory of the dawn over the darkness, had he been permitted to read Mr. Farnell's lucid account of the relations between Nike and Athena. But so ceaseless is the intellectual activity of our day that a book has hardly left the press before it in turn is antiquated in some regards; and Mr. Farnell himself would have qualified his assertion that Nike is a mere emanation of Athena, if he had waited to study Usener's epoch-making treatment of transparent divinities, or Sondergötter, in the 'Griechische Götternamen.'

Mr. Farnell will have ample opportunity to review the whole question in his promised chapter on Abstract Divinities. We do not see how he can expect to finish his work in one more volume with Apollo Dionysus, Ares, Hephaistos, Hestia, Demeter, and a host of minor deities yet to be treated. But we wish him all success, and hope soon to congratulate him on the completion of what bids fair to be the standard English authority on his subject.

The Romance of Isabel Lady Burton: The Story of her Life, told in part by Herself, and in part by W. H. Wilkins. 2 vols. Dodd, Mead & Co.

Not long after Lady Burton had finished her Life of her husband, she set to work with her usual energy on her autobiography. This was hardly more than begun at the time of her death, so the task had to be completed, with the help of her papers, by another hand, at less length, but perhaps quite as well. Shortly before it was done Miss Stisted's 'The True Life of Capt. Sir Richard Burton' (reviewed in these columns) appeared with its severe criticisms of certain of her actions. Her biographer took up the challenge and in the main answers the charges satisfactorily. At any rate, the public has now not only the well-known story of one of the most extraordinary men of his age, but also two views of his private life, of his relations with his wife, and of the causes of his many disappointments. Still, with this evidence before us, it is not easy to come to definite conclusions on several points.

Isabel Lady Burton, *née* Arundell of War-

dour, was born on March 20, 1831. Her family belonged to the old and exclusive Catholic nobility of England; and to the end of her days we find, among her strongest traits, pride of birth, which, together with her pride in her husband, gave her an exalted idea of her position that she was prone to assert, and a fervent Catholicism never for an instant affected by the free-thinking of the man she worshipped and for whose conversion she unceasingly prayed. Her childhood was uneventful, albeit filled with dreams of an adventurous life that were probably not stranger than those of many another young girl who has afterwards led a humdrum existence. However, the tale of her courtship, engagement, and marriage is romantic enough, even if we make allowance for a little heightening of color in the narration. We may, too, readily admit that she set her cap for Burton, as Miss Stisted declares, without judging that she did anything uncommon or blameworthy. She merely fell in love first, as was natural, considering her age, his attainments and reputation (which made him like the hero of her dreams), and an accidental prophecy of a gypsy of a sort to excite a girl's imagination; but she does not seem to have put herself too much forward. Hardly were they married when he had to accept a consulship at Fernando Po, where no white woman could live, so that the couple were not together for any length of time until he was transferred to Santos in Brazil. Here they began their curious system of housekeeping, whose most striking characteristic was its continual interruptions, owing to their incurable love of wandering.

Burton was restlessness itself, a born traveller and explorer, who was ever happiest when undertaking some difficult expedition, his iron constitution enabling him to endure climates and fatigues that would have killed most men. His wife also must have had great vitality, spirit of adventure, courage, energy, and determination, besides blind devotion to the slightest wish of her lord and master. In many ways she suited him as few women could have done, sharing his tastes, and falling in uncomplainingly with his strange ways (Heaven knows what would have happened to their children if they had had any), and even, we can see, doing violence to her own nature. He could not have had a more untiringly faithful companion, and her business ability helped to make possible their lavish style of living. On the other hand, without repeating the accusation that she was stupid, we cannot help feeling that in certain respects she was obtuse, that a certain narrow and straight-mindedness in her make-up prevented her from wholly understanding her brilliant, wayward husband. If, as an author, she not infrequently makes her readers smile or rasps on their nerves, she must more than once have been a grievous trial to such a sensitive man as Burton, till he learned to bear it with his usual philosophy. We suspect that the last quality she possessed was tact, and we are forced to condemn severely her want of taste, as shown in certain passages which her biographer would have done well to omit, though a failing of this kind can hardly have troubled the translator of the 'Arabian Nights.' With all her unselfish devotion Lady Burton cannot have been of a retiring disposition; few people less so. We cannot agree that in her Life of her husband she "studiously avoided putting herself forward." The book gives rather the opposite impression.

The busiest and happiest period in the career of this strange pair was the two years in Damascus, where all their characteristics stand out clearly on a congenial background. Miss Stisted accuses Lady (then Mrs.) Burton of being the chief cause of her husband's recall. Mrs. Wilkins answers victoriously in a whole chapter, in which, though she does not entirely clear her of unwise conduct in regard to the Shazli Christian converts, she proves conclusively that Burton, however well suited to live in the East, was not fitted to have any sort of diplomatic appointment there—an opinion that seems to have been firmly held by the British Foreign Office (which had suspected as much before) from this time on, whichever party was in power, in spite of kindly personal feelings, at least on the part of Lord Salisbury. Burton was far from being a "safe" man, so for eighteen years he was quietly housed in Trieste, where he could not easily get into trouble, and where he was given and took an astonishing amount of leave of absence.

We will not enter into the details of the death-bed controversy, but merely say that we acquit Lady Burton of any but the best motives in having administered extreme unction to her husband, pagan though he had always been. She was, perhaps, fanatical and mistaken; very possibly he was already dead, but she believed that he still lived, that she had his authorization, and that she was saving his eternal soul. Even if we disagree with her, it is difficult to judge her harshly. So, too, in her burning of the 'Scented Garden.' Not only the translation itself, but Burton's commentary, was undoubtedly nasty, to use a plain adjective. It could do no good to any one except to his wife, to whom it would bring money. Without going into his character and motives, or into the thorny question of what is permissible in literature or in semi-scientific writing, we cannot but admire the courage of the woman who, at a great pecuniary sacrifice to herself, and at a sacrifice of her obedience to her dead husband's wishes that were hardly less than a religion to her, burned this, his latest work, because she thought it would injure his good fame. It is precisely this heroism in her nature that forces us to overlook her obvious deficiencies.

In conclusion, we note that, though Lady Burton's loose style is at times irritating, and though she gives the most trivial events the prominence of important ones, she holds our attention. Mrs. Wilkins, also, has, on the whole, done her share with judgment and success, so that we have a book which is interesting for more than one reason. Some of the illustrations are neither beautiful nor appropriate.

Sequel to 'Our Liberal Movement.' By Joseph Henry Allen, late Lecturer on Ecclesiastical History. Boston: Roberts Brothers. Pp. 157.

It is true, as Dr. Johnson said, that "few people who have lived with a man know what to remark about him," but Dr. Allen is one of the few who are gifted with such knowledge. It is almost entirely of men whom he has known that he writes in this small volume, and he writes of them with the rarest sympathy and discrimination. He has an eye for character, for individuality, and if sometimes we miss foibles and limitations, or wish that a hint of them given here and there had been more expanded, it is not that he was blind to any of these things, but that he prefers to recognize and exhibit what was most significant and what constituted the value of this one or that for his generation and his friends. Some of the sketches, like those of Dr. Thomas Hill and Frederick Newman Knapp, are the more interesting and valuable because dealing with men too little appreciated in proportion to their worth. In fact, one of the most attractive features of Dr. Allen's mind is the very tender feeling that he has for men of native force and genius who, from some defect in their quality or some untoward circumstance, are disqualified from doing what they seem to promise at the start.

The first chapter in Dr. Allen's book reproduces an address before the Harvard Divinity School in 1896. Delightful to those who heard it in the little chapel where Emerson gave his famous address of 1838, it is hardly less so to read, especially for those who, reading leisurely, blend their own recollections of Andrews Norton, Henry Ware, jr., Convers Francis, John G. Palfrey, and others with Dr. Allen's. It is a sign of how fast we go that Dr. Noyes was threatened in 1834 with indictment for blasphemy for questioning the New Testament fulfilment of the Old Testament prophecies. That the School was not in those times wholly reactionary is shown by the fact that Dr. Noyes was made a professor in the School close on the heels of that event. And Mr. Norton, notwithstanding his attack on Emerson's "Address," as "The Latest Form of Infidelity," published in 1844 a "Note on the Old Testament" which was the thin edge of the wedge of what we call the Higher Criticism at the century's end. We miss in Dr. Allen's account of Dr. Noyes the personal note which is elsewhere so prominent; and, possibly, its absence means that when Dr. Allen was in the School, Dr. Noyes was not that object of personal affection which he became later on.

In a second chapter Dr. Allen attempts to indicate the nature and extent of the German influence upon Unitarian thought. The stress at the German end is upon Schleiermacher and Paulus and Baur; at this end on Parker, Hedge, Clarke, Furness, and (too slightly) Ripley. The limitations of this excellent chapter are an inadequate appreciation of the second-hand German influence of Coleridge and Carlyle, and the direct influence of Strauss, whose criticism of supernaturalist and naturalistic interpretations was quite independent of his mythical theory, the essence of which, however, is the life and soul of a great deal of the best criticism of the present time. It is, perhaps worth remarking that Dr. Furness, whose naturalism made him seem a Paulus whom the gods had made poetical, disavowed any debt to Paulus whatsoever.

"Forty Years Later" is an admirable comparison between the liberal movement as it was in Dr. Allen's youth and it is in his hale and invincible old age. His chapter upon Dr. Hedge is the most expansive of all the sketches in the book. He succeeded Dr. Hedge as minister of the Bangor parish, and was his intimate companion in the closing decades of his life. Philosophically they

were far apart—Dr. Hedge a metaphysician, Dr. Allen scientific and positivist; and, by the way, one of the few Americans who enjoyed a personal acquaintance with Auguste Comte. But Dr. Allen could not have been more appreciative of his friends if they had been chips from the same metaphysical block.

In chapter v. we have "Some Younger Memories" of a dozen men more or less loosely affiliated with the Unitarian body. Among them are James Freeman Clarke, William G. Eliot of St. Louis, Thomas Starr King, Samuel Longfellow, O. B. Frothingham. Of all these and the others, Dr. Allen writes as he knew them, plucking out the heart of what was most essential in their characters and aims. One name conspicuously absent is that of Samuel Johnson, a man equally remarkable for his philosophical ability and for his moral passion in the anti-slavery conflict. It is only because Johnson was not one of Dr. Allen's familiar friends that he is wanting in the list. The *Nation's* older readers especially will be gratified by the simple and affecting tribute to Dr. Allen's brother, the late Prof. William Francis Allen of the University of Wisconsin.

Any complete list of Unitarian worthies would include Dr. Allen's own name, and not the least pleasant feature of his book is its casual reflection of his own character and life. He is so fond of reminiscence and so apt at characterization that he should have given us a book four times as big as this, full of his recollections of the men whom he has known and the systems of great hope and promise that have had their day and ceased to be.

A Treatise on Rocks, Rock-Weathering, and Soils. By George P. Merrill. Macmillan. 1897. Pp. xx-411. Ill.

Prof. Merrill, already well known through his 'Stones for Building and Decoration,' and various monographs issued by the United States Geological Survey, has done a real service in preparing a work whose chief aim is to review fully and concisely the agents of rock-weathering, a subject which until now has been treated only in a fragmentary manner. By way of introduction—for the work is written as much for the general reader as for the scientist—a brief account of rocks offers the most logical presentation of the leading facts in lithology which has yet been published. Microscopic petrography has led to such a fine discrimination, and has encouraged so much variety in nomenclature and classification, that a host of students can sympathize with that facetious Western mining engineer who recently published the following rule for identifying rocks: "Ascertain the two or three predominant minerals in your specimen; select from the lithologies all those names of rocks containing the minerals found; put these in a hat; shake them up, and draw one." The tendency has been steadily towards classification on the basis of chemical composition, but the matter of origin and structure has persistently embarrassed our lithological taxonomists. Prof. Merrill has gone one step farther. His major divisions are necessarily genetic, yielding igneous, aqueous æolian, and metamorphic rocks. The principle of origins controls the subdivisions of the aqueous into chemical, sedimentary, and organogenous groups, while structure forms the basis of division among the metamorphic. The igneous rocks, however, are classified absolutely upon a chemical basis, and thus we have the resemblances between granites, liparites, and quartz-porphyries not only distinctly recognized, but made the bond of union into a single group, called the Granite-Liparite Group, representing the extreme types of the plutonic and effusive rocks of like composition. In the same manner the Syenite-Trachyte, Diorite-Andesite, Gabbro-Basalt, and other groups are derived. The simplicity and beauty of this classification as compared with the old systems are obvious. Attention should also be called to Prof. Merrill's brief little list of only thirty original rock-forming minerals (or fifty-one, including the varieties of the feldspars, amphiboles, etc.), and of twenty-two secondary minerals, all of which the student should be taught to recognize under whatsoever conditions they may be met with.

The term *weathering* is used in this work in its more limited sense, as restricted to "processes involving the destruction of the rock mass as a geological body," while Prof. Merrill prefers "to designate the purely mineralogical, deeper-seated changes as *alteration*, which may or may not be due wholly to hydrometamorphism." This limitation of the treatise is unfortunate. By reason of it one misses a completeness in the discussion, for it is not easy to draw a line, save in a few cases, between the regions where these two classes of changes are separately in progress, and there are such close interrelations between the superficially acting forces and those in the zones of the vadose circulation (which might popularly be termed "fountain water") and the deeper-seated plutonic circulation, that it is hardly proper to draw the line sharply between their effects. The weakness of such an attempt is shown by constant recurrence throughout the book to the processes of mineral alteration which are involved in weathering, and Prof. Merrill is particularly emphatic in his statement (p. 388) that—

"The ultimate product of weathering of rocks of any but the purely siliceous type is a more or less ferruginous clay, which may be contaminated or admixed with coarser foreign particles. It is the extent of decomposition, more than its lithological derivation, that determines both the chemical composition and physical characteristics of any soil."

We cannot but wish that the author had taken under consideration the whole broad question of the destructive agencies which are changing the rock ribs of mother earth. It is not enough to say that one results in secondary formations, the other in destruction, degradation. The results of superficial weathering and erosion are, after all, but secondary products, the accidental circumstance of transportation making but little difference in this view. Furthermore, the deeper-seated changes, and the relations these may bear to superficial conditions, are of great economic as well as geologic importance. It is to be hoped that Prof. Merrill will make good the deficiency in this book by giving us its natural counterpart.

The subject-matter in his discussion of weathering is familiar to all close students of geological phenomena. The advantage here is that a vast fund of information is epitomized and rendered conveniently accessible. A classification, in tabular form, of corroso-erosive agencies would, however, have been valuable as a chart from which the general reader might get his bearings occasionally amid the sea of facts. This is not saying that there is any lack of orderly arrangement, for it would seem that classification is one of the author's strong points. He deserves congratulation also for the introduction of a new term which is useful and will doubtless be readily accepted by geologists. For the "most superficial and unconsolidated portion of the earth's crust," various names have been suggested, such as geest, saprolite, etc., but none seems to cover the case so well as Prof. Merrill's "regolith," from ῥῆγος, a blanket, and λίθος, a stone. From this he proceeds to discuss the sedentary and transported regolithic deposits, with their proper varieties, classified on a genetic basis.

The author's style is pleasant and easy. The book is typographically very neat and elegant. The plates and figures are abundant, and truly elucidate the text. It is to be regretted that the proof-reading has not been executed with scrupulous accuracy, and that the index is deficient in the number of references and in correctness. But these errors are not so important as seriously to impair the value of this work, which should be in the hands of every person interested in lithology, geology, or physical geography.

Social England. By H. D. Traill. Vol. VI. Putnams.

This sixth and last volume of the coöperative history edited by Mr. Traill, covering the period from the battle of Waterloo to the general election of 1885, is characterized by the same merits and defects as its predecessors. There is the same abundance of instructive papers on—to quote the title-page—"the progress of the people in religion, laws, learning, arts, industry, commerce, science, literature, and manners"; they are of every variety of workmanship, from the sober and stodgy collection of facts to the brilliant essay; they proceed both from the recognized authority on his own subject and from the handy man-of-all-work. Among those most interesting to the general reader may be mentioned the editor's own essays on literature (marred somewhat by the repetition of pet phrases, such as "root of the matter" and "flux and reflux"), and those of Mr. Hughes on painting, of Canon Bonney on geology, of Mr. Prothero on agriculture, of Mr. Farrer on railroads, of Prof. Montague on legal procedure, of Miss Morris on decorative art, and of Miss Bateson on costume and social usage. The amount of distinctly inferior hack work is much less in this than in some of the previous volumes; a special effort has been made to secure an adequate treatment of physical science; and the few concluding pages on the colonies (probably an afterthought, but an excellent one) are well conceived and to the point.

On the other hand, there is the same want of proportion. Perhaps we are apt to assign too much influence to ecclesiastical organization and formulated theology in social life; yet, from any point of view, one would find it hard to justify an apportionment of space which gives almost as much room to Pottery as to the Church. And, to descend to details, we are justified in feeling cross with

an editor who can give only eight words to Clough, and yet allow a contributor to occupy valuable space with the statement that a certain Cambridge scholar, of by no means the first order of importance, "won the recognition of an honorary degree at Edinburgh"! The absence of unity, of architectonic arrangement, of guiding principles in the selection and display of facts, is even more glaringly apparent now that the undertaking has reached its conclusion. Each chapter begins with a brief sketch of political history. In what relation is it supposed to stand to the "social" progress next set forth? We are left to make it out for ourselves. The last two chapters are decorated with the titles, "The Rule of the Middle Class, 1846-1865" and "The Succession of the Democracy, 1865-1885"; no attempt is made to justify these epithets. There are separate sections on "The Social Economy"; but these sometimes repeat what other writers have said before, and sometimes restrict themselves to a part of the field.

The book is essentially a publisher's book, manufactured to sell, appealing to the prevalent interest in everything "social," but without any steady or consistent conception of its own scope and purpose. Such a work may be of great use in the popularization of knowledge, and may contain pages here and there that will be valuable even to the competent student of particular subjects, and yet the whole book will be unsatisfactory and chaotic.

BOOKS OF THE WEEK.

Claretie, Jules. The Crime of the Boulevard. R. F. Fenno & Co. $1.25.

Copinger, Prof. W. A. The Bible and its Transmission: Being an Historical and Bibliographical View of the Hebrew and Greek Texts, and the Greek, Latin, and other Versions of the Bible (both MS. and Printed) prior to the Reformation. London: Henry Sotheran & Co.; New York: Dodd, Mead & Co.

Dawson, M. M. Principles of Insurance Legislation. New York: Humboldt Library.

Ebers, Georg. Barbara Blomberg: A Historical Romance. 2 vols. Appletons.

Horton, George. Aphrôessa: a Legend of Argolis, and Other Poems. London: T. Fisher Unwin.

Johnston, Sir H. H. British Central Africa. Edward Arnold. $10.

The Johns Hopkins University.
BALTIMORE.

Announcements of the Graduate, Medical, and Collegiate Courses for the academic year beginning October 1, 1897, are now ready and may be had on application to the Registrar of the University.

THERE is always something good to read, because there is always earnest thinking in the NEW WORLD, which is the quarterly organ of "reverent breadth" in American religious thought. . . . Altogether the NEW WORLD is a periodical which deserves much attention. There is hardly its equivalent on this side of the Atlantic.—*The Spectator* (London).

The New World for September, 1897

1897 Columbia Bicycles

$75

TO ALL ALIKE.

The 5% Nickel Steel Tubing used in 1897 Columbias costs more than any other steel tubing on the market. The expense incident to this construction is justified by the advantages which it enables us to offer to the rider, both in safety, stiffness of tubular parts and consequent ease of running. This is indicated by the regard in which '97 Columbias are held by all riders.

Public Health and Public Works.
Geography and Ethnography.—Statistical and Commercial Geography.
French and Foreign Finances.
Military Geography and Organization.—Geography of French Possessions.
Money, Credit, and Exchange.—Banking.
Foreign Commerce and Legislation of Customs.

GENERAL INFORMATION

The instruction given at the School of Political Sciences is the crowning accomplishment of every liberal education. In each of the several branches the pupil acquires the requisite competency for holding high State Offices (Diplomacy, Council of State, Court of Accounts, Inspection of Finances), is getting thoroughly prepared for the examinations and competitions which they call for, and is also trained for leading posts in all great private enterprises.

The pupils are admitted without examination, with the approbation of the Director and School Board. No university degrees are necessary.

Tuition comprises two years' course, which may be extended to three years. On completing his studies every pupil who has successfully passed his examination receives his diploma.

SCHOLAR YEAR, 1897-1898.—The scholar year commences on November 8, 1897, and closes on June 6, 1898. Applications are received at the Secretary's Office, commencing November 3, 1897. Application for the whole course gives the right to all the regular and complementary courses and conferences, and also access to the Library (about 25,000 volumes and over 160 French and Foreign Reviews).

A Special Pamphlet *can be had (giving detailed information on the organization of the school and respecting the professions for which the pupil receives special training). Address*

L'ECOLE, 27 Rue Saint Guillaume, PARIS.

LONGMANS, GREEN, & CO.'S NEW BOOKS.

NEW NOVEL BY EDNA LYALL.

WAYFARING MEN.

By the Author of "Donovan," "We Two," "Doreen," etc.

Crown 8vo, Cloth, Ornamental, $1.50. [*Sept. 15*

The Chevalier D'Auriac.

A ROMANCE.

By S. LEVETT YEATS,

Author of "The Honour of Savelli," etc., etc.

12 mo, cloth, ornamental, $1.25.

"The story is full of action, it is alive from cover to cover, and is so compact with thrilling adventure that there is no room for a dull page. The Chevalier tells his own story, but he is the most charming of egoists. He wins our sympathies from the outset by his boyish naïveté, his downright manliness and bravery. . . . Not only has Mr. Yeats written an excellent tale of adventure, but he has shown a close study of character which does not borrow merely from the trappings of historical actors, but which denotes a keen knowledge of human nature and a shrewd insight into the workings of human motives. . . . The fashion of the period is kept well in mind, the style of writing has just that touch of old-fashioned formality which serves to veil the past from the present, and to throw the lights and shadows into a harmony of tone. . . . The work has literary quality of a genuine sort in it, which raises it above a numerous host of its fellows in kind."—*Bookman, New York.*

". . . A story of Huguenot days, brim full of action that takes shape in plots, sudden surprises, fierce encounters, and cunning intrigues. The author is so saturated with the times of which he writes that the story is realism itself. . . . The story is brilliant and thrilling, and whoever sits down to give it attention will reach the last page with regret."—*Globe, Boston.*

". . . A tale of more than usual interest and of genuine literary merit. . . . The characters and scenes in a sense seem far removed yet they live in our hearts and seem contemporaneous through the skill and philosophic treatment of the author. Those men and women seem akin to us; they are flesh and blood, and are impelled by human motives as we are. One cannot follow the fortunes of this hero without feeling refreshed and benefited."—*Globe-Democrat, St. Louis.*

NEW WORK BY MR. ANDREW LANG.

MODERN MYTHOLOGY.

By ANDREW LANG. 8vo, cloth, 236 pages, $3.00.

CONTENTS: Introduction—I. Recent Mythology—II. Story of Daphne—III. The Question of Allies—IV. Mannhardt—V. Philology and Demeter Erinnys—VI. Totemism—VII. Conclusion—Appendices, Index.

RAMEAU'S NEPHEW:

A Translation from Diderot's Autographic Text. By SYLVIA MARGARET HILL. Crown 8vo, $1.25.

"An unabridged translation, provided with notes, that will help those unacquainted with the literary history and the intrigues of the period to understand better the numerous personal and ironical allusions in which this strange bundle of philosophy, satire, and observation abounds."

CROQUET.

Its History, Rules, and Secrets. By ARTHUR LILLIE. (Champion Grand National Croquet Club, 1872; Winner of the "All-Comers' Championship," Maidstone, 1896.) With 4 Full-Page Illustrations by LUCIEN DAVIS, 15 Illustrations in the Text, and 27 Diagrams. Crown 8vo, 264 pages, $1.50.

THE PROFESSOR'S CHILDREN:

A Story. By EDITH H. FOWLER, author of "The Young Pretenders." With 24 Illustrations by ETHEL KATE BURGESS. Crown 8vo, $1.50.

KALLISTRATUS: An Autobiography.

A Story of the Time of the Second Punic War. By A. H. GILKES, M.A., Master of Dulwich College. With 4 Illustrations by MAURICE GREIFFENHAGEN. Crown 8vo, $1.50.

Sold by booksellers. Sent, postpaid, on receipt of price.

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 9, 1897.

The Week.

The National Democrats of Pennsylvania have not proved equal to their opportunity. Their State committee held a meeting at Philadelphia on Thursday, and decided, by a vote of 17 to 10, not to nominate a ticket for the November election. They denounced in vigorous terms the platform adopted by the Bryanized Democracy at their recent State convention, and "deplored its action in again fastening upon the Democratic organization the exploded heresies of Populism, cheap money, and repudiation"—action "especially unwise and unpatriotic at this time, in that it thrusts into the State campaign an issue that should have no place in this contest." But this excellent preamble was followed by the illogical conclusion that it would be "inexpedient" for the Sound-Money Democrats to nominate a ticket of their own, because "the issues in Pennsylvania this fall are local and not national, and offer no fit occasion for the discussion of questions of federal policy." Theoretically, of course, the issues are local in a State election, but the Bryanite Democracy have "thrust into the State campaign" a national issue, and have reaffirmed the Chicago platform as their chief article of faith. No Sound-Money Democrat can vote the Bryan ticket or the Quay ticket, and it is an equally short-sighted and cowardly policy which refuses to nominate candidates worthy of support.

A welcome contrast with this disappointing action on the part of the National Democrats of Pennsylvania is the course adopted by their brethren in Iowa. They have not only nominated a full ticket of first-class candidates, but they have already started a vigorous campaign for it. Headquarters have been opened at Des Moines, and the whole State will be organized with a view to getting out a large vote. Judge Cliggitt, who heads the ticket as candidate for Governor, delivered his first speech at Davenport on Wednesday week, and he will be supported on the stump not only by some of the best political orators in the State, but also by ex-Congressman Bynum of Indiana, chairman of the National Democratic committee, ex-Congressman Patterson of Tennessee, and, it is hoped, in at least one speech, by ex-Secretary Carlisle. This is the sort of spirit that is needed in our politics, and the action of these Sound-Money Democrats of Iowa renders the more pitiable the weakness of the Pennsylvanians.

Although the recent State convention of the Virginia Democrats apparently indicated that Bryanism had swept everything before it in the party, there is evidence of a strong undercurrent of opposition. Gov. O'Ferrall, who refused to support Bryan last year, declares his belief that there are 40,000 Democrats in Virginia who stood with him in this attitude, and says that he is informed that in the recent convention there were many delegates who were anxious to leave out of the platform the national issues which divided the party in the Presidential campaign, but the leaders, "crazed with temporary power," would not consent. For his own part, he announces that he will not support the platform adopted at Roanoke a few weeks ago, nor will he support Bryan in 1900, if nominated on a platform which reaffirms the Chicago declarations of 1896. It requires courage for a Democrat to take such a stand as this in Virginia, but such leadership is inspiring and must rally followers.

Chairman Dingley's newspaper, the Lewiston *Journal*, offers an entirely new explanation of the discriminating duty on foreign goods transported to this country by Canadian railroads—the clause which Speaker Reed says "slipped in." Mr. Dingley's paper says that in the first place certain words were stricken out of the bill by the Senate, and the change thus made imposed a surtax of 10 per cent. on all foreign goods brought into the United States by the ships of foreign countries, unless those countries have treaties with us which would be infringed thereby. After this was done, the Lewiston *Journal* says:

> "The other amendment, it now seems, was adopted by the conferees simply to prevent an evasion of the section by the landing of foreign merchandise in Canada by vessels not entitled to equal privileges in our ports, then shipping it to the United States. It was not intended or understood to affect the bonding privilege under which foreign merchandise can be continuously shipped and forwarded through Canada."

It is somewhat astonishing that this simple explanation should have been so long delayed, and that it should be at variance with all the others that have been offered by the persons most nearly concerned. It is strange, too, that Senator Chandler did not run against it in the course of his investigations. Strangest of all is the story current in Wall Street, during the past month, that the Canadian Pacific Railroad people got wind of this clause before it was put into the bill, and made strenuous efforts at Washington to defeat it, but were unable to do so. If, as the Lewiston *Journal* says, there had been no purpose to abolish the bonding privilege as to goods carried through Canada, it would have been easy to change the wording of the clause so as to preserve that privilege and yet accomplish what Mr. Dingley's paper says was the real object. That real object, by the way, was itself a swindle, being an attempt to reverse the commercial policy of the United States in an important particular surreptitiously, without the knowledge of the country or of Congress itself.

We learn from the office of the Collector of the Port of New York that, in practice, works of art, the production of American artists residing abroad, are free of duty on importation into this country. A misunderstanding has arisen from what the Collector's office admits is the "faulty punctuation" of paragraph 703 of the Dingley bill. That paragraph was apparently intended to be an exact reproduction of paragraph 686 of the Wilson bill; but the introduction of a comma made the phrase "imported expressly for presentation" apply to all the works of art mentioned, instead of simply to "pictorial paintings on glass." Nevertheless, the department has ruled that the same construction is to be put upon the Dingley clause as upon the corresponding Wilson clause. The result is that the "productions of American artists are still admitted free of duty when accompanied by a properly authenticated certificate in conformity with regulations prescribed by the Secretary of the Treasury." We take the more pleasure in exposing the erroneous reading of the law, inasmuch as the official interpretation diminishes by so much the iniquity of the Dingley tax on art.

A few days ago, the Treasury published its estimate of the amount and kinds of money circulating in the United States September 1. This estimate showed a heavy increase over this month in 1896—an increase of no less than $126,500,000. But of this increase, $56,000,000 was in gold brought from foreign countries in settlement of last year's heavy exports, and $47,000,000 was in United States notes paid out by reason of the Treasury deficit. Moreover, the total circulation, with all the increase of the year, made poor comparison with other previous years. The Treasury's estimate for the above date reckoned $1,665,680,098 for the aggregate circulating medium; on February 1, 1894, the total amounted to $1,739,783,511. Yet every one remembers what sort of trade activity accompanied the enormous money supply of 1894. The simple truth of the matter is that our heavy trade, during the current year, has supplied through the normal channels

of exchange its own requisite circulating medium. If the supply were now deficient, we should witness enormous receipts of gold from Europe, such as the $175,000,000 net importations of 1879, 1880, and 1881. On the other hand, the large supply in 1894, instead of stimulating trade, suppressed and paralyzed it; the avenues of circulation were choked; there was an overflow, of course, and the overflow involved a net shipment of $108,000,000 of gold to Europe in the next two years. There is no more perfect demonstration in commercial history of the fact that abundant money supply cannot create prosperity, but that, on the contrary, prosperity commands sufficient circulating medium from the world's reserves.

The notice given by the Secretary of State for India that the sale of bills of exchange on Calcutta, Bombay, and Madras will be suspended for not less than ten weeks, is not calculated to make Senator Wolcott's smile more cheerful. The action taken is, perhaps, sufficiently explained by the fact that "war, pestilence, and famine" have exhausted the Indian treasury, so that it has nothing to draw against. Nevertheless, the suspension of the issue of bills will tend to raise the rate of exchange and to increase the value of the rupee, which may not improbably attain to "parity," that is, 16d. This would establish the gold standard temporarily if not permanently. The prospect of opening the Indian mints to the free coinage of silver is, at all events, not improved by the present action of the Government. Something was to be done for silver in October; so much our silver embassy had secured. But ten weeks carries us beyond October, and the price of silver is falling every day. If anything is to be done for it, 'twere well 'twere done quickly. The task of reëstablishing bimetallism is far more difficult than it has ever been before.

Although the Gallingers of the Senate and the Grosvenors of the House continue to rail against the merit system and to threaten its overthrow, it is clear enough that they will get precious little support. The reply of Gallinger's colleague to a question as to the attitude of the Republican party toward civil-service reform shows the hopelessness of any attempt to undo what has been done. Mr. Chandler says that "of course a civil-service system is a part of the principles of the party," and "should be loyally supported by all Republicans," but that there is a question as to what is a "fair and just" system. For his own part, he believes in the existing system as regards all clerical employees, but would not extend it downward to the lowest workman or upward so far as to include many high officials now covered by it; but he admits that "much controversy might arise over these reservations," and he is too busy discussing other questions to bother over this one. The New Hampshire Senator has here given away the whole case of the spoilsmen. Congress could never formulate a law specifying what employees should be in the classified service and what out of it; and, in the absence of such action by the legislative department, the question must be settled by the executive—as it has been. What Arthur and Cleveland and Harrison and Cleveland again and McKinley have thus done by executive order will stand.

The Populists have been making a "howl" against injunctions, and demanding that the practice of granting them shall be stopped. But the Kansas members of that party have found that recourse to an injunction was the only means of speedily ending what they considered an abuse, and they have consequently applied for one without exhibiting the slightest sense of shame. The railroads recently changed their rates for transporting cattle, putting out a new tariff which charged by the pound instead of by the carload, with the result of making the shippers pay considerably more than before. The change was made just when shipments were becoming heaviest, and the effect of the new schedule in a short time would be great. The Railroad Commissioners undid the work of the railroads, or assumed to do so, for it is a disputed point whether the board has the power to make rates. The railroads proposed to fight the issue out in the courts, and in the meanwhile charge the higher tariff. If the Populists had lived up to their principles on the subject of injunctions, weeks would have passed before the matter would have been settled, or a special session of the Legislature might have needed to be called. But they summarily abandoned their old position, applied to a county judge for an injunction, which was granted, and are now "pointing with pride" to the service which they have rendered the people by repudiating their own platform.

Another Legislature has passed an act which proves to be null and void, and which any reasonably intelligent lawmaker ought to have found out must be such. The last body which assembled at the capital of Iowa passed a bill that imposed a tax upon the premium income of European insurance companies greater than the tax imposed upon the premium income of American companies. The obvious duty of the committee to which this proposition was referred was to make an investigation, and discover whether or not there are any agreements between the United States and European nations which would render an attempt at such discrimination nugatory. Inquiry would have shown that there are treaties which have precisely this effect, but apparently none of the Iowa legislators took the trouble to look the matter up. The result is that the Minister of Switzerland at Washington has called the attention of the Secretary of State to the fact that the Iowa statute would operate to the disadvantage of Swiss insurance companies doing business in that State, and that such discrimination is forbidden by an article of the Treaty of 1850 between the United States and Switzerland, which provides that "no higher impost, under whatever name, shall be exacted from the citizens of one of the two countries residing or established in the other country in which they reside, nor any contribution whatever to which the latter shall not be liable." Secretary Sherman in turn calls the attention of the Governor of Iowa to this provision, and the legislators are thus notified of the failure of their scheme.

The usual attempt on the part of the State Tax Commissioners to make the city of New York pay a greater share of the State taxes than the city assessments justify, has this year been resisted with rather unusual spirit. Mr. Heermance, one of the State Tax Commissioners, announced that the people "up the State" did not think that New York was taxed enough, and he proposed to "equalize" things by raising the valuations here. The city Tax Commissioners, however, showed pretty clearly that valuations here ought not to be raised. It was formerly the tradition that real property here was to be assessed at two-thirds of its market value. Recently, however, assessments have been raised and taxes increased, while much property has during the hard times been less productive of rent than formerly. It is probable that real estate is now assessed more nearly at its actual value, measured by its revenue-producing power, than ever before. Very competent experts were produced who testified emphatically that Mr. Heermance's claim that New York city assessments were too low was untrue. Against this evidence Mr. Heermance had nothing to offer except current reports and general impressions. What should be established to prove his claim is that country assessments are higher than those of the city. As President Barker of the city Tax Commission says, the contrary is notoriously true. The truth is, that it is excessively difficult to assess property fairly, and even more so to equalize unfair assessments on the scale undertaken by the State Tax Commission. The best solution of the difficulty would seem to be to levy State taxes on municipal incomes. It is possible to ascertain very nearly the revenue of every town and city, and a State tax proportioned to

this revenue would be as equitable as any tax can be.

The most noteworthy feature of the outbreak of yellow fever at Ocean Springs, Miss., one of the summer resorts on the Gulf Coast, is the slight disturbance of the public mind which such an announcement now causes, compared with the wild dismay that was produced by news of this sort until comparatively recent times. The measures which are nowadays taken to prevent the spread of the disease, under a quarantine system which is more efficient than ever before, reduce to a minimum the danger of its cutting a wide swath, and, in connection with the advance of medical science in treating the epidemic, render impossible such frightful experiences as the country had a century ago. The story of the yellow fever epidemic of 1793 in Philadelphia, then the political and commercial metropolis of the nation, seems almost incredible. The disease appeared about the middle of August, and soon half of all the houses were deserted, while a full fifth of the 20,000 inhabitants who remained, mostly because of their poverty, died, whole families being swept away. Banks, business houses, and even churches closed their doors, and "the grass grew waist-high in the streets."

The report of the legal adviser of the Spanish Government in this country on the subject of our relations with Cuba should be studied by all members of Congress. According to this report, our laws are sufficient to enable our Government to come up to the full measure of international duty which it required of Great Britain. That seems a rather uncomfortable reminder of the *Alabama* affair. The report continues to the effect that the recognition of Cuban belligerency would materially increase our responsibility for the damage that might result from any filibustering expeditions originating here. It is added that, while citizens of the United States may sell munitions of war to whomsoever they please, any attempt to transport such goods to the Cuban insurgents constitutes an illegal military enterprise which it is the duty of our Government to suppress. There is nothing in this report which members of Congress ought not to know already, and the sincere sympathizers with the Cuban insurgents should inform the public just what lawful steps they are prepared to take. They cannot properly ask their fellow-citizens to support measures which will greatly increase our responsibilities without helping the Cuban cause a particle.

The news from Hawaii indicates that the annexation faction is much perturbed. Minister Hatch brought information from the United States which caused the Government to call at once an extra session of the Senate. It is supposed that this extra session is called for the purpose of ratifying the treaty of annexation, and it certainly looks as if no time should be lost. There are reports of a grand anti-annexation mass-meeting of natives, to be held on the arrival of Senators Morgan and Quay, and such a demonstration might be extremely awkward. The Americans numbering only 3 or 4 per cent. of the population, they would find it embarrassing to insist on annexation in fact of the declared opposition of the mass of the population. These miserable natives are to be marshalled by the "money-power," personified in Claus Spreckels, to the number of fifteen or twenty thousand, to protest publicly against annexation, and to send a monster petition to the United States. The degraded creatures will allow themselves to be used in this way because they will look on the mass-meeting as a "picnic," and for the further reason that they do not want to be annexed. But if the treaty is once ratified by the Senate of Hawaii, the protest of the natives could be disregarded. They could be told that their Government had made an irrevocable decision, and that there was nothing to do but submit. Yet we should be pleased to have the projected mass-meeting take place, even after the annexationists have ratified their treaty. Mr. Spreckels's motives may not be altruistic, but his "picnic" would be on many accounts an impressive event.

The great strike of the workmen in Lord Penrhyn's quarries in Wales has ended. How it has ended is something about which different assertions have been made. According to the Radical journals the men have won a complete victory. According to other, and apparently more accurate authorities, Lord Penrhyn has carried his point. At all events, the evidence now at hand, in the shape of the agreement of settlement, shows that the terms are almost identical with those offered by Lord Penrhyn last May and then refused by the quarrymen. They stood out, not for the right to combine, which was not denied them, but for the principle that a permanent body should be chosen to represent the workmen, and that the claims of individuals should be presented or not, according to the decision of this body. This principle Lord Penrhyn, acting, in our view, in the interest of the liberty of his men, refused to acknowledge, and he has made no change in his position. He is willing, as he was before, to have the managers of the works receive deputations representing the whole body of workmen, or deputations representing any class of them, or aggrieved individuals, and to allow appeals to himself from the decisions of the managers. These conditions were rejected by the men last May, but the conditions now accepted by them are different only in trifling details. What concession they have now obtained they might have obtained in May, or, for that matter, in September of last year, when the strike began.

The real question was the same as that raised in this country when the Knights of Labor first took the field. The Welsh strikers contended that Lord Penrhyn must treat them, not as individual men, but as a body politic speaking only through its constituted government. It is very well known that industrial operations cannot be successfully carried on where this system prevails. If the employer is responsible for the business, he must be free to discharge such employees as he finds incompetent or untrustworthy. Lord Penrhyn did not refuse to listen to complaints or to hear appeals, but he would not consent that a general committee of workmen should have the sole power to determine what his relations with his workmen should be. It is true that such a committee formerly existed, but when the present Lord Penrhyn undertook the management of the quarries he curbed its pretensions, and it was their renewal that brought on the strike. The present settlement appears to be perfectly reasonable. The men can combine as they please, and complain if they choose through the officers of their combinations. But men who prefer not to submit to the tyranny of trade unions are guaranteed protection, and need not depend upon the good graces of an arbitrary standing committee for the maintenance of their rights.

Russia may have meant her use of the word "alliance," at the meeting of Czar and President, to be taken in a Platonic and Pickwickian sense, but evidently France does not. The populace flamed with enthusiasm, with visions of revenge on Germany, the instant the telegraph announced that the sacred word "alliance" had been articulated; and the enthusiasm seems to have carried away the Prime Minister. Unless very sure of his position and certain of Russian approval, M. Méline has been guilty of a blazing indiscretion in the despatch he sent to residents of Lorraine, congratulating them on their glowing patriotism. Whatever their sentiments, they are in fact German subjects, and for the Prime Minister of France to encourage them in what is, practically and legally, a treasonable demonstration, is a serious business. Out of France, no one is likely to believe that the Czar, who gives frequent evidence of possessing a level head, committed himself to the support of France in a war expressly for the recovery of her lost provinces.

BETTER RAILROAD PROSPECTS.

It is twenty-five years and more since a number of Western States, in obedience to the popular demand, which came to be called the Granger movement, undertook to regulate, fix, and limit by statute the charges of railroad companies for the transportation of freight and passengers. Without attempting to rehearse a legal controversy long ago settled, it is enough to recall the fact that the right of the States to assume this function was stoutly contested by the railroads, as in violation of their chartered property rights, guaranteed under State or federal Constitution, that the battle was lost, and that a railroad era of unparalleled disaster opened.

All railroad managers and all owners of railway property foresaw trouble, for the decision of the Supreme Court in the case of Munn vs. Illinois was virtually an announcement that legislative bodies in whom no one had much confidence would have a controlling voice in determining what this form of property should yield to its owners; and though, as time went on, qualifications were introduced into this doctrine which robbed it of some of its terrors, the mere spectacle of roads constantly in litigation over the right to their earnings was not calculated to make people hopeful of the future, especially as the introduction of the new system was accompanied by loud denunciation of the owners of railway shares and bonds as extortioners and monopolists, who might be thankful if the public allowed them to get any income from their property at all.

But many other causes contributed to the depression. To say nothing of the frightful conflagrations which wrecked Boston and Chicago, or of the panic of 1873, or the currency troubles, we were then at the beginning of a period of continued and increasing agricultural depression that was to send down the prices of the great products on which the prosperity of the transportation system depends, and make the income derived from the service lower and lower. To cap the climax, so little were the conditions which the country was to be called upon to face understood that new railroad construction began in 1879 with great fury, new unproductive areas being continually added to existing properties, already overburdened with debt. The "boom" which came after the resumption of specie payments in that year, and when the effects of the panic of 1873 had died away, revived for a time the hopes of investors, but the temptation to expand the railway system resulted in gigantic speculation, and a depression set in which carried railway earnings down to a point hitherto undreamed of, and made investors wonder whether the time would not come when railway stocks would be absolutely worthless. Their alarm was heightened, too, by the increasing complexities of railway receiverships, foreclosures, and reorganizations—once, in the days of single short lines, simple enough, but now, in a period of "systems," leases, guarantees, debentures, and superimposed strata of mortgages, fairly baffling to the comprehension of the wayfaring man, who has a not unnatural suspicion of management under which there are steady declines, no gains, and occasionally a total loss. This era in the development of railway property came to a climax in the panic of 1893; the subsequent collapse, which reached its lowest point during the last Presidential campaign, left owners of railway property in a situation in which there seemed to be really little to fear or to hope.

When we consider that twenty-five years ago American railway stocks were considered all over the world as almost certain wealth, and that even fifteen years ago first-mortgage railway bonds considered perfectly secure, and yielding 6 per cent., were constantly to be had at par, the change to which, a few months since, we were trying to accustom ourselves, was certainly overwhelming, especially when we consider that it affected some eleven thousand millions of property, most of it owned by people dependent on the income for their support. And the case seemed to be really without remedy, for the only cure ever suggested to the unhappy investor under such circumstances is to sell out and invest in "bond and mortgage," a form of investment in which there is never any increase of capital, and always a decline in interest after a certain number of years.

And yet it is easy enough to see now that the end was near at hand and certain to come very soon. Railroad expansion had stopped, the agricultural depression had shown clear signs of coming to an end, the reorganizations were over, the effects of the panic of 1893 had worn off, and the long line of decisions, beginning with Munn vs. Illinois, had produced a theory of public railroad regulation under which the limits of State interference were seriously restricted; more than all, the constant decline in the rate of interest had reached a point at which it had become possible for railroads to reduce materially their fixed charges once for all, and in this work they were busily engaged.

It is now pretty generally admitted that the railway metamorphosis which has been such a weary and heart-breaking process, has brought a new day for the investor. There does not seem to be any doubt that, in the fulness of time, the era brought in by the Granger laws has ended and a new epoch begun. One reason for thinking so is that, with a total change in the conditions affecting the whole railway world, a repetition of what we have gone through is practically inconceivable. Assuming that other things remain as now, it requires neither a prophet nor the son of a prophet to see that it would be rather surprising if railway property did not regain once more something of its old status, and that the day might come again when it would be considered, as it was for so many years, a specially valuable form of investment.

In one respect it has an advantage which, twenty-five years ago, it would have seemed madness to hope for. Its management has become practically public. This great good the Granger movement did help to produce. There is no longer any secrecy left such as once surrounded railway property and earnings and accounts, and rendered possible the gigantic frauds of a generation since. Railroad accounts are not yet what bank accounts are, but they convey at least sufficient information to put the prudent man on his guard. A generation ago railroad dishonesty was a by-word. If this is not true to-day, it is mainly to the new system of publicity that we owe the change. As for ourselves, optimistic it may be, but we firmly believe that we stand on the threshold of a new railway period, full of wonders to be accomplished as great as any that have yet been seen, of returns on capital once more decent, and of prosperity far more secure than ever before, because based upon the lasting foundations of veracity, publicity, and low fixed charges.

MR. LOW'S CANDIDACY.

The experiment which is to be made in this city during the next two months is in many respects without a parallel in the political history of the country. It is something of far greater importance than even the election of a government for a new city of three millions of people, momentous as that alone would be. Mr. Low, in the brief statement in which he accepted the Citizens' Union nomination, said that he regarded the petition of over 100,000 voters as so imperative a mandate from the people that, as a patriot, he could not refuse to obey it unless he was prepared to discourage, even in local matters, all spontaneous movement by the people outside the limitations of party. He added that what had moved the people to this unprecedented expression was a desire to have the new city begin its career under officials who would make the welfare of the city, not the welfare of any party, their first concern. He thus touched upon the two aspects of his candidacy which constitute its great significance. He will stand more exclusively on the platform of non-partisan city government than any mayoralty candidate the city has ever had heretofore, and he will stand as a candidate of the people, rather than of the nominating machinery of any poli-

tical party. In fact, the people have been so earnest in their desire for good government that they have taken the nominating power away from the political parties and exercised it themselves.

The politicians have been very slow to realize the new order of things. They could not imagine the nomination of an anti-Tammany candidate on any other plan than the familiar one of agreement among all the opposing political forces. They were willing that the reformers should start the movement, and give it its moral tone, but were astonished and enraged when, for the first time in the history of the city, their offer to come in and take possession of it was denied. They resorted in vain to all the old methods of carrying their point —ridicule, abuse, threats. The reformers laid the matter, for the first time, before the people, and got a verdict of approval so overwhelming as to amount to a repudiation of the regular nominating machinery. The spontaneous and eager response showed unmistakably, in fact, that the Citizens' Union was the natural outcome of a great popular disgust with existing political methods, and of a general popular conviction that the regular nominating machinery could not be trusted to select for public office the kind of men the people desired. While starting out with the object of obtaining honest municipal government, the Citizens' Union, by its wise and courageous course, has raised a no less momentous issue in the preservation or destruction of the boss nominating system.

What Mr. Low will stand for concerns not New York city alone. If the demonstration can be made in New York that a majority of the voters will improve an opportunity to elect a man simply because he is an expert in government and is pledged to devote his abilities and energies to the welfare of the city, and not to the welfare of any party, there is not a city in the land which will not be encouraged to follow the example set by New York. If it shall be shown that the regular party nominating machinery can be defied, and that the people will themselves exercise the right of nominating, then boss government everywhere is doomed. The boss must exercise this power absolutely, or his reign will come to an end. If he cannot in person name all the candidates, his system will break down. Nothing has been more instructive or more amusing in the controversy between the Citizens' Union and the Platt Republican machine than the claims of the latter to a sort of divine right to nominate. Awful things were to happen if this right were to be denied. The election of the best Mayor was a trifling thing compared with the impairment of it. To deny it as supreme was to so humiliate and outrage its possessors as to justify them in turning the city over to Tammany Hall or any other gang of looters. One of its defenders went so far as to say that "the Republican party cannot afford in the city of New York or elsewhere at any time to become the prey of highwaymen," the allusion being to the proposal that the Republican organization should acquiesce in Mr. Low's nomination on the petition of 127,000 citizens. For the people to assert their right to nominate a candidate was "flat burglary as ever was committed," in the eyes of this political Dogberry.

Nevertheless, from this time forward the only question before the Republican politicians will be: "Are you in favor of Tammany rule or non-partisan rule?" There is no possible middle ground. The method of Mr. Low's nomination, combined with his personal character and expert fitness for the office, makes it impossible for the Republican machine to refuse to support him on any other ground than that it is not in favor of the honest government of the city. If it opposes Mr. Low and puts a "straight ticket" in the field, it will array itself openly on the side of Tammany. As the *Tribune*, speaking for Republicans, said with courage and force on Thursday last, whoever advises or demands a policy that ends in the election of a Tammany Democrat "will be held not only an enemy to honest municipal government, but the worst of enemies to the Republican party." On the other hand, it is conceded on all sides that Mr. Low's candidacy has compelled the selection of the best man attainable as his Democratic opponent. It has also raised the qualifications considered necessary for all candidates for subordinate positions on the tickets of both parties. Even the most reckless political managers realize that the people are going to be exacting in their demands this year. Contrast this situation with what would have been the case had the two regular party machines been left alone to select the opposing tickets. Instead of the best material attainable, we should have had on both sides just as poor material as could be submitted to the people without danger of revolt. Whatever the result in November, the city will have a better government than would have been possible of attainment had not the Citizens' Union been formed. Instead of being shut up to a choice between sets of more or less unfit candidates, the voters will have an opportunity to elect the best or the next best, as shall suit their pleasure.

PARDONS AND LYNCH LAW.

The judicial department of the government in many States is justly criticised for its dilatory and lax administration of the laws against crimes, and the courts are held in part to blame for the prevalence of lynching in those States. In some cases the legislative branch is responsible for neglect to make necessary changes in the laws to secure greater promptness of action and less regard for technicalities by the courts. The executive department has also its burden of shame to bear for lessening popular confidence in the regular administration of justice by its disposition to remit penalties rightly imposed by the courts.

In commenting upon the action of President McKinley in pardoning, a few weeks ago, the cashier of the Ellsworth (Me.) National Bank, who was sentenced to ten years' imprisonment, before he had served four years, the Lewiston *Journal* expressed the opinion that "the courts do not forget their function of punishing for the protection of the properties and lives of the people, but their work is now nullified to a large extent by executive volition." As regards the federal judiciary, this remark is true in the broadest sense. A case is almost never reported where a United States court lends favor to mere technicalities as a bar to punishment, or fails to impose a severe sentence upon conviction. State courts are more open to criticism in both respects, particularly the former, and yet some of the most flagrant decisions on technical grounds in favor of criminals who had been justly convicted appear to be demanded by laws which the courts cannot disregard, however unfair the judges may consider them. On the other hand, a President may largely undo the work of the courts by an unjust use of the pardoning power, as when Mr. McKinley, a few weeks ago, released almost simultaneously three bank defaulters, in New York, Maine, and Arkansas, who had served but a small part of the time for which they had been sentenced.

The pardon of the Chicago anarchists by Gov. Altgeld of Illinois four years ago was only the first and most flagrant in a long series of acts by that Executive which encouraged the criminal classes and disheartened the law-abiding. Too many other Governors err in the same way. Gov. Jones of Arkansas was inaugurated on the 18th of January last, and during the first seven months of his administration he issued 175 pardons—an average of one a day, leaving Sundays out of the account. Gov. Bradley of Kentucky has a still worse record. He assumed office on the 10th of December, 1895, and by the end of June, 1897—a period of one year, eight months, and twenty-one days—he had pardoned or commuted the sentences of 675 convicts. Three murderers, who the courts decreed should be executed, had their sentences commuted to life imprisonment; 32 murderers who had been sentenced for life, were released after serving an average of only eight years apiece; and 64 who had "killed their men" and been convicted of manslaughter, were set free. Among these last,

one sentenced for twenty years served only nine; one for twenty-one, but four; one for seventeen, only three. The average sentence of the 64 had been eight years, but they were released after serving on the average only three years.

In some States the securing of pardons has become a regular business, which lawyers make a profitable specialty. At the capital of Kansas, for example, are lawyers who watch the prison records, and whenever a man with property of his own or with wealthy friends is convicted, they at once set about negotiating his release for a given fee, finding the task usually easy after the excitement attending the criminal's trial has died away. Petitions are circulated, the judge and jury who convicted him and the attorney who prosecuted him are enlisted, and public sentiment is manufactured in his favor. Touching pleas from the wife, sister, or daughter are addressed to the Board of Pardons, and if a favorable recommendation is secured from that body, the assault is renewed upon the Governor, who is very apt to yield if he is a tender-hearted man, like the last Executive, Gov. Morrill.

But while the blame rests in the last analysis upon the Governor who surrenders when he ought to resist, the responsibility is shared by others. An inspection of the records of the Kansas Board of Pardons shows that, in a large majority of the applications presented, the judge and jury who tried the prisoner unite in asking for commutation or full pardon. Dozens of district judges are now sitting in Kansas who have documents on file in the Pardon Board office which are nothing less than a confession of their own unfairness and incapacity, while it is a common thing to find a paper signed by all the jurymen in which they declare that they erred in finding the prisoner guilty.

The general public is no less remiss in its duty to stand by the courts. A journal published at the capital of Mississippi says that a great many of the country papers which find their way to its office "contain petitions for the pardon of Tom, Dick, or Harry—some white, others colored—who have been sent to the State prison for this, that, and the other offence, murder, burglary, forgery, etc." An Iowa newspaper a few weeks ago told how a citizen of that State went to the executive office to make complaint because a certain criminal had been let out of prison; and when the Governor sent for the papers in the case, he found the signature of his caller to the petition for the man's release.

There is not a particle of doubt that the frequency of pardon is one of the causes of lynch law. People see that, even if the courts convict a criminal, the Governor is liable to release him in a little while, and this added risk of his escaping all but a slight punishment strengthens the disposition to visit swift and terrible vengeance upon a villain who falls into the hands of a mob. The soft-hearted Executive who has yielded to appeals for mercy which was not deserved, has by that act weakened the assurance which should be enjoyed by every man suspected of crime that he shall have a fair trial. There must be a toning up of public sentiment in this matter from top to bottom. Presidents and Governors must be held to stricter account; judges, prosecuting attorneys, and jurors must be made to feel that it is their duty to stand by their work, instead of trying to undermine it. Above all, the individual citizen must realize that he has a duty in this matter, and that it is a grave offence for him to ask clemency for a man justly convicted and sentenced.

ARCHITECTS' COMPETITIONS.

Every great reform has in it the seed of others. It expresses a principle which is soon discovered to have manifold applications. The fact that the reform is accomplished shows that the public has been awakened to its importance, and, being once aroused, the public observes that other reforms may be consistently demanded. Something like this process is now going on in the case of the construction of great public buildings. Formerly the construction of these buildings was often committed to such architects as had most political influence. As in other appointments to office under our government, favor, not fitness, determined success. But as the principle of fitness has gradually been recognized in selecting most of the public servants, it has become apparent that the selection of architects must be made on different principles from those which have heretofore prevailed.

Two circumstances have tended to produce this conviction. The first is the fact that the private work of our architects has so greatly improved in beauty since 1876 as to make our public buildings generally conspicuous by their ugliness. The people are indifferent to the fact that these buildings involve "jobs," but they now cry out if the results are æsthetically bad. Very few people can tell why one building is beautiful and another ugly, but it is undeniable that people whose eyes have become accustomed to resting on beautiful buildings are unpleasantly affected when they turn to bad ones. In this way there comes to be a certain education of the public taste, and a public opinion is gradually created in favor of better public architecture. Many of our politicians also have seen the great works in the older countries, and are not unwilling to have it appear that we can outdo foreigners in architecture as well as in other things.

A second circumstance affecting the result is the increased prevalence of the notion that public officers are trustees. When such officers now attempt to distribute patronage arbitrarily, they encounter violent opposition. If they choose inferior architects, these architects do not gain but lose standing in their profession. The pressure thus becomes very strong on the authorities having the construction of a public building in charge to select a competent architect, and these authorities, as has been found to be the case under the civil-service reform acts, are frequently glad to be relieved from party "pulls" and importunities by resorting to a competition of architects. The most recent illustration of this tendency is the decision of Secretary Gage to obtain a supervising architect of the Treasury by competitive examination. He does not himself attempt to judge of the merits of the competitors—that is committed to a board of architects eminent in their profession; and should they agree in their decision, it is probable that it will be final. The scheme seems to be as nearly perfect in its theory as anything that is at present practicable.

In the matter of selecting the architect for a particular building, the most scientific plan that has fallen under our observation is that devised by Prof. Laird of the University of Pennsylvania in connection with the construction of the new State buildings at Harrisburg. The Legislature, as was necessary, appointed a commission to have the general oversight of the business, consisting of the Governor, the Treasurer, the Auditor-General, the President of the Senate, and the Speaker of the House of Representatives. This Commission selected of their own notion six architects, and invited them to prepare plans, agreeing to pay them as compensation $1,000 each. They also invited "all American architects of good standing" to submit plans, promising them that all drawings presented by them should be fairly considered. They then constituted a board of experts, as Secretary Gage has done, consisting of Prof. Laird, as the professional adviser of the Commission, and two architects in active practice, each of whom must have had the responsible direction, as principal, of work of importance at least equal to that of the proposed building. One of these two experts was to be nominated by a majority of the six architects invited to compete, and the other was to be chosen by him and the professional adviser. The decision of a majority of the board of experts so constituted was to be final. All the plans, including those of the six chosen architects, were to be submitted without the disclosure of the names of their authors, and very great precautions were taken to secure freedom from personal influence in all the details of the competition. It is,

of course, conceivable that a dishonorable man might become a member of the board, and that a dishonest architect might let it be known which plan was his; but this is only to say that human nature is imperfect. So far as fairness can be promoted by intelligent regulations, it is attained by these.

Out of all the designs submitted, the board of experts was to select eight, giving them rank in the order of their merit. From these eight the commission was then to select one, designating it as their first choice, and the author of this plan was to be appointed their architect. Two other designs were to be specially honored, in accordance with the rank assigned them by the experts. If the commission should consider that by reason of youth or inexperience, or for any other reason, their architect was not a suitable person to be put in charge of the work, he was to associate with him some acceptable architect. There were many other details of importance provided for in Prof. Laird's plan, but these which we have stated are the essential ones, and we should not be surprised if they became eventually the standard requirements in such competitions. In this particular case the requirements of the Commission were apparently greater than could be secured for $550,000, the sum appropriated by the Legislature, and it is apprehended that the whole competition may fail on this account. While this would be a regrettable incident, it would involve no reflection on the merits of the competitive scheme.

In a competition of this kind the conditions are such as to be reasonably satisfactory to architects of eminence, and reasonably fair to ambitious men who have their reputations to make. Some of the former class will probably be included in the list of those compensated for their plans; any of the latter class may enter the competition on the same terms as the former, with the exception that they receive no compensation unless they are successful. Were the public officers disposed to favor their friends by nominating them for the competition, they could indeed insure them compensation, but it would be out of their power to award them the prize except with the concurrence of the board of experts. It is conceivable that a commission composed of corrupt politicians might appoint a corrupt professional adviser and select a list of corrupt architects, and that a corrupt board of experts might thus be constituted. Of course if corruption prevails to such an extent, all measures of precaution are futile. But, bad as things are, they are probably not so bad as that, and no scheme has yet been devised so well adapted as Prof. Laird's to make political influence unavailing, to attract architects of distinction, and to give a fighting chance to men of ability by whom distinction has yet to be won.

GLIMPSES OF SOUTHERN OREGON.—I.

MARSHFIELD, August, 1897.

The State of Oregon is divided topographically and climatologically by the Cascade Mountains, which extend a little to the west of the middle of the State, from Mount Hood on the north to Mount Pitt on the south. Eastward from these are more or less arid plains of sand, and scattered volcanic elevations from which the sand is derived. Extremely fertile where water can be had, this part of Oregon offers few attractions elsewhere. The parching winds which sometimes cook the fruit on the trees of Californian orchards, owe their heat and dryness to a passage over this area.

Parallel with the Cascades along the seacoast lies the lower belt of the Coast Range of Oregon. Between the two is the Willamette valley, the garden of the State. Toward the southern boundary the two ranges converge and are practically united by the Klamath Mountains, an ancient island of crystalline rocks which stretches in an easterly and westerly direction from the northern end of the Sierras to the sea. These include the Siskiyous, Rogue River Mountains, and other subordinate ranges, and separate, topographically, northern California from southern Oregon. The moisture-laden winds from the Pacific drop their rain abundantly upon the coast, and are responsible for the deep blue patch familiar to students of meteorology, which indicates on maps of rainfall, near the mouth of the Columbia, the most rainy district of the United States. To the eastward of the Coast Range sufficient moisture passes to supply in generous measure the harvests of the Willamette valley, but the Cascades intercept nearly all that is left. As one travels southward from Portland on the railway, the valley narrows and is divided by wooded spurs from the ranges on either side and from the south. Beyond Eugene, where the State University is situated, the road winds gently between wooded hills with picturesque glimpses of narrow lateral valleys, nearly all of which are occupied by farms and orchards. In the vicinity of Comstock the road leaves the Willamette drainage and enters that of the Umpqua, which cuts directly through the Coast Range to the Pacific.

Here is a region which less than half a century ago was an unbroken wilderness, whose annals offer to the historian nothing striking or romantic, and which the uncommercial traveller knows only as a given area on the map. Owing to its broken topography of hill and dale, abruptly alternating, it can never become a densely populated region, but the fertility of the narrow strips along the streams has attracted settlers, and there is hardly a tillable area of a few acres but has its cabin. The necessarily elongated farms separate the dwellings rather widely. The towns are few and small. The farmers of this region share with those of California the convenience of a dry harvest. July, August, and September are usually rainless. The sun pours down its rays with ardency; the lips dry and crack, the dry air does away with visible perspiration, and, in spite of the noon temperatures hovering in the vicinity of 90 to 100 degrees F., the heat is stimulating rather than oppressive. Dust, of course, is ever present. The roads are usually poor, formed, on the hillsides, of the surface soil, with an occasional sprinkling of rounded river-gravel, which does not pack. The rocks are mostly friable sandstones and shales, or an exceedingly refractory diabase, and do not afford good road-metal. A further explanation of the wretched highways is afforded by the fact that the farmer gets all his heavy hauling done just after harvest, while the roads are still sunbaked, and in the rainy season, when they are mostly quagmires, he has nothing to haul; or, if he has, betakes himself to a broad-runnered wooden sledge, which slides over the mud almost as easily as if it were snow. As the day wanes, a haze overspreads the sky, the remnant of the coast fogs brought by the persistent trade-wind. After nightfall the air becomes cool, and, with one's window up, a refreshing sleep may be enjoyed under two heavy blankets. The rainy season, by all accounts, is trying to those unused to isolation and intellectual torpor. For reasons above indicated there can be but a minimum of moving about on the country roads and little sociality. Those in more easy circumstances go to the towns; the others exist until the seed-time comes.

The conditions foster lethargy of mind. The village papers have mostly "patent outsides" and a vacuous interior. At the stationer's, in one of the larger towns, I was informed that they did not take in a single weekly illustrated paper or any monthly magazine. Those who wished such things got them from the train boy of the daily local. In two weeks I did not see him sell anything except a few daily papers, when, following the usage, I went to get a paper for myself. The schoolhouses, scattered at intervals along the hill-roads, were small, untidy, and unpainted. I heard from residents repeated criticism of the poor work done by the State Normal Schools, which were said to graduate immature, incompetent, and untrained teachers, each provided with a diploma which exempted the bearer from further examinations. On the other hand, the extremely meagre pay given to the district-school-teachers could hardly attract competent persons to the work. It is probable, also, that politics plays some part in appointments. However, the criticism heard is a more favorable symptom than content with an unsatisfactory state of affairs would be. The higher educators are not indifferent to the lack of culture, and earnest efforts in the direction of "university extension" are being made.

The mental torpor referred to is quite a different thing from stupidity. In conversation with the people I found no lack of intelligence, and was surprised to discover how generally sound views on the currency and other analogous topics were entertained. The women, as usual, were more alert in such matters than the men, and, even under disadvantageous circumstances, showed praiseworthy strivings for thrift, neatness, and other than domestic interests. The physique of both sexes seemed good, and attractive faces were not rare. There was apparently some tendency to pallor, and a physician of long experience in the region assured me that, though the country is exceptionally healthful, the people lacked physical tone and succumbed with astonishing ease to relatively slight attacks of disease. Searching for some explanation of this singular fact, I learned that the settlers, though more

or less mixed with European stock, are derived mainly from immigrants from Missouri, Tennessee, and Virginia, where malarial conditions may have undermined the constitutions of the progenitors of the present population. Much weight must be allowed, I am convinced, to the unhygienic cuisine which is nearly universal, and always comprises an excess of fatty, sweet, and acid constituents, badly cooked and hurriedly consumed. There is no doubt that this part of the country is sadly in need of missionaries capable of teaching better domestic economy and methods of thrift.

The products of the region are the staples, wheat, hops, prunes, and beef cattle; while timber, staves, and poultry contribute a not unimportant share. The high price of wheat has recently greatly encouraged the farmers, and will bring much money into the valleys. In general, I was informed, the farms are free from encumbrance, and the people have been, in spite of the hard times, fairly prosperous. The transportation of the region is wholly in the hands of a single railway and the rates are high. The coast may be reached by several stage lines, one of which starts west from Roseburg for the Coos Bay country, while another, over a better road, crosses the mountains by a moderate divide, and descends the valley of the Umpqua. The ride by the latter is picturesque and interesting, and, with a comfortable coach (which is not provided), might be recommended to tourists. As it is, however, the hotels in most cases are far from meeting the most elementary requirements of cleanliness and good food, while the stages are merely rough covered wagons, with hard seats and insufficient springs. The omnipresent dust is a factor not to be ignored.

After crossing the coast range, where the road winds slowly upward between forests of tall and stately fir, the traveller descends into a valley much like that from which he came, but diversified by the meanderings of the river over wide beds of nearly level rock, with deep pools here and there, very suggestive of trout. At Scottsburg one welcomes the transfer from the dusty stage to a neat and well-appointed little stern-wheel steamer, by which one reaches the bay at the river mouth. The passage to Gardiner requires three or four hours and is charming. The cañon of the Umpqua is narrow and deep, but the steeps on either hand are densely wooded, and the rich green of the firs, diversified by the lighter tints of cottonwood and willow, softens the ruggedness effectively. In a region more easily reached this stream would be the haunt of artists and tourists. Though its beauties are hardly on a scale to attain grandeur, they fully compass the picturesque. I have rarely seen such a succession of "paintable" bits of scenery as those brought out by the curves and reaches of the lower Umpqua. I was told, also, that the river offered a fair reward to the fisherman, with numerous good camping-places, abundance of wood for the campfire, and clear, cold water everywhere to be had from rills and springs. Certainly one seldom sees a region more attractive to the camper and canoeist, and it seems provoking that it should not be more accessible.

By evening one reaches the pretty village of Gardiner, supported by two large sawmills, neat, thrifty, and attractive. Backed by steep wooded hills, it looks out upon the Umpqua estuary, a lovely bay, whose borders are dotted here and there with the traps of salmon fishers and the cabins and garden-patches of the sturdy loggers. It must be confessed that the presence of a clean and comfortable inn, where I partook of my first well-cooked meal in southern Oregon, takes nothing from the agreeable memories with which my stay at Gardiner is associated.

W. H. D.

THE GIFT OF CHANTILLY.

PARIS, August 26, 1897.

The Institute of France entered into possession of the château and of the forest of Chantilly immediately after the death of the Duke d'Aumale. Nothing is changed in appearance in the beautiful domain, in the château and its surroundings; but, as the poet says, "the mind is its own place," and the wanderer cannot help feeling that much is changed and that the living spirit of Chantilly is departed.

The terms of the donation made by the Prince are worth remembering:

"Wishing to preserve for France the domain of Chantilly in its integrity, with its woods, its lawns, its waters, its buildings and all that they contain—trophies, pictures, books, works of art, all that *ensemble* which forms a compiete and varied monument of French art in all its branches and of the history of my country at its glorious periods—I have resolved to confide it to an illustrious body which has done me the honor to call me to its ranks on various grounds, and which, without avoiding the inevitable transformation of society, does not feel the spirit of faction and can escape too rapid changes, keeping its independence in the midst of our political fluctuations.

"In consequence, I leave to the Institute of France, which will dispose of it on the conditions hereinafter mentioned, the domain of Chantilly as it may exist at the time of my death, with the library and the other artistic or historical collections which I have formed in it."

Without going into the details of the donation, I will only say that the Institute has, in obedience to the will of the Prince, appointed from its own ranks three *conservateurs*, M. Mézières of the French Academy, M. Léopold Delisle, the Director of our National Library, and M. Gruyer of the Academy of Fine Arts, author of a magnificent work on the pictures of Chantilly. M. Delisle is chiefly affected to the library, and M. Gruyer, who was once a curator in the Louvre, to the pictures and works of art.

The château, according to the positive instructions of the Prince, will remain uninhabited. It is to be a mere museum, which will be public two days of the week, as soon as the necessary changes and dispositions are made. The three curators will have lodgings in a pavilion which is at some little distance from the château, and is called the Pavillon d'Enghien. They are not bound to reside always in these lodgings, which are merely their *pied-à-terre* when they make their visits; in the same pavilion there is a fourth apartment, which is the residence of a permanent assistant curator, appointed by the Institute, who is to be not a member of the Institute, but a mere agent. The gift of Chantilly to the French Institute was made with the binding condition that "the Institute should preserve the character of the whole of the domain, and especially that it should make no change in the exterior or interior architecture of the château, the pavilions of Enghien and of Sylvia, the *jeu de paume*, and the three small chapels, . . . and that it should equally maintain the character and the destination of the parks, gardens, canals, rivers, as well as the general distribution of the forests, ponds, and fountains." It is clear that the dominant idea of the Prince was the preservation of Chantilly as a whole, and it is to be hoped that this wish will be well adhered to.

The collections of Chantilly, formed by the Montmorencys and the Condés, were confiscated at the time of the Revolution; they were given back to the Duke de Bourbon, first in 1814, afterwards in 1815. They were chiefly composed then of manuscripts and of written documents, forming 1,260 volumes, well bound. The printed books had been dispersed. The Duke d'Aumale, when he became possessor of Chantilly, felt the necessity of forming a library. He soon found a good occasion to acquire very important books. Frank Hall Standish had left England for France, and, when he died, he bequeathed his collections to King Louis Philippe. At the death of the King, the Duke d'Aumale bought from the heirs the Standish collection of books, composed of 3,504 volumes; many of them were incunabula and books printed on vellum, bought by Standish in France, in Spain, and in Italy (the best part of the library of Count Gaetano Malzi had been acquired by Standish). Having become possessor of the Standish collection, the Duke increased his library by making well-chosen acquisitions at nearly all the important public sales which took place in France and in England after 1850. In 1861 Potier published a 'Catalogue of the Manuscripts and Printed Books composing the Library of M. Armand Cigongne, Member of the Society of Bibliophiles, preceded by a Bibliographical Notice by M. Leroux de Lincy.' M. Cigongne was a stockbroker on the Paris Exchange, and had formed, with an exquisite and almost unerring taste, a collection consisting almost exclusively of French books, poems, dramatic works, novels; he had searched with great care for artistic bindings bearing the arms of illustrious persons. M. Cigongne was one of the first bibliophiles who put a high value not only on a book, but on what we now call its condition—a word which applies to every detail, even to the breadth of a margin. His library was not sold in detail; the Duke d'Aumale offered a large price for the whole, and was fortunate enough to have his offer accepted. It has been my good fortune to be able to examine, one by one, the books of M. Cigongne, and I have often wondered how a man of business, engaged in the laborious life of the Exchange, could have found the time to make such a collection.

After the acquisition of this collection, the library at Twickenham became a rival of the most famous private collections. It was enriched during the decade by various acquisitions made at public sales. After the war of 1870, when the Duke returned to Chantilly, the architect who built the new château found place in it for a library, which resembled almost in every detail the library of Twickenham, with its two stories, its iron balcony between them, its iron doors. The Duke continued to make constant additions to his library. He bought some very valuable manuscripts—the Psalm-book of Ingeburge, the Danish wife of King Philippe Auguste, the Breviary of Jeanne d'Évreux, some volumes of the Hamilton collection, the

famous miniatures of Jean Fouquet, which had been cut out of the Prayer-book. He bought from an anonymous amateur, through a bookseller, the Horæ of Louise Adélaïde d'Orléans, Abbesse de Chelles; a manuscript written by the famous Jarry; a splendid copy of Pindar, with a binding executed for King Henri II.; the 'Lunettes des Princes' (Jehan Meschinot, 1539), a copy bound for Charles the Fifth; the works of Ronsard (Paris: Buon, 1587), bound for Marguerite de Valois, who had her charming books covered with daisies in various stages of development. I cite these few books to give an idea of the character of the works which have found their way to Chantilly.

Besides this library, embracing exclusively the works entered in the catalogues under the denomination of "livres rares et curieux," there is at Chantilly a second library, which is what we call a "bibliothèque de travail," composed of books of reference, great historical and literary collections. This library, destined for common use, is in a large room, formerly the theatre in the times of the Condés: the books are arranged in what were once the boxes, and there are tables in the pit and on the old stage. A curious peculiarity of this theatre is the fact that there was no other scenery than that of the park, which was visible through a large window. This rural scenery was very suitable for the plays which were represented; princesses liked to appear as shepherdesses, and princes as shepherds. The library of "rare and curious" books will not be accessible without special permission; it would be very unwise to place its treasures in common hands.

Anne of Montmorency, who became Marshal and Constable of France, was not very learned, but he was a patron of letters and art, and many of the Chantilly manuscripts were acquired by him. He procured some manuscripts of Jean du Mas, Seigneur de l'Isle, an ardent bibliophile, who had obtained, it is not known how, some fine manuscripts which had belonged to Jacques d'Armagnac, Duke de Nemours, who was beheaded in 1477. Sixty of the manuscripts of the Duke de Nemours are now in our National Library. Montmorency had some manuscripts made for himself, and received several as presents. The Duke d'Aumale himself wrote notices of the manuscripts at Chantilly, and made researches into their origin. Many interesting details will be found in the complete catalogues which are in preparation. In all, there are 1,450 manuscripts in the collection.

After the manuscripts, we must cite the first productions of the art of printing, the books printed in Mainz, in Strasbourg, the celebrated editions of Mentelin, of Sweynheim and Pannartz, the first editions of Cologne, Augsburg, Milan, Venice, Nuremberg, Foligno, Ulm, Verona, Bologna, Ferrara, Florence, Naples, Brescia, Mantua, Padua, Lyons, Utrecht, Louvain, Lübeck, Rostock, Toulouse, Geneva, etc. The Duke d'Aumale had a great predilection for books printed on vellum, and collected a great many; among others, he took special care to collect the books of Hours *(Heures)*, and in various dioceses (Rome, Bayeux, Besançon, Chartres, Langres, Metz, Nevers, Rouen, etc.), as well as the old "Coutumes," which were the foundation of our present "Code Civil." The printed books actually catalogued form a total of about 8,000 articles. This number may not seem very large, but it does not include the books which are merely books of reference and for common use.

The visits to Chantilly will not begin till a year after the Duke's death; in the interval, everything will be prepared in the château and in all the collections, in conformity with his will. The library is already in perfect order, and M. Léopold Delisle will not have much to do except the supervision of the catalogues, which were not quite completed.

TOKENS OF WOE.

VIRGINIA, August, 1897.

The story of Joseph and Potiphar's wife recurs in Greek mythology ('Iliad,' vi. 168 ff.). Anteia, the Queen of Proetus, made a false charge against Bellerophon, whom accordingly Proetus dispatched to the King of Lycia, Anteia's father, "and gave him *Tokens of Woe, graving in a folded tablet many deadly things*, and bade him show these to Anteia's father, that he might be slain." From the Homeric account it seems clear that, upon his arrival in Lycia, Bellerophon announced to the King that he was the bearer of a *token* from Proetus. But etiquette forbade the King to ask to see that *token* until the guest had been entertained for nine days, at the end of which the King "asked to see what *token* Bellerophon bore from his son-in-law, even Proetus. Now when he had received of him Proetus's *evil token*, first he bade him slay Chimæra, the unconquerable," etc.

Students of the history of the alphabet and of writing have often asked the question, "Wherein consisted these *Tokens of Woe?*" but the question has never been answered to the complete satisfaction of scholars, for the history of the invention of the alphabet is not yet fully written. The subject is elusive and intricate, because it has to deal with comparative palæography. Until twenty-three years ago the existence of a pre-Phœnician script was scarcely suspected by scholars, notwithstanding the fact that in 1859 De Rougé had announced that the Phœnicians did not *originate* their alphabet, but had adapted to their purposes the most ancient Egyptian hieratic script. De Rougé lost the manuscript of his work, and never rewrote it. But after his death his son discovered the rough outline of the father's work and published it in 1874. The theory of De Rougé is generally accepted, and his structure is built upon such solid ground that it will probably never be overthrown or even shaken.

The tradition that, when the Homeric poems were composed, the alphabet had not yet reached Greece is probably correct. The fact that Homer makes no mention of the alphabet has been used as proof that he was ignorant of it. But, however that may be, if Homer does not mention the alphabet specifically, he does mention ideograms or phonograms of some kind or other. And here I must explain, in the thoughts if not the words of another, what is meant by ideograms or phonograms. All primitive writing was ideographic—*i. e.*, the writing itself depicted ideas. The symbols used by such alphabets are therefore called ideograms. There are two kinds of ideograms: (1) pictures, or actual representations of objects—such pictorial writing was used by our American Indians; (2) pictorial symbols used to express abstract ideas, such as the Roman numerals, the signs of the zodiac, etc. As mankind advances in intellectuality, ideographic alphabets are supplanted by phonetic alphabets, in which the symbols are called phonograms, because they express or stand for *sounds*, and not for *ideas* or *things*. They are, however, merely conventionalized ideograms, which usually have suffered abrasion to such an extent that their origin becomes more or less obscured. Now phonograms are of three kinds: (1) verbal signs, which stand for entire words, such as $, £ s. d., lbs., cwt., etc.; (2) syllabic signs, which stand for the articulations of which words are composed; (3) alphabetic signs, or letters, which represent the elementary sounds into which the syllable can be resolved. It is phonograms of this last-named kind which we use to-day. But if we trace the history of any of our letters back far enough, we shall find that they resolve themselves into the conventionalized picture of some object, and that most of them retain features which they have derived from the primitive picture from which they are descended.

Now what kind of ideograms or phonograms were graven upon that folded tablet of which Homer speaks? The question has been asked often, and discussions of it may be found in every elaborate commentary on Homer. In these discussions many arguments are used to prove that Homer could not have had a *letter* in mind; could not, properly speaking, have had *writing* in mind; but, after everything has been said upon the subject that can be said, it remains quite evident to all, except to the wilfully blind, that something *was* written, or scratched, or painted on that folded tablet. The words of Homer presuppose some kind of writing—certainly not *the* art of writing as we understand it, or as the Phœnicians and Greeks understood it, but surely *an* art of writing. It were interesting to discover what kind of writing this was, wherein this system of symbols consisted that was capable of expressing emotion by means of *Tokens of Woe*, and, by inference, *Tokens of Gladness*.

Some years ago Sayce, in a little book on the Hittites, attempted to prove that the Phœnicians got their first notions of linear phonetic alphabetic signs, not from the oldest hieratic script of the Egyptians, but from the ideograms of the Hittites. His thesis is that Cappadocia was the original home of the Hittites—a contention which he attempts to make clear from many of the ideograms in the Hittite characters, *e. g.*, from what he calls their ideogram for country, consisting of two or three cones that are similar to the cones in the volcanic formation in the Udj-Essar-Urgub region of Cappadocia; and from certain peculiarities of their costume as seen in Hittite rock-sculpture and other works of art, *e. g.*, the tip-tilted boots, that are so much like the Greek *zarouchia* of to-day. Sayce argues further that the Hittite empire and civilization spread from Cappadocia southwards to Syria, where so powerful an empire was created that it could successfully resist Egypt, then mighty. From Cappadocia again the Hittites extended their empire to the western seaboard of Asia Minor, until it included almost if not all the vast peninsula, and fronted upon Assyria and Egypt in the east and south. In all this broad empire one and the same system of ideographic writing prevailed, and that system of writing must have been known to the

peoples who jostled elbows with the Phœnicians.

There are two possible theories as to how the knowledge of the Hittite symbols reached Greece. According to one, the Phœnicians adapted it to their purposes by making it linear and phonetic, and then passed it on to the Greeks, thus justifying the Greek traditions about the Phœnician origin of the Greek alphabet, for the Greeks knew nothing about a *pre*-Phœnician alphabet. But this is not the theory which Sayce advocates. On the contrary, he inclines to the opinion that the Greeks got the Hittite ideographic characters from the Phrygians of the Smyrna region, who had modified it, perhaps, and reduced it to a linear script. This script was further modified, simplified, and beautified by the Greeks, who made it wholly linear and phonetic. When it had been perfected by the Greeks, who improved upon everything which they touched, the modified or Greek alphabet was adopted by the Phrygians, who made abundant use of it, *e. g.*, on the rock tombs of the city of Midas.

Sayce's theory has been twice refuted with German elaborateness by Schlottmann and Hinrichs. At the time of the appearance of Sayce's book I was unwilling to admit the Hittite origin of the Phœnician alphabet, but still the theory had great fascination for me, because I had just returned from long journeys in Asia—journeys that had extended over several years, and had made it possible for me to gaze with my own eyes upon almost all the art remains of the Hittite civilization from Carchemish to the region of Smyrna. But the links in the chain that would connect Greece with the Hittite empire seemed to be wanting, although, of course, there was the Phrygian Pelops, who was destined to influence Mycenæan civilization so powerfully. But, while rejecting the Hittite origin of the Phœnician or of the Greek alphabet, another thought had been ever-present with me as I studied the Hittite remains that are scattered up and down the length and breadth of the Turkish empire in Asia. The thought was, Have we not here Homer's *Tokens of Woe?* I could not prove it to my satisfaction, and for two reasons. In the first place, Greece was remote, and Hittite influence upon Greece, even through the mediation of the Phrygians, seemed small and weak. This point, though, seemed of minor importance, because the *Tokens of Woe* must have come to Proetus in Tiryns from Lycia at the time when he married the daughter of the King of Lycia. Then, next in order, Hittite influence in Lycia would have to be assumed, for it cannot be proved, methinks. Of course, there is plenty of Asiatic influence to be seen in Lycian art, but it is of later date than the hoary Hittite empire. In fact, the Hittite remains that are nearest to Lycia are in Isauro-Pisidia, at El-Flatun Puñar and at Fassiller, where I discovered a colossal Hittite stele with sculpture in high relief, and a Hittite seal, which the curious may find depicted in Perrot's 'History of Art.' Accordingly, Hittite influence in Lycia cannot be proved, nor can it be proved that we must recognize the *Tokens of Woe* in the Hittite ideograms. This thought, therefore, took a back seat, awaiting further developments and more exact information.

Now at a time when men had no suspicion of the wide territory covered by what we call the Mycenæan civilization; at a time when certain stone seals were still called *Inselsteine*, Schliemann had discovered in Troy many strange and novel patterns impressed upon terracotta whorls, seals, vases, and other objects. One characteristic of these patterns was noteworthy: there was an absence in them of Egyptian, and almost equally of Assyrian, influence, with no trace of Phœnician characters. Even then some scholars held that these "patterns of Hissarlik were not mere ornaments or symbols, but had a meaning and were true signs," *i. e.*, phonograms. Then came Mycenæ with its flood of light, which grows more intense with each succeeding year. In 1894 Mr. A. J. Evans published in the *Journal of Hellenic Studies* an article entitled "Primitive Pictographs and a Pre-Phœnician Script from Crete and the Peloponnese" (reprinted the next year in book form). In this article Mr. Evans differentiates two classes of seal-stones: (1) such as belong to a very ancient period (the third millennium B. C.) and bear ideograms engraved upon their facets, and (2) such as belong to a younger period and bear phonograms and even a linear script engraved upon their facets. These stones, to describe them as nearly as possible in Mr. Evans's own words, are (1) three-sided or prism-shaped with a string-hole, (2) four-sided equilateral, or columnar, (3) four-sided with two larger facets, (4) seal-stones with a single facet. Upon their facets they bear a striking series of pictograms, some even presenting characters that are remarkably alphabetic. Evans believes that these are not mere idle figures carved at random, but must have a definite meaning and are in fact a form of script. He points out that there is method and intention in the choice and arrangement of the symbols, and that even a boustrophedon arrangement is quite evident on some of them. They are therefore not meaningless ornaments. Certain of these symbols recur frequently, such as the human eye, the bent leg, the bent arm, etc. The choice of symbols is evidently restricted by some practical consideration, and while some objects are of frequent occurrence, others equally obvious are conspicuous by their absence. Abbreviated symbols are made use of, such as the head for the whole animal. Gesture-language in graphic form appears, an invaluable resource of early pictography for the expression of ideas and emotions, such as crossed hands (denoting ten), the open hand (a palm measure), the bent leg (marching, or approaching), a man standing alone with arms held downwards (perhaps denoting ownership), an arm holding a curved instrument (forcible action, such as was called for by the *Tokens of Woe* which Bellerophon bore to the King of Lycia), and many others.

These symbols occur almost exclusively in groups of from two to seven. The most frequent, however, are groups of two or three, a fact which seems to indicate that the symbols thus appearing had a syllabic character. Certain fixed principles are traceable in the arrangement of the symbols in the several groups. Thus, the human eye usually appears at the beginning or end of a line. In the three cases in which the bent leg makes its appearance, it is in immediate contiguity with a symbol that seems to stand for a door or a gate. When the columnar seal-stones are rolled out on the principle of a Babylonian cylinder, we notice that in several cases a boustrophedon arrangement has been adopted, as I have already stated. Among these symbols we find many relating to the human body and its parts; we also find houses and household utensils, marine subjects, animals and birds, vegetable forms, heavenly bodies, geographical symbols, geometrical figures, besides a number of uncertain symbols.

These symbols were not copied from nor influenced by either Asia or Egypt, but, where a parallelism appears, it is the parallelism of an independent system drawn from a common source. About sixteen symbols approach Egyptian and sixteen Hittite forms, but still the proportion of affinities points to Asia, when we consider that the choice of comparisons in the case of the Egyptian hieroglyphs is very much larger than is that of the Hittite. Moreover, the promiscuous way in which the signs are disposed suggests the Hittite monuments. Besides, the columnar arrangement of the sides of the seals recalls the sculptured stones of Hamath. And again, the boustrophedon arrangement is found both on these seal-stones and on the Hittite monuments. But we have not to do in either case with a mere servile imitation of foreign symbols; there is only a collateral relationship, and both the Cretan and the Hittite symbols grew up out of the still more primitive pictographic elements. The more primitive elements which were the parent stock of the symbols we are discussing, Mr. Evans finds in the Cretan and Peloponnesian seal-stones of the first period, *i. e.*, of the third millennium, B. C. As to the Hittite symbols, that is a question which need not delay us further on this occasion. On the contrary, let us gather up Mr. Evans's chief points: he has proved the existence of primitive Aegean pictograms akin to the Hittite symbols; from these pictograms there arose on the one hand a linear syllabic script that extended to continental Greece and to Syria, and on the other hand a Cypriote syllabary. Now Mr. Evans's thesis is to prove that the theory which derives the Phœnician alphabet from the most ancient form of the hieratic script of Egypt must give place to his new theory, which derives the Phœnician alphabet from an Aegean or Mycenæan prototype. He sustains his thesis with marvellous learning, and he makes out a most plausible and fascinating case, but he does not prove his point; De Rougé's structure is erected on the solid rock and refuses to be shaken. Of Evans's magnificent paper we are forced to ask:

"Warum in die Weite schweifen?
Denn das Gute liegt so nah."

This Aegean script of the third millennium before our era, what is it? What is it, indeed, but the Tokens of Woe of Homer, tokens that had to give place to the more practical Phœnician letters which Herodotus and general Greek tradition say were brought to Greece by the Phœnician merchants of the Syrian seaboard? My belief (I have seen the question mooted only once, and that was by Salomon Reinach in the *Chroniques d'Orient*) that we have the Tokens of Woe at last is not based on mere assumption or conjecture. It seems to be warranted by the character of the symbols themselves, which are capable of expressing emotion of various kinds and degrees, *e. g.*, the bent arm holding a scimitarlike weapon was amply sufficient to indicate to the King of Lycia what his worthy son-in-law expected of him in the matter of Bellerophon. It seems warranted by the fact that this

system of symbols covered a wide territory, and was indeed in use throughout the whole world that was in any way affected by Greek influence. It seems to be warranted by the fact that it was in universal use, not merely among the rich and princely, but among all classes, even the lowliest. For some of the stones are the seals of dealers in or producers of milk, cheese, and butter, as can be seen at a glance. It was, therefore, in use even among shepherds. The suggestion, then, that we have found the Tokens of Woe at last is perhaps something more than a plausible theory.

J. R. S. Sterrett.

Correspondence.

THE LOGIC OF IT.

To the Editor of The Nation:

Sir: I beg leave to call your attention to the fact that an important American industry appears to have been seriously injured by the action of Col. Waring in removing the mud and snow from the streets of the city of New York. In *McClure's Magazine* for September (page 921), Col. Waring says, in his article on "The Cleaning of a Great City":

"I have been told by the President of the United States Rubber Company that this snow removal, together with the abolition of mud from the streets at all seasons, has cost that company $100,000 per year by reason of the decreased demand for rubber boots and shoes. What this means to the poorer people of the city, as compared with their previous suffering, need not be said."

So that the Colonel not only inflicts this damage on the rubber industry, but actually exults in the act!

Ought not some steps to be taken by a paternal government to redress this foul wrong to the Rubber Company, and also, to bring the Colonel to a sense of the enormity of his conduct? Was not the wearing-apparel clause in the Dingley tariff enacted in order to drive customers to the shops of New York shopkeepers? And are not dealers in India-rubber shoes as much entitled to protection as dealers in fair-weather clothing? Is the question of protection or no protection to the American clothing-dealer to depend on the weather in which his wares are worn—to be determined by the test of rain or shine?

The Colonel speaks of the "poorer people of the city" and their "previous sufferings." What wretched free-trade sophistry! What difference does it make whether the poorer people suffer or not? The first business of the American Government is to build up American industries; and (let me add, sir) that should be the business of every official in the United States, as far as his power extends. At the very least, if he injures an American industry, he should not be allowed to boast of it with impunity. Such an act must (to every true American heart) be proof of even greater wickedness than that of the iniquitous Bayard.

When the Rubber Company received the $100,000 of which Col. Waring has now deprived them, they were able to pay, and presumably did pay, more wages than they pay now. Col. Waring, therefore, has probably inflicted a serious injury on many innocent dealers in India-rubber shoes and their employees—exactly such an injury in fact, as was complained of by the Merchants' and Manufacturers' Board of Trade when they asked for the enactment of the wearing-apparel clause in the Dingley tariff limiting the value of personal effects entitled to exemption to the sum of $100.

I do not find any fault with Col. Waring's conduct in cleaning the streets of New York. What I maintain is, that, according to the protectionist theory, the saving to the poor people by reason of the decreased demand for rubber boots and shoes is no benefit to the community. The essential feature of protectionism is that it is a benefit to the State that its citizens should be forced, by means of tariff laws, to pay higher prices for certain articles than they would pay if trade were free. The reason assigned for this proposition is that the excessive prices thus wrung from the consumers are used to build up industries that would not otherwise exist, and that as laborers are employed in these industries whose wages might be reduced or destroyed if the protective tariff should be repealed, it must, therefore, be an injury to the community to repeal the tariff. Now, it is evident that in the case of the New York street-cleaning the incompetency or dishonesty of Col. Waring's predecessors exactly corresponded to a protective tariff as far as the India-rubber industry is concerned, because the people of the city were forced, by the mismanagement of the Street-Cleaning Department, to increase their purchases of India-rubber shoes, just as they might have been by a protective tariff.

The splendid results of Col. Waring's good management exactly correspond to a repeal of a protective tariff. They have, it is true, diminished the profits of a certain industry—and presumably the wages of its employees—but, on the other hand, they have saved to the people of New York, no doubt, a much greater sum. And—what is really the root of the whole matter—the people's money is their own, and they ought not to be forced, either by a protective tariff, by official misconduct, or in any other way, to part with it against their will and without compensation, whether for the purpose of building up an industry or not. At the present day a far greater tax, and of the same kind, is paid all over the United States on almost every article of clothing and on many articles of general consumption. May we not hope that some day another Waring in a still higher office will complete the work that Grover Cleveland began ten years ago?

Daniel Holsman.

September 3, 1 97.

PRESIDENT ANDREWS ON VERGIL.

To the Editor of The Nation:

Sir: When has the head of a reputable university made a more astonishing statement than that made by President E. B. Andrews, in the current *Cosmopolitan*? He says: "Large parts of classical literature reek with filth; and much of Vergil and Horace that is used in the class-room, editors and teachers misinterpret to make it decent." All lovers of Horace, and all who understand his spirit, will resent the imputation, even as against this gay philosopher; but in the case of Vergil, what an astonishing accusation President Andrews has made. I had supposed that Vergil was beyond the reach of any such assault. If testimony is needed, what could be more conclusive than the testimony of two so critical and pure-minded men as Dante and Tennyson? Dante's attitude toward Vergil is that of a reverent pupil toward an adored master. He is proud to call him "my master and my author." Tennyson testifies the same feeling in the lines:

"I salute thee, Mantovano, I that loved thee since my day began;
Wielder of the stateliest measure ever moulded by the lips of man."

I believe it was a Brooklyn school-committeeman who discovered that Longfellow was indecent, and that even that inoffensive jingle, "Excelsior," contains the objectionable lines:

"Stay, stay, the maiden said, and rest
Thy weary head upon this breast."

To parochial-minded men of this class all literature must be objectionable; but it is amazing to find such views held by the President of Brown University. If we discard Vergil as indecent, surely we must also discard Shakspere and the English Bible and nine-tenths of the standard literature of the world. Cannot the enemies of classical study find valid arguments without resorting to wild, whirling words which disclose either an astonishing ignorance or a lamentable recklessness? To call Vergil "indecent" is "prurient prudery" gone mad.

Arthur Mark Cummings.

Boston, Mass., September 4, 1897.

CERVANTES.

To the Editor of The Nation:

Sir: The name of Cervantes is not a common one in Spain, and the probability is that those who bear it are kinsmen. Those interested in the cult of the author of 'Don Quixote' may possibly, therefore, find assistance in tracing his genealogy from the occurrence of two persons bearing that patronymic among the officials of the Inquisition in the sixteenth century. A cedula of Ferdinand of Aragon, bearing date August 16, 1514, recites that he had been informed that the Licentiate Cervantes, advocate of the fisc in the Inquisition of Cordoba, had abandoned the office and taken another, whereupon he had appointed the Licentiate Francisco de Oro to fill the vacancy. He now learns that Cervantes had only obtained leave of absence, had furnished a substitute, and had now returned to duty; wherefore, he restores him to the position and orders his accustomed salary to be paid (*Archivo General de Simancas, Consejo de Inquisición, Libro III., fol. 387*).

Another Cervantes, the Licentiate Gaspar, was inquisitor of Saragossa in 1560, at which date he was sent by Inquisitor-General Valdés to inspect the Inquisition of Barcelona (*ibidem, Espedientes de Visitas de Barcelona, Legajo 15, fol. 28*).

It may be mentioned that officials of the Inquisition were not necessarily clerics vowed to celibacy.

H. C. L.

Philadelphia, August 30, 1897.

Notes.

'The Life of Tennyson,' by his son, in two volumes, has the post of honor on Macmillan's October list; and close upon it in interest will be the 'Letters of Elizabeth Barrett Browning,' in two volumes, with its

glimpses of Paris during the *Coup d'Etat* and of Italy in times of stress. Other announcements are 'The Story of Gladstone's Life,' by Justin McCarthy; 'The Household of the Lafayettes,' by Edith Sichel; Brandes's 'William Shakspere'; a ninth volume supplementary to Wheatley's edition of Pepys's Diary; 'Biblical Quotations from Old English Prose Writers [pre-Wicliffite],' by Prof. Albert S. Cook of Yale; Krüger's 'History of Early Christian Literature in the First Three Centuries'; 'Pausanias's Description of Greece,' translated with a commentary by J. G. Frazer, in six volumes; 'Sketches from Old Virginia,' by A. G. Bradley; 'The Old Santa Fé Trail,' by Col. Henry Inman; and a 'Political Primer of New York State and City,' by Miss Fielde.

Besides the amplified 'Impressions of South Africa,' by James Bryce, the Century Co. will publish 'Forty-six Years in the Army,' by Gen. John M. Schofield, and 'An Artist's Letters from Japan,' by John La Farge.

From Dodd, Mead & Co. we are to have the 'Polychrome Bible,' a wholly new version of the Old Testament, with its composite structure shown in colored printing, under the editorship of Prof. Paul Haupt of Johns Hopkins; a 'History of the Literature of the Victorian Era,' by Clement K. Shorter; 'Pictures from the Life of Nelson,' by W. Clark Russell; 'Constitutional Studies,' by James Schouler, who now betakes himself to the sixth and concluding volume, embracing the civil war, of his 'History of the United States'; 'Colonization in the United States,' by Prof. Barnett Smith; 'The New England Primer,' edited by Paul Leicester Ford; a new work on the Brontës, by Angus Mackay; translations of A. Lavignac's 'Voyage Artistique à Bayreuth' and of Camille Bellaigue's 'Portraits of Musicians'; 'Stories of Famous Operas,' by Miss Guerber; 'Romance of the Irish Stage,' by Fitzgerald Molloy, and 'Dariel,' a romance of Surrey, by R. D. Blackmore.

Tennyson's 'In Memoriam,' illustrated by Harry Fenn, and furnished with a preface by Dr. Henry Van Dyke, is to be handsomely produced for the holidays by Fords, Howard & Hulbert.

Roberts Bros. will shortly issue Renan's 'Antichrist,' translated and edited by Joseph Henry Allen, and 'In Indian Tents,' stories told by the Indians of the Penobscot, Passamaquoddy, and Micmac tribes to Abby L. Alger.

D. C. Heath & Co. have in press the Second Part of 'Faust,' edited by Prof. Calvin Thomas of Columbia University.

A new Boston firm, of the class which is exercising a wholesome influence on taste in book manufacture, Richard G. Badger & Co., announces 'The Right Side of the Car,' a story by John Uri Lloyd, author of 'Etidorhpa.'

L. C. Page & Co. have nearly ready a new illustrated edition of William Kirby's 'Golden Dog,' a romance of Quebec.

Herbert S. Stone & Co., Chicago, will publish 'What Maisie Knew,' by Henry James; 'Phyllis in Bohemia,' by L. H. Bickford and Richard Stillman Powell; 'For the Love of Tonita, and Other Tales of the Mesas,' by Charles Fleming Embree; and 'Literary Statesmen, and Others,' essays by Norman Hapgood.

William Doxey, San Francisco, will issue 'Idle Hours in a Library,' by William Henry Hudson; 'The Wild Flowers of California: Their Names, Haunts, and Habits,' by Mary Elizabeth Parsons, illustrated by Margaret Warriner Buck; and 'The Sonnets from the *Trophées* of José de Hérédia,' translated by Edward Robeson Taylor.

If a sufficient number of guinea subscriptions can be obtained, the Clarendon Press, Oxford, will undertake an imperial quarto containing a facsimile of the original MS. of the Epistles to Timothy, Titus, and Philemon in Welsh, with a comparison of parallel versions and other enrichments. It will show the formation of a Welsh theological terminology and the development of a prose literary standard.

Hachette has published another volume in its series of monographs of Great French Writers, the author honored this time being the delightful, the subtle, the inimitable Marivaux. Coming so soon after the admirable work on Beaumarchais, the present one suffers by comparison. M. Gaston Deschamps, to whom has fallen the task of telling us about the delicate playwright and the novelist who inspired Richardson, has not been as happy as M. Hallays, and has failed to produce one of those books which come to mind as often as the name of the subject is mentioned. Not that the biography is a failure or the critical estimate a mistaken one; merely that there is not here that magic of style which in Hallays's 'Beaumarchais' made the man live again for us. That M. Deschamps has peculiar qualifications which pointed him out as the writer *par excellence* to take up Marivaux, every one must admit; but has he made the most of his subject? It is not enough to sympathize with Marivaux to the extent of disliking Molière and preferring the *soubrettes* of the eighteenth-century writer to the *domestiques* of the monarch of the comic stage. The book is easy reading for the most part, but is not striking in any respect, and it cannot be said that M. Deschamps has added to our knowledge of Marivaux or contributed to endear him more to us. Marivaux cannot be imitated, even by Musset, who merely surpasses him; hence it is impossible to speak the Marivaux tongue in writing about him, and no doubt this is the secret of our slight feeling of disappointment with M. Deschamps's work.

In the August number of the Bulletin of the New York Public Library is begun publication of 237 copy-press letters of Washington's acquired by the Lenox Library in 1895. They are on thin paper, partly reinforced in pencil, and sometimes illegible.

The *Scottish Geographical Magazine* for August contributes to Jubilee literature an interesting review of explorations within British territory during the last sixty years. Each continent is taken up in turn, and, after a brief description of what had been accomplished in 1837, an account is given of the principal expeditions and their results. It is noteworthy that the greater part of the knowledge acquired of southern Central Asia is due to native Indian explorers. There is also a short notice, with a map, of the Mississippi flood of last April, by Henry Gannett of the United States Geological Survey. The region flooded had a population of nearly 400,000, and contained "fully 2,000,000 acres of cultivated land, mainly devoted to cotton and maize," and which produced a crop last year of 370,000 bales of cotton and more than 11,000,000 bushels of maize, valued at about $16,400,000. Extracts are given from recent Canadian official reports in regard to gold in the Yukon district.

Petermann's Mitteilungen, number seven, opens with an account of the remarkable crater lakes of the Eifel in Rhenish Prussia, together with tables and charts of depth and temperature. This is followed by the conclusion of Dr. Supan's summary of the scientific results of the Nansen expedition, and notes upon a map of middle Albania and Epirus showing the distribution of plant-life in this region.

A naturalist has been sent out by the British Museum, at the expense of Dr. John Murray, to explore Christmas Island, which lies two hundred miles south of Java and is separated from it by an ocean four miles deep. Its area is about one hundred square miles, the highest point being about 1,200 feet, and it has a remarkable fauna. "Three of the five known mammals," says the London *Times*, "all the land birds, and four out of five land reptiles are endemic. Of insects, out of some thirty-five specimens that have been determined, twenty-three were new." The flora, in which orchids are very common, is almost wholly unknown. The island, of which a small part only has been explored, is about to be utilized by a commercial company for its phosphates. This makes very desirable a scientific examination before its native conditions are altered by man's agency.

The Genizah, or treasure-house of an ancient synagogue in Cairo, is described in the *Times* by Dr. S. Schechter of Cambridge, Eng. It is a windowless and doorless room at the end of the gallery, with an entrance through a big shapeless hole reached by a ladder. Here, in obedience to the injunction upon the Jews not to destroy any of their sacred books, which finally came to include the preservation of all writings in the Hebrew characters, have been deposited, during the past thousand years, worn-out and defective copies of such books, sound copies of "disgraced" books (that is, such as have once pretended to the rank of Scriptures, but have been authoritatively condemned as uninspired), and various Hebrew documents. Some parts of the immense mass, which includes books printed during the last four hundred years, are in a fair state of preservation, others are squeezed into unshapely lumps, while still others are "literally ground to dust in the terrible struggle for space." Dr. Schechter was able to rescue about forty thousand fragments of manuscripts, which have been placed in the library of the University of Cambridge, and are now being carefully examined. They consist mainly of parts of the Old Testament, some going as "far back as the tenth century," of Jewish liturgical works, of the two Talmuds, very many hymns, legal documents, letters, prescriptions, amulets, and fragments of miscellaneous works.

From a short essay on "Nationaljudenthum und Zionismus," in *Die Kritik* (Berlin) for August 7, we learn that the movement for the reëstablishment of an independent Jewish state in Palestine has thus far resulted in the foundation, within the last ten years, of twenty-six flourishing villages, with a population of 9,000 peasants—a notable instance, probably without parallel in history, of a mercantile city population turning suddenly into hard-working tillers of the soil. The Jewish contributor to the *Kritik* attributes the success of the

movement to the unheard-of idealism of which his fellow-believers are capable, and to the enthusiasm with which the youth of his race has received the new ideas. These ideas of Jewish nationalism and of Zionism have both sprung from the conviction, which the last few decades have ripened, that a final assimilation of the Hebrews with the nations of western Europe is a practical impossibility.

A startling comparison was contained in a statement made recently in Parliament by Lord George Hamilton in his Indian budget speech. After referring to the extraordinary number of persons who have been fed by the Indian Government in the "relief camps" and by other agencies, amounting to several millions, he said, in effect, that throughout the present famine the greatest number of persons relieved at any one time bore a much smaller proportion to the population of British India than the proportion of persons in permanent receipt of poor relief in England bears to the population of that country.

There is in England a body of persons who have associated themselves together as the Thames Valley Legitimist Club. Their peculiar mission is to uphold the right of the Stuart family to the throne of Great Britain. To these odd people, not Queen Victoria, but a German princess, is their rightful sovereign. The club holds its meetings at intervals, but does nothing more dangerous than to pass futile resolutions, which are reported in the newspapers as practical jokes. But these belated Jacobites are not to be left alone in the enjoyment of their craze. A new association has just sprung up, which calls itself the Society of the Red Carnation, and seeks to cut into the Jacobite business. The Council of the Thames Valley Legitimist Club has gravely resolved that the new society is "unnecessary," and that the advanced programme is bound to create "divisions and disgust among all true Legitimists and Jacobites," and to bring the cause into derision. The speedy dissolution of the intruder is advised by the Council of the original patentees.

The overcrowded state of the medical profession in Great Britain has recently been the subject of discussion in the London press, and particularly in the columns of the *Standard*. Medical men are not so well off now as they were thirty or forty years ago. Among the causes of this state of things are, it is urged: (1) Increased competition; (2) the enormous growth of the out-patient departments of hospitals, and the increase in the number of special hospitals; (3) the great increase in the sale of patent medicines; (4) the liberty allowed to quacks and other unqualified practitioners; and (5) the extensive prescribing by chemists and druggists. The increase in the number of practitioners has been relatively greater than the increase in the population. In 1878 there was one medical practitioner to every 1,645 persons in England and Wales; now there is one practitioner to every 1,451 only. The facilities for education among the less well-to-do classes have, no doubt, had their share in adding to the numbers who have swollen the ranks of the medical profession. The number of hospitals and dispensaries in England and Wales was 755, with a medical staff of 3,377, in 1878; in 1893, the hospitals and dispensaries numbered 928, and the medical staff 4,454.

The lamps of literature in South America are but few in number. The extinction of any one of them cannot, therefore, but be regretted. For some twenty years past the colony of British Guiana has produced a very creditable half-yearly magazine bearing the name of *Timehri*, which is the aboriginal Indian term for the primitive picture-writings found in that part of the continent. This journal has successively been under the editorship of Messrs. Im Thurn, Queich, and Rodway, who have themselves contributed largely to its columns. Among its other contributors have been Messrs. Kirke, Jenman, Alford Nichols, and Prof. J. B. Harrison, with others of British Guiana and the West Indian Islands. The publication was not a commercial venture, and never paid its expenses. It was carried on at the expense of the Royal Agricultural and Commercial Society of British Guiana. Having regard to the grave condition of the sugar industry of the colony, which is being gradually borne down by the operation of the foreign bounties upon beet sugar, the Society does not feel justified in continuing its support to the publication after the 31st of December next, when the last number will appear. The happy possessors of complete sets of *Timehri* will all the more cherish their volumes.

Two numbers of the *Boletin de la Sociedad Geográfica de Lima* (2d and 3d trimestres, Año VI.) have been issued simultaneously, and present additional papers on the indigenous languages of the Andean region by Dr. Leonardo Villar and Don Eulogio Delgado. In the second trimestre we note articles of timely interest in connection with the recent gold excitement in the Province of Carabaya, by Antonio Raimondi (a reprint of a paper originally sent to the Royal Geographical Society of London), and by Manuel Cesár Vidal, whose observations were of later date than those of Raimondi. Señor Vidal's account is aided by a map. Of special interest to North Americans is the description (3d trimestre), by Solón Bailey, of Mt. Misti, under the brow of which stands the Arequipa Observatory of Harvard College. A cross section of the crater, and a beautiful phototype of the observatory, with Mt. Misti in the background, accompany the article.

The second volume of the 'Geografía Comercial de la América del Sur,' by Carlos B. Cisneros and Rómolo E. Garcia (Lima: J. Mesinas), has just been issued. The present volume deals with the Argentine Republic, and within 100 pages gives an excellent account of its geographical features and products, its cities and their leading industries, together with routes of communication; the whole elucidated by a small but well-executed map.

—The leading articles in the *Atlantic* for September are Theodore Roosevelt's on the New York Police Force, and Carroll D. Wright's "Are the Rich Growing Richer and the Poor Poorer?" Mr. Roosevelt gives a history of his own police administration, and mentions several facts worth bearing in mind, *e. g.*, that the best policemen come from military, naval, or railroad services; that the result of the "merit system" is to increase the percentage of Americans on the force; that before each election the board was obliged to reject as morally or mentally unfit more than one thousand of the election officers picked out by party organizations; that it is since Tammany disappeared that the Bertillon identification system has been introduced, the bicycle squad set up, and the tramp lodging-houses abolished. Mr. Wright, who has not only devoted years to the accumulation of statistics on the subject, but who is a man of sense and judgment, declares that the statement so continually made about the rich and poor is, as a whole, untrue. Both rich and poor are improving in condition. Wealth is not stationary, and consequently the accumulation of fortunes for the few does not mean "a corresponding drainage from the many." He does not discuss the favorite Socialist question whether the poor get their fair share of the general increase, though he thinks they do not; but as he does not, and, indeed, cannot, explain what a fair share would be, this has no bearing on his general argument. Mrs. Mabel Loomis Todd's "In Quest of a Shadow" is a pleasant account of the observation of the total eclipse of the sun in 1896, in the Japanese island of Yezo, with many charming little touches of Japanese life and manners. Mrs. Todd, our readers do not need to be reminded, accompanied the Massachusetts expedition. "A Man and the Sea," by Guy H. Scull, is good realism. But is there such a thing as an abstract realistic man, like the economic man of Ricardo and Malthus? Prof. Gildersleeve's "A Southerner in the Peloponnesian War" is a fanciful attempt to find correspondences between our civil war and that between Athens and Sparta. He himself admits that "there is no real resemblance" outside "the inevitable features of all armed conflicts," and his article has the curious effect of producing, under the promise of a parallel, a glaring contrast. Henry Childs Merwin, who writes about "The American Notion of Equality," and Prof. Woodrow Wilson, who declares that the art of "Being Human" is the art of Freedom and of Force, may be said to baffle criticism. Mr. Hill's second instalment of Swift's unpublished letters is full of entertainment. The letter of April 29, 1721, in which the Dean explains his ability as a Christian to take the oath of allegiance "to any Prince in possession," is as good as anything in Gulliver. His argument on the subject, he says, has already "convinced a young Gentleman of great Parts and Virtue," and he feels that he could "defend himself" by it anywhere.

—*Scribner's* has two readable illustrated articles on out-of-the-way places, one on San Sebastian, by William Henry Bishop; the other on the "Mingan Seigniory" in Canada, by Frederic Irland. Mr. Bishop doubts if Americans know much about San Sebastian—he found none there—though it cannot be above thirty miles from Biarritz. He notices, what may be observed in Spanish America also, the utter difference in character between the Frenchman and the Spaniard—a difference, notwithstanding their common religion and other points of solidarity, as great, perhaps, in some respects, as that between the Spaniard and the Englishman. San Sebastian is a place to which Spanish royalty goes, and Mr. Bishop saw the royalties bathe there, much as one might see bathers at Newport. He was struck with their simplicity and entire naturalness; even the infant King being allowed to wade about barefoot and dig in the sand like any other child. There is nothing very remarkable about this, but kings and queens in Europe nowadays always strike American travellers as simple and unaffected people,

because we involuntarily contrast their manners and dress with those of the home millionaire, our supreme type. The account given of the Mingan salmon by Mr. Irland is true, though people who have not been in that curious fishing country would not be likely to credit it. We have seen and can vouch for the fifteen-foot waterfalls up which the fish leap, and, still more singular, for the rocky salmon pool, so crowded that, as Mr. Irland says, "their tails and dorsal fins could constantly be seen sticking out of the water." Walter A. Wyckoff's account of his experiment in passing himself off as a laboring man ("The Workers—A Day Laborer at West Point") is overdone. Why should masons, bricklayers, and plasterers go to work at the lowest form of manual labor, at West Point, at $1.60 per day, when the skilled labor of men of their sort commands $3.50? And how do they manage to pay out of this for "huge slices of juicy sirloin" for supper? If the story is fact, it shows a strange state of things in the labor market. F. B. Sanborn's "Lord Byron in the Greek Revolution" is based in part on an examination, made some years ago, of books and manuscripts in Finlay's Athenian house. In "Some Notes on Tennessee's Centennial," accompanied by illustrations of his own, F. Hopkinson Smith describes this achievement of the South as it is, and sheds a passing tear over the South as it was, in what he calls the "Wood-fire and Old Mahogany" period, when Col. Cyarter of Cyartersville still owned a number of "likely boys," and Mr. Hopkinson Smith was too young to suspect that the civilization about him was already doomed. "At the Foot of the Rockies," by Abbe Carter Goodloe, is worth reading, and the opening chapters of "The Durket Sperret," by Sarah Barnwell Elliott, show power.

—*Harper's* contains an article, in a vein of prophecy, by Capt. Mahan, "A Twentieth Century Outlook," and an illustrated article on "The Beginnings of the American Navy," by James Barnes, both of which certainly ought not to have appeared in the same number, for one destroys the effect of the other. Capt. Mahan thinks that the next century will see a state of affairs—what it is to be, he is far from explaining clearly, for the excellent reason that he does not know—in which we shall need a powerful navy. Mr. Barnes, on the other hand, shows that on the occasion when we were in most pressing need of ships and had opposed to us the greatest naval power in the world, we managed to do very well without any navy at all. It seems that at the time of the Revolution, the United States lost but twenty-four regularly armed vessels during the war, while the British lost one hundred and two. About eight hundred vessels of all kinds were captured by the American cruisers and privateers, while not a single Yankee cruiser was taken by the privateers of England; yet sixteen English cruisers were captured by American privateers. These figures are accompanied by the statement that it is "rather surprising" that the American people should not immediately, on the termination of the war with England, "have profited more than they did by her example in establishing a naval force on a peace footing." On the contrary, it is not surprising at all; what is surprising is that the writer should think so. This article, Mrs. Pennell's "Around London by Bicycle" (the illustrations by her husband), and "The Lotus Land of the Pacific," by John Harrison Wagner, are the chief illustrated papers, though Frederick Remington's "Great Medicine Horse" should not be overlooked. The most substantial article in the number is Henry James's account of Du Maurier, which we advise every one to read. It is a study of Leech's great successor (who, as Mr. James points out, stands alone in his ability to see "the funny" in the beautiful, and the beautiful in "the funny"), of a friend, and also of English caricature—a subject in which Mr. James is thoroughly at home. Besides all this, there is an elaborate criticism of the three novels, of which Mr. James thinks 'Peter Ibbetson' the best; he declares that Du Maurier himself could not see why 'Trilby' was picked out as his masterpiece by the public. A pathetic account is given of the effect of the awful burst of publicity upon him, when the world was taken by storm, for he was a modest man, and to him the glare and noise of the to-do made over him by the many-headed was a "botheration." When the light began to fail him, as it soon did, he was actually suffering from a surfeit of fame; the critic hardly needed to hesitate over what he calls the whimsicality of saying that the great caricaturist had not merely achieved what he wished and enjoyed what he wanted, but had both enjoyed and achieved a good deal more.

—It would be impossible to notice the *Century* for this month critically without going into a great deal of detail. Pierre de Coubertin's notes about "Royalists and Republicans" (illustrated by A. Castaigne) set old Bourbondom on its legs once more in the midst of contemporary France, evoking for the purpose the royal ghost of Frohsdorf. Apart from the continued fiction, all of which will, no doubt, claim criticism sooner or later as books, and to pass over for the same reason the penultimate instalment of General Porter's "Campaigning with Grant," two illustrated articles out of the common way are "Prisoners of State at Boro Boedor," by Eliza Ruhamah Scidmore, and "Cruelty in the Congo Free State," from the journals of the late E. J. Glave, an account of whose last days and death is subjoined by the editor of the magazine in a postscript. The first of them gives a description of ruins of Buddhist and Brahmanic temples in middle Java, said to surpass in "extent and magnificence" anything to be seen in Egypt or India—beauty and grandeur, it will be noticed, are not the terms chosen; the second is one of those sad and interesting chapters of African life which make us sometimes regret that the advance of knowledge and discovery and all the appliances of publicity must bring within our horizon more and more human wretchedness, curable only, however, by more publicity. Harry Furniss, the caricaturist, furnishes some "Glimpses of Gladstone," and seems to labor under the impression that his drawings of Gladstone are not properly caricatures. "Browning's Summers in Brittany" (illustrated by George Wharton Edwards) takes the reader to enchanted ground, and gives him something to think about at the same time.

—The *Revue Encyclopédique Larousse*, which, since it became a weekly, seems inclined to emphasize the last word in its title, has a more or less praiseworthy habit of bringing out now and then a special number of double or triple thickness, devoted entirely to some one subject. These numbers are often of considerable interest, and, under the well-known Larousse limitations, of a certain value. The issue of July 24 is one of these, and is devoted to Belgium, which it regards in many aspects, but chiefly in those that concern the arts. The articles it contains are for the most part, if not entirely, the work of well-known Flemish writers of the present time: M. Maurice Maeterlinck, M. Emile Verhaeren, M. Georges Eckhoud, M. Albert Mockel, M. Camille Lemonnier, M. Edmond Picard. Each of them speaks of what he knows best and likes best, and so their work is of value in itself; but the number also possesses a special interest as giving a sort of bird's-eye view of contemporaneous Flemish literature. One does not often see the work of so many representative writers of a country placed side by side. What one notes first in the present instance is the general air of "Jeunesse"; but Young Belgium is not exactly Young France, though there are indications that the very youngest France is drawing towards it and, more or less to its own advantage, submitting to its influence. To speak particularly of the different articles in the Review would lead us too far. The illustrations in it are to be noted, both for the excellence of some of the process prints, and for the wisdom which has determined the choice of the pictures, old and new, which are represented. There are, besides, many interesting portraits, some from photographs and some from paintings. Among the photographs will be found one of M. Maurice Maeterlinck looking somewhat older than in the usual photographs of him, and one of M. Emile Verhaeren, who seems to have gained the years of youth which Maeterlinck has lost. An admirable portrait of M. Georges Rodenbach and an almost equally admirable drawing of M. Cyriel Buysse are also given. A bibliography of the chief books relating to Belgium closes the number.

—The Lambeth Conference of Bishops of the Anglican communion which has just closed, gave occasion to the Bishop of Oxford of bringing out a second edition of his 'Registrum Sacrum Anglicanum' (Oxford: The Clarendon Press; New York: H. Frowde). The book is a list of all the bishops that have ever held English sees, and is intended to exhibit the course of episcopal succession in England as it may be gathered from the records and chronicles of the Church. This has been a labor of love on the part of Dr. Stubbs, who has (as he says and as the world knows) naturally that strong instinct for the investigation of continuities and coincidences which leads men to the study of chronology and genealogy for the pleasure of exercise—an instinct that was favored by the circumstances of early home education and local association. His book has been almost exactly fifty years in the making, and the first edition of it appeared about forty years ago. Its authority rests upon original documentary evidence to the almost complete exclusion of any second-hand testimony. In the first edition a tabular arrangement was followed. This has now been given up, which enables the author to exhibit distinctly the principal authorities for the several dates, and particular references to the editions of chronicles and other records, many of which have been printed since 1858. The book is simply indispensable to every student of English ecclesiastical history. One notes with

interest that Dr. Stubbs finds less new material for the mediæval portion of the work than might have been expected from the research made in the Papal archives since the accession of Leo XIII. It is pretty, too, to observe the summary disposition Dr. Stubbs makes of the lists of British and Welsh bishops anterior to the coming of Augustine, which were so dear to the heart of old-fashioned high churchmen. He sweeps them all into the dust-hole of an appendix, with the remark that this is done in order to clear away at once all questionable legendary matter from the subject. "There is probably some little truth in each of them," he says, "but so much that is simple fabrication that I have thought it better to insert them whole here, with what remarks I have to make on them, than to mix with undoubtedly true records any portion of what stands on so weak a foundation." Both in respect of these lists and, in fact, generally, students who compare, however hastily and slightly, the present volume with such works as Godwin's 'De Presulibus' and Le Neve's 'Fasti,' will note a contrast which, however oft repeated, is still startling, between the historical work of a critical and a non-critical age.

—There has just been published in New York a quaint little volume of Judeo-German poetry from the pen of Morris Rosenfeld, which marks an era in Jewish literature. Heretofore the poetry of the Russian Jews has consisted in the main of folk-songs, accessible in language and sentiment only to those of their own race and country. By the masterly productions of Mr. Rosenfeld, until lately a tailor by trade, a new road has been opened for it, one that leads to universal literature and demands universal recognition. The Jewish Muse sings in the minor key of oppression and suffering; so, too, our author's poems have frequently tears for their subject, and their burden is the unanswered question. The keynote is struck in his "Cemetery Nightingale," who of all places chooses the "Guter Ort" in which to pour out his sweetest songs. His ballads and legends have all a painful charm about them, and even such sentiments as generally cause others pleasant sensations make him smile through tears. The poet's technique is perfect, the melody of his rhythms and word-grouping is very remarkable in a dialect in which Slavic and Hebrew elements seem only to have corrupted its German base. Mr. Rosenfeld is the first one in his language to sing of youth and spring and love. We quote a stanza from his "The Jewish May" (in the German orthography, as far as the dialect permits of it), but one must read a whole poem before coming under the poet's spell:

> Wieder nemmt der Frühling mohlen
> Mit sein Pinsel—wie er schmiert,
> Weren Berger, weren Tholen,
> Werd die Erd' mit Grün verziert.
> Wieder lacht die Sunn' arunter
> Zu der Welt un' macht ihr munter;—
> Mit ihr Schmeichel (smile), mit ihr Kuss
> Macht sie greet (ready) ihr zum Genuss. . .

What makes the poet's genius the more remarkable is that he was born into a family of humble fishermen, and that he has received no other education than that which familiarizes every Jewish boy in Russia with the language and literature of his religious lore.

MR. LOGAN IN RUSSIA.

In Joyful Russia. By John A. Logan, jr. D. Appleton & Co.

One of the Arabian Nights' Tales relates the mishaps of voyagers who navigated too near the great mountain of lodestone, and suffered shipwreck in consequence. A volume would hardly suffice to narrate the mishaps of the over-bold travellers of modern days who go to pieces in Russia. The latest unfortunate on the list is Mr. John A. Logan, jr. Had he confined himself to a plain statement of what he saw during the coronation time and the remainder of his brief stay, taking due advice, and making careful observations, his book would have been small but valuable. The fragment of it which fulfils those conditions is valuable and, since his style is direct and graphic and his opportunities for seeing a limited part of Russian life were unusually good, interesting. Unfortunately, he has not been content with this, but his ambition "to write a book about Russia" on the ordinary slender foundations has betrayed him into a great deal of "padding," the greater portion of which has been taken from the works of writers who have preceded him. As his own knowledge of the language, life, and conditions was no larger than could reasonably be demanded of an impromptu visitor, the resulting web of ingeniously interwoven quotations (acknowledged and unacknowledged) was, of necessity, put together without any possible criterion, and all the original inaccuracies are incorporated with the natural misconceptions of the writer himself.

It is not usual to make mention of such secondary matters as the illustrations before the text has been duly examined, but in this case it will prove instructive if we reverse the common procedure and say a few words concerning them, because we shall thereby arrive directly at a characteristic feature of the whole work. Nine of the illustrations are extremely misleading, to say the least, though in varying degrees. Taking them in their order, they are as follows: P. 8, the Borovitzky Gate of the Kremlin is wrongly labelled "The Nikolsky Gate"; p. 32, "The Grand Duke Alexander Alexandrovitch" should read "Alexander Mikhailovitch"; and in the fulsome chapter on the reigning Empress, "The Empress Alexandrovna" means simply "The Empress, daughter of Alexander," instead of Alexandra Feodorovna (Alexandra, daughter of Feodor, her proper name); p. 43, "A Peasant of the Better Class" is a stock photograph, made, like the costume therein depicted, to be sold in the shops to confiding strangers, and the costume is not more genuinely peasant than is the woman who wears it; p. 67, "Our Little Servant" is another stock photograph of a Little Russian girl, with a Little Russian, not a Moscow, oven; pp. 111 and 265, "The Emperor's Bedroom" and "A Room in the Empress's Private Suite in the Palace of the Kremlin" are in reality two of the ancient, unused rooms in the old Terem, maintained as specimens of ancient building. The imperial apartments are in a different part of the palace, are entirely modern, and are not shown to every traveller. P. 151, "Georgian and Caucasian costumes" are merely the ordinary Cossack uniform, worn all over the empire by members of the Cossack regiments. P. 232, "Chapel at Petrovski Palace" is, in reality, a famous church at Ostankino, built in 1648, while the Petrovski palace—several miles away—was built in 1840. P. 239, "A Russian Merchant-Koopyets" is another stock photograph of a fashionable coachman in winter attire, as the author would (perhaps) have known had he been in Russia during the winter, whose climate, customs, and so forth, he repeatedly describes as though from personal observation. We may mention, in passing, that the four colored plates entirely fail to give any idea of the true coloring. The moral which the above-mentioned illustrations, with their easily rectified and wholly erroneous inscriptions, preach is, that Mr. Logan was not a careful observer even of what he really saw. The reader can readily judge of the length of his stay from the fact that he had time to write the book in Switzerland before the summer ended. We are able, therefore, to pronounce with considerable certainty as to what he had even the opportunity to observe.

His errors of commission and omission are so numerous that we must content ourselves with summary mention of the majority of them. P. 7, pilgrims do not carry samovars about with them and brew sizzling tea in the streets. P. 9, the corps of the Russian army at the railway stations is the gendarmes' corps. P. 15, Izvostchiks do not have a pillow sewed to the back of their coats; the fashionable men have them applied with artful fixedness, which prevents the amusing disarrangement described. P. 21, the passage concerning the policeman, his house, and habits is copied, unacknowledged, from F. Wishaw's thoroughly delightful 'Out of Doors in Tzarland,' and is erroneous in that work also. The anecdote of sleepers in the streets, recorded with an extraordinary use of the word "should," and mentioned again on p. 177, is unusual, if not incredible. P. 36 contains a passage originally written concerning some experience during a famine by an author not mentioned. Any physician could have informed the author that no class of people can use, as their "staple food," tree-bark and grass, raw or baked, without speedily turning to angels. P. 39, sterlet soup, we are told, "is better than clam chowder, and not altogether unlike it." It is wholly unlike it, if properly made. P. 48, the fine description of the habits of the blackcock and the manner of hunting them is taken from Wishaw's book just cited. P. 59, there is not "an ikon on the wall of every room in every Russian house," for there are stated proper places, not universal, for them. Neither is an ikon, necessarily, "a half-length picture." P. 60, it is a pity that the author did not fill out the quoted passage about the metal garments on the ikons with an explanation, if he found one in his authorities. There is a very rational and easy explanation. P. 61, here, and in nearly every other case where Russian words are used with a knowing effect, they are misspelled almost to the point of being unrecognizable. "Tchudotrormy" represents tchudotvorny; p. 76, "garmouka" for garmonka; p. 130, "Unpenski" for Uspenski; p. 244, "starvst" and "voriadnik" for starost and uriadnik; p. 254, "Shevtcheuko" and Seukovski for Shevtchenko and Senkovski. All these could easily have been avoided, as well as Somonosof for Lomonosoff, p. 260, and "Efunovitch" for Evfimovitch on the same page. P. 95, we find the old familiar fable about Ivan the Terrible putting out the eyes of the architect who built the Cathedral of St. Basil. As a matter of fact, the wooden church which preceded the present one on the same site was built under Ivan, who died long before the present one (the

one in question) was finished. P. 110, the Emperor and Empress did not spend their three days of religious retirement at the Petrovsky Palace, as the author will remember, but at the Alexandrinsky Palace, several miles away.

Mr. Logan's description of the actual coronation ceremony, which he did not see, is quite good and accurate (as it is taken from a competent authority), with one or two exceptions. The impression conveyed by the introduction of the benedictions and other phrases in Latin is that Latin was the language used in the service; whereas, as always in the Russian Church, it was Old Church Slavic. Moreover, when he asserts (pp. 118, 235, 237) that the Russian Church "acknowledges the Czar as its spiritual chief," he speaks in ignorance of the facts, as he does when he states that the Virgin Mary is "worshipped." If he will refer to the Office for the Reception of Converts into the Orthodox Church, he will find the position of the Church on both those points distinctly and unmistakably set forth; the spiritual Head of the Church is Christ, and it has no earthly head; the Virgin Mother receives homage, but not worship. Neither is it true that "every soldier in the army is a blind idolater, and has learned at his mother's knees and in the village church that the noblest thing he can do is to lay down his life for his ruler, or to spend it in unquestioning service." That doctrine is not preached, and, in the thousands of pages of the Church Service books, it is not once mentioned. However, it sounds well, like many other attempts at fine writing which serve to fill out the requisite number of pages. Equally misleading are other statements in this chapter upon the Church. The Russian Church does not "attach to her priesthood plenary powers of indulgence" (p. 234). Unlike the Roman Catholic Church, she admits of no indulgence. And the Patriarch Nikon was not "banished to the Siberian desert" (p. 235), but to a place less than 200 miles from St. Petersburg's present site. So far is it from the truth that when Russian priests "become widowers they lose their cures and must become monks," that the proof of the contrary can be obtained in New York city. A recent number of the *Russian American Messenger*, the official organ of the Russian Church in America, published in New York, mentioned the need for an assistant in the cathedral at San Francisco, adding: "A widower or monk is preferred"; and a widower is arch-priest over one of the Pennsylvania parishes.

Other extraordinary statements can be found in the chapter, "How We Washed in Russia." On p. 187, the author describes the method of heating by means of "large blocks of wood" placed in an oven in one corner. "When they have become sufficiently heated, the attendant throws over them quantities of cold water sufficient to make as much steam as if a boiler had burst. . . . In order to enhance the steam, bunches of birch twigs are first dipped in the water and then thrust into the oven. During the steaming process, the attendant takes one of these bunches of birch rods and proceeds to beat the bather." It hardly requires an expert to perceive how dangerous and short-lived blocks of wood—even of hard wood—would be for such a use as that described; stones are the proper thing, and probably what the author saw. Peter the Great, very appropriately, used cannon-balls. The birch twigs would hardly enhance the steam to any extent; they are thus treated to prevent the leaves from falling off during the beating process, and to render them soft to the flesh. The "excelsior" here mentioned is merely finely shredded linden bast. Perhaps the most remarkable assertion of all is that contained in the description of the Christmas masquerading and the religious ceremony of "The Blessing of the Waters," at the end of this chapter. This will be interesting news to Russians. It is true that many peasants jump into the stream after it has been blessed, both at the Feast of the Epiphany (in commemoration of Christ's baptism in the Jordan), which is here referred to, and on various other occasions, of less importance, during the year, when the same ceremony takes place for other reasons, and in milder weather. But that it is merely a lavish way of using holy water, instead of a special cleansing process after fancy-dress frolics, may be gathered from the fact that, at this particular "Jordan" Blessing of the Waters, the Church statutes enjoin the priests to drink of the holy water before partaking of food, under certain conditions, and the priests assuredly are not "purging their devout bodies from the uncleanness they had absorbed from indiscreet wearing of heathen-like garments."

The chapter on "Slavic Literature" is charmingly ingenuous. It deals with the whole subject as a freshly discovered and original field of investigation, conveying the impression of profound research in the native tongue and dialects. But how fresh it is to the author himself is shown by his remark preceding copious quotations (acknowledged) from Dr. Georg Brandes, on the Epic Songs or Byliny. "The history of these bilini is so deeply interesting that I venture to dwell upon it, feeling sure that they are unknown to thousands of English and American readers who are fairly familiar with modern Russian fiction." In 1886 'The Epic Songs of Russia,' by Isabel F. Hapgood, with an introduction by the late Prof. Francis J. Child of Harvard College, was published in New York, and became a standard book, familiar not only to thousands of Americans and English, but to many Russians as well. In the absence of reliable authorities from whom he could quote, or the rare knowledge of the subject, which demands long residence and study, as well as acquaintance with the Russian language, history, and other branches, it is not surprising that the chapter on "Slavic Art" should be unsatisfactory, despite its enthusiastic appreciation.

It would not have been worth while to enter into these details had the pretensions of the book been less, and the tone less aggressively authoritative. But, having criticised its shortcomings, we must give due credit to the spirited style, the freshness, and interest of chapters xxii. and xxiii., on Russian Horses, taken from Col. Ismailoff's Chicago Exposition volume; the truth of the comments (p. 18) on the present incapacity for self-government of the Russian masses; page 50, the quality of food in the prisons; page 79, on bathing at home, and, in general, the author's personal experiences; page 88, the disappointing effect of the much-lauded gypsy singers, and the exquisite Russian courtesy which makes a guest feel that he is conferring, as well as receiving, a favor; page 152, on the simple manner of the Emperor and Empress, driving, unattended, and heartily received by their people; p. 153, on the manufacture of terrible stories for foreign consumption.

A Description of the Wordsworth and Coleridge Manuscripts in the Possession of Mr. T. Norton Longman. With three facsimile reproductions. Edited with notes by W. Hale White. Longmans, Green & Co.

This sumptuous book describes four volumes of Wordsworth and Coleridge manuscripts belonging to Mr. T. Norton Longman of the publishing family. The first of these volumes comprises the "copy" for most of volume ii. of the 1800 edition of the 'Lyrical Ballads' and for a part of volume i., together with a number of letters. The second and third are the "copy" for the 1802 edition of the same. The fourth is the manuscript of the 'Poems in Two Volumes,' 1807. A bare statement of the contents of Mr. Longman's manuscripts conveys, however, no idea of their interest. This is biographical as well as literary, for, as the editor justly remarks, even such a detail as "the intermixture of handwritings is remarkable evidence of the intimacy of the relationship between Coleridge, Wordsworth, and Dorothy, and shows how much the 'Lyrical Ballads' of 1800 owed to love and friendship." We shall not attempt an exhaustive notice of a book which every student of Wordsworth or Coleridge will wish to possess, or at least to examine, but shall rest content with mentioning some of the interesting things which it contains.

Among these is a holograph letter from Wordsworth to "Mr. Davy, Superintendent of the Pneumatic Institution, Bristol" (afterwards the celebrated Sir Humphry Davy), begging him "to look over the enclosed poems and correct anything he finds amiss in the punctuation"—"a business," continues Wordsworth, "in which I am ashamed to say I am no adept." With this letter were enclosed "Hartleap Well," "There was a Boy," "Ellen Irwin," and part of "The Brothers."

Interesting, also, is the sheet, in Dorothy Wordsworth's hand, containing the Notes to the first volume of the 'Lyrical Ballads.' This includes Wordsworth's strangely banal criticism of "The Ancient Mariner"—a note which was dropped after 1800. Curiously enough, there is little reason to doubt that these unappreciative remarks allowed the poem merits quite as great as Coleridge himself was disposed to claim for it.

Of very great interest is the sixteenth sheet in the first manuscript volume. This sheet, which is entirely in Coleridge's hand, contains the whole of "Love," with various corrections. Coleridge has deleted one whole stanza, much to the improvement of the poem, though the verses are beautiful in themselves. The sheet also contains more than seventy alterations for "The Ancient Mariner." The felicity of some of these changes is hardly surpassed by Milton's amazing revision of his "Lycidas." It is in this manuscript, for instance, that

> "Are those *her* naked ribs, which fleck'd
> The sun that did behind them peer?"

is first changed to

> "Are those *her* ribs thro' which the sun
> Did peer, as thro' a grate?"

And again, the halting stanza,

> "Since then at an uncertain hour,

Now oftimes and now fewer,
That anguish comes and makes me tell
My ghastly aventure,"

is transmuted into

"Since then at an uncertain hour
That agony returns;
And till my ghastly tale is told
This heart within me burns."

The copy for the 1802 edition of the 'Lyrical Ballads' contains two highly interesting cancelled passages, now printed for the first time. Both are important for the history of Wordsworth's critical opinions, and the first will repay study.

Mr. Longman's last volume contains some textual variations of moment, all of which are registered by Mr. White. "The Tinker" and lines "On Seeing some Tourists of the Lakes pass by reading" have never before been printed.

Nothing but praise is due to Mr. Hale White for his part in this book. His account of the material is clear, and his editorial work seems to have been performed with scrupulous accuracy. The facsimile reproductions are "The Brothers" (in part), the letter to Mr. Davy, Coleridge's "Love," and a part of the "Ode on Immortality." They are beautifully executed. In closing this summary notice it is our painful duty to quote, for our readers' benefit, two sentences from the preface, which tell their own story: "Professor Knight, in his last edition of Wordsworth's Poems, has inserted some of the various readings found in the [Longman] MSS. He has not, however, in all cases transcribed them correctly, nor is the transcription complete."

Book and Heart: Essays on Literature and Life. By Thomas Wentworth Higginson. Harper & Bros. 1897.

The fanciful title taken by Mr. Higginson for his collection of essays (reprinted, in part, from reviews and newspapers) is explained on the title-page by a quotation from the New England Primer, and still further elucidated by the table of contents. With literature and life the essayist concerns himself, and there is a great deal of pleasant talk about both in his pages. We ourselves like the literary essays best, for those which deal with life are occasionally suggestive of the pulpit; but if called upon to defend our preference, we doubt very much whether we have any better reason than a reprehensible aversion to the pulpit "tone," as one might shy at the medical or legal, on occasion. Mr. Higginson's views of life cannot be called those of a man of the world—they are rather those of a recluse and scholar, who has had a good deal to do with life without ever having fallen under the thraldom of what is known as society. Yet Swelldom, as existent in Newport, is not unknown to him; and in a very good essay on the "Problem of Drudgery," he naïvely confesses that his own most vivid memory of social drudgery goes back to an evening at the chief club in that town, where three or four fashionable men debated for two hours the question of servants' liveries. Though men come and go, this goes on for ever, for fashionable men are really interested in servants' liveries, and people, fashionable or unfashionable, talk about what interests them. After all, which is the worst, that the vapid should talk about what interests vapidity, or that, as in former days, they should affect an interest in literary things, to such as they really incomprehensible? But this is beside the point, which is that life means drudgery for all, and that the secret of happiness is congenial work. Hence literature and art stand high among pursuits (Mr. Higginson cautiously limits the statement by adding "to those who love them"), because their very drudgery is mostly a pleasure.

Mr. Higginson is an accomplished literary critic, and has also, what many critics have not, a gift for reproducing personal impressions, as in the account of "Lowell's Closing Years in Cambridge" in this volume. Essays like these are not dogmatic or polemic; they are rather the friendly talk of a thoughtful man, with whom we may not always agree, but whose suggestions we may take or leave. One point, however, we must dispute. The author declares (p. 133) that it is becoming more and more "absurd" to classify men and women "by occupation instead of character." How is this to be reconciled with the classification of literature and art at the top of all? A world in which people are classified by merit, virtue, intellect, and character is an old and beautiful ideal, but there is nothing absurd in other classifications; and visible external differences, such as rank, clothes, money, power, manners, and occupations, are instinctively fastened upon as among the necessary tests applied by everybody. No kind of labor can be degrading, our author thinks, and we say so, too; but that does not prove that manual labor is ennobling, or prevent the inference, as matters stand, that it would be absurd to put Mr. Higginson and a hod-carrier in the same social class. We dislike the word "class," because it recalls caste, but without classes, according to some test, every logician must admit that there can be no classification, and we see no reason to believe that a classification by merit only could ever be of more than limited application. The fact is, that the dream is of a unitary system of classification in a non-unitary world.

Essays and Addresses. By Sir J. Russell Reynolds, Bart., F. R. S., M.D. Lond. etc., etc. Macmillan. Pp. xxiv, 307.

The friends of Dr. Russell Reynolds have built for him the best of monuments in a volume of his occasional addresses. His face in the frontispiece—one of those in which Charles Lamb says the heavenly dove sits visibly brooding—is in keeping with his discourses. The idea pervading all his utterances—not obtrusively, but like a sweet and subtle aroma—is that materialistic views not only are false in fact, but tend to inhuman and unsuccessful medical treatment.

His life was that of an ideal doctor. During the whole of it, from his twenty-fourth year, he dwelt in the same London house, succeeding another doctor there. All that time (1852-1896) he was busy in metropolitan colleges, hospitals, or practice. Seldom was he beyond hearing of Bow Bells. When sixty years old he had a glimpse of the Alps, and about the same time made one address in Bristol and another in Bolton. No wonder that these excursions were his only claims to membership in the Travellers' Club, for he held that frequent rides, even in an easy-going, first-class English coach, must generate diseases. "Prominent among these," he remarks, "are insomnia, defective memory," etc. "The jar of frequently-stopping suburban trains is seriously damaging, even when a busy man is concussed into a sort of coma by six to seven minutes of the train" (p. 262).

Dr. Reynolds, in 1884, delivering the Harveian oration before the Royal College, of which he died President, was glad to recall the fact that his grandfather in 1776 had enjoyed the same honor. This oration was the most elaborate of the grandson's productions; nor can we easily find so good a tribute to Harvey, not only as discovering —that is, proving—the circulation of the blood, but as filled with a philosophical spirit of prophecy, thanks to which he anticipated in idea many nineteenth-century revelations. One at least of the articles in this memorial volume has been long known in America, since it formed the introduction to 'A System of Medicine,' which Dr. Reynolds edited in 1866. Several other articles, which served well for local and temporary ends, and which personal friends would not willingly let die, cannot be of much interest to the general or even medical public. Dr. Reynolds was hospitable to new ideas. He describes with gusto the first trial at an amputation by a sceptic of "the Yankee dodge for making men insensible," as the use of ether for an anæsthetic was called, and its triumphant success (p. 274). His last address was entitled "The Organized Progress of Medicine." He loved to contrast the harmonious compromises in his latter days with his youth, when a triangular and internecine fight was waging between antiphlogistics, "who would bleed every one, whether he had pneumonia, apoplexy, a compound fracture, or a fit"; expectants, who would do nothing for a patient but watch him as the Levite did the Jew who had been left half dead by thieves; and those whose therapeutics were based on brandy. He died happy in the discoveries he had seen "as to the pituitary body, the thyroid gland, and the suprarenal capsules, as well as regarding the metabolic properties of the liver and the spleen" (p. 296), and in faith that, standing on the threshold of still greater revelations, he saw through the portal a larger knowledge as to the nutrition of all organs, of the way in which this is brought about, and of the interdependence of all tissues.

South and East Africa. By C. P. Lucas. Oxford: Clarendon Press; New York: Macmillan.

It is a real pleasure to read on a timely and difficult subject a book as well written as this one. Of its two parts, which make up the fourth volume of Mr. Lucas's 'Historical Geography of the British Colonies,' the first is purely historical. As he says in beginning:

"The story of South Africa is unique in the chronicles of European colonization. For a century and a half it is the barren record of a landmark—the Cape. For another century and a half it is little more than the story of a port of call, round which a small settlement gathered. It is now the unfinished tale of a wide dominion.

"In the days when the Portuguese were lords of the sea, the Cape was a point on the route to and from the East, to be sighted and gladly passed by. Under the Dutch it was a trading station, subsidiary to and maintained in the interests of the Netherlands Indies. In British keeping it has been the nucleus of a great European colony,

the home and abiding-place of a large white population."

In less than three hundred and fifty short pages the author gives us an excellent account of the three periods without ever letting our interest flag. If it is easy enough to write dispassionately of earlier events, the times of Dutch dominion, the task becomes increasingly delicate for each decade of the present century. Almost at every page the writer has to dwell upon subjects that have provoked great difference of opinion and aroused bitter feeling; some of them are burning questions at the present day. As between the whites and the blacks, the missionaries and the settlers, the colonists and the home Government, the Boers and the English, Mr. Lucas remains calm and judicial, striving to be fair to both parties, and, we believe, succeeding. Naturally the troubles of the last two years are touched upon but lightly. We know of no other book which contains such an admirable short account of South African history, clear and impartial, well proportioned, well thought out, and well expressed.

The second part, which is chiefly geography, being more technical, will be of less interest to the general reader: indeed, the short chapters, excellent in themselves, are hardly longer than encyclopædia articles. The most important of them, the one on British East Africa, is particularly attractive, although, with its acompanying map, it is open to question on political grounds. Here, as in several other regions of the world, the last word in the settling of boundaries between the French and English has not yet been heard—a fact which the latter are trying to ignore. Still, we do not wish to end with a criticism our remarks on so satisfactory a work, but prefer instead to call attention to the eleven little maps that form a useful supplement to the text.

SECOND EDITION
Of "a very remarkable romance."—*Times.*

THE GADFLY.

By E. L. VOYNICH. 12mo, $1.25.

The Dial: "The story of the Italian revolutionary movement. . . . Is full of such incidents as the novelist most desires. . . . This novel is one of the strongest of the year, vivid in conception and dramatic in execution, filled with intense human feeling, and worked up to a tremendously impressive climax."

The Critic: "An historical novel . . . in which from first to last the story is dominant and absorbing."

HENRY HOLT & CO., NEW YORK

Who Reads a Book?

Might well be asked in this day of newspapers and magazines. The Chautauqua Reading Circle helps busy people to make the acquaintance of good books.

The German-Roman Year

offers an interesting plan.

The Macmillan Company's New Books.

NOW READY OR TO BE PUBLISHED IN OCTOBER.

F. MARION CRAWFORD'S NEW ITALIAN NOVEL,

CORLEONE.

Another Story of the Saracinesca Family.

Mr. Crawford's most popular novels are held to be those which reproduce Roman society and are chiefly concerned with the fortunes of the different generations of the Saracinesca family. In his latest novel we follow our old friends Don Orsino and his cousin San Giacinto into the Sicily mountains, where they fall afoul of the *mafia* and have various exciting adventures all involved with the affairs of one or another of the Corleone brothers, "the worst blood in Sicily," one of whom, by the way, is, in the end, husband of Bianca Corleone, who figures as Veronica's friend in "Taquisara."

In Two Volumes. Cloth, Extra. Price, $2.00.

Stories of Western Life and People.

THE OLD SANTA FÉ TRAIL.

By Col. Henry Inman, late of the U. S. Army. With full-page Plates by Frederic Remington, and many smaller Illustrations, besides a Map of the Trail. *Ready in October.*

A FOREST ORCHID AND OTHER TALES.

By Ella Higginson, author of "From the Land of the Snow Pearls—Tales of Puget Sound."

THE GENERAL MANAGER'S STORY. Old-Time Reminiscences of Railroading in the United States.

By Herbert Elliott Hamblen, author of "On Many Seas." *Ready in October.*

The Letters of Elizabeth Barrett Browning.

In two volumes. With Portraits, etc. Medium 8vo. *Ready in October.*

These frank, simply written letters display every period of Mrs. Browning's life from her earliest girlhood, with many sketches of well-known people who were among her visitors. Thus she gives us one of the very few *English* views of George Sand's striking personality.

BOSTON BROWNING SOCIETY PAPERS.

Selected to represent the works of the Society from 1886 to 1897.

Cloth, 8vo. Price, $3.00.

The Golden Treasury of Songs and Lyrics of the English Language.

Second Series—MODERN POETRY.

Selected and arranged with Notes by Francis T. Palgrave, M.A.

THE STATUE IN THE AIR. An Allegory.

By Miss Caroline Le Conte.

A prose poem of classical beauty, with pages which recall the Socratic legends.

Practical Idealism.

By William DeWitt Hyde, President of Bowdoin College, and author of "Outlines of Social Theology," *Ready in October.*

"The natural sequence of Dr. Hyde's Theoretical 'Outlines,' which was pronounced a peculiarly original, interesting, and suggestive study."—*The Church Standard.*

In Press. **Other Important Philosophical Works.** *Recently Issued.*

THE CONCEPTION OF GOD.

A Philosophical Discussion Concerning the Nature of the Divine Idea as a Demonstrable Reality.

By Josiah Royce, Ph.D., Harvard University; Joseph Le Conte, M.D., LL.D., and G. H. Howison, LL.D., Professors in the University of California. *A reissue with a new and fuller essay* by Professor Royce. Crown 8vo.

THE SOCIAL TEACHINGS OF JESUS.

An Essay in Christian Sociology. By Shailer Mathews, University of Chicago.

In the present volume an attempt is made to study the Social Teachings of Jesus systematically, with little or no attempt at homiletic application. It is based upon the belief that Jesus, as a strong thinker, must have had some central truth or conception.

GENESIS OF THE SOCIAL CONSCIENCE.

The Relation Between the Establishment of Christianity in Europe and the Social Question.

By Henry Spencer Nash, Professor in the Episcopal Theological School, Cambridge, Mass.

"Perhaps not since the publication of Kidd's volume has a more genuinely popular sociological work appeared."—*The Outlook.*

THE MYTHS OF ISRAEL.

The Ancient Book of Genesis, with Analysis and Explanations of its Contents.

By Amos Kidder Fiske.

The Study of City Government.

An Outline of the Problems of Municipal Functions, Control, and Organization.

By Delos F. Wilcox, A.M., Ph.D. The author holds that the City Problem is the key to the immediate future of social progress in this country, and he offers for the first time a systematic outline for the study of the whole municipal field, indicating the chief problems in order with facts and illustrations sufficient as a basis for intelligent interest and a guide to the sources of further information. He discusses in turn problems of function, of control, and of organization, and his book will be very useful.

THE FINANCES OF NEW YORK CITY.

By E. Dana Durand.

A well written, clear, straightforward, and interesting history of an important subject.

A POLITICAL PRIMER FOR NEW YORK STATE AND CITY.

The City Under the Greater New York Charter.

By Adele M. Fielde, Secretary of the League for Political Education.

With numerous Maps.

Singing Verses for Children.

With Music and Illustrations in Color. Verses by Lydia Avery Coonley. Illustrations and Colored Borders by Alice Kellogg Tyler. Music by Frederic W. Root, Eleanor Smith, Jessie L. Gaynor, and Frank H. Atkinson, Jr.

The verses are simple and natural, full of the pleasures of child-life, outdoor or indoor, and so varied that something appropriate to every season can be found. The music is admirably suited to the verses, and is intended to be sung to children as well as by children. The illustrations make it a rarely beautiful picture-book, showing a delicate sense of color and a keen sympathy with child nature.

BIRDCRAFT.

By Mabel O. Wright. New and cheaper edition. Illustrated by Louis A. Fuertes. Cloth, extra, 8vo, $2.50.

CITIZEN BIRD.

A story of Bird Life. By Mabel O. Wright and Dr. Elliott Coues. New edition. Cloth, $1.50 net.

WILD NEIGHBORS.

A Book about Animals. By Ernest Ingersoll. With 20 full-page Plates and other Illustrations Cloth, crown 8vo, $1.50.

LIFE HISTORIES OF AMERICAN INSECTS.

By Professor Clarence M. Weed. Freely illustrated. Cloth, crown 8vo, $1.50.

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 16, 1897.

The Week.

The Ohio Gold Democrats showed on Thursday that they have both courage and convictions to base it on. If a platform alone were to be voted on in Ohio, theirs ought to have the best chance of winning, as it is incomparably better than either of the others. It is the Indianapolis platform brought down to date, with the Dingley bill to give fresh point to the demand for taxation for revenue only, the lavish appropriations to the demand for economy, the action of President McKinley (which the platform praises) to the demand for civil-service reform, and the Hawaiian annexation treaty to the demand for a peaceful foreign policy. All told, the platform is a model of political principles fitted to the crying needs of the hour. Whether the ticket nominated secures many or few votes, the Gold Democrats of Ohio have at least raised a standard to which honest men may rally.

The Ohio campaign was formally "opened" on Saturday, and one reads the speeches in vain to find a clear note of political leadership or courage. Of Senator Hanna's performance it is enough to say that it explains his praise of the Senate and his indignant denial that it has degenerated. The school-boy style and low tone of this speech of one of the great men of the modern Senate show how its own standards of judgment are vitiated. The very denial of decay is proof of decay. To make the exhibition of Republican harmony in Ohio complete, ex-Secretary Foster, who made such a lamentable bankruptcy under the Wilson bill, was brought out as a striking evidence of what the Dingley bill has done to restore prosperity. He undertook to hurl back two falsehoods, one of which was that the funds began to run low before Harrison went out, and that he, Foster, had made all his preparations to issue bonds. This falsehood, he complains, has been so many times repeated that even Republicans have believed it. So they have, including those Republican bankers in this city with whom Mr. Foster discussed his intended operation, and including also those Republican officials in the Treasury who were surprised when the orders to prepare bonds were countermanded. Mr. Foster's denial lacks something of completeness. The way he meets the charge that he prepared to sell bonds is by asserting that the revenue was sufficient to pay expenses. But if the issue of bonds was contemplated in order to fortify the imperilled gold reserve, or as a general measure of precaution, then this denial does not deny. Mr. Foster must be more explicit if he really means to set right all the financial historians of the period in question.

During the recent session of Quay's Legislature, the Republican machine insisted upon padding the pay-rolls with the names of many "runners" and "heelers," who were to be paid out of the public treasury for partisan work. Quay's creatures in the Senate and House did not shrink from passing bills appropriating money for this purpose, and the State Treasurer was called upon for the amounts allowed to these fictitious and unlawful employees. This official suspected that the Governor might not be so complaisant to the boss as the legislators had been, and he refused to pay any of these illegitimate allowances until a lot of prominent Republican politicians had given him a $20,000 bond to indemnify him if the Executive should veto the padded list, as in due course of time he did. One of the names on this bond was that of the Secretary of the Commonwealth, Gen. Frank Reeder, and Gov. Hastings has very properly forced the resignation of a man who thus showed himself ready to condone fraud upon the public treasury. Another State official, Deputy Attorney-General Elkin, has had to resign for the same reason. It is obvious that political motives reinforced the dictates of propriety in leading the Governor to force these retirements. Both the offending officials have been Quay men, and anti-Quay men are reported to be slated as their successors. Indeed, Gov. Hastings has thrown a cloud over the motives for his action by offering the secretaryship to Dave Martin, one of the most unscrupulous Republican politicians in Philadelphia, whose appointment is a disgrace to the State. The gossips hold that this is only the first step in an organized movement for the overthrow of Quay, in which Chris Magee of Pittsburgh is to join. Unhappy Republicans of Pennsylvania, who have to choose only between Quay and a Martin-Magee "combine"!

The architects' competition to secure the best plans for the new Pennsylvania State-house has come to grief. It is the old story of politicians being so much more expert than the experts. The architectural experts recommended any one of eight plans, having rejected thirty. This at once alarmed the politicians on the building commission. Why were any plans rejected? Especially why were any plans of friends of theirs rejected? It was all very well for the experts to say the rejected plans did not comply with the conditions, or were obviously inferior. It was not at all obvious to the Commissioners, who proceeded, by a vote of 4 to 1, to kick the report of the experts out of doors, and to invite architects to resubmit their plans to the Commissioners direct. This action was taken only after Gov. Hastings, himself a member of the commission, had pointed out that it would be an act of bad faith towards the experts and the public and an insult to every architect. But what did the commission care about that? They knew that it would not be regarded as an insult by "a certain architect," whose plans, it was freely charged, they were determined to approve and adopt, despite the adverse decision of the experts.

We consider it a most fortunate thing for this city that Richard Croker should have returned from abroad to reassume control of the Tammany forces just at this time. He landed at the very moment when the long contest between Senator Platt and the Citizens' Union reached its crisis. Public attention had been concentrated for many weeks upon the frantic efforts of the Republican boss to convince the Citizens' Union that it had no right to take away from him, or to exercise without his permission, the power of making nominations. He was insisting, and his arguments and threats filled many columns of the newspapers daily, that unless he was allowed to name the candidates first, the party organization which he controlled would not only refuse to accept them, but would put up other candidates, and thus make the triumph of good government impossible. Meanwhile, the extraordinary reception given to the newly landed Tammany boss by the press and politicians called public attention chiefly to one great fact, namely, that he not only claimed the right of nomination for the Tammany forces, and for the entire Democratic party, but that his complete possession of this right was conceded. What were the Democratic voters who were so exacting in their demands about the avoidance of all contamination with Republican boss rule, going to do about this? Would they submit to that in their own party which they had declared to be so odious in the Republican party? In this, Croker has performed a public service of incalculable value. He has done even more than Platt to justify the course of the Citizens' Union, for he has shown to Democrats as well as to Republicans that there can be no honest rule of the city, no real good government, except through the election of

candidates on the plan proposed and followed by the Citizens' Union.

Senator Gallinger of New Hampshire confesses his intellectual poverty in his reply to Carl Schurz, by drawing the chief part of his material from the works of the late James G. Blaine and those of another writer whose name is not given. It is within the memory of the present generation that Mr. Blaine was the Republican nominee for the Presidency in 1884, and that Mr. Schurz made a speech opposing his election on the ground that he had used his office as Speaker of the House to make money for himself. It is a matter of history that many Republicans at that time believed the charge (which did not rest upon Mr. Schurz's say-so), and that they voted against him in such numbers as to defeat him. Subsequently Mr. Blaine wrote his book, 'Twenty Years in Congress,' or that part of it which gives his opinions of Mr. Schurz. Favorable mention could not be expected under the circumstances. We do not know where Gallinger was at that time. He bloomed at a later date, but if he has any gift of original research, we commend for the subject of his next discourse the question who is the better friend of the Republican party—the one who warns it against putting up a vulnerable candidate (as Mr. Schurz did before the convention of that year was held), or the one who leads the party to a smashing defeat?

A writer in the Chicago *Times-Herald* claims for Congressman Tawney of Minnesota the honor of getting the discriminating clause against Canadian railroads inserted in the Dingley bill, saying that "he is execrated by the Canadian Pacific Road, but there are those in this country who say he is one of the greatest and shrewdest statesmen in America, and that he richly deserves to be President of the United States before he dies." This, we presume, is the utterance of an irresponsible reporter. The Chicago *Times-Herald* is conducted with some reference to the moral aspects of public questions, and we cannot believe that it defends the practice of passing bills in Congress by stealth, and then rewarding the tricksters with the highest office in the gift of the people. Such a standard of merit for the Presidency would be the last reach of public depravity. It would be the signal for "shooting Niagara," so far as the American republic is concerned. It is admitted on all hands that this clause was not known to the Congress that passed it. Mr. Dingley says so in his ingenious explanation. He tells us that its purport was not known to the framers of it; that they were aiming at something altogether different, and were surprised when they found out the interpretation that might be put upon it. In other words, the Dingley explanation does not allow any merit or demerit to Tawney of Minnesota. It was simply a mistake. Yet we incline to the belief that no mistake was made, and it is very possible that Mr. Tawney may have been one of the tricksters, but he could not have been the chief trickster. There must have been a powerful influence behind him. All the corrupt and corruptible newspapers that have dealt with this question have ignored the method by which the clause was inserted in the bill, and have kept insisting that the clause itself was a good thing, whereas the question whether it was a good or a bad thing never was considered by Congress at all; and there lies the kernel of the whole controversy.

Another decision as to the use of public highways by strikers has been rendered by Judge McIlvain of Pennsylvania, who takes substantially the same view as Judge Goff of the United States Circuit Court in the West Virginia case. Judge McIlvain holds that workingmen have a right not only to strike, but to persuade others to follow their example. In pursuance of this purpose they may hold meetings, have parades, and march along a highway in such parades. But they have not a right to take virtual possession of a portion of a highway, which was the claim made by the strikers, in Pennsylvania as well as in West Virginia. "A parade," says Judge McIlvain, "confined to a limited piece of a public road before a pit mouth and under a tramway, repeated two or three times a day for ten days or two weeks, loses the characteristic of legitimate parade, and, when directed against the interests of the mine-owner over whose land the road passes, and indulged in contrary to his express command, is a trespass." The Judge also drew clearly the distinction between legitimate persuasion on the part of strikers and unlawful coercion, holding that language by which working miners are called scabs, blacklegs, black sheep, etc., and threats of personal violence should they not cease work, are designed to coerce and not to persuade, tend to create a breach of the peace and to provoke a personal conflict between two large bodies of men, and therefore cannot be asserted to be lawful persuasion. An injunction against the practice of such coercion before it has resulted in bloodshed is, in the Judge's opinion, a reasonable use of the power, and it is hard to see how any law-abiding citizen can suffer by it.

The collision at Hazleton, Pa., between a crowd of striking miners and a force commanded by the Sheriff of the county has given the sensational press one of the greatest opportunities it has ever had for reckless attempts to prejudice the standing of those charged with the administration of the laws and the maintenance of order. Newspapers of this type always take it for granted that the law-breakers are in the right, and shrink from no misrepresentation of the facts to make out a case against the officials. There will, of course, be a thorough investigation of this affair, but such an inquiry is not needed to show that a riotous body of men had already committed acts of violence and were on their way to commit more, that they were warned to stop by the Sheriff and refused to heed him, and that the exhibition of force which was made was the only thing that would have checked them. So far as can now be judged, the Sheriff only did his duty, and there would be less occasion to call out the militia if more sheriffs were like him, for ignorant foreigners, like those involved at Hazleton, would then know that it was as dangerous to resist the Sheriff as the troops.

The execution of a murderer in any State is not ordinarily a matter of concern to people living elsewhere in the country, but circumstances combined to make the hanging of Horace S. Perry at Decatur, Ga., on the 8th instant, a matter of wide significance. It has been charged, with too much reason, that no white man of property and influence in the South need fear that he would be put to death by the law for killing another man, but Perry was well-to-do and had been prominent enough in politics to have become Sheriff of his county. His crime was the cold-blooded murder of a young man whom he had hunted for two days, but his guilt was no greater than that of many other offenders who have either escaped conviction or received executive clemency after sentence. Gov. Atkinson deserves national recognition for the sturdiness with which he resisted the appeals that were made for Perry's pardon, culminating in what was obviously an afterthought invented by his wife, that the murderer was avenging a wrong done her, and so was the "defender of a woman's honor." The course of the Georgia Governor is in refreshing contrast with that of his namesake, Gov. Atkinson of West Virginia, who recently pardoned a murderer on this ground, and thus encouraged any man who has any sort of grievance against another to kill him, and set up a plea of this nature as a bar to punishment.

The full story of the pardon by President McKinley of Francis A. Coffin, the Indianapolis bank wrecker, only emphasizes the outrage of executive clemency in this case. In the summer of 1893 Haughey, President of the Indianapolis National Bank, Coffin, and two others were indicted for violation of the national banking laws in conducting the business of the bank, which they had brought to ruin. Haughey pleaded guilty

rather than stand trial; the other three were convicted upon trial, and Coffin was sentenced to ten years in the penitentiary. Six days after he reached that institution he was released under an appeal to the Supreme Court, which resulted in the ordering of a second trial, after the customarily long delay. He was again found guilty, and was sentenced this time to eight years in prison from October 26, 1895. But another appeal to the Supreme Court was made on technical grounds, and he was allowed to remain at liberty until this was decided against him six months later. He has, therefore, really been confined little more than a year, and this brief imprisonment was made as nearly nominal as possible, his friends being allowed to furnish him whatever food he desired, and "all the privileges any man could ask" being granted him. Now this nominal punishment is cut short by the President, and he is to suffer nothing more for his share in the outrageous performances by which several hundred thousand dollars were obtained from the bank on worthless paper.

No wonder the annexationists in Hawaii are in a good deal of a flutter over the arrival of United States Senators and Representatives to take a near view of their "republic for annexation only." The ungrateful natives are preparing for the occasion a "monster petition," with incidental mass-meetings, to assert that their country was stolen from them by "a handful of rich and powerful whites," and that they do not want to be annexed. The worst of it is that most of the visiting statesmen are beet-sugar men. Now a beet-sugar American is almost certain to be pessimistic about the institutions of cane-sugar Hawaii. He will take very high ground on liberty and constitutional guarantees and the right of suffrage; and unless the Hawaiians are able to satisfy him on all these points, he will never consent to let the beet sugar grown by freemen suffer competition from the cane sugar of men who are not enjoying self-government. This is what makes the annexationists so nervous. Jingoes they can satisfy; big-navy men they can easily persuade that they are ripe for annexation; but they tremble under inspection by statesmen thoroughly grounded in the doctrines of representative government and beet sugar. To add to their perplexities, an election has to be held pretty soon, and the exhibition is not likely to be instructive. That good annexationist organ, the *Hawaiian Gazette*, thus worries over the prospect:

"The registration lists show that less than 2,700 men will cast the entire vote of the republic in the next election. This fact is significant. It cannot be concealed, and it will be freely used in the coming debate of the American Congress. He is assuredly a short-sighted man who believes that the enemies of annexation will not promptly use it. The natives have generally refused to register. So has that large and important body, the Portuguese."

The London *Economist* of September 4 takes a serious view of section 22 of the Dingley tariff in so far as it relates to its effect on British shipping. This clause provides that a discriminating duty of 10 per cent. shall be imposed on all goods imported in foreign vessels, except where such goods are entitled by treaty or convention [or any act of Congress] to be admitted at the same rate of duty as goods imported in vessels of the United States. This clause, including the words in brackets, was an old provision of law, reënacted at each general change of the tariff. It was accordingly a part of the Wilson tariff and also of the Dingley tariff as it passed the House. The bill was reported back by the finance committee to the Senate with the same clause, but while it was passing through the Senate Mr. Allison, who had charge of the bill, moved to strike out the words "or any act of Congress," and the motion was agreed to as though it were a matter of mere phraseology and were without other significance. At a later period, and while the bill was in conference, another change was made which was intended to impose the 10 per cent. discriminating duty on foreign goods brought into this country on Canadian railroads. Now the *Economist* learns that the striking out of those words makes a great difference to British shipping, since the only treaty on the subject between Great Britain and the United States is that of 1815, which provides that there shall be no discriminating duty on any articles "which are the growth, product, or manufacture of his Britannic Majesty's territories in Europe." There is no treaty on this subject, we believe, with France, Italy, or Austria. Consequently all goods imported in the vessels of these countries, as well as those of Great Britain which are not the growth, produce, or manufacture of the British islands or British possessions in Europe, may be liable to this discriminating duty. The Attorney-General is studying this paragraph as well as the one relating to Canadian railroads.

There already are signs that the Duke of York's visit has not had the political effect in Ireland that it was expected to have. There were crowds in the streets of Dublin when he arrived, there have been pleasant parties in all the country houses which he visited, and there has been in England a widespread belief that what Ireland really needed was more frequent visits from some member of the royal family and a "royal residence" in Ireland. This faith falls in thoroughly with the contemporary influence of society on politics in England. So many people there find the chief delight of life just now in associating with "royalties," and meeting "royalties" at balls, and being able to report what "the Duchess said to me," that it is not surprising that they expect the Irish to forget all their woes, past and present, when they see a royal duke and his wife driving through the country. The climax of this absurdity was reached at Limerick. A new line of steamers has been established on the Shannon. The Duke opened it, but for some days previously it was given out that something serious was to take place on the occasion, but was to be kept a secret till then. When it was revealed, it appeared the Duke had permitted the route of the boats to be called "The Duke of York's Route." The truth is, that it is too late to cure Ireland's troubles by any such devices. In the beginning of the century, it might have been possible for a royal devotion such as the Queen has shown to Scotland, to convert the Irish into loyal subjects, but the day has gone by. The Irish are past that stage in politics. The supposition is almost amusing when one reads some of the articles which appeared in the newspapers about Ireland when the Irish members refused to take part in the jubilee. The *Scotsman*, the leading Scotch Liberal Unionist journal, confessed the Irish had been a good deal oppressed and coerced in the past, but asked them with unconscious humor: "But did you not deserve it? If English statesmen had to coerce you, could they help it?"

Prince Bismarck has had a good deal to say about the Franco-Russian alliance, some of his remarks being in his well-known vein of lucidity tempered by cynicism, and now his newspaper organ declares that the alliance at any rate leaves the Dreibund unaltered. Yes, but how different the situation is from what it was when Bismarck first formed the Dreibund, and supplemented it by successful intrigues in a way to give Germany the primacy of Europe and leave France practically isolated. In addition to his league with Austria and Italy, he had his secret treaty with Russia; he had France and Italy by the ears over Tunis; he had France and England by the ears over Egypt. But what is the case now? It is Austria that has gone behind the Dreibund to make a secret treaty with Russia. Italy is so weakened that she counts for little, and has, besides, her secret treaty with England, making the Dreibund appear hollow from that side also. France and Italy are now on fairly good terms; there is a distinct *rapprochement* between France and England; and the Russian alliance is now an accomplished fact. The net result of all these changes is to make Germany the isolated Power, and to cede to Russia the first place in European diplomacy which had been Germany's from 1870 until William the Sudden broke with the man who had won it,

DEMOCRATIC PROSPECTS.

The Democrats of this State and of the East generally are in trouble regarding the platform and attitude of the party on national questions in the coming election. The regulars of New York who supported Bryan and free silver last year and were buried under an adverse majority of 287,000 (counting the Palmer and Buckner vote), are making signs here and there of returning animation. That they ever had any clear conception of the meaning of 16 to 1, or of the merits of the silver question generally, is not to be supposed. Such a supposition is negatived by the fact that they had adopted a platform in opposition to free silver before the Chicago convention was held, and turned around immediately after it. The only thing they understood or really cared for was adherence to party usage. Custom and discipline require that the party in each State shall endorse the national creed, whatever it may be. So they wheeled with the ease of veterans, and without the slightest sense of inconsistency or shame. They would have deemed it inconsistent and shameful not to do so.

Not all of the party, however, joined in performing the *volte-face*. Bryan's vote was 103,000 smaller than Cleveland's vote in 1892, and McKinley's was 210,000 larger than Harrison's in the latter year, and there were about 19,000 votes for Palmer and Buckner. It is safe to say that 100,000 Democrats voted for McKinley straight, in order to "take no chances," and that there are to-day at least 119,000 Democratic votes in the State which will never be cast for free silver directly or indirectly, and will never be found giving any encouragement to that heresy in national, State, or municipal elections. They are attached to their own party from feeling and conviction, but only so far as it adheres to the principles that gave it birth. Free coinage of silver they consider repudiation of debts, and therefore dishonorable in the highest degree. Rather than lend any support or countenance to such a crime, they would see the Democratic party dead and buried a thousand times. Their hope is that the majority who were stampeded at Chicago last year, may be either chastened by defeat or convinced of their error, and return to the platform of earlier days.

The regulars who supported Bryan and Sewall last year, would be very glad to have the coöperation of the Nationals who supported Palmer and Buckner, and are evidently fishing for their votes. All the signs and outgivings point to an offer of compromise on the part of the former to the latter, not unlike that which Senator Gorman fixed up in Maryland. In short, if the Nationals would be content with simply ignoring the Chicago platform in the coming State election, the regulars would concede so much to them for the sake of present harmony and peace, leaving the future to take care of itself. Circumstances lend themselves to this kind of an arrangement, if there were a disposition on both sides to accede to it, since there is to be no State convention this year, but only a committee meeting to designate a candidate for Judge of the Court of Appeals. Platforms are seldom or never adopted by committees. So it would be in the usual order of things for the party to go into the campaign without one.

We feel sure that no such plan of union will tempt any supporter of the Indianapolis platform and candidates to "fall in line" with the regulars and to vote for their nominee for Judge. Ex-Senator Hill, who did not support either candidate last year, and a few others who simply abstained from voting, may lend their assistance now, especially if they are allowed to name the candidate, but those Democrats who voted for Palmer and Buckner, or for McKinley, because they believed that the Chicago platform was a grave breach of the moral law, ought not to be enticed to even a tacit compromise with the regulars. The reason why they ought not to do so is that a victory, or even a gain of votes, under present conditions would be claimed as a gain for Bryanism and free silver. It would be said that the platform of last year holds good until a new one is adopted, and that all persons who vote the Democratic State ticket must be presumed to do so because they approve the platform. The latest platform of the regulars was adopted on the 17th of September, 1896. It is brief and comprehensive. The first plank is as follows.

"The Democratic party of the State of New York, in convention assembled, unreservedly endorses the platform adopted by the Democratic party at the national convention held in Chicago on July 7, 1896; cordially approves the nomination there made; pledges to William J. Bryan and Arthur Sewall its hearty and active support, and declares as its deliberate judgment that never in the history of the Democratic party has a platform been written which embodied more completely the interests of the whole people, as distinguished from those who seek legislation for private benefit, than that given to the country by the national Democratic convention of 1896."

That is the kind of doctrine which the sound-money Democrats of the type of Abram S. Hewitt, Charles S. Fairchild, John De Witt Warner, and Gen. Tracey are asked to endorse, or at all events to ignore, within a twelvemonth of its adoption. Over against it we set their own State platform of last year, viz.:

"The Chicago platform attacks the Constitution, both in its letter and spirit. It threatens to overcome decisions of the Supreme Court displeasing to the party caucus by packing the court through an increase of the number of judges, thus striking a deadly blow at the vital constitutional principle of the independence of the judiciary. . . . In proposing to open the mints of the United States to the free coinage of silver at the ratio of 16 to 1, when the relative market values of silver and gold are now 32 to 1, the Chicago platform threatens a partial repudiation of that public debt the validity of which the Constitution says 'shall not be questioned.'"

The men who adopted this platform on the 31st of August last year are not going to eat their words now. Nor will they allow any act of theirs to be construed as approving the atrocious doctrines which they repudiated with such energy last year.

THE LOW NOMINATION.

Mr. Low's nomination is now complete. He has written his letter of acceptance, in which he endeavors to set forth the kind of Mayor he will be. There are only two vital points in it. There may be honest and harmless differences of opinion about the liquor law, and about rapid transit, and about municipal ownership of street railways, and about the hours of city labor. Men may hold contrary opinions on all these subjects, and may advocate various policies with regard to them, and yet have the good of the city thoroughly at heart. The essential articles of a good municipal creed are non-partisanship and home rule. On these no differences of opinion can be allowed among people calling themselves reformers. Unless a man thinks city offices should be filled solely for the sake of the city, and should be administered solely for the sake of the city, and that the city should not be deprived of any competent man's services because of his opinions about the tariff, or Hawaii, or silver, or gold, or the "Grand Army," or the condition of Cuba, or because of his creed or residence, he is not a good citizen, in the municipal sense of that term.

In like manner, if he thinks that nearly two millions and a half of the population of the six million inhabitants of the State, paying 70 per cent. of its taxes, and living in close contiguity, are incapable of managing their own local affairs, and that they need the watchful superintendence of the other four millions who live elsewhere, not only is he not a good citizen, but he is not a good democrat. It shows that he does not believe in the fundamental principles of American government. In other words, he is a dangerous man in a republic. The growth of this heresy during the last thirty years has been so steady, and has received so much support from both parties, that it has at last become an enormous scandal and a threat to property and order. It has ended, not only in producing the two party bosses, but in begetting the practice of levying blackmail on rich men and on corporations to pay the cost at Albany of extinguishing local government in New York. The time has come for this scandal to cease, and Mr. Low shows that he understands the crisis. This state of things cannot continue without putting constitutional govern-

ment in peril. Communities have a way of taking care of themselves when the worst comes to the worst, but it is not always the way of pleasantness and peace.

One of the most valuable portions of Mr. Low's letter is that in which he defines "non-partisanship." This term has now been in use for some years, but it came out clearly during Mayor Strong's administration that a large portion of the community, including Mayor Strong himself, did not use it in the same sense in which the Committee of Seventy used it. A large number of persons among the voters still do not understand it in the committee's sense. To an American who has been bred under the spoils system and accustomed to regard public offices as rewards for services to the party or to the appointing officer, the term naturally means that these rewards will be given to anybody who has supported a candidate, no matter to what party he belongs; that, for example, the appointing officer will not say to him, "Are you a good Republican or a good Democrat?" but, "What have you done to promote my election?" Understanding it in this sense, Mayor Strong gave offices to all sorts of people who had supported him. Some were good, some very bad, but all could say that their party associations had not prevented their getting "a plum." None, or next to none, could say that he was selected for his place solely for his fitness. The result was, that Mayor Strong's administration, though a great improvement on the Tammany riot, was marked by so many serious failures as to turn reform into ridicule, and to give Platt his most formidable weapon against the city. "The patronage of the city," says Mr. Low, "shall not be used, so far as it is in the Mayor's power to prevent it, for the purpose of either strengthening or weakening one party or another, or any fraction of any party." If this stood alone, Mayor Strong might have said it. But Mr. Low adds that "he will fill every place with a single eye to the public good." If Mayor Strong could have said this, a score of discreditable appointments would not have been made, and he would have been saved a great deal of embarrassment.

Now as to the future. We have in some degree found out during the last three years the great value of good administration as a popular educator. We have seen the effect on public opinion of the spectacle of public work well done. We believe the cleaning of the streets, for the first time in the history of the city, is only a small part of Col. Waring's claim to public gratitude. We believe that his demonstration, in the teeth of hostile and doubting public opinion, that the streets *could* be cleaned by honest labor, that the thing was possible, and even easy, has done more for the cause of municipal reform than all the articles and all the books that have been written about it. It has not only done much to banish despair about the city among the reading, intelligent classes, but it has brought interest in municipal problems, and light upon them, to the tens of thousands who do not read, who simply labor and suffer and fear. It has proved an argument, almost the only argument, which the laboring man understands. We rely on Mr. Low to do for non-partisanship, for "honest, broad-minded, efficient, and business-like administration," what Col. Waring has done for the street-cleaning. He must show the public for the first time that it is possible, and then show what it will do for popular comfort and decency. If he succeeds in doing this during his four years, we shall assuredly never go back to the mire of partisan politics. He will have raised a standard to which good men and women all over the Union will repair in the matter of municipal government. He will have nothing to learn in his new office, for the affairs of a city are no more inscrutable than those of a bank. What is inscrutable is political intrigue, the motives and humors of Mike, Jake, and Barney. Any Mayor who lets Mike and Jake alone may be sure that his work will be as easy as any other great business.

The immense importance of the manner of Mr. Low's nomination we have discussed already. It is a revolt against the machine and the corrupt nominating convention which may have far-reaching and beneficent effects. It may make the most momentous change yet made in American politics. But he will remember that the success of this great experiment will, if he is elected, depend mainly on him. It remains for him to prove its wisdom by its success.

THE HALIFAX COMMISSION.

What the amount of the award against the United States at Halifax is likely to be, no one knows, but we shall certainly be in luck if we get off with less than the $425,000 for which Mr. Gresham agreed to settle. His settlement was upset by Congress, and under the treaty of 1895 the damages are to be awarded by the commission which is still taking evidence. According to recent despatches, the English counsel are pressing a claim very like one unsuccessfully presented by us in the *Alabama* case, but with better chances of success.

In the *Alabama* case we insisted that we were entitled to recover, not merely for all the vessels and cargoes destroyed, but for the prospective earnings which the vessels might have made had they not been destroyed. As to this claim, the tribunal at Geneva decided unanimously that such earnings could not be made the subject of compensation, "inasmuch as they depend in their nature upon future and uncertain contingencies." In that case the point was very clear, especially as the tribunal expressly included interest in the $15,500,000 awarded. As a general rule in any court of law, when a loss is fixed, the person losing does not recover profits that might have been made, and interest on the loss as estimated in money as well. If he did, it would be *pro tanto* a double recovery. In the present instance, however, the English counsel contends, with some show of reason, that the catch of seals for the year, and the consequent profits (prevented by our interference), were a reasonably certain amount; and even if not, as our interference was determined by the Paris tribunal to be wholly wrongful, the Canadian sealers ought to be given more than they would had the loss been occasioned by mere neglect, as in the escape of the *Alabama*. This distinction, frequently recognized in common-law litigation over private wrongs, will have to be disposed of in some way by the tribunal, and it cannot be contended that the *Alabama* precedent is conclusive.

Another point raised at Halifax which is of some novelty is whether the question of good faith could be gone into. Commissioner Putnam sternly reproved the British counsel for attempting to go into it, and perhaps under the treaty it may not be open; but the idea that an arbitration can never raise a question of good faith is, of course, preposterous. When governments submit their disputes to a court, they do not make a reservation of the moral complexion of their acts. The extent of liability, and, indeed, liability itself, often depend wholly on moral considerations. Wilful offences are almost necessarily immoral, and a government can act in bad faith as well as an individual. Indeed, all governmental acts are individual acts. Mr. Sherman, in his notorious "shirt-sleeves" despatch, found no difficulty in imputing bad faith to Lord Salisbury, and we know of no way in which acts can be submitted to arbitration while the moral complexion of the acts is reserved from it. What was evidently running through the Commissioner's mind was the talk in the Senate and in England about the impossibility of submitting questions of national "honor" to arbitration. The suggestion, to our minds, proves nothing so much as the idleness of all this talk.

When the Halifax award is made, big or little, we shall have to pay it, and that, acccording to the common understanding, will terminate this part of the seal dispute. According to Mr. J. W. Foster, indeed, there is a still unsettled question outside the arbitration, by which we might offset the award. Writing in the *North American Review* for De-

cember, 1895, that ingenious international attorney suggested that it was still a "vital question" whether, inasmuch as the Paris tribunal decided that pelagic sealing should not be permitted in the future, the United States had not a claim for damages on its own side, and added, "It is not to the discredit of Congress that it exercised its judgment as to the action of the Executive in agreeing to a settlement with Great Britain which altogether ignored the claim of the United States for damages to the seals by improper pelagic hunting." In other words, the Paris tribunal having expressly decided that we never had any rights in Bering Sea, and on this very ground having adopted or advised international precautions for the future, and having further decided that we must pay for having prevented the Canadians from sealing, we may, after paying these damages, get them back again because we have had to pay them. A suggestion of this sort cannot be treated seriously.

Very likely the Jingoes will make a great row over paying the award; but paid it will have to be, and with its payment the great seal controversy will probably gradually lose its importance and sink out of sight. The refusal of Lord Salisbury to reopen it has left nothing at issue but a question of international seal preservation, which may produce a great deal of acrimonious scientific discussion, but which would be a rather pitiable *casus belli*. If we could have got England to fight over the question whether killing a seal at sea was contrary to the moral law, or have persuaded the world that part of the Pacific Ocean was our private property which England was trying to "grab," we should have had a glorious quarrel, fit to pour out millions of treasure and oceans of blood for; but it would be hard to have to die for one's country over the seal controversy as it now stands, especially if the conduct of the war were to be distinguished by management no better than we now succeed in getting in public business in time of peace.

THE BANK OF ENGLAND AND SILVER.

The report published in the London *Times* that the Bank of England was about to announce its willingness to use silver as one-fifth part of the reserve of its issue department, has caused much excitement both in England and on the Continent. The report is not confirmed, and, although not officially denied, is now generally discredited. Yet the belief remains that the Bank directors have had the question under consideration, and that there is a party in favor of that policy in the board of direction, as well as in the Salisbury Government. In order to understand what is meant by the proposed action, we must go back to the Paris Conference of 1881, in which a similar project was advanced. On that occasion the representative of Great Britain laid before the Conference a paper from the Bank, saying that its charter required it to receive all the gold offered to it and give its notes therefor, and to redeem all of its notes in gold on demand. It might also receive silver and issue its notes therefor to the extent of one-fourth of the gold held in its issue department—these notes also being redeemable in gold. The Bank would avail itself of this provision of its charter, provided the mints of "other countries" would return to such rules as would insure the certainty of the conversion of gold into silver and of silver into gold. This, the paper said, would be indispensable to the resumption of silver purchases by a bank of issue whose responsibilities are contracted in gold.

The Bank is composed of two departments as distinct from each other as though they were two separate institutions. The banking department receives deposits and discounts commercial paper like any other bank. It has a capital wholly in this department, amounting, with its surplus, to about $90,000,000. The issue department is a veritable automaton. It had notes outstanding at its last return amounting to $250,000,000. These were the sole liabilities of that department. The assets of the same department consisted of Government debt $55,000,000, "other securities" about $28,000,000, and gold $117,000,000. The automatic action of the Bank is shown in this statement. The law authorizes the issue of a fixed amount of notes (about £16,500,000) against securities, and then requires the Bank to give its notes to the public in exchange for gold without any limit whatsoever. This action of the Bank is called, in the language of the street, "buying gold." It is required to redeem all of its notes in gold on demand. The deposits in its banking department are also payable in gold on demand. The greater or less amount of notes outstanding at any time depends upon the public and not in any degree upon the Bank, since the latter must issue and redeem notes upon the conditions named. The directors have nothing to say about that part of the business.

The Bank's charter as passed in 1844 authorizes it to receive and hold silver in its issue department to the extent of one-fifth of the total amount of its metallic reserve in that department. At the time when the charter was adopted silver was worth a trifle more than gold at the French ratio of 15½ to 1. England at that time had no ratio; she had been on the single gold standard since 1816. This authorization has never been availed of, we believe, and it would not be availed of now unless some competent authority should fix a ratio at which silver should be received. Even in that case—even if a ratio were adopted corresponding with the mercantile ratio, say 35 to 1—we could regard such a step on the part of the Bank only as evidence of mental unsoundness, leading also to financial unsoundness, since it would reduce the reserves of the issue department by 20 per cent. without any gain whatever.

For all purposes of redeeming its notes it might as well have an equal investment in pig iron. It may be said that the mints of the other countries, under the proposed scheme of 1881, will always hand over their gold in exchange for the Bank's silver at the agreed ratio, but who is to guarantee that? An international agreement? Suppose the countries go to war and blockade each other's ports. Will France be likely to hand over two or three hundred million francs in gold immediately in exchange for silver? Both countries in such a case will want all the gold they can lay their hands on, and both will leave for future adjustment any question that may arise touching their monetary agreements. Thus in a conceivable case, one-fifth of the Bank's metallic reserves may be no more available than pig iron, and even less, since pig iron could be converted into shot and shell. In short, the Bank's solvency at a critical moment might depend on a foreign government.

It should be added that the Bank's proposal in the Conference of 1881 was not accepted by any government represented therein. It had been pronounced unsatisfactory by Mr. Thurman on behalf of the United States even before it was received. It was pronounced unsatisfactory by Mr. Pierson, a bimetallist delegate from the Netherlands, after it was read. It was not even noticed by the delegates of France, who were at that time of the bimetallist persuasion. No vote was taken on it, and the Conference adjourned on the third day after the paper was laid on its table, and without any general discussion of its merits. The reason was the same as that which led to the rejection of all similar proposals at the Brussels Conference. It was simply a plan to make an artificial market for silver—to bolster up the price and help the owners of mines. Such a market could not be permanent, since any increase of price would necessarily be followed by an increase of the output; and as the market would not be an unlimited one, the price would fall back as soon as the artificial demand was satisfied, and then the Bank would be loaded with perhaps $50,000,000 of a metal that it could not pay its debts with nor get rid of except at a loss. The Bank would be in the same situation as the United States Government is with its new-fangled Treasury notes issued against pig silver. That a Government acting under the stress of popular sov-

ereignty and worried by demagogues to the extent that ours is should fall into such a muddle, can be easily understood and explained, but that a sober board of business men, not serving under fear of the next caucus, should do so, is past belief.

THE ENGLISH TROUBLES IN INDIA.

The English press has been devoting a great deal of space and thought to an analysis of the causes which led to the Afridi uprising. Up to a certain point there is a substantial agreement that it was owing to a belief deliberately spread through the Mohammedan world, that it is now a good time to attack England. The mountain tribesmen have been generally quiet for fifty years, and their rising was not due to any known or recognized grievance. Something had happened which gave them the idea that England was weak, and the English critics of both parties agree that the exciting cause was the English management of the Greco-Turkish question. When it comes, however, to explaining how the effect was produced, there is a great divergence of opinion. The Tory papers all maintain that England is a great "Mohammedan Power," and that the troubles on the frontier were due to the attacks on the Sultan, and on Mohammedans generally, made by English writers and speakers, and to the siding of the Government with the enemies of Turkey. What the English ought to have done was to have supported their natural ally, the Sultan. To this the Liberals reply with great force that there is not a scintilla of evidence to support this view, and that the present difficulties really arose from a failure to put the screws on the Sultan and coerce him.

The talk about England being a "Mohammedan Power" is of course a mere juggle with words. It is about as true as it would be to call the United States a great African Power because it has under its government several million negroes. England is a Christian Power, which has conquered and keeps in subjection a large part of the Mohammedan world, and governs it upon a system which would be reduced to absolute chaos were Mohammedan interests to be taken as guides. The rest of the Tory argument, and its real substance, is precisely the same appeal to fear which has been steadily made for two years. England is blamed for not having placated, conciliated, and supported the Sultan, in order that the Sultan might dissuade its Indian subjects from rising; in precisely the same way it was urged that nothing must be done for the Armenians or the Greeks, lest the intervention of the English should bring on a general European war. The *Spectator* recalls the fact that the Crimean war, undertaken to bolster up the Turk, was immediately followed by the disastrous Indian mutiny, a fact certainly not tending to prove that backing up the Sultan helps to maintain peace in India; but to onlookers at a distance the most striking thing about the whole controversy is that the motive, and the only motive, appealed to on behalf of Lord Salisbury's Eastern policy is fear of dreadful consequences, which it is always said must ensue if he shows any courage in his dealings with the Sultan. Up to the present time it is no exaggeration to say that the idea that Lord Salisbury's diplomacy has averted a general war, has been sufficient to reconcile England to a series of effects directly traceable to it which, under ordinary circumstances, would have been regarded as little short of horrible reproaches to any national policy.

Whatever Lord Salisbury may have prevented, the events for which his management of foreign affairs is inevitably held responsible are the Armenian massacres, the blockade of Crete and suppression of the Cretan insurrection, the recrudescence of Turkey as a military Power, the reduction of Greece to a "controlled" state, and now the rising in India, which, however completely it may be put down, is a most serious source of alarm, as even threatened trouble in India cripples English power elsewhere. These, it must be remembered, are positive consequences, while the inference that Lord Salisbury's management of foreign business has been the reason why a general Enropean war has not broken out, is a mere inference or conjecture, based on nothing more substantial than his own assurances, which we must regard as very poor evidence, inasmuch as the opposite policy of curtailing the power of Turkey in Europe, pursued for many years before the concert was invented, itself produced no general war.

It is evident that this argument will not do for ever. The English people may be reconciled for a good while to disasters and humiliations on the ground that they have prevented a general European war, but the time will come sooner or later when they will ask whether they are not being deceived, and whether it is not possible that an Eastern policy of a quite different sort would avert a general war in Europe even more definitely. Sooner or later the history of the diplomacy of the last two years will come out, and then we shall probably know how much truth there is in the constant assertion that it is Lord Salisbury's policy which has preserved the peace.

For ourselves, we cannot help regarding it as a misfortune to the world that the control of the foreign affairs of England should just at this time have fallen into the hands of a man whose career seems to foreigners to verify their most inveterate anti-English prejudices. Centuries of misrepresentation could not have accomplished what Lord Salisbury has done to make the old idea of England, as given to bullying the weak and cringing to the strong, seem true; and yet at no time in the history of the country has its actual management of governed populations, or its attitude towards its neighbors, been so civilized and humane. There is something painful in the spectacle of the greatest free Power the world has seen complying with the demands, first of one despot and then of another, for fear of there being a "general war," and, finally, finding itself, as a result, face to face with a serious rebellion in that part of its dominions where a hesitating policy is sure to be most fatal.

SOME UNPUBLISHED WASHINGTON LETTERS.

NEW YORK, September 3, 1897.

In one of the series of letters written by George Washington to Arthur Young, which were published by that eminent agriculturist after Washington's death, there occurs the following passage:

"By means of the application I made to my friend Mr. Fairfax of Bath and through the medium of Mr. Rock a bailiff is sent to me, who if he is acquainted with the best courses of cropping will answer my purposes as a director or superintendent of my farms. He has the appearance of a plain honest farmer—is industrious and from the character given of him by a Mr. Peacy (with whom he has lived many years) is understanding in the management of stock and of most matters for which he is employed. How far his ability may be equal to a pretty extensive concern is questionable. And what is still worse he has come over with improper ideas, for instead of preparing his mind to meet a ruinous course of cropping, exhausted lands and numberless inconveniences into which we had been thrown by an eight years' war, he seems to have expected that he was coming to well organized farms and that he was to have met ploughs, harrows and all the other implements of husbandry in as high taste as the best farming counties of England could have exhibited them. How far his fortitude will enable him to encounter these disappointments or his patience and perseverance will carry him towards the work of reform remains to be decided."

There seems to be no further trace of this somewhat unpromising new bailiff in letter, diary, or note-books, and here or elsewhere no mention of his name. It was, however, my fortune not long since to stumble upon further documents relating to this man, and Washington's experience with him, in the shape of certain letters of the bailiff and of Washington himself to the Mr. Peacey mentioned above, in the hands of whose descendants these letters have been preserved.

Among that class of country gentlemen which reached its zenith in the latter part of the last century, the name of Mr. William Peacey of North Leach, Gloucestershire, stood very high; and this—in the days when farmers "could let half their land lie idle and live like gentlemen on the proceeds of the other half," when the greatest statesmen in the country reckoned their interest in agriculture and their knowledge of its practical side as not the least of their accomplishments, when the King himself, "a gentleman of Berkshire," took keen interest in

such matters—was no slight distinction. Not only was he awarded the great gold medal of the Royal Agricultural Society and invited to become one of the editors of the great agricultural cyclopædia of the time, but he numbered among his friends and correspondents many of the most famous public men of his day. It is of him, too, the story is told, and embalmed in the yellow pages of the *Gentleman's Magazine* for 1791, how, in order to save an innocent man from the gallows, he rode ninety miles to London in one night, with proofs of the man's innocence, which he had secured at great trouble. There is another story, too, how once King George came to see him in his absence. The busy and irritable housekeeper grumbled vastly at being disturbed in her work by the big footman who "made as much noise as if it had been the King." "It *is* the King," said the footman. "Then," said the still angry housekeeper, "the King can just go on to Cheltenham to see Mr. Peacey, for he's not at home." And the King went.

But these glimpses of an elder day when men were hanged for petty theft, when horses were still the fastest locomotive power, when a king posted from place to place like any private gentleman, are by the way. These slight gleanings of correspondence which follow are the connection between this Gloucestershire farmer and another and greater George on this side the Atlantic. The first letter is from that Wakelin Welch who for many years was Washington's agent in London, the connection being severed about 1791. It needs no comment.

Mr. William Peacy North Leach Gloucestershire
MR. PEACY,

By this post have sent you a packet which came by a vessel, just arrived, addressed to us from Gen. Washington in his letter to us—"he mentions that "he had a Farmer sent to him from Gloucestershire "by a Friend at Bath, he has written for his wife to "come to him with her Children & to bring with "them some Seeds Implements of Husbandry &c to "this Country. Bristol is their nearest port, but "Opp° from thence to this River rarely happen-"ing I have recommended it to their Patron Mr "Peacey to open a Correspondence with you that "she may be advised of the Sailing of a Vessell from "London to this River as a more speedy & certain "mode of conveyance. Your compliance therein "would be very pleasing to me & very Serviceable "to an honest old English Farmer

am Sr
" Yr Most obedient humle Serv.
"G. W."

In Conformity to the above I am to inform you that a fine Vessell named the Mary Capt. John Andrews & who sails by Gen. Washington's Seat will go from hence in all February if it suits your Friend to go by that time & from London, she shoud let me know as I might engage for her Passage which sometimes cannot always be depended upon. am

Sr
Yr H Servt
W. WELCH,

LONDON the 17 Jan 1787

The charge of a Passage from hence is high & paid for before the departure of the Ship how far will this be convenient for the Family.

The next is the remarkable communication of Mr. James Bloxham, not to himself, as one might imagine from the beginning, but to his patron and benefactor, Mr. Peacey. It may be necessary to explain that sanfine, or sainfoin, is a kind of pasture grass, and from the Young letters it seems probable that the unsatisfactory seed came from that farmer and that many seeds spoiled in transit. A "shupick" is a fork; the word may be used in some parts of America, but is not in my vocabulary, and is, I believe, peculiar to Gloucester, Worcester, and Wilts (Ger. *Schuppe*, a spade?). And as to the gentle insistence of Mr. Bloxham that the ploughs shall be "Light and Deasent," his anxiety will not be surprising to any one who has ever observed the difference of *weight* between English and American soil, probably nowhere greater than between North Wilts and Gloucester and the neighborhood of Mount Vernon. In his letters to Young, Washington complains of the trouble he has had to make his hands use the heavy English ploughs, and comments on his land as "light loam."

For Mr. Peacey Att Northleach Farm Gloucestershire

Vurginia July 23 1786

JAMES BLOXHAM SR. this is to Inform you that I arived Safe att the generls Washingtons the 20 3 [23] of aprel which was Ester monday. I have orderd for 10 Bushels of Sanfine Seed and other Seeds from you which the generel washington will aplie to you for and I should be glad if you would take the Best Care you Can to send it over good ass you Can for he have been Deseved in soom sanfine seed from Englnd which I Recemend him to you and let me have good that the generl sends for of all sorts if posable and send it along with my wife ass soon ass posable and I sould bee glad If you could get a Clever Little Deasant D plow which must go whithout a weeal for the Land is not Level and to be Shoor to make him Light and Desant and be Shoor to make him to turn the worke well for they have som most shoking Plows that Ever was Seen in the world the land is Light and very esey to plow they go with two horses only and Doble the same ass your norfolk plows. But no weel but very light but they have no noshon of making of a plow to turn the work thay are very stupet in thare one Consait but send on that is Light an Deasent and that it will turn the work well I Rot in my other Letter to my wife to Com over but I thinke it not worth wile for I think thatt I Shall not Stay no Longer then my yeare is up which is the forst of next may for things Are verey Desagreable to Do Bisness it is inposable for any man to Do Bisness in any form the Genral have a Bout 25 hundrd akers of Clear Land under is on ocyping. Ther is nothing agreble about on the plase which I Can not Do no Bisnss form nor no Credet but I have you send the plow And the Seeds which the Genearel will send for to you and send half a Dosen of Good Clean made Shupicks for they have nothing but woodon forks I have got one or two made but in a very bad maner that I should be glad to Show them a patrn and if my house is not Disposed of I should be glad if you would not for this Contey is verey pore and there is no Chance for any Body to Do any god and I should be gad if you and my Brother Thomas would See if these velins would Com to any terms or I would go to any part of Englun to be out of thare way But this Countruy will not Do for me but to Be Shore what the General have oferd in wages is quite Well he Gives for this year we have a Gred for 50 English ginnes per yeare and Bord and washing and Lodging and if I Would Send for my wife and famly he would alow me ten Ginnes towards thare Coming to this Contry an if I would Stay and to alow me 8 hundard Waite of flower and 6 hunderd Wait of pork and Bef and to alow me two milchs Cows for the youse of my famly and to alow me a Sow to Bree [d] Som pigs for my on yous but Not to Sell and to alow me a Comfortable house to Live n but it apears to me not Any Inheretance [inducement?] thear is another thing Which is very Disagreable tese Black Peope I am Rather in Danger of being poisind among them which I think I Shall Leave the Contrey ass son Ass I Can But the general and I have agreed and articld for one yeare But my wife may youse ore one will A Bout Comming over. But I hope Sr you I Hope will Be a frend to my Poor Deer Children and Wife And I Hope you will Remember my Brother Thomas to a Sist them what he can my heart have yarned for my family A gret maney time and I think I m allmost Like a transport [*i. e.*, convict] But I hope that the Sun will Shine upon me wonce more the general have some very [good?] laynd But badly manedge and he never well have them no Better for he have a Sett About him which I nor you would be troubled with But the General is goot them and he must keep them But they are a verey Desagreable People and I will leave the Contry But I Should be glad of answer Inmedatly to know how afares Stand and then I Sall be a better Judge of the matter the General have som very good Shep which he sold for 40 Shilings a pes of thar money a English guina is 28 Shiling of m[o]ney and I hope mrs and all the famly is Well and I have whent thro a greatt Dele Since I laft England.

And Lett me have a nanswer Imeadetly Rember me to all frens and no mor from me yor frend and well well wisher

JAMES BLOXHAM

The next letter, that of Washington himself, calls for no explanation, nor does the following one from the agents:

MOUNT VERNON, VIRGINIA, Augt 5th 1786.

SIR, Excuse the liberty I take in putting the inclosed Letters under cover to you.—It is to oblige Mr. James Bloxham who now lives with me, but who scarcely has sufficient knowledge of his own mind to determine whether to continue more than the present year (for which he is engaged) or not.—In a word he seems rather to have expected to have found well organized farms, than that the end and design of my employing him was to make them so.—He makes no allowances for the ravages of a nine year's war from which we are but just begining to emerge, nor does he consider that if our system of Husbandry had been as perfect as it may be found on your Farms, or in some of the best farming Counties in England, there would have been no occasion for his Services.

What the old man has written to you respecting the coming over of his wife—sending over plows seeds and so forth, I know not; because at different times he seems to be of different opinions. I can only add, therefore, if his family are to come, and by the way of London, that it would be well for some person on their behalf to open a correspondence with Messrs. Forrest & Stoddart, Merchans, of that place who have Ships that pass by my door in their way to Alexandria, and would render the passage in one of them much more convenient & less expensive than to any other place; 'tho in a Vessel bound to Norfolk in this State (Virginia,) or to Annapolis, Baltimore or Patuxent in the neighbouring one of Maryland, it would not be very inconvenient. In case of her coming, whatever Impliments, seeds, &c. may be requested by Mr. Bloxham on my Acct had better be paid for by his wife, and settled for here.

I am sorry to be thus troublesome, but as Mr. Bloxham considers you as his Benefactor, and Friend—has addressed one of his Letters to you—and his Wife, if she finally resolves to come, will stand in need of advise and assistance, it is necessary that the best mode should be suggested.—A Ship from Bristol to either of the places above named, may, probably, be more convenient than the rout by London but of this you can judge better than I. I am Sir,

Yr most Obdt & Humle Servt,
G. WASHINGTON.

William Peacey, Esq

Mr. W. Peacey, North Leach, Gloustirshire.

SR. I am to thank You in the first place for your kind present of a Hare which I rec'd very safe & in Consequence of your desiring my engaging a passage for Mrs. Bloxham & her two Children I this day have done it—the Captain one Andrews is a very good Man, his ship is Brittish & one of the first character, the Vessel goes very near Gen. Washingtons Landing so that Mrs. Bloxham has not far to Travel.

The Usual Charge for passengers who Lay in the Cabbin & are found with fresh Provisions & Wine during the Voyage is twenty Guineas each, but for Mrs. Bloxham & her two children to go in that agreeable State, the Captain has agreed for thirty Guineas for the Family & which I do not think unreasonable, as to the things necessary for Mrs Bloxham to take depends on her Self. Goods & Cloaths in Virginia as they mostly come from hence are very dear, therefore it woud be necessary for her

to Lay in a good Stock of them, on board Ship anything does the Captain was saying some Bedding might be wanting for the Cabin, but the expence of which cannot be great as to every thing else is included in the thirty guineas, the Seeds will be particularly taken care of & let the Package be marked Seeds so that they may be known when on Board, pray will there be any Quantity so as to fill Casks, if they do we must take a warehouse for them if not they may be sent to our Counting house No 10 Fenchurch Buildings near Fenchurch Street, the Place of my Residence is in the country about 4 miles from London.

The Ship sails in all Feby so that if Mrs Bloxham has any Acquaintance in Town she might come by the last week

am very Respectfully

yr obliged & humb Serv

W. Welch

23 Jany 1787

If Mrs Bloxham should alter her Mind let me know as the Captain keeps the Cabbin for her Accomodation & therefore cannot dispose of it to any else.

It appears from the above, then, that Mrs. Bloxham did not alter her mind, but was shipped along with the "sanfine" seed and the other farming necessaries (of which we may hope the ploughs were Light and Deasent), as we see by the following letter. From this it also appears that the fretful Bloxham had not been poisoned, and that he had apparently reconsidered his determination to leave the country to its fate as soon as his agreement with Washington expired, and, moreover, that his services had proved more satisfactory than the previous letters would have led us to believe:

Mount Vernon, 7 Jany 1788

Sir:—I have received your letter of the 2nd of Feby 1787. I am much obliged to you for your attention in sending me the seeds, which arrived agreeable to the bill. Mrs. Bloxam received of Wakelin Welch Esq. of London £10-1-10 which sum she informed him was what she paid you for the seeds on my account. I am not sorry that Caleb Hall did not come out for I proposed his coming more to please Bloxham, who was very desirous of having him here then from a want of his services myself. I thank you, Sir, for your obliging offer to furnish me with Blacksmiths and a Mill-wright:—I have two of the former occupation, who, though not very neat workmen, answer all my purposes in making farming utensils etc in a plain way—the latter I shall have no occasion for as I have not work enough to employ him in his own line:—and indeed I doubt whether they would find their advantage in coming over at present because I hardly think they will meet with constant employ: for although I should be extremely glad to see the honest and industrious mechanic come into this country from any and every part of the Globe, yet I would not wish to encourage them unless they could be benefitted by it. Whenever we have a regular and firm government established the prospect for these people will be much more pleasing than it is at present. Bloxham and his family are in good health and appear to be contented with the country. I am Sir

Yr most obed: Servt

G. Washington.

William Peacey Esq.

This, so far as I know, is the end of Mr. Bloxham's appearance in history. Whatever further correspondence there was, if any, between Washington and Mr. Peacey has been lost. Neither Bloxham's name nor that of Mr. Peacey seems to occur anywhere else, either in Sparks's or Ford's 'Writings of Washington,' in the Diary, or rather the Itinerary, published by Mr. Baker, in the *Pennsylvania Historical Magazine*, in the Long Island Historical Society papers edited by Moncure D. Conway, which cover the agricultural affairs from 1793, in the letters to Young, Sinclair, or Anderson on agricultural subjects, or in minor collections like Ford's 'Washington as an Employer of Labor,' or in the accounts. I am told, further, by Mr. Eames of the Lenox Library, to whose courtesy I have been much indebted, that he does not recall the names of either Bloxham or Peacey in any of the two hundred-odd letters of Washington in possession of the Library, which it is now publishing in the form of bulletins. Of no great intrinsic value, the letters are none the less interesting as a side light on that private life of Washington which, now that the public life has been so thoroughly exploited, begins to demand more attention.

Wilbur C. Abbott.

GLIMPSES OF SOUTHERN OREGON.—II.

Marshfield, August, 1897.

The coast of Oregon runs in a nearly straight north and south line from the mouth of the Columbia River to the Umpqua, and is chiefly composed of sandy beaches, behind which rise moderately high rocky bluffs of shale or sandstone of Tertiary age. The line of bluffs is broken by the estuaries of the river drainage of the Coast Range and its foothills; mostly small, and separated from the ocean by sandy bars which admit only vessels of light or moderate draught. Near these estuaries are groups of sand dunes often of considerable size. South of the Umpqua the shore trends a little more to the westward, and rocky bluffs reach quite to the sea in places. The general character of the coast continues much the same as far as Cape Blanco. The estuary of the Umpqua admits vessels of several hundred tons, which are principally employed in carrying lumber to other parts of the coast. The only harbor of consequence on this shore between Cape Blanco and the Columbia is Coos Bay, about thirty miles south of the Umpqua. It is accessible from Gardiner by driving down the ocean beach in a rough stage with broad-tired wheels. Under favorable circumstances this is an enjoyable drive, the beach at low water being hard and the salt air stimulating and refreshing. When the terminus is nearly reached, the stage leaves the beach and cuts across a mile-wide spit of sand, which defends Coos Bay from the breakers of the Pacific. The entrance to the harbor was formerly rather difficult, but the building of a jetty by the Government, though not yet completed, has already much improved the channel over the bar. Several lines of steamers ply between the bay, Astoria, and San Francisco, carrying coal, lumber, and produce.

In 1853 the first settlement was made at Empire City, on the lower bay, by a band of pioneers, associated as the Coos Bay Company. A little later, the discovery of beds of Eocene coal in the vicinity, and of gold in the sands of adjacent beaches, stimulated immigration; other towns were located, and the neighboring valleys became the site of farms. The career of Coos Bay has since continued with varied fortunes. The business depression of the last few years has been seriously felt, and, as little wheat is grown and other coals compete with the local product, no very evident signs of a change for the better are yet manifest. Coos Bay is a long and narrow estuary of winding form with numerous branches. The commodious part of the harbor is near the small town grandiloquently denominated Empire City by the pioneers. The proximity of the coal deposits determined the establishment of another town, Marshfield, near the head of navigation, and this has outstripped its older neighbor in size and population, though less favorably situated for commerce.

About the bay, as elsewhere on the Oregon coast, the climate varies markedly from that of the interior valleys. Though little rain falls from July to October, the northwest trades blow with great constancy, interrupted only by occasional southeasters. The mornings and evenings are almost invariably foggy, and the clouds frequently persist during the entire day. It follows that the summer atmosphere is cool and rather moist. The trees and shrubs for hours after sunrise are dripping with the copious dews left by the condensing fog. Luxuriant tufts of lichen hang from the fences. Even the dusty country roads are damp in the early morning, except where protected by overhanging foliage. If one penetrates the woods by road or trail, the density of vegetation on either hand is astonishing. Huge fallen trunks lie upon one another in chaotic confusion, thickly overspread with brushwood, moss, and ferns. Rhododendron, myrtle, blackberry vines, and enormous bracken form impenetrable thickets. A low purple barberry, the so-called "Oregon grape," occupies the more open places, and is very ornamental with its vernicose leaves and purple clusters of fruit. A coarse vaccinium, with insipid large seedy fruit, called the "salal-berry," is very abundant, and its rosy bells, which seem to be ever-blooming, are not unpleasing. The season of flowers is over by August, but the indications are that spring must offer a remarkable profusion of them. The rhododendrons alone, if up to their reputation, must afford a gorgeous display. At present a few bright colored asters, rich yellow daisies, purple pedicularia, and the familiar willowherb or fireweed of the East comprise the autumnal flora. The symplocarpus, so common in Alaska, abounds in moist places, and the ferns exceed anything I have elsewhere noted in size and luxuriance. On one old trail I forced my way beneath over-arching brake which would average nine feet in height. At various points on the road over to the coast I had been surprised to note the common European foxglove, purple and white, growing abundantly. Inquiry brought out the fact that, some years ago, an English lady resident in Gardiner, with a love for the flowers of her youth, imported foxglove seed. The plant soon escaped from her garden and has become widely distributed over the coast, where, the story being known, it is generally called, apropos of its introducer, the "Gibbs weed." In several places I have also observed the English broom, probably likewise a truant from gardens, but which does not seem to have found the climate or soil so congenial as the foxglove. The latter is credibly reported to have extended its range northward at least as far as the Nehalem River, forty miles south of the Columbia.

The trees which form the prevalent forest are chiefly the Douglas fir, widely known as "Oregon fir," and which furnishes a large proportion of the fine timber exported from the coast. It is a stately tree, but less elegant in foliage than its frequent companion the white cedar. The latter resembles the

arbor-vitæ in its docility under pruning and the flattened, frond-like sprays which cast a dense shade. There are a few hemlocks, but the non-coniferous trees are rare and most commonly represented by the alder.

The task of clearing land so encumbered is most laborious. It seemed not improbable in many places that if the wood actually on the ground were reduced to sawdust, it would cover the surface, evenly distributed, to a depth of at least a foot. When the trees are felled and the underbrush cut in a piece of virgin forest, the soil is practically covered to a much greater depth. These trees are rapid growers. I counted the rings of one which had been sawed across to clear the roadway, and though it was three feet in diameter there were only about two hundred and fifty rings. The fallen trees are very numerous, and so wet that they do not burn readily, though the wood seems sound. Uncultivated land falls rapidly back into woodland. The very cemeteries become thickets in a few years.

On the whole, the task of the settler who would clear his land is appalling. Even in the tropics the persistent, steady siege laid by the forces of nature against the handiwork of man, is hardly more obvious and more unrelenting. Here, however, the settler is spared the insidious heat which undermines health and energy in the tropics. Where the land is tillable, on the flats near the estuaries and on the valley floors, man conquers in the end, though he must hold his conquest by yearly effort. The country, climate, and vegetation strongly remind one of southeastern Alaska. Here it is somewhat drier in summer and a little warmer—differences sufficient to make productive agriculture possible. The winters are, of course, much milder here, though, in the nine months of rain, flooding streams and boggy roads, the region is seriously handicapped. "People always come back to Coos County," said a resident, "if they have lived here a few years; and I think if outsiders realized what we have to contend with, in the long rainy season and the difficulty of clearing land, they would not so often reproach us with a lack of energy." And the listener was inclined to agree with him. W. H. D.

Correspondence.

THE DEMOCRATIC - REPUBLICAN PARTY.

To the Editor of The Nation:

Sir: The continued dominance in public affairs of (*soi-disant*) leaders of party must, almost inevitably, result in unrest, revolt, and—bloodshed, perhaps. When men moved by principle get together, the end of opportunism and machine politics will come. If men having the courage of their convictions will unite, the bosses—Hill, Platt, Quay, Hanna, and Gorman—will be relegated to retirement.

Live principles demand live parties. Give voters a platform of:

1st. Free trade, absolute and unqualified.

2d. An honest currency, based on real money.

3d. Honest administration of genuine civil service.

4th. Economical expenditure of revenues.

5th. Purification of the suffrage; *i. e.*, eliminate from those privileged to vote and to hold office not only such as sell their ballot, but also every one who, directly or indirectly, is party to such corruption.

6th. A strict construction of the Federal Constitution and rigid observance of its limitations.

The name of a party of such believers matters little. If the names "Democrat" and "Republican" are now odorous, or reminiscent of evil deeds only, cleanse them by faith and good works. For one, "Democratic-Republican" will do for me.

Robert T. Johnson.

Franklin, N. Y., September 6, 1897.

SEQUEL TO A SOUTHERN "DIFFICULTY."

To the Editor of The Nation:

Sir: Twenty-three years ago the Marshal of the old-style Southern town of Lexington, Mo., forty miles east of Kansas City, was a one-armed ex-Confederate soldier named Lane, with a wife and a little girl. He was a Virginian, and made up of grit and nerve from head to heels, and there was never such order maintained in the town before or since as he kept. A difficulty rose between him and a deputy sheriff named Ewing, a native of the town, a descendant of the Rev. Finis Ewing, the father of the "Cumberland" Presbyterian sect, and a kinsman of the wife of Senator Cockrell of Missouri. They were both witnesses in a case in court, and their testimony was contradictory the one's of the other's. Afterwards they met on the street, Ewing waiting for Lane at a certain place in the most public part of the town, having heavily armed himself. He stepped out and began talking, and Lane said, "You swore to a G—d d—d lie in court to-day." A man could hardly stay in a Southern town after taking that, albeit, if the charge is not true, the man who makes it is the liar, and, if true, he ought not to resent it. Ewing began firing at Lane, almost close enough to touch each other, one ball grazing the lower end of his heart and nearly knocking him down. He gritted his teeth frightfully and spread his legs apart to keep from falling, and, getting his pistol out, with his one (left) hand, fired at Ewing, and both fell. The bullet lodged against Ewing's spine. Lane died in a few hours, after expressing pleasure that he had made his enemy suffer.

Lane's wife struggled through poverty and sickness, and died in a hospital in St. Louis. Their child was taken by a kind Canadian merchant of Lexington and raised as his own. She had the misfortune to lose one arm at the shoulder. Ewing suffered most excruciating agony for years, after the doctors had nearly killed him with cutting and probing ineffectually for the ball. Then he became paralyzed below the waist and went totally blind, and in hopeless poverty was supported by his friends. Last week he was taken to Kansas City and the X-rays turned on him, and the bullet was seen half imbedded in one of the vertebræ of his spine, much higher up than the doctors had always thought it was. They are going to take it out, and he hopes to recover from his paralysis and blindness. In the long years of darkness he has had time to think the affair well over, and has become a pious church member. No doubt he would now advise any other man to take a good deal of bad talk rather than again die a thousand deaths as he has done. Everybody says he got the worst of it, though he lived and his adversary died. Southerner.

TEXAS IN POORE'S CHARTERS.

To the Editor of The Nation:

Sir: **In the matter relative to Texas in** Poore's 'Charters and Constitutions' there are some mistakes, and a seriously important omission, which are very misleading to those **who rely absolutely on the work. Under the title "Texas Declaration of Independence" is printed (Part II., pp. 1752-3) the declaration adopted November 7, 1835, by the consultation at San Felipe de Austin, in favor of the Mexican Federal Constitution of 1824, and against the revolutionary aims of Santa** Anna. The footnote (p. 1752) which says, **"This Declaration of Independence was adopted by a convention which assembled at** Washington, on the Brazos River, March 1, **1836," applies properly not to "this Declaration, etc.," but to the actual Texas Declaration of Independence, which was adopted March 2, 1836, and has passed by the name into history. The latter is, unfortunately, omitted altogether.**

My attention was first directed to these errors by my colleague, Prof. John C. Townes. George P. Garrison.

University of Texas,
Austin, September 3, 1897.

DR. ANDREWS AND VERGIL.

To the Editor of The Nation:

Sir: It has been a little over five years since Dr. Andrews wrote that "to be accurate requires that of many things a finite mind should deliberately remain in ignorance." The natural corollary, that of the things whereof one elects to remain in ignorance he should forbear to speak, seems not to have occurred to the Doctor's mind when he made the ridiculous charge that "much of Vergil and Horace that is used in the class-room, editors and teachers misinterpret to make it decent."

The lines in Vergil which, even by malicious misinterpretation, can be made to carry indecent suggestions to the mind of the pupil, are too few to constitute "much" of a single day's lesson; and as to these few passages, the teacher who is obliged to misinterpret in order to avoid harm should look for the real seat of the difficulty in himself, not in "the chastest poet and royalest that to the memory of man is known" (Bacon). Let one grant that the apparent sweetness and purity so dominant in the whole of Vergil's work is but a mere cloak of hypocrisy, and that the worst ever said of him by a handful of ancient scandalmongers was true; grant, further, that a bad interpretation is to be put upon every passage possible under this supposition, and still the words of Dr. Andrews would be grossly inaccurate. But no one who has read understandingly any important part of his poems would think for an instant of the possibility of such concessions. Aside from the mere absence of impurity, the positive religious tone of the 'Æneid' is so marked that Gaston Boissier has well said: "L'Énéide est avant tout un poème religieux; on s'expose à le mal comprendre si l'on n'en est pas convaincu." The same author says elsewhere that if Vergil himself was not a

Christian, his writings dispose one to become so.

As to Horace, most teachers will consult the mental and moral characteristics of their pupils before indiscriminate reading. Where there are those in a class who might be harmed by certain poems, omission is the rule, not misinterpretation. Any one who supposes that Horace is ever indecent for the mere sake of indecency, knows him not, and should not attempt to teach him. He exerted an elevating tendency in his time, and the teacher in whose hands he cannot be made to do the same to-day is probably either an immoral man himself, or one whose notions of propriety are so far astray as to lead him into the attempt to clarify the honey of the "Matinian bee" by the adulterant of misinterpretation.

As to Dr. Andrews's general assertion that "large parts of classical literature reek with filth," it is a mere platitude, applying with equal truth to the literature of any other period or people. To assign any portion of Vergil to the filthy part, however, is neither more nor less accurate than to classify Tennyson or Milton in the same way. Let us hope that in the new *Cosmopolitan* "University" Dr. Andrews will not himself act as "expert" in the subject of classical literature. If so, there will be a solution of continuity in the stream of dignity which is to flow in the direction of the *Cosmopolitan*. Dr. Andrews owes to the educated public an unqualified apology for his blunder. A CLASSICAL TEACHER.

ARCHITECTURAL COMPETITION.

TO THE EDITOR OF THE NATION:

SIR: It would be a mistake to infer, as your readers might infer, from your editorial last week entitled "Architects' Competitions," that there is a general feeling among architects in favor of the plan of competition therein described. There are a great number of objections urged against its provisions. It cannot be announced as in any sense a solution of the old difficulty. It is one more attempt to meet all the requirements, and it is a perfectly respectable, intelligent, and honest attempt; but so have been a score of similar attempts before, and so will be a hundred more. The Institute of Architects and many smaller and less generally influential organizations have formulated schemes for competition. Sagacious professional advisers have drawn up programmes. They have all failed to give satisfaction, and all such plans are destined to fail, because they seek to bring about an impossibility, namely, to persuade busy and successful men to give a great deal of valuable advice, designs, calculations, and the result of years of study in return for very inadequate compensation. That compensation is the chance of getting employment; a chance small at best and generally uncertain.

It is not the purpose of this protest to point out the weak points in the Harrisburg or in any competition; but it may at least be suggested that the recently published agreement signed by twenty New York firms and architects offers the only basis known for a proper system of competitions.

Persons meaning to build may choose between those terms on which alone the most successful architects will compete and terms of their own devising, which will be accepted by less well-known men. As those younger men come to be better known, they also will insist on the terms of the agreement signed by the twenty; and so on in a somewhat orderly sequence. Do not imagine, however, that those less prosperous architects accept their fate contentedly, or that they engage in these competitions without profound annoyance. The extremely high character of the experts employed in the Harrisburg competition cannot alone make this an exception to the rule that all such competitions are an offence to the profession, and a very poor way of serving the public. RUSSELL STURGIS.

DANTE AMONG HIS COUNTRYMEN.

TO THE EDITOR OF THE NATION:

SIR: A remark in your review of 'Dante in America' (No. 1678), that "in Italy itself the great poet is a name to worship conventionally more than elsewhere," runs counter to the experience and observation of your present correspondent. Had your reviewer written a few weeks later, he would hardly have used an expression implying that Dante is a writer much talked of but little read by Italians. He would doubtless have read in the *Dial* of September 1 a lady's letter from Berkeley which mentions a settlement of Italian fishermen about San Francisco Bay, apparently without an aspiration other than a supply of the black bread they eat and the sour wine they drink; "and yet these people support a society for the study of Dante."

Again, the reviewer would surely have modified his remark had his Italian experience been of a piece with my own. In May, 1891, I saw a vest-pocket edition of the "Inferno" (pp. 168) on sale wherever I walked in Florence, published in Rome the same year. The price was twenty centimes in the depreciated Italian currency, and so less than four cents. Such an edition, I said to myself, would never have been printed but in response to a popular demand. No printer could afford it. It proves a permanent popularity. This impression of mine was shared and confirmed by Prof. Norton, to whom I exhibited the dime Dante which I had brought home. Though he had always been a gatherer of Dantes, and though my treasure-trove pleased him in paper, type, and text, it had altogether eluded his research. This Lilliputian jewel, less than three inches by four, must have seemed to his Italian purveyors beneath the dignity of his chair. Though I at first saw only the "Inferno," I directly met with the rest of the 'Divina Commedia,' in separate parts, as well as all three portions tastefully bound together, and retailed at a single lira.

It has long been customary to concede to Italian illiterates a degree of artistic discernment, or appreciation for painting and sculpture, which is lacking in uncultured ultramontanes—yes, in many of them where culture has done for them what it could. May not bounteous Nature have added an analogous precious seeing to the eyes of the Italian masses in regard to Dante? It was not without genuine feeling, according to all accounts of Dante's sixth centennial, that the Italian millions cried: "Onorate l'altissimo poeta!"

For illustrating the fewness till recent decades of American Dantophilists, in the judgment of Europeans, there is one significant fact that would have done yeoman service to the reviewer. When Lord Vernon has completed his monumental Dante in vellum paper folios at a greater outlay of money and labor than any other edition had cost, he resolved never to sell a single copy, but to distribute every one as a free gift where it would, as he thought, be best appreciated. As a result of this resolution—*Detur dignioribus*—only four sets were at first vouchsafed to Americans. These four were bestowed upon Ticknor, Lowell, Longfellow, and Norton. DANTOPHILIST.

Notes.

J. B. Lippincott Co. are to publish during the present season a 'Life of Charles Jared Ingersoll,' by William M. Meigs; 'Men, Women, and Manners in Colonial Times,' by Sydney George Fisher; 'Washington after the Revolution, 1784-1799,' by William S. Baker; 'A History of the United States of America, its People and its Institutions,' for advanced school grades, by Charles Morris; 'The University of Pennsylvania Illustrated,' with letter-press by Prof. John B. McMaster and H. L. Geyelin; 'Curiosities of Popular Customs, and of Rites, Ceremonies, etc.,' together with 'A Library of Curiosities,' by William S. Walsh; 'Stories of Famous Songs,' by S. J. Adair Fitzgerald; 'A Guide to the Proper Understanding of Wagner'; a 'Life of Wagner,' by Houston Stuart Chamberlain, illustrated; 'Symphonies and their Meaning,' by Philip H. Goepp; 'Chambers's Concise Biographical Dictionary'; 'Picturesque Burma, Past and Present,' by Mrs. Ernest Hart, copiously illustrated; a new edition of the Urquhart-Motteux translation of Rabelais's Works in five volumes, and Rousseau's 'Confessions' in four, founded on the anonymous edition of 1790-'96, but amended and enlarged.

G. P. Putnam's Sons' autumn list includes a new and limited edition of 'A History of the English Poor Law,' by Sir George Nicholls, K.C.B., revised; a new edition, in larger form, of Bernhard Berenson's 'Venetian Painters of the Renaissance,' with twenty-four examples in photogravure, together with a fresh work by the same author on 'The Central Italian Painters of the Renaissance'; 'Life in Early Britain,' by Bertram C. A. Windle, with maps and illustrations; 'The Ayrshire Homes and Haunts of Burns,' by H. C. Shelley; 'Historic New York,' comprising the twelve papers of the "Half-Moon Series," with illustrations; Irving's 'Astoria,' in the style of the holiday Alhambra edition; a brand-new issue of the Complete Works of Irving in forty volumes; 'The American College in American Life,' by President Thwing of Western Reserve University; 'The Occasional Address: Its Literature and Composition,' by Prof. Lorenzo Sears of Brown University; 'Modern English Prose Writers,' by Frank Preston Stearns; the second and concluding volume of Prof. Moses Coit Tyler's 'Literary History of the American Revolution'; and 'Coffee and India-rubber Culture in Mexico,' with historical and geographical notes on the country, by Matias Romero, Mexican Minister to the United States.

The Baker & Taylor Co. announce for early publication 'A Colonial Witch: Being a Study of the Black Art in the Colony of Connecticut,' by Frank Samuel Child; 'Fabius the Roman; or, How the Church be-

came Militant,' by the Rev. E. Fitch Burr; and 'Sunlight and Shadow,' a book for photographers, edited, with illustrations, by W. I. Lincoln Adams.

An *édition de luxe* of the British classic poets, beginning with Burns, Byron, Milton, Scott, and Wordsworth, will be immediately brought out by Thomas Whittaker, in new type and two styles of binding. He will also market in this country 'Bishops of the Day: A Biographical Dictionary of the Archbishops and Bishops of the Church of England and of All Churches in communion therewith throughout the World,' by Frederick S. Lowndes of Oxford.

From Ginn & Co.'s list of forthcoming educational works we select Gibbon's Memoirs, edited by Prof. O. F. Emerson; 'A History of English Literature,' by Prof. F. B. Gummere; 'Outline of the Philosophy of English Literature: Part i., The Middle Ages,' by Prof. Greenough White; 'Introduction to the Study of Literary Criticism: Volume i., Poetics and the Drama,' by Prof. Charles Mills Gayley; 'Science of Discourse,' by Prof. Arnold Tomkins; 'The Forms of Discourse,' by William B. Cairns; and 'The Principles of Argumentation,' by Prof. George P. Baker.

'The Herbartian Psychology Applied to Education,' by John Adams, President of the Educational Institute of Scotland, is about to be published by D. C. Heath & Co.

The Helman-Taylor Co., Cleveland, have in press a 'History of the Pequot War, from the contemporary accounts of Mason, Underhill, Vincent, and Gardener,' edited, with notes and an introduction, by Charles Orr, librarian of Case Library. The edition will be limited, and each copy will be numbered.

A work dealing with the 'Libraries of London,' their foundation, history, and special features, is now being prepared by Thomas Greenwood, editor of the 'Library Year-Book,' in collaboration with James D. Brown, librarian of the Clerkenwell Public Library, and author of biographies of musical persons. It seems passing strange that no such work should have already been undertaken; but, as a matter of fact, only very few persons know how London teems with libraries. The matter of the coming work will be arranged under the following heads: State Libraries, Society Libraries, Collegiate Libraries, Endowed Libraries, Club and Proprietary Libraries, Voluntary and Subscription Libraries, Church and Hospital Libraries, Municipal or Rate-Supported Libraries, Commercial Libraries, and Miscellaneous Libraries. The work is to be limited to an issue of about 300 copies, and will be illustrated. The price will be one guinea net.

It is not generally known, by the way, that there is a library attached to each of the great departments of state, in London, such as the Foreign Office, the Colonial Office, the Admiralty, and the India Office; each with its own staff. That at the India Office is said to contain about one hundred thousand volumes. A library which contains a number of books relating to the colonial period of the history of the United States is that of Sion College, on the Victoria Embankment. Much use of its collections was made by the late Bishop Wilberforce when writing his history of the 'Church in America.' At the reception given by the authorities of Sion College to the librarians, on the 13th of July last, many of the rarities of the library were exposed to the view of the guests. Among them was a volume of manuscript documents, by Dr. Thomas Bray and others, relating to the Maryland bishopric (1697, &c.), bequeathed to Sion College by Dr. Bray.

Those who are interested in Puritan nomenclature will be glad to learn that Canon Bardsley is about to bring out a new edition of his work upon that peculiar subject.

Cabot literature has grown large enough to require its own bibliography. Prompted by Mr. Foster of the Providence Public Library, Mr. G. P. Winship has prepared a list of works relating to both John and Sebastian. It is clearly arranged, and, though not absolutely exhaustive, will be of service to investigators in the field of early American discovery, as well as to students of the Cabot question proper.

The Centenary Edition of Carlyle's Works, which bears in this country the imprint of Messrs. Scribner, pursues its course with the fourth and final volume of the Cromwell, and 'Past and Present' in one volume, with Mr. Traill's customary introduction. The clear and elegant print of this edition is worthy of finality; but who will predicate that of any edition of any classic? A shade less luxurious in paper, but otherwise comparable in beauty, is the same publishers' Gadshill Edition of Dickens, under Mr. Andrew Lang's direction. Of this we now have 'David Copperfield' in two volumes, with the contemporary etchings. Mr. Lang's perfunctory opening words can hardly be thought to outweigh in interest or value the bibliographical introduction to this work written by the younger Dickens, to which one would never suspect Mr. Lang's manifest indebtedness.

Excellent specimens, also, of English bookmaking, with pretty condensed typography, are the Service & Paton reprints of Bulwer's 'Last Days of Pompeii' and Lever's 'Charles O'Malley' (New York: Putnams). Here there is no apparatus, but the illustrations are numerous and respectable.

The tenth volume of Mrs. Garnett's translations from Turgeneff comprises 'Dream Tales and Prose Poems' (Macmillan). In spite of all shortcomings, not to be too much insisted upon, this series is one to be prized.

From an interesting review by Prof. Carlo Salvioni, in the Milan *Perseveranza*, of August 19, 20, one learns of the attention paid by native scholars to the Milanese speech; first in the 'Vocabulary' of Francesco Cherubini, followed by that of Banfi, who builds upon his predecessor. Last year and this, a third 'Vocabolario Milanese-Italiano,' by Francesco Angiolini, and a 'Dizionario Milanese-Italiano,' by Cletto Arrighi, have appeared, and they are examined together by Salvioni, who, criticising the deficiencies of both, concludes that they meet a want and mark an advance, and that they should be used to check each other. Angiolini confines himself to the dialect of the "gente civile" within the walls, and adds a grammar; Arrighi includes the common people and the suburbs, and has no grammar. Both have a complementary Italian-Milanese vocabulary. It should be remarked that these useful works were evoked by prizes offered by the Ministry of Public Instruction in 1890 for dialect dictionaries throughout the peninsula, to be completed in three years, and that Angiolini won a third prize; Arrighi honorable mention, not having complied fully with the conditions.

A lawyer of Milan, Lodovico Gatta, formerly a member of the municipal government, has honored his city of glorious memories with an historical illustration of the nomenclature of its streets ('Milano e i Nomi delle sue Vie: Personaggi Illustri e Benemeriti: Momenti Storici'). Some 250 biographies and 20 episodes are embraced in this pious memorial.

If one should follow blindly M. Fernand Vandérem in his last clever book, 'Les Deux Rives' (Paul Ollendorff), he might naturally enough come to the conclusion that in Paris the day of judgment had come and gone without observation or any special notice, since the Seine between Auteuil and Bercy separates with perfect accuracy and justice the sheep from the goats. The Rive Gauche is the true fold, the chosen home of virtue, knowledge, and faith. It includes all that Paris holds of purity, industry, and of the familiar and domestic virtues. But the Rive Droite is a sad region, a home of dragons and serpents, a den of all the vices and all the vanities. It is attractive, nevertheless, to those who do not see its hollowness, and seductive to the innocent; and its attractions draw to high and frivolous society, to the Bourse and the Opera. However little one may agree with M. Vandérem's hasty and sweeping division of Paris and of Parisians, it still must be said that his book is full of an ability which quite surpasses mere cleverness. It shows much observation, much faithful representation of character and of life, and is full of interest from beginning to end. It is, in fact, one of the best novels of the year.

An improvement in the hanging of the pictures in the gallery of the Louvre may be called an event of cosmopolitan interest. The desirability of a thorough-going change of this kind is once more set forth, in a recent number of the *Journal des Débats*, by M. André Hallays, upon his return from a visit to the well-arranged collections of Berlin and Munich. Improvements have been made within the last few years in other sections of the museum, but no essential change can be effected in the picture gallery till the famous *salon carré*, with its accumulation of masterpieces, is given up and a series of rooms and cabinets created, each devoted to some great master or school. Under present conditions, M. Hallays declares—and thousands of visitors will agree with him—that, while there is no collection in the world as rich as that of the Louvre, there is none, also, in which the visitor is subjected to so much trouble and fatigue. We are glad to learn that there is some reason for hoping that a new system of classification will be adopted in a not too distant future, when "even those who know, or believe they know, the gallery of the Louvre thoroughly, will wonder at its undreamt-of wealth."

Another African language has taken its place among written languages with the beginnings of a literature. A Somali-English and English-Somali dictionary, together with a grammar and manual of sentences, has just been published in London through the generosity of Lord Delamere. It is the result of the many years' labor of Father É angéliste de Larajasse, the head of the mission of the French Fathers at Berbera. With the proceeds of the sale it is proposed to publish a translation of the Gospels,

a collection of native poetry, and other interesting work. For writing Somali phonetically, Roman characters have been employed with their Latin pronunciation, some signs used in the Syriac alphabet, and one new letter representing the cerebral *d*. The Somalis are an enterprising and adventurous race of unknown origin, whose home for many centuries has been in the Horn of Africa, but who are to be found in most places on the east coast.

The Egyptian Government has, at the instance of the English and French authorities at Cairo, undertaken to have a classification made of all known papyri, whether preserved in Egypt or in other countries. The prime mover in this matter was Mr. Marshall Adams, the author of a book upon the 'Religion of Egypt.' To him, in the first place, Egyptologists are indebted; but the readiness with which the Egyptian Government has adopted the suggestion will be duly recognized by all scholars.

Although little has lately been heard of the Venezuelan boundary question, agents on each side are busily engaged in record-hunting and in the preparation of the respective "cases" to be laid before the Court of Arbitration. The "cases," or statements of claim, must, in terms of the treaty, be handed in by the 14th of February, 1898; the counter-cases by the 14th of June following, and the printed arguments by the 14th of September. The Court of Arbitration will hold its sittings about the 14th of November, 1898. The place of meeting will, most probably, be Paris. A question of some interest is, who will be the fifth Commissioner? It is not known who this important personage will be. The four Commissioners already appointed have the power to name the fifth, who will be their President. If within a certain time no such selection be made, then the appointment will be made by the King of Sweden.

The printer of the London *Figaro* was recently fined £5 and £2 2s. costs as being "a rogue and a vagabond," in terms of a law passed in the reign of George the Fourth, which provides that, "if any person shall publish any proposal or scheme for the sale of any ticket or tickets, chance or chances, in a lottery," he shall be punishable as therein provided. From March to June last, an advertisement of certain "headache powders" had appeared in the *Figaro*, under the heading "£20 Missing Word Competition." A description of the powders was given, with the omission of two words needed to perfect the sense. Six persons guessed the words omitted, and the prize was duly divided among them. The legal proceedings have, of course, given a substantial advertisement to the powders, at the expense of the *Figaro*.

Operators in Wall Street will no doubt be interested in at least one of the scenes in the new play which was to have been performed at the Drury Lane Theatre, London, yesterday for the first time; for a "Panic on the London Stock Exchange" is to be acted with as much of reality as the circumstances will admit. Servants and officers of the Exchange are to be employed in subordinate parts of the performance, while rehearsals of the play have been taking place under the supervision of members of the "House," as stockbrokers are sometimes called.

—Although the naming of Harvard College grew out of a considerable gift of books as well as of money, it was nearly thirty years before the appointment of the first librarian. We learn this fact from "The Librarians of Harvard College," issued as No. 52 of the Bibliographical Contributions of the Library, and compiled by Messrs. Potter and Bolton. The transitory and subordinate nature of the office is shown by the number of persons who held it, from 1667 to 1887—no fewer than sixty, of whom forty-four succeeded each other in the eighteenth century. But the list is very distinguished, embracing the best blood of Massachusetts. From the Library the incumbents went out to make their mark in the community, as our long-term modern librarians cannot do, and more than one rose to high eminence. The first, Solomon Stoddard, became a famous minister in western Massachusetts, and the grandfather of Jonathan Edwards. The second was Samuel Sewall, afterwards chief justice and diarist; the sixth, John Cotton, grandson of Anne Bradstreet, who brought upon himself the displeasure of the Rev. Increase Mather and atoned for it by leaving him "his widow, mother of his eight children," to be his second wife. The tenth was Anthony Stoddard, nephew of the first librarian; the twelfth, John Whiting, married John Cotton's daughter; the fourteenth, Nathaniel Gookin, was the nephew of Daniel, the third (and fifth), and married another daughter of John Cotton; and so the interrelationship ran on in an amusing manner, with the Sewall line most extensively involved. Elizur Holyoke (1757-58) was nephew of Edward (1709-12), who afterwards became President of the College, and whose daughter was about to marry Nathaniel Ward (1768) when that promising librarian died. Samuel Shapleigh (1793-1800), with whom and with Sidney Willard (1800-1805), great-grandnephew of Josiah Willard (1702-3), the century went out, left nearly his whole property, now a fund of $4,000, for the purchase of works in polite literature not Greek or Latin. The Rev. Andrews Norton (1813-21); Joseph Green Cogswell (1821-23), the virtual author of the Astor Library; Benjamin Peirce (1826-1831), the historian of the College and father of the race of mathematicians; Thaddeus William Harris (1831-56), son of Thaddeus Mason Harris (1791-93), and John Langdon Sibley (1856-77), with whom the chronicle ends, are the more famous of the nineteenth-century predecessors of Mr. Justin Winsor.

—Mr. J. Massey Rhind's statue of Stephen Girard, unveiled on May 20 in the Philadelphia City Hall Plaza, seems from the pictures to be a good performance well mounted. The occasion has been commemorated in a volume embodying the proceedings (Philadelphia: Lippincott), and illustrated with photographs of the statue and of the Girard College grounds and buildings. Girard's will is appended, and shows that he drew as fast a color line among the orphans who might enter the gates of his foundation as he did between visiting laymen and clergymen. Only white orphans are provided for, and careful instructions are given for the holding and ultimate sale of a Louisiana property with its slaves and their increase. In this particular, Girard compares with the Baltimore philanthropist McDonogh. The College has now been turning out graduates for half a century, and there is a vague allusion, in the report of the secretary of the committee on page 7, regarding their usefulness in various callings. We cannot, however, recall, in the biography of any American who has become eminent, the fact of his having been one of Girard's beneficiaries; nor have we recognized any such in the list of alumni who contributed to the statue fund. Does this point to an inferior system of education (in a State which notoriously lagged in the care for public instruction), or to a poor class of pupils, in illustration of Darwin's doctrine that heredity counts for more than environment? Would the result have been different if Girard College had been established, say, in Massachusetts?

—The return, on September 3, of the members of the Jackson-Harmsworth polar expedition closes the history of an exploration which has met with a degree of success not fully commensurate with the magnificent manner of its equipment, nor equal to the expectations of those who had been most directly associated with it. Few expeditions have been more lavishly fitted out, and of none, probably, has the leader been more absolute master or more independent to dictate the choice of his work. So far as concerns what is generally assumed to have been the main purpose of the expedition, the attaining of the farthest north if not the pole itself, the expedition has proved a failure, falling short of the attainments of six earlier explorations, viz., those of Parry (1827), Payer, Hall, Nares, Greely, and Nansen. While, manifestly, the non-extension northward of Franz-Josef Land, or the absence north of it of outlying land-masses calculated to serve as a base of support, contributed to this failure, it is not clear why no strenuous effort was made to attack the open sea (especially that part of it which Mr. Jackson has graciously named Victoria Sea) or its encumbering pack. Three years of comfortable habitation in a region lying on the 80th parallel of latitude is an experience that has befallen few expeditions of this kind, and credit is due to Mr. Jackson for the manner in which he conserved the health and strength of himself and his associates during this long period. Despite its shortcomings, the expedition has done much meritorious work, and the delineation and delimitation of the various land-masses which together constitute what may now properly be considered to be the Franz-Josef archipelago is in itself an important contribution to geographical knowledge.

—Criticisms of the work of the Austrian explorer, Julius Payer, in Franz-Josef Land have from time to time appeared in the communications by Mr. Jackson, leader of the Jackson-Harmsworth Polar Expedition, to the Royal Geographical Society of London. The endeavor to minimize the labors of one of the most conscientious and observant of travellers has not met with the justification which the supporting facts were thought to warrant. It remains true that many of the contours laid down by Payer have to be modified in the light of the more detailed determinations of both Jackson and Nansen, and it is equally true that some of the larger land-masses are now known to be associations of smaller tracts; but, in its broader aspects, the work of Payer, especially when the circumstances under which it was executed are considered, is of a strikingly high order, and does credit to a surveyor of rare ability. Prof. Ralph Copeland, Astronomer Royal for Scotland, has recently recalcu-

lated Payer's cartographic data from the original copy of the survey in possession of the Royal Geographical Society, and bears testimony to the general accuracy of the Austrian explorer's constructions and to the value of his charts. The greatest error in the original map is the placing of the great Dove Glacier, which apparently does not exist, as Nansen found water over a large part of the area supposed to be occupied by it. It is almost certain that Payer mistook fog-banks on the eastern horizon for an ice-land—a deception which almost every Arctic voyager has experienced. Prof. Copeland closes his critical comments on the first map of Franz-Josef Land by stating that the region traversed by Payer "is laid down in such a way that any explorer following in his track will be able to correct the few oversights inevitably incidental to a first exploration."

—At a recent meeting of the Oxford Philological Society, held in Exeter College, an important paper was read by Mr. W. Lutoslawski of Drozdowo, Poland, summarizing some of the novel points in regard to the possible discovery of the order of the composition of the Platonic writings. These are to be fully set forth in his forthcoming work on the origin and growth of Plato's 'Logic,' now in the press (Longmans). His plan for a chronological arrangement of the Platonic writings is based on 58,000 coördinated observations of Plato's style. These consist in more than the investigation of the author's vocabulary, though that is not neglected. The tendency, for instance, to invent new words or compounds for certain classes of notions, varies in various works admitted to have been written at different periods. Plato, more than other prose writers, chose to use poetical words; he had a certain number of foreign words in his vocabulary. Rare words were sometimes indispensable for the expression of a specific thought. Common words, occurring frequently, such as particles, are not thus indispensable. The frequency with which any given characteristic word occurs in each dialogue has not been exhaustively registered, nor do we know how the frequency of such words actually used stands in relation to the number of cases where the word might possibly have been used, had Plato so chosen. Equally important is the arrangement of words, as contradistinguished from their selection; the comparative frequency in the use of substantives, as against the use of verbs, and the practice of inversion so conspicuous in Plato's later style. The great point to be kept in mind is that points in style can be used as sure tests of periods of composition only if they are very numerous. The number and also the variety in kind of observed points in style are of the essence of Mr. Lutoslawski's test. The variety of such tests will be found more complete as the investigation proceeds, taking into account such things as the intended or unintended rhythm that goes with certain arrangements of words, the use of proverbs, and the frequency of rhetorical figures. At the present stage of Platonic study, such microscopic investigations, competently made and carefully recorded, are of the very first importance for further progress. Much has been done, but more remains to be accomplished.

—In order to improve for future workers the method of interpreting facts about style, Mr. Lutoslawski seeks to establish certain degrees of greater or less importance in observed peculiarities of style. What may be called accidental peculiarities, such as the use of φιάλη only in 'Symposium,' 'Critias,' and 'Laws,' have little or no significance. The single use in the 'Phædo' of μετάσχεσις, however, has its significance. A higher degree of importance attaches to peculiarities repeated, occurring twice in a small dialogue, twice or three times in an ordinary dialogue, twice or four times in a large dialogue, or less than once on every twelve pages (Didot's pages are the safe unit for observations of the kind) of a longer dialogue. Really important peculiarities are those occurring more than twice in a small dialogue, more than thrice in an ordinary dialogue, more than four times in a large dialogue, and once in twelve pages of the 'Republic' or 'Laws.' Instances of the most important peculiarities of all are (a) κατά with the accusative prevailing over ἐν, (b) πᾶς and its compounds over five times in a page, (c) more than twenty-one prepositions in a page, (d) μέν τοι, occurring less than once in five pages. These are classed with words or idioms recurring very frequently, say 118 times or more in the 'Laws,' 97 times or more in the 'Republic.' The numbers of observed peculiarities in two works compared must differ at least by one-tenth for valid chronological inferences. The total number of peculiarities dealt with ought to be more than 150 in a dialogue of ordinary size. The 'Laws,' as the latest work of Plato, should be used as a standard of comparison. Mr. Lutoslawski makes an earnest appeal to scholars the world over for further inquiry to investigate the peculiarities of the order of words and of the construction of phrases, and declares that a great number of such observed peculiarities will determine the relative affinity of all dialogues, and lead to the definitive solution of all problems of Platonic chronology.

COURTHOPE'S HISTORY OF ENGLISH POETRY.

A History of English Poetry. By W. J. Courthope, Professor of Poetry in the University of Oxford. Vol. II. The Renaissance and the Reformation: Influence of the Court and the Universities. Macmillan. 1897.

Soon after the first volume of his 'History' was published, Mr. Courthope became Professor of Poetry at Oxford. How far these two events stand in the relation of cause and effect, we shall not allow ourselves to conjecture. The coincidence can hardly escape the future historian of nineteenth-century scholarship, who will doubtless interpret it in the easiest way. In what light he will regard the chair and the book in their joint and several bearing on his general subject is a curious, perhaps a fantastic, question, which may also be left to time.

For our own part, we took Mr. Courthope's first volume pretty seriously, reviewing it in these columns with a particularity which its pretensions and the reputation of the author seemed to demand. It attempted to cover the Middle Ages, and it showed, we were pained to discover, only a superficial acquaintance with mediæval literature. Its inaccuracies in detail were gross, and in some of the most important branches of the subject its errors were nothing short of labyrinthine. It ignored much of the best scholarly work of the last thirty years. In pronouncing on complicated and uncertain questions it was dogmatic with the dogmatism of a positive man who knows but half the evidence. In structure it was at once complex and disjointed; even the minute "Analysis of Contents" which stood at the beginning could not make the reader's progress easy or satisfactory. In plain terms, Mr. Courthope's first volume was a monumental failure. Yet, after all, the book was interesting. The author showed unusual power in framing and discussing large generalizations, which, if one could only control them in matters of fact, were not without stimulus. We looked forward, therefore, with some eagerness to the progress of the work, hoping that, when Mr. Courthope reached a period of which he had a competent knowledge, he might produce something of moment.

Obviously that period is not yet reached. The second volume, which lies before us, is a complete disappointment. In no respect is it an advance on its predecessor, and in some ways it betrays a lamentable falling off. It shows no improvement in point of scholarship; it is even more loosely constructed than the first volume, and, from beginning to end, it makes an impression rather of pervasive feebleness than of any kind of power. It is flat and dull. Its learning is superficial; its critical part is shallow and commonplace. Surely in his haste to bring to market the first fruits of his professorship Mr. Courthope has done scant justice whether to himself or to his university.

Yet the period included in this volume, 1450-1600, might well have inspired a good book. It implies, to use the ordinary terms, the transition from the Middle Ages to modern times, and is full of opportunities for the critic and the literary historian. The Renaissance, the Reformation, sixteenth-century French poetry and poetic theories in their effect on England, the far-reaching and very various influences of Italian literature, Spain in its relations to English Euphuism and English romance, the moral plays or moralities—whence they came and whither they were going; the rise of comedy and tragedy—such are some of the subjects with which Mr. Courthope had to concern himself. Every one of these catchwords suggests a host of subordinate but intensely interesting topics. The literary historian of this period has a vast opportunity, and—to the shame of English letters it must be confessed—an almost clear field. Much material has been collected; many clever essays have been written; good *obiter dicta* are abundant; but where shall one look for a comprehensive treatment of the whole matter, conducted on a basis of wide and sound learning, in accordance with just principles of criticism, historical and comparative as well as æsthetic? Such a work, if ever it comes to pass, will not cumber its text with biographical and bibiliographical detail beyond what is necessary and significant. It will distinguish between the "history of poetry" and the "lives of the poets." Above all, it will shun the see-saw method, so much in vogue, by which the reader, after a breathless ascent into the (often somewhat rarefied) air of generalities, is let down with a bump to the contemplation of uninterpreted facts and figures,

only to be carried up into the vague again before he has got his bearings.

Mr. Courthope, we make haste to remark, is not without some conception of the possibilities of his subject and of the method that ought to be followed in treating it. He mentions most of the important problems and discusses some of them at considerable length. As to general method, the opening chapter sets forth, with considerable pomp, a plan of campaign which, the reader thinks, may come to something. "The purpose of this history," we are told, "is to trace the course of our poetry rather by the stream of the national thought and imagination than by that of the national language, and this involves a constant reference to the state of morals and politics in Europe at large." Again: "The sixteenth century is the great age of transition from mediæval to modern times; the chief poets of the period work from the basis of culture provided for them by the Middle Ages, but they are alive to all the influences of their own age; and, like their ancestor Chaucer, they avail themselves of ideas and feelings flowing in upon them from a foreign source." We must therefore have, continues Mr. Courthope, a clear notion of the state of mind of Catholic Europe at the beginning of the sixteenth century, and he therefore proposes "to illustrate the working of the ancient system in Europe on the eve of the Reformation by reference to the Diet of Augsburg held in 1518." Having thus got "a conception of the organic whole," "I shall then," he says, "turn to the parts, and seek in the most characteristic literature of the sixteenth century what I before sought in the literature of the fourteenth—a general idea of the movement of European liberty."

This sounds attractive. "Comparison" seems to be provided for—comparison not only of literature but of the political and social movements of which literature is the expression. We are not to be confined to insular letters, it seems, but all Europe is to be focussed for us. Some light, we imagine, and considerable vitality ought to be the result. A moment's thought, however, reveals the weakness of Mr. Courthope's programme. He will look at literature from no point of view but the political. Art, æsthetics, imagination, creative enthusiasm, poetry itself—all these terms have no meaning for him unless he can see in them a mere expression of the πολιτικὸν ζῶον. Even religious, moral, and social conditions, which fall within his limited scheme and which he really intends to study, reduce themselves to politics in his crucible.

Inadequate as this method is, it would, if consistently followed by a powerful writer well acquainted with all the facts, produce, beyond question, a masterly work—not a real history of literature, doubtless, but a contribution to the history of civilization which all literary students would find enlightening. Mr. Courthope, however, is not true to his own programme. From time to time he asserts his point of view, and, in a paragraph or two of generalities, endeavors to persuade himself that he is following a definite plan. But his treatment has no steadiness. When he comes to a particular author he proceeds in the ordinary fashion: a few pages of "cyclopædia" biography, a few pages of extracts or summaries, some fragments of machine-made criticism, and an academic peroration. The weakness and commonplace of some of the chapters are depressing. Their lack of connection with each other is evidence of the feeble hold which Mr. Courthope has on his general plan or on any plan whatever.

The chapter on Sir Philip Sidney may serve to illustrate these strictures. Here Mr. Courthope has made a distinct attempt at continuity. The chapter itself is entitled "Court Romance: Sir Philip Sidney"; that which precedes is called "Court Dialect: John Lyly"; that which follows, "Court Romance: Edmund Spenser." Elaborate transitional paragraphs are provided. "While one section of Elizabeth's court," writes Mr. Courthope, "occupied itself with forming out of the memories of chivalry a dialect and code of manners fitted to distinguish itself as a caste [*this is our historian's summing up of the Euphuistic movement!*], the more generous spirits endeavored to preserve an ideal of knighthood which should have a practical bearing on the circumstances of their own life." Thus Sidney is introduced to the reader. Then, at the beginning of the chapter on Spenser, an effort is made to tack the three chapters together by the following remark: "The genius of Spenser . . . covered at once the movement developed by the Euphuists for the refinement of the national language, and the ideals of those who aimed at adapting the ideals of chivalry to the requirements of the court." Lyly, Sidney, and Spenser, it will be observed, are conceived by Mr. Courthope to have certain definite relations to each other. It might be expected, therefore, that his treatment of each of them would be guided, in the main, by this conception. Nothing of the kind! The chapter on Sidney reveals itself, on examination, as a mere piece of "space writing." It is hastily and clumsily huddled together out of the most accessible materials. It contains nothing new, nor does it throw any new light on the familiar facts. Mechanical as it is, it may be conveniently analyzed by a mechanical process—that of counting the pages—and no more delicate analysis is needed to resolve it into its elements.

In all, then, Mr. Courthope allots thirty-two pages to Sir Philip Sidney. First we have a page of exordium, quite in the manner of a popular lecture, and ending with a "general utility" sentence: "This harsh contrast between mediæval memories and modern realities produced in many high-spirited English gentlemen a state of feeling which is vividly represented in the life and writings of Sir Philip Sidney." There follows an eleven-page account of Sidney's life, compiled, with due credit, from Fox-Bourne, and including a page and a half of quotations from Languet and others. Next comes a discussion on "romance," with some remarks about Montemayor and Sanazzaro. This occupies four pages. It is remarkable chiefly for some strange ideas about the old French *romans d'aventure*, on which is based a diverting bit of distinction-making. Between seven and eight pages are then filled with a very superficial criticism of the 'Arcadia,' including a page-and-a-half summary of the plot and a page of stylistic specimens. Then come seven pages on 'Astrophel and Stella,' just half of them devoted to a heavy though sensible disquisition on the supposed biographical value of these poems. Five sonnets are quoted in full, and thus two pages are provided for. The chapter then ends with a labored peroration, a page in length, and suggesting, like the exordium, a popular lecture.

The discerning reader will perceive the significance of these statistics. The chapter contains much familiar fact and very little criticism. It is in no way distinguishable from the humdrum literary manual except by the leisurely and ineffectual pomp of its pseudo-Gibbonesque style. "*Arcadia* and *Astrophel* and *Stella* are equally to be regarded as the outpourings of an ardent and chivalrous nature, long pent in the midst of uncongenial surroundings, and at length permitted to find utterance during a period of enforced leisure. In the 'Astrophel' Sidney gives utterance alike to the amorous traditions of chivalry and to the ardors of his own imagination." "The extraordinary medley of elements out of which the fiction [of the 'Arcadia'] is composed, helps to produce that incongruous ideal effect against which Horace warns the inventor of fiction at the opening of his *Ars Poetica*." This is the kind of thing which the Oxford Professor of Poetry thinks important enough to print. One searches the chapter in vain for anything which has not been said before—anything which (a few misconceptions apart) is not to be included in the limbos of "things generally known" and "things that may be taken for granted."

We have selected the chapter on Sidney for particular comment, not because it is below the level of the rest, but because it is, on the whole, a fair sample of the volume. If we had wished to illustrate Mr. Courthope's neglect of the results of recent scholarship, we might have referred to his chapter on Wyatt. If we had been inclined to dwell on his confidence in pronouncing upon subjects which lie out of his welkin, we might have adverted to his preposterous remarks about the English language (at pp. 57 and 94) and about translation in the Anglo-Saxon and Middle English periods (at p. 131). If we had wished to amuse our readers, we might have quoted the solemnity with which Warton is referred to (at p. 103) as if he were a Herald's College for the English poets. If, finally, we had wished to take the book at its very worst, we might have dissected the chapter on "The Evolution of the English Poetical Drama," which is a very dismal piece of hack-work, and exemplifies every imaginable quality from which a 'History of English Poetry' should be free. In concluding, we can but express the hope that Mr. Courthope will let his third volume ripen before he sends it to press.

MAITLAND'S DOMESDAY BOOK.

Domesday Book and Beyond: Three Essays in the Early History of England. By Frederic William Maitland, LL.D., Downing Professor of the Laws of England in the University of Cambridge. Boston: Little, Brown & Co. 1897.

It is not often that a reviewer can safely use the term "epoch-making"; but to Prof. Maitland's book it may be applied with confidence, and in its true sense. When the future historian of historiography comes to write his chapter on the study of the social and political origins of the English people, he will probably point to the earlier sections of Bishop Stubbs's 'Constitutional History' as summing up in compact and cautious form the conclusions of one whole great school of industrious and enthusiastic scholars. He will then point to Mr. Seebohm's

'English Village Community,' and to various English statements of the views of M. Fustel de Coulanges, as somewhat unexpectedly reopening the discussion by calling in question what had come to be regarded as settled fundamentals. Over the literature of the next few years, including though it did at least one loudly trumpeted work, he will pass rapidly, and he will find the next distinct stage in the course of investigation in the present work of Prof. Maitland. For, like all the books which really mark an epoch in the progress of science, this of Mr. Maitland is no mere defence of a threatened position. It advances to a new position, which, if closer to the older one than to its critics, is yet other than the older one. We would not, perhaps, apply to historiography what some writers are fond of saying of philosophy. We would not speak, for example, of Prof. Maitland as taking up into his doctrine what may be regarded as the valuable elements in the doctrine of Mr. Seebohm. The antithesis between the views of the one and the other is as sharp as can well be: there is, indeed, one respect in which the antithesis is even sharper than it was between Mr. Seebohm and Bishop Stubbs. But, without speculating on what might have been, it is clear that Mr. Maitland's book, as we have it and when we have it, is very much the result of the antagonistic movement of thought called out by 'The English Village Community,' and also that it recognizes and deals with elements in the problem, such as the yardland, to which Mr. Seebohm was the first effectively to call our attention.

In form Prof. Maitland's book is a model of the tentative. It is made up of three "Essays"; one on "Domesday Book"; one on "England before the Conquest," devoted mainly to the Anglo-Saxon land-books; and one to the "Hide." In each of these he fetches a very wide compass; he approaches the matter at issue at a dozen points; he exhausts the phraseology of conjecture, of dubiety, of suggestion, of caution; and ever and anon there are purple patches of self-depreciation. Nevertheless, certain sufficiently positive conclusions gradually emerge which are capable of brief statement.

Mr. Maitland, then, thinks of what afterwards became England as in the main settled by English freemen cultivating their land with the aid perhaps of a slave or so apiece, but unaffected to any noteworthy extent by any previous agricultural system. So far he agrees with the Germanists. To each such adult freeman, head of a family, he assigns in the beginning, as his normal holding, a long hundred (120) of the local 'acres'—which is his interpretation of the *hide*. But now, unlike all those, from Sir Henry Maine and Bishop Stubbs downward, who have been affected by "the mark theory," he altogether refuses to make this freeman's holding subject to any sort of communal ownership. There were, indeed, from the first, apparently over a large part of the country, groups of more or less contiguous residences which grew later into the mediæval village as we know it. The holdings were, moreover, composed of intermingled acre-strips; but they were bound to one another only by the customary rotation of crop and fallow which "must have appeared less as the outcome of human ordinance than as an unalterable arrangement established by the nature of things" (p. 347); and private ownership was as complete as the strong sense of the family tie would allow it to be. There was no substantial village moot; the manorial court was the result of later "feudalizing" tendencies; and much of the "communalism" of subsequent centuries was apparently the consequence of "seignorial pressure." The growth of seignorial authority and of "the manorial system" Mr. Maitland explains as the slow result of many causes—the transfer to private lords of royal rights, the "commendation" of the weak to the strong, the encroachments of magnates, lay and ecclesiastical. Above all, the pressure of Danegeld was "fully capable of transmuting a whole nation" (p. 8). It is Mr. Maitland's most novel, and, so far as we can see at present, his most valuable contention that *manerium* in Domesday is a technical term, meaning nothing more nor less than "a house against which geld is charged," and responsible for the geld which lies on any land that is in any way subject to the power of its holder (pp. 120, 121). Agrarian history, instead of being characterized by the permanence of relations, as Mr. Seebohm, in agreement with the spirit of modern evolutionary thought, would have us believe, "becomes more catastrophic as we trace it backwards" (p. 365). Of these catastrophes the Norman conquest was one of the greatest. The formation of what we may by anticipation call "manors" had gone a very long way before that event; but much still remained to be done before the external symmetry of the thirteenth century was realized; and of this the greater part was accomplished by the Norman Conquest and the violence that accompanied it. "We cannot treat either the legal or the economic history of our peasantry as a continuous whole; it is divided into two parts by the red thread of the Norman Conquest" (p. 60).

In this attempted reconstruction of early English social history, there is much that seems to promise solidity. The explanation of the original meaning of "manor" will probably be pretty generally accepted. That, however, does not necessarily carry with it any very far-reaching conclusions. Very different in that respect is Mr. Maitland's argument concerning the *hide*. If there was from the first only one *hide:* if that *hide* consisted of as much as 120 acres of arable land with the appurtenant pasture; if that was the ordinary holding of the great majority of the heads of cultivating families—then it does seem difficult to find any considerable space for provincial *villæ coloni*, and *servi*. The proof that is offered us is cumulative, and needs minute examination in detail. How much of it Mr. Maitland could surrender and yet produce conviction remains to be seen. But certainly much of it is open to grave doubt. For instance, it is requiring us to attribute either great stupidity or great deceitfulness to those who drew up the early land charters, to ask us to believe that the technical language of Roman law for the conveyance of ownership was employed for a mere conveyance of a "superiority."

Mr. Maitland regards himself as but opening the way to further investigation, and that investigation has a sufficiently hard task before it. There is one consideration to which we would invite attention. If the *yardland* arose simply from the fissure of the *hide*, it is surely surprising that the process of disintegration should so very generally have gone just to the point of producing the *yardland*, and no further. Much of the effectiveness of Mr. Seebohm's argument was due to the impression of uniformity it produced. Mr. Maitland has sought with skill and success to weaken the impression; he delights in revealing heterogeneity and irregularity. Nevertheless, if we are not very much mistaken, over the larger part of England and over wide districts of Germany the thirty-acre *yard*, or *hufe*, was so far more common than any other for the *plenus villanus*, the *voll-spanner*, as to be deemed normal. There may be reasons, in the productivity of the soil or in the spread of fashion, for this result, but it is not what we should have expected on Mr. Maitland's hypothesis.

But 'Domesday Book and Beyond' is not to be lightly disposed of. Students will have to work over it for several years to come; and though it is in great measure caviare to the general, there is perhaps no work in which profound learning is so gracefully and amusingly handled.

Charles Sealsfield, Sein Leben und seine Werke. Von A. B. Faust. Weimar: Emil Felber; New York: G. E. Stechert.

"Der Dichter beider Hemisphären" is the descriptive subtitle of the first systematic attempt to furnish a biography of the once widely read but now almost forgotten Charles Sealsfield. The author of this volume is Prof. A. B. Faust of Wesleyan University, who about seven years ago began to collect his materials at Johns Hopkins, and there presented as his doctor dissertation a study of Sealsfield's style and influence. The work thus emanates from this hemisphere where Sealsfield lived, although printed in the other where he was born. The circumstance has its appropriateness, for Sealsfield's best-known writings are essentially American, although phrased in German. He deserves to be named with Bret Harte, Cooper, and Hawthorne for his vivid and faithful portrayals of American types, now vanishing or quite extinct, which represent certain stages in the history of our civilization. The fearless squatter, the sturdy pioneer, the patriarchal Southern planter, and the New York dandy, who is known to this generation chiefly through the stiff fashion-plate prints of a half-century ago, are all still living in the pages of Sealsfield. The lucid descriptions, too, which he gives of European conditions prior to 1850 have special interest for the American reader, since it was out of those conditions that the great immigration arose which so profoundly influenced the development of this country. Longfellow admired Sealsfield, and in his journal we find this entry: "In the evening F. read our favorite Sealsfield. His descriptions of the Southwest are very striking. The Creole Ball quite life-like, and the passage through the cypress swamp terrible." There is, as Prof. Faust admits, more matter than art in these graphic narratives, and no psychological analysis, but they have the absorbing interest of sketches drawn from life by a quick observer with unfailing humor. It was the sketchy character of these works, perhaps, that rendered them so accessible a treasure-house for plagiarists. Moreover, they were written under an assumed name and never attained great popularity in America. All things favored the literary appropriator, and Capt. Mayne Reid in his 'Wild Life' boldly reprinted in their entirety seve-

ral chapters from Sealsfield's 'Cabin Book.'

The life of Sealsfield possesses the same romantic interest that attaches to the mysterious personalities of Kaspar Hauser and the man with the iron mask. He attained his popularity during the first half of this century as "the great unknown." When the author revealed himself it was as Charles Sealsfield, and no clue remained to connect him with the monk, Carl Postl, who, in 1823, had fled from the monastery in Prague, leaving no trace. Not until the author's will was opened in 1864 was this unsuspected identity established. By his own directions the initials C. P. were placed upon his tombstone, and the date of Sealsfield's birth, March 3, 1793, corresponds with that of Carl Postl. It was thus an unknown monk of Prague, who, with Gutzkow and Jungdeutschland, assisted in the political and literary revolution which made for representative government on the one hand and for realism on the other. Speaking of Sealsfield's feverish unrest, the late Prof. Treitschke said: "In such powerful but unschooled talents the spirit of the age is mostly clearly revealed. Sealsfield's writings prove how irresistibly the time was pressing on towards realism." And these realistic sketches have a lasting value which Americans have not sufficiently recognized. Numerous translations of these works exist, and, if Prof. Faust's work should be translated and abridged, attention would again be directed to Sealsfield's strong and striking characterizations. A real service would thus be rendered to those who wish to study America in her turbulent efforts to transplant an old civilization to a new continent on a grand scale and under untried conditions.

Naples in the Nineties: A Sequel to Naples in 1888. By E. Neville-Rolfe, B.A., of Heacham Hall, Norfolk, H. B. M. Consul for South Italy, etc. With illustrations. London: Adam & Charles Black: New York: Macmillan. 1897.

In the first page of this book reference is made to 'Naples in 1888,' joint work of the present author and another. It appears that, in Mr. Neville-Rolfe's opinion, Naples is changing with such rapidity that it is far easier to write a new book than to issue a revised edition of one only nine years old. The keynote of it, perhaps, rings most strongly in chapter ix., of which the title is "An Old World Journey," and from the opening words of which it appears that an ancestor of the author's made "the grand tour" some time before 1759, and left a diary. This gentleman was Edmund Rolfe, Esquire and master of Heacham Hall, Norfolk, as his title-page shows that our author is in his day also. The diary is printed in full, occupying eighty pages. It is, for its length, as interesting as anything in Pepys or Evelyn, and to read it alone is well worth the price of the book before us. In calling it the keynote, we are not conscious of doing injustice to the more modern writer, although he has been a continuous resident in the south of Italy, whereas his ancestor travelled rapidly, for his time, with the disadvantages of the slow communication of the eighteenth century. In fact, this is in no respect an exhaustive treatise on any part of the subject. Neither the cities and their monuments, nor the country and its productions; neither the people and their doings, nor the Government and its influence, are treated with any great thoroughness; but the whole is very interesting and can be read from beginning to end without effort by any one who is prepared to except certain errors of statement. Even these are rather inaccuracies than mistakes. Thus there is an odd, blundering description of the substructure of a Roman amphitheatre and of the relation which that structure held to the Greek circus. And again, it is stated that, at Herculaneum, the famous Villa and Basilica have both been filled up again. Certainly, if our author had ever visited Herculaneum, he would have known that the Villa and the Theatre lie under fifty to ninety feet of solid, if soft, rock, and have never been, for one moment, open to the light of day. This, however, is an error which is not uncommon in writing about Herculaneum; for the fact that a small part of the city has been opened to the air, and that other parts, not now open, have been so in the past, and also that the galleries under ground were filled up with the débris obtained by excavating other galleries, tends to confuse the mind of the student and to falsify the guide-books. Our author seems to feel the importance of the burial and gradual recovery of whole tracts of waterside between Vesuvius and the Bay of Naples. It is rare that any writer on this region seems rightly to grasp the immense significance to the whole of Italy of that series of earthquakes and eruptions which marked the reign of Titus. Not Herculaneum and Pompeii alone, but the whole belt of country between Naples and the peninsula of Sorrento, was changed by it, and the Bay of Naples, beautiful now, must have been immeasurably more beautiful before that series of natural cataclysms. In connection with this it is good to see that Mr. Neville-Rolfe appreciates the extraordinary picturesqueness of the site of Naples itself, and dwells at length upon that superb acropolis which still stands at the head of Santa Lucia, and separates old Naples from the new city which is building up on the seaside northwest of the Greco-Roman town.

That sort of appreciation of foreign, of Roman Catholic, of Southern manners as distinguished from home, from Protestant and from Northern feeling, which is so marked in half a dozen of the earlier poems of Robert Browning, is visible throughout this book. When a traveller lives long enough in a country to understand pretty well the details of what he sees, and still preserves through it all his feeling for its novelty and the radical difference between what he sees and what his readers at home are familiar with—then, indeed, he is qualified to be an interesting writer, and that is what Mr. Neville-Rolfe assuredly is.

The Genealogical Magazine: A Journal of Family History, Heraldry, and Pedigrees. London: Elliot Stock; New York: J. W. Bouton. 1897.

The first number of this magazine was issued in May, in quarto form, 64 pages to each part, and the four numbers now in hand enable us to judge fairly of its intended scope. Although the English race is the only one which has preserved the materials for preparing genealogies of a large portion of its members, there is a wide difference between the aims and methods of English and American genealogists. Everywhere, except in England, prior to 1630 the records remaining are almost exclusively those of the limited class of the nobility. In France and Germany there was, indeed, for two centuries before that date a certain percentage of a middle class whose members had hereditary surnames, records of births, deaths, and marriages, and of property, but the unhappy wars which have ravaged both countries have caused the destruction of most of these archives. In England these records have been largely preserved, and while the pedigrees of peers have been well traced, the systematic subsidence of the junior branches, male and female, of the nobility into the ranks of the commoners has extended the public interest in the pedigree of even the highest ranks, as probable or ascertained ancestors.

In America, especially in the case of persons of English descent, a genealogy begins with a definite ancestor, a first settler, whose descendants are not only of equal rank in blood, but generally in social position. Fortunately, also, our ancestors promptly invented a system of public records by which pedigree-making is reduced to a careful scrutiny of documents easily accessible.

In England the fact that the manufacture of authentic pedigrees, at least in regard to honors and coats-of-arms, has been for centuries the monopoly of the officers of the Crown, the College of Heralds, has given a distinctly aristocratic tinge to all genealogical writing. "Peerages" and "Baronetages" have been printed for nearly two hundred years, but magazines devoted to genealogy are of very recent date. Leaving out of the reckoning the facts recorded in the *Gentleman's Magazine* for the last century, the first English magazine was the *Herald and Genealogist*, founded by John Gough Nichols in 1863, continued through eight volumes, and terminated by his death in 1874. We do not ignore his earlier issues, the 'Collectanea Topographica et Genealogica' (1833-1843), nor the still existing 'Miscellanea Genealogica et Heraldica,' of Dr. Joseph Jackson Howard; but these are not magazines. Of late years, local antiquarian societies have started small magazines devoted to various county affairs, but the work under notice seems to be the true successor to Mr. Nichols's admirable magazine.

The new candidate for public favor, edited by Arthur Charles Fox-Davies, is distinctively English in form and scope, but the "reading matter" is largely in excess of the tabular pedigrees. We note, for the information of Americans, articles on Bradford's 'History of New Plymouth' and on the capture of Washington in 1814. Other articles are on the Shakspere family, being scattered notes on the many persons of the name in Warwickshire; on Lord Nelson's family; on the Lane and Strode families; and two or three essays upon certain peerages wherein obscure junior branches are carefully traced. This latter subject is one of special fascination to English genealogists, who wage war for years in innumerable essays to define the relationship between William, Earl of Warren, and William the Conqueror, or upon the question whether some summons to the House of Lords under the Plantagenets did or did not create a new peerage with a new line of descent. We hope that the editor of this magazine will soon turn his attention to the example set by the late Col. Joseph L. Chester, and successfully followed by the present Henry F. Waters, and explore and make

available some part of the valuable manuscripts remaining in the English archives. We want more copies of wills, deeds, and family papers; more facts and fewer dissertations.

We close by putting in comparison with this select and exclusive magazine the work of our own genealogists. The *New England Historical and Genealogical Register* has completed its fiftieth volume, issued regularly every quarter, and containing the history of thousands of families. To be sure, we have no families to trace earlier than 1630; but are there no families in England, outside the "landed gentry," who have a pride in their ancestry for the past eight generations?

The People for whom Shakespeare Wrote. By Charles Dudley Warner. Harper & Brothers. 1897. Pp. vi, 1897. Illustrated.

There seems to be always room for a new book about Shakspere, and even were the public not "overkind" to Mr. Warner, as his preface intimates, it would doubtless enjoy seeing the old contemporary materials, describing the temper and manners of the Tudor and Stuart ages, recast in a concise and lively form. Harrison has been more largely drawn upon than any other author. There are fewer references than might be expected to Shakspere's own brothers in the dramatic craft. More is said about Ben Jonson than any other. The allusions to Beaumont, Fletcher, and Massinger are scanty indeed; yet all three, and the first two in particular, are rich in material for Mr. Warner's purpose. A more serious criticism would appear to be that there is little or nothing like critical research. The "*English Mercury* of 1588" is spoken of as the first newspaper as if it were exactly as genuine as the *Boston News-Letter*. Yet the forgery has been exploded again and again, at least as long ago as 1839. In speaking of the Earl of Essex, Mr. Warner strangely calls him more than once by the modern corrupt form Devereaux instead of Devereux. On page 4, the well-known John Donne has his name printed Dunne; if this is the spelling of Sir Richard Baker, it shows how the name was pronounced.

One trait of Shakspere's age escapes mention in this work, as in most others on the same subject, which is yet hardly to be missed by an attentive reader of its literature. This is the greater tenderness of feeling and expression manifested by men to men. There is, between Shakspere's heroes and those of his compeers, a tone of romantic and effusive affection which may seem feeble and sentimental to the sternly matter-of-fact friendship of to-day, but which lends a very soothing and charming influence to the roughness and boisterousness of that day. A most beautiful instance will be remembered in "Henry V.," act iv., where the death of the Duke of York is described.

For one bit of old-fogyism we may well be thankful. Mr. Warner is actually so far behind the age as not even to allude to Shakspere's being anybody but Shakspere.

BOOKS OF THE WEEK.

Ashworth, Alice. Just a Little Boy. F. Warne & Co. 75c.
Balzac, H. de. Seraphita. London: Dent; New York: Macmillan. $1.50.

Educational.

CALIFORNIA, Belmont. (In the foothills near San Francisco.)

BELMONT SCHOOL for Boys hopes to deserve the confidence of Eastern as well as of Western parents by surrounding its boys with a stimulating an intellectual, spiritual, and physical life as is found in the best Eastern schools, and by offering a home which in beauty of surroundings and fineness of climate for sustained work no Eastern school can hope to equal. It should give to its boys a healthful impulse towards good thinking and good living, and leave with them a heritage of pleasant and helpful memories.

The catalogue, containing views of the school and a record of the colleges and technical schools entered by its graduates, will help to give an idea of its spirit and the work it is doing

W. T. REID, A.M. (Harvard), Head Master.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 23, 1897.

The Week.

The Cuban news is grave, whether all its details are accurate or not. Minister Woodford may not have delivered an ultimatum to Spain, but there seems to be no doubt that he has made, or will make, very serious representations to the Spanish Government, under instructions from our own; or that a crisis in our relations to Spain is approaching. Exactly what ground the Administration has chosen on which to make its remonstrances to Spain is, of course, not yet known; but it is fair to presume that the despatches of the *Temps* of Paris are not wide of the mark in asserting that special stress was laid, in Gen. Woodford's communication, upon the great losses sustained by reason of the long-continued war, and the evident unlikelihood of the rebellion's being crushed within a reasonable time. This, it is important to recall, is the historic American position, and is the only rational and justifiable way of dealing with an affair which, in any aspect, is deplorable and thick with embarrassments. No longer ago than President Cleveland's message of December 7, 1896, interference on the lines indicated was distinctly foreshadowed, and he was but taking his stand where President Grant had taken his in 1874 and 1875. With our foreign affairs then in the careful hands of Hamilton Fish, interference with Spain on the ground of the prolonged rebellion in Cuba was yet distinctly intimated. In his annual message of December 7, 1874, Gen. Grant referred to the continuance of "the deplorable strife in Cuba," then of six years' duration, and said that "positive steps on the part of other Powers" might become "a matter of self-necessity." In the following December he adverted to the subject more at length.

Of course, the threat of force necessarily lies back of any interference, no matter how considerately it may be suggested. The inevitable implication is, "We very much hope you will listen to our respectful and friendly representations; but if you do not, why, we shall have to compel you to." Now this is a grave step to take with a high-spirited and almost insanely proud people like the Spanish. They recognize no distinction between Cuba and any other part of their territory. A suggestion from any outside Power about Cuba would seem as deep an insult as one about Catalonia. How an open rupture could be avoided it is not easy to see. It is said, indeed, that many public men in Spain would welcome our interference, as enabling them to give up Cuba under stress of superior force, and so save Spanish pride. But any such programme would necessarily involve a show of war, if not actual war. Probably no intelligent Spaniards would enter upon war with the United States except as a desperate resort to vindicate the national honor. But even a war undertaken by one of the parties to it in a hopeless spirit may be made disastrous to both before it is over. This is only one of those grave considerations which, it is to be hoped, the Administration has carefully weighed before embarking on a policy which may lead us far and cost us dear.

A striking saying of the late Cánovas del Castillo is reported by M. Charles Benoist in his article on that Spanish statesman in the *Revue des Deux Mondes* of September 1. "We Spaniards," Cánovas is said to have declared in 1878, "are not strong enough to insist upon the first place; but we are not, and we cannot be, modest enough to take the second place with a good grace." The phrase is typical not only of the policy which Cánovas pursued so indomitably, but, in a sense, of the whole course of Spanish affairs in this century. Cánovas, according to M. Benoist, would not consent to sound European governments in respect to the Cuban trouble; it was beneath the dignity of Spain so much as to admit that she was in difficulties. So of the many other solutions proposed: Spain was too proud to sell Cuba; her troops would die there, her last man and peseta would be sent there if necessary, but the island would never be abandoned. The conduct of the foreign relations of Spain, in short, has been kept as far as possible on the haughty plane occupied by the rulers of Spain when she held the primacy of Europe. In view of her sadly changed circumstances, this is magnificent, but is it statesmanship?

Soon after Secretary Sherman's ill-mannered and undiplomatic despatch about the seals was made public, the British Government announced that the despatch had been duly answered. That answer is now given in a "Blue Book" covering the correspondence. It consists in a complete ignoring of Mr. Sherman's bad manners, and a quiet remark that, as far as his despatch contained any arguments, they had been met by anticipation in previous notes by Lord Salisbury. It is added that the Government's assent to a conference of experts in October contemplates only a "limited inquiry" as to the facts, and does not at all countenance "Mr. Sherman's strange misconceptions." All this would seem the ideal way for a gentleman to deal with a boor, were it not that Mr. Chamberlain has been allowed, in a communication from the Colonial Office to the Foreign Office, to traverse Mr. Sherman's assertions and give him, though in better literary form, as good as he sent. England's "unavailing protests against the attempts of the United States to hamper and embarrass the operations of British subjects pursuing their lawful vocation," is not a very happy or conciliatory way of phrasing it. But the notes to Ambassador Hay and Secretary Sherman appear to be in perfect taste and form, and to have rebuked bad manners in the most effective way possible—by ignoring them and displaying good manners.

We are not surprised to learn from the *Tribune's* Washington despatch that State Department officials are shocked at the bad form of the English reply to Secretary Sherman. They will not be quoted; they make no open comments—that would be bad form on their part—but they raise their eyebrows and look unutterable things. The main trouble seems to be that no official copy of Mr. Chamberlain's letter to Lord Salisbury has reached Washington. The London papers had it in advance. This is severely commented upon by the Washington correspondent of the *Tribune*, in the same breath in which he points out the advantage his own paper enjoyed in getting a copy of Secretary Sherman's despatch in advance. But we doubt if an official copy of Mr. Chamberlain's letter ever reaches Washington at all. It was a purely domestic affair between the Colonial Office and the Foreign Office. Doubtless Mr. Chamberlain saw that it reached the papers very much as the author of the Sherman despatch saw that *his* performance reached them. As authorities on diplomatic "good form," neither our editors nor our State Department seem to be in a position to hold up hands of horror at the disgusting English.

Hawaii is already annexed to the United States, as far as her own action can do it. A special session of the Hawaiian Senate was called for September 8, to ratify the treaty. There was no concealment of the reasons for this step. It was intended both to expedite matters at Washington and to do away with the dangers of delay at Honolulu. Government supporters openly said that if the treaty should be long tied up in Washington, or should appear to be in danger of failing there, it might not be possible to ratify it even in Hawaii. Hence the need of speed. So the Senate

was called together, and is reported to have approved the treaty. But this, of course, amounts to nothing so far as we are concerned, and really will serve to embitter the Hawaiians still further at being ruled by an oligarchy. They have practically no voice in electing their Senate, and yet their Senate is giving away their country. Less than 3,000 voters have anything to do with elections in the Hawaiian republic; even they have not been consulted about the choice of President or Senate, both being, in effect, self-appointed. Yet it is this President and this Senate that have hastened to alienate the territory and extinguish the nationality of 100,000 people without consulting them. To put the finishing touch of dishonesty to their action, they describe it as performed in the name of republican institutions and Christianity!

It appears now that the Bank of England did address a note to the Chancellor of the Exchequer as long ago as the 29th of July, offering to hold one-fifth of the reserves of the issues department in silver on condition that "the French mint is again open to the free coinage of silver, and that the prices at which silver is procurable and salable are satisfactory." Exactly what is meant by the last clause is not clear. One interpretation put upon it is that the Government shall protect the Bank against loss in the purchase and sale of silver, but it may mean merely that the ratio between gold and silver must be satisfactory. Although the conditions imposed are not likely to be complied with, since it is most improbable that France will expose herself to the loss of her gold by a resumption of silver coinage, the action of the Bank of England is quite unaccountable. It is also extremely mischievous since it comes at a time when the silverites both here and abroad are flat on their backs. The price of silver had dropped about 20 per cent. The simultaneous advance in wheat had turned the laugh on the Bryanites and deprived them of their principal argument. Japan had adopted the single gold standard. Russia had taken the initial steps to that end. The silver craze in Germany had nearly died and in France it was on the wane. Above all, the discontinuance of silver coinage in India had produced comparative steadiness in the value of the rupee and in the rate of exchange with England. All these desirable results had come about since the last international babblement about silver, and even if the results had not been altogether desirable at the time when the Brussels conference was in session, they were now *faits accomplis*. The monetary question now wore a new aspect, and by all business rules ought to remain undisturbed by business men. In this condition of calm the Bank of England, reputed to be the most solid and conservative institution in the world—one which has been conducted on the single gold standard for eighty years, and has never used silver except for small change in all that time—takes a step, not to restore silver to the category of legal tender, but to put the silverites of the world on their feet once more and fill them with new hope and courage.

A letter from Lord Farrer to the London *Times* gives information that a proposal has been made to reopen the Indian mints to silver on the understanding that the United States and France do the same at a ratio of 15½ to 1. The consideration offered is, that it will insure India a permanent and steady exchange. Lord Farrer was himself a member of the Monetary Commission of 1893, which examined and passed upon the proposal of the Indian Government to discontinue the coinage of silver and tentatively adopt the gold standard. The commission made an exhaustive report, and reached the unanimous conclusion that the proposal should be agreed to, in order to put an end to the fluctuations of exchange. They believed that if the mints were closed, the value of the rupee would no longer follow the fluctuations of silver, but would become steady and be subject only to the slight changes of a commercial character which exist between gold-standard countries. The result has fully justified their expectations. Owing to the fact that a large amount of silver had been lodged in the Indian mints in anticipation of the discontinuance of coinage, the value of the rupee showed a tendency to follow the value of silver during the two subsequent years. At the beginning of 1896, however, the rupee took an independent course, and with some slight fluctuations began to rise, while silver was falling. It was worth 16d. in June, 1893, when the mints were closed. It is now worth 16¼d., while the silver bullion contained in a rupee is worth less than 10d. This shows that the object of stopping coinage in India has been realized, and now it is proposed to upset the whole arrangement and try something else.

The lack of interest in the silver movement at the present time was strikingly demonstrated at Springfield, O., last week. A "national free-silver camp-meeting" was projected, under the auspices of the National Bimetallic Union, to begin on Thursday and continue for some days. Ex-Congressman Warner, President of the Union, was in charge, and he had engaged a long list of speakers, whose fame was expected to draw people from near and far, excursion parties from Colorado and Utah being counted upon. When the opening day came, there was not even an excursion from any Ohio town, and there were almost more orators than auditors, only thirty-five people being present. The managers did not attempt to hold any meeting the second day, but sent an urgent appeal to Bryan to come to their rescue, which he unfeelingly refused to do. On the third day it is said that free excursions brought in several hundred people. The fiasco shows that the men who are running the Democratic campaign in Ohio have been shrewd in retiring free coinage from the prominence which they gave it in their platform, and in trying to carry the election on other issues.

In view of the action taken by the recent convention of knit-goods manufacturers, the Philadelphia *Ledger* calls upon Congress to repeal the present tariff on those goods and substitute the duties of the Wilson bill, which were a plain 35 per cent. ad valorem. The reason why this should be done, in the opinion of the *Ledger*, is that the convention resolved, in the first place, to advance the prices of knit goods 15 to 40 per cent., and in the next place to curtail production "even to the stoppage of our mills" in order to force the advance of prices. In other words, the manufacturers declare their intention to "interfere with that wholesome competition in trade which public policy demands shall not be restrained, and deprive of work and wages the 50,000 or 100,000, or whatever the number may be, workingmen or women employed in the mills." The manufacturers, on the other hand, say that they can make no money at present. They have been overprotected in the past to such a degree that domestic production is strangling them, and on top of this comes the new tariff on wool, which they could not avoid, even if they wished to do so. There is much to be said on both sides, but nothing whatever is to be said for the tariff itself, which compels the manufacturers to oppress either their customers or their employees, and perhaps both.

Mr. Dingley's explanation, through his paper, the Lewiston *Journal*, of the reason and intent of the changes made in his now famous section 22 is, besides being most unlikely, pure afterthought. He now reasons gravely about what was aimed at in the changes, but when the conference report was made he did not even know, or at least he said he did not know, that there had been any changes. He was specifically questioned about the section, and as specifically answered that it was "an old provision"; that it had "been the law for fifty years, yes, a hundred years"; that it was in the "early tariff bills," and in "every tariff bill since," including "the tariff bill of 1894." It is clear, then, that Mr. Dingley was either himself deceived or was practising deception on the House. At

any rate, the Attorney-General will not get much light from him as to the "intent" of Congress in passing a law which it did not know it was passing at all.

Civil-service reformers are not at all disturbed by the recent decision of Judge Cox of the District of Columbia Supreme Court, since supplemented by a similar deliverance from Judge Jenkins in Chicago, as to the power of removal and the legal worthlessness of executive rules on the subject. Mr. Rice, of the National Civil-Service Commission, not only finds in this interpretation of the law no basis for exultation on the part of spoilsmen, but expresses the belief that, when properly understood, it will aid in the betterment of the service. The effect of these decisions is to place the responsibility for the enforcement of the civil-service rules, not upon the courts, but upon the officials appointed by the President; and Mr. Rice holds that it is an advantage to exchange the risk of technicalities in the courts for the certainty that the Executive may act directly and dismiss his appointees if they fail to conform to his instructions. He says that President Cleveland did not hesitate to dismiss, upon the recommendation of the Civil-Service Commission, a number of his own appointees who wilfully violated the civil-service rules, and he trusts that President McKinley will compel observance of his own recently promulgated rule regarding removals by similar action whenever it may be required.

As we understand the situation, the only serious obstacle to Mr. Low's support by the Republican machine is the doubtful "loyalty" of his Republicanism. Meanwhile the State press has been making some revelations concerning the "loyalty" of Platt's chosen candidate for Chief Judge of the Court of Appeals, Judge Wallace of the United States Circuit Court. His offending is much more serious than Mr. Low's. He not only refused to vote for Blaine in 1884, but, it is charged, on what seems to be good authority, and is not denied, that he voted for Cleveland in 1884, 1888, and 1892. What is far worse than this, his name was published in 1884 at the head of a list of "Cleveland Republicans" in Syracuse, and he sat as a vice-president on the platform of a Cleveland ratification meeting in Syracuse, at which Carl Schurz spoke. Nothing could be more offensive in the way of "disloyalty" than this. He not only refused to support Blaine, but he sustained with his presence a public assault upon Blaine by the most detested of all the Mugwumps. We do not set forth these facts for the purpose of in any way questioning Judge Wallace's fitness for the chief judgeship of the Court of Appeals. On the contrary, they constitute evidence in his favor which, taken in connection with his excellent record on the bench, leads us to look upon him as an exceptionally desirable candidate. But how can Mr. Platt take this view of him? How can he reject Mr. Low as unworthy of Republican support for Mayor of New York because of his "disloyalty," and at the same time nominate Judge Wallace for the Court of Appeals?

The lynching in Indiana of several ordinary burglars and thieves is another illustration of the spread all over the Union of contempt for legal process. These men seem to have carried on their depredations for many months with impunity. They roved about the State breaking into houses and torturing people to make them reveal their valuables, and nobody meddled with them. The sheriffs of the various counties seem to have adopted the view of the California sheriff who, when invited to arrest some highwaymen, refused, saying, "The darned fellers they robbed should catch 'em." At last the Indiana dignitary was aroused and caught some of the robbers and lodged them in jail. Four hundred farmers then arose in their might, took them out of the hands of the authorities, and hanged them. All over the country we have no country police. It is only in the cities that anybody stands ready to arrest a malefactor. Out in the rural districts every man has really to be his own policeman. There is, to be sure, a sheriff, but the sheriff is an officer elected without the slightest reference to his fitness for police duty, and he, if he can be reached in time, pursues criminals, if at all, with as much or as little zeal as his convenience or temperament will permit. He cannot be called to account for neglect or misconduct except by a trial before the Governor, on charges which hardly anybody is ever willing to make. The result is, crimes committed in the country, unless they are murderous, are rarely punished. What we need in all country districts is what is called a country "police" in England and "gendarmerie" in France; that is, uniformed and salaried police, whose business it is to patrol country roads and pursue criminals. In England every village has at least one uniformed constable, and the whole are under the orders of a single county superintendent. These police are to be met everywhere, and no burglar or highway robber can make more than one stroke without finding them on his track.

That shadowy, if not shady, institution, the "National University of Chicago," which has been selling degrees in England, finds an unblushing defender of its unblushing methods in the person of "F. W. Harkins, Chancellor," This worthy writes to the English papers, under date of August 19, asserting that his "university" is, despite the ignorance of our Bureau of Education, "regularly chartered," and legally as much entitled to grant degrees as Oxford or Cambridge. But he has no desire to "antagonize" those seats of learning; his aim is to "reach worthy persons they would never reach." His philanthropic endeavor is to bestow a "boon" on the "many who otherwise would never have known a college course or would have missed the enjoyment of its higher honors." This boon and these higher honors any worthy person may obtain from the National University of Chicago on the payment of a suitable fee. The "Chancellor" indignantly denies that this fee is as low as $5. The mere rumor that such is the figure has "deluged" him with "applications." Applicants are informed that they must not expect a degree at "less than the cost of the engraved diploma." The Chancellor spurns $5, but we should hate to expose him to the temptation of $5.67. His letter is of a piece with the impudence and fraudulent nature of the whole affair, and shows in what delightful ways American ideas and institutions are publicly commended to foreigners.

Apropos of the candidacy of D'Annunzio for the Italian Parliament, a French writer has been taking a survey of the literary men of Europe who are in public life, or who at least aspire to political influence. In Italy Carducci's name comes first, of course; and Verdi, though not strictly a man of letters, is a Senator. Spain still honors literary achievement with political rewards; Cánovas himself was a distinguished historian; Castelar, Galdós, Martos, have been at once Academicians and members of the Cortes. Seven writers of more or less prominence are in the German Reichstag, Prof. Virchow being the most distinguished. Maurus Jókai is a member of the Hungarian Parliament. In England the well-known names are thicker; Morley, Lecky, Bryce, being all members of the present Parliament, to say nothing of Mr. Balfour, who made such a hit with his 'Foundations of Belief'—a book which, we understand, was written years ago and then brought out as an example of the way in which a statesman might refresh himself, after vulgar political struggles, by plunging into metaphysics. America does not come within the sweep of the summary we are following—perhaps because the names of our great writers in Congress are unknown to Europeans. But surely they must have heard of Lodge, and how reluctantly he tears himself away from the still air of delightful studies to do something for silver, and to urge pleas in foreign policy which the first Republican platform called the pleas of a highwayman.

REPUBLICANISM IN THE SOUTH.

Three recent occurrences in the South illustrate very clearly the apparently insuperable difficulties which the Republicans encounter in their attempts to build up the party in that section of the Union. The first was the appointment of a Louisiana negro as Naval Officer at New Orleans; the second, the demand of Baltimore negroes for representation on the Republican legislative ticket, and its refusal by the party; and the third, the attempt to assassinate a negro postmaster in a Georgia village on account of his color.

There is no State in the farther South where the prospects of the Republicans have appeared so promising as in Louisiana. The sugar interests of the commonwealth have inclined many of the most prominent and influential whites to desert the Democrats on the protection issue. If the Republican party were composed of men of the same class as the Democratic, there is little doubt that a majority of the whites would have joined it before this time. But the trouble is that about half of the men in Louisiana are blacks, and that these blacks not only as a rule are Republicans, but also insist that they shall be rewarded for their fidelity to the party precisely as whites are rewarded in the North. Demas, the negro who was recently appointed Naval Officer, has been for a quarter of a century one of the most influential Republican leaders in the State. His "claims" to recognition were so strong that, if he had been a white man, no politician would have thought of disputing them. He maintained that the fact that he was a black man had nothing to do with the case, and the President accepted this view.

The announcement of his appointment, however, has been followed by such indignant protests from white men who have been voting the Republican ticket, as to show that the party stands no chance of carrying the State hereafter. Mr. A. A. Maginnis of New Orleans, who went over to the Republican party some years ago on account of its national policy and principles, and who is a member of the State executive committee, says that "the appointment of Demas destroys any hope for a Republican party worthy of the name in Louisiana or in the South for a long time to come." Mr. W. S. Parkerson, who became a Republican on the protective issue, declares that "the white Republicans of this State can do nothing under such leadership or such a policy." A prominent Republican who has been active for years in endeavoring to build up an organization that would command the respect of the people, predicts that at the next election for Governor the Republicans will not poll 10,000 votes in the State, notwithstanding the fact that Capt. Pharr polled 90,000 votes when he ran for Governor only eighteen months ago, and he does not expect that the Republicans will have a single delegate in the constitutional convention to be chosen a few months hence.

It is true that Demas is a disreputable fellow in private life, and corrupt in politics; one of the charges against him, which seems to be proved, being that he secured his election as a delegate to the Republican national convention last year as an avowed supporter of Reed, and then "sold out" to the McKinley men. But he is no worse than many white men who have been given office by the President, and while his bad character aggravates the offence of his appointment, the selection of any negro would have been offensive. The white Republicans, especially those who have joined the party in recent years, and still more those white Democrats who must yet be won over if the party is to carry elections, might have stood a "decent sort of darky" in the place, but they would never consent to a policy by which even respectable negroes should be given as many important offices as they are entitled to receive on the basis of the colored vote. Mr. Parkerson puts the case bluntly and clearly when he says: "For my part, I believe in white supremacy, as much as any Democrat. I don't believe any race should dominate except the whites."

That this is the attitude of Southern whites generally appears from the Georgia attempt to shoot a black postmaster simply because he was black. There was no charge in this case that the official was disreputable or corrupt. The only objection to him was his color, but that was enough to endanger his life. While some whites in Atlanta are ready to take office if they can get it under a negro as internal-revenue collector, the overwhelming majority of the race throughout the State cannot stand the idea of a black official.

The feeling seems to be about as strong in Maryland, on the very northern edge of the South. Nobody pretended that the negroes who aspired to nomination on the Republican legislative ticket in Baltimore were not qualified in point of ability and character. Their only weakness was in the matter of color. Many white Republicans would not vote for any negro member of the Legislature, and the many white Democrats whom the Republican leaders hope to attract would be driven off by such nominations. So the black aspirants were "turned down" because they were black.

The situation appears almost hopeless for the Southern Republicans. The party managers must either "recognize" the negroes by giving then their fair share of prominent offices, or they must snub them because of their color. If they recognize the blacks, they drive off so many whites that they stand no chance of carrying elections. If they snub the colored politicians, they disgust the colored voters, whose hearty support is always essential to success. The situation is most unfortunate, both for the South and for the nation. A division of the white vote is most desirable on all grounds, and yet the black official, even when he has a right to the place he is given, solidifies the whites against the party which he represents.

WHAT IT MEANS.

Why are the Platt Republicans fighting so desperately against the candidacy of Mr. Low? There has never been but one reason, and that is because he stands for the honest government of the city. Lauterbach put the position of the Platt machine with plainness and force in April last when he said:

> "I know that you are, as one man, resolved that the battle of November shall be waged under the banner of partisan Republicanism; that the man who shall be elevated to the high office of Mayor should be a true Republican. If we cannot succeed in bringing about that result, better far that there should be placed in power a true Democrat, even a Tammany Hall Democrat, than that we should aid to elect to that state of power and place a man of no party, whose administration is responsible to no party, and who has no party at his back."

There has been no wavering from that position. Platt said virtually the same thing a few weeks later, and Quigg has been saying it, more or less guardedly, at every opportunity for the past three months. It has been said in resolutions by the county committee many times, and on Saturday Platt had it said once more by his State committee. As Lauterbach, Quigg, the county committee, and the State committee are simply Platt in all their thoughts and deliverances, what all this denunciation and threatening means is merely that Platt is bitterly opposed to Mr. Low because his candidacy threatens the overthrow of Platt's business and of Platt's government of the State. Honest government of the city, honest and fearless and just treatment of all corporations, the removal of all the great municipal departments from the control of partisan politics, would be a very serious blow to the Platt machine and to many of the influences which are behind it in its present contest. There should be no misunderstanding in the public mind on this point, for the issue involved is a momentous one for the city. It is simply a question of whether the government of the city shall be administered in the interest of the whole people or in the interest of corrupt politics.

What Platt is seeking to do is not to get concessions from the Citizens' Union which will enable him to accept Mr. Low's candidacy without "humiliation," but to frighten Mr. Low out of the field and get in his place some man whom he can hope to use in case of election. He has not a shadow of a chance of doing

this, but he cannot believe that he has not. If he could induce Mr. Low to withdraw, he would get himself out of the worst "hole" of his political life. He does not dare to run a "straight ticket," for nobody knows better than he how weak his machine is and how insignificant a portion of the Republican vote of the city it would be able to hold away from Mr. Low and in support of such a ticket. For the past ten days or more he has been using his full power—and it is undoubtedly supreme in the machine—to crush out all Low sentiment therein and to keep Low delegates from getting into his county convention. Left to itself, his own machine either would have gone for Low or would have come so near doing so that a refusal to accept him would have been impossible. If there is so much Low sentiment inside this organization, what must be the condition of the party outside of it? Everybody who is in a position to form a judgment on this question knows that an overwhelming majority of the party is in favor of Mr. Low, and will vote for him in preference to any candidate whom Platt can induce to take his nomination.

How has Platt succeeded in suppressing Low sentiment inside the machine? It is said that he has compelled Worth to abandon Low in Brooklyn, and the way in which he has been able to do this, if he has succeeded in doing it, is no secret. What defeated Worth in the Brooklyn county committee was the street-railway influence. Why Platt should be able to get that assistance it is not necessary to explain. Everybody knows why the corporations which are at the mercy of the Legislature are on Platt's side. Is he using like influence here? What is the attitude of the street-railway powers in New York towards Mr. Low's candidacy? Does anybody suppose that they are in favor of it? Would they prefer to have an absolutely honest and fearless man in the office of Mayor, or a man who would listen to their wishes?

There should be no mistake about the present crisis. All the influences which profit by corrupt government are fighting against the candidacy of Mr. Low. If he remains in the field (and he will remain in spite of all efforts to get him out), he will force all the promoters of rascally government out into the open. They must either consent to support him or go over to the side of Tammany. His candidacy will compel the selection of a far better Tammany nominee than would be possible were he not in the field. This will be the case whether the Platt machine shall consent ultimately to acquiesce in Mr. Low's nomination or not. Indeed, we share fully in the doubt of the managers of the Citizens' Union as to whether a Platt approval now will help more than it will hurt. It is a toss-up whether Mr. Low will not prove a stronger candidate without Platt's approval than with it. What remains of the machine except Platt? His long and bitter fight against the Union has revealed with perfect clearness that he is himself the machine, that he is virtually destitute of respectable following in the party. His chief lieutenants are mere puppets of his, who are prominent in the affairs of the organization only because he has lifted them into positions of publicity. He has not a reputable party newspaper in this city on his side, and has been obliged to get his support from the old Tammany organ. He cannot induce any Republican of eminence to accept his straight nomination against Mr. Low, and it is extremely doubtful if he would himself be able to hold any such candidate in the field, if he were to nominate him, in the face of the party pressure which would come from all over the country to take him out. Under these conditions, it is small wonder that he is making such a disturbance, or that all the corrupt influences in the city are wishing him godspeed in his fight.

A SPANISH SUGGESTION.

Mr. Henry C. Lea of Philadelphia has an interesting article in the last number of the *Popular Science Monthly* on "Spanish Experiments in Coinage," which is full of suggestion for our bimetallists. It appears, according to Mr. Lea, that the Spanish Government was engaged from 1537 for the next two hundred years, in attempts to keep copper, silver, and gold at ratios fixed by the state, independently of the market value of the metals. These attempts were extremely numerous, and consisted each of a decree, or *pragmática*, changing the relative value of one or two of the metals. Sometimes it lowered the mint's legal value of either silver or gold, in order to make it meet copper, but the larger number of these *pragmáticas* were directed to raising the value of copper. We need hardly say that copper resisted all efforts to raise it with wonderful success. Sometimes it was hoisted up for two or three months, till debtors had got their debts paid, when it dropped down again, and another *pragmática* was then issued increasing its value, or directing a fresh issue of different weight. All this time, we need hardly say, Spain, although beginning its work on copper as the richest country in the world, and receiving a constant flow of gold and silver from the American mines, was steadily declining in both strength and wealth. Justice to copper, or a desire to do something for copper, or to restore copper to its proper place in the currency of the world, was for two centuries the leading feature of Spanish financial policy. The Government never would believe that a nation which stood at the head of civilization in arts and arms, and had more true religion than any other, could not make copper circulate at any ratio it pleased. It used all its resources, too, to enforce its decrees. After the establishment of each fresh ratio it was made punishable with confiscation, imprisonment, the galleys, and finally with death, to refuse to receive coins at their new valuations, or to fail to bring in the old ones in exchange for the new issue. Even foreign ambassadors were made liable to some of these pains and penalties.

Now the financial history of nearly every other European country resembles that of Spain. Playing tricks with the coinage, by altering its legal value or by adulterating it, was the favorite mode of escape from financial difficulties with all the European states, except the republics of Holland, Venice, and Genoa, down to the eighteenth century, when they began to have the power of borrowing. They differed from Spain, not in the greater rationality of their expedients, but in the greater mildness of the punishments inflicted for disregarding their decrees. Ever since the days of John Locke—that is, for two hundred years—instructed men have been laughing at them, and especially at the penalties they tried to impose on people who chose to put their own value on the precious metals. It has been supposed for these two hundred years—say until 1873—that this power of governments over money had been banished, with witchcraft and religious intolerance, to the garret of worn-out mediæval superstitions. But instructed men were mistaken. The close of the nineteenth century will be for ever memorable in history for the revival of one of these superstitions during the lifetime of John Stuart Mill, Herbert Spencer, Thomas Huxley, John Tyndall, and Charles Darwin. It is again believed by legislators of modern democracy that value is given to a thing not by the desire of mankind to possess it, but by the agreement of cabinets and emperors. It is now proposed to do by treaty between foreign Powers what these Powers tried for five hundred years to do by penal legislation, and failed miserably. It is announced solemnly, by men in modern clothing, that as soon as the peoples hear that cabinets and monarchs think silver, for instance, ought to be worth double its market rate, they will tranquilly accept it at such valuation, although if any one nation tried to give it this valuation by an act of Congress or Parliament, it would be greeted with roars of laughter.

It is but right, therefore, to point out to the bimetallists that their mediæval experiment, if it succeeds at all, will not succeed unless *all* the mediæval conditions are revived. The treaty will not double the value of silver unless persons are punished by domestic legislation for refusing to receive it at its

treaty price, in payment of debts or in payment for goods. The notion that two metals can be kept in concurrent circulation by mere governmental agreement or declaration, without regard to the play on them of the individual mind, is a delusion, strange to say, which any one can dissipate in a moment by interrogating himself. If a man wants to borrow money of me, I should never think of leaving it to *him* to decide whether he would pay me in silver or in gold. If I have goods to sell, I should never think of allowing the would-be purchaser to pay me in which metal he pleased at some legal ratio. I would fix the metal and the ratio to suit my own convenience and mercantile needs. If at this moment a bimetallist were to enter my store and say, "My good sir, do you not see you are, in preferring the payment of your debt in gold, preventing the concurrent circulation of the two great metals and doing injustice to silver?" I would call my porter, and ask him to conduct this bimetallist to the door. In other words, "concurrent circulation" and a "double standard" are things which must be in the minds of the people before there is any use in putting them into treaties or acts. You cannot have two metals or two of anything circulate at values fixed by law; still less can you have them fixed by treaty. All schemes for such purposes need, therefore, to be supported, as they used to be, by penal legislation. A man who refuses to let a debtor choose which metal he will pay in, or a merchant who asks either metal exclusively for his goods, must be punished if the two metals are to be kept afloat at the same time. We would not kill him, as Philip II. of Spain proposed to do, but we would imprison him and confiscate his goods. We do not say that this would succeed, but we do say that severe legal penalties are a necessary part of the bimetallic plan. Never in the history of the world has any nation done business in two standards. One metal at a time is all the dealer or lender has ever accepted. If silver is now to have a chance, the jailer and executioner must stand behind it.

THE ISTHMUS CANAL.

In a few pages it would be hard to find a better summary of our canal diplomacy than is given in the current number of the *North American Review* by Mr. James Gustavus Whiteley. It is interesting in many ways, but in none more so than as an illustration of the difficulty which confronts diplomatic adventurers who attempt to substitute for a settled national policy some new "craze" or "fad" of their own, quite at variance with it.

With every year's discussion it becomes more and more clear that the Clayton-Bulwer treaty, the compact over which the canal controversy has raged, far from being a novel canal scheme got up by two expert diplomatists, was little more than a joint declaration by England and the United States that they would honestly apply to any canal that might be built across the isthmus a general principle of international dealing. For this principle—the freedom of the seas—the United States has fought one war, and stoutly and successfully contended in the diplomatic field for sixty years. Without going into historical details, every one knows that the idea of the ocean as common property is extremely modern. It is only three centuries since the Portuguese claimed an exclusive trade to the East, through the South Atlantic and Indian Oceans, and Grotius wrote a pamphlet to prove that they were wrong, and that the open sea was not capable of private dominion. Selden answered him, and showed by the laws and practice of all nations, ancient and modern, that the sea was in fact capable of private dominion, and Sir Matthew Hale considered the title to the narrow seas adjoining England to be vested in the King.

As commerce drove these primitive ideas out of people's heads, it began to be perceived that if the ocean itself was a common highway, interoceanic communication must also be free, and hence any interoceanic canal must be neutralized for the benefit of the world's commerce, so that no nation could have any exclusive control of it. This idea happened to be in harmony with the foreign policy of the United States, which had been that of a pacific and neutral Power. When England became a great pacific free-trade Power, her interests became almost identical with those of this country, and hence when Mr. Clayton and Sir Henry Bulwer sat down to draft their treaty, they found that they could really do very little more than announce to the world that any canal between the Atlantic and Pacific should become part of the ocean. This was what neutralization meant. This was their "general principle" of "interoceanic communication," which was actually, however, to be applied to the Suez Canal while the Isthmus Canal was still uncut.

This view of the matter remained the American view and the English view and the view of every rational man down to about fifteen years since, when Mr. Blaine began to insist that the Clayton-Bulwer treaty was "obsolete," and that any canal which might be opened would be part of our "coast line." Now, waiving all other difficulties, this was virtually a notice to England that as soon as the Atlantic and Pacific Oceans should be united we would claim an exclusive title to the highway between them. We would make it part of the ocean, but would own it ourselves. In other words, the claim really was not that a particular agreement between the United States and England had become obsolete, but that the whole modern view of the ocean as common property was obsolete. Very likely Mr. Blaine had never heard of Grotius's pamphlet, nor of Selden's, but his view of the subject (and he set up a very similar claim to Bering Sea) belongs to the mediæval world, not that of to-day.

Blaine's little venture was, therefore, doomed from the start. To make it worth trying, we should first have to convert the United States into a great belligerent Power, something like Russia, without any commerce worth protecting, armed to the teeth, and with its coast defended at all points. We should, in fact, have to give up, for the sake of the canal, all industry and commerce, and devote ourselves to that. And mark the fatality which has pursued it. England found it in the first place very easy to show that the Clayton-Bulwer treaty was not obsolete, really because it embodies a vital principle of international law, and we had to give up attempting to persuade England that we could not allow her to neutralize what must be in its nature neutral. Next, the ingenious statesman and his successors turned their attention to the negotiation of a treaty on the subject with Nicaragua, and, of course, had no difficulty whatever in getting Nicaragua to agree to a sort of protectorate. But unfortunately about this time Mr. Cleveland was elected President, and he not only withdrew the treaty, but in course of time began to make use of the Clayton-Bulwer treaty, which Blaine had declared obsolete, to induce Great Britain to refrain from intervening on behalf of the Mosquito Coast. So that, when the dispute begins again, the argument that the treaty is obsolete has ceased to be available to us.

It is, of course, impossible to say what the State Department, as at present organized, may or may not do; but it is hardly conceivable that Mr. Blaine's extraordinary canal venture can be tried over again. One thing is evident, that it is a total mistake to imagine it merely an Anglo-American dispute, like that as to the Maine boundary or the Venezuela frontier. It involves, just as Clayton and Bulwer said it did fifty years ago, a great principle, that of the freedom of the sea, and applies to the commerce of the world. The pretension of a protectorate is directly contrary to the history and traditions of this country, and was given diplomatic life only through the extraordinary combination of qualities which made Mr. Blaine a successful demagogue. But, after fifteen years, its present status to conservative people must be encouraging. Far from succeeding in making any headway with it, we have made it ridiculous, and should a Nicaragua or Panama Canal be cut through the isthmus, we shall almost certainly see it neutralized by the common consent of mankind, whether

we contend that the Clayton-Bulwer treaty is in force or dead. Against some things even a strong nation is impotent, and one of them is the *mare liberum* of the modern world.

THE BRITISH ASSOCIATION AT TORONTO.—I.

MONTREAL, September 1, 1897.

The British Association for the Advancement of Science held its second Canadian meeting in Toronto August 18 to 25. The experiment of coming to the American side was made first in 1884, when a very successful meeting was held in Montreal. In every way successful, too, was the Toronto meeting—surprisingly so to Americans, who have come to consider geographical distance an insurmountable difficulty. There seem to be two reasons why this did not prevent a good English attendance: the first, that the American meeting is the exception. Such an ocean voyage must be the exception to most people, especially scientific people; and an exceptional call always meets with an exceptional response. The second reason, however, is more intrinsic: it is the remarkable *esprit de corps* of the British Association—the remarkable loyalty and unselfishness which actuate the officers and members. It is not to cast a slur on the members of other organizations, especially those of a similar kind in this country, to say that here is an example for scientific men to follow. The greatest men in England, those who have their duties to the Royal Society, to their professional positions, etc., still attend the British Association as a matter of course, and prepare elaborate papers, slides, etc., for its general and sectional meetings, beside the youngest aspirant for scientific recognition. A very prominent English physiologist, for example, said to the writer that he wished very much to attend the medical congress at Moscow, but felt that he must come to the British Association in support of Sir John Evans. Another factor of great moment to the success of the meetings of the Association is the committee system. Through the committees the programmes of the sections are kept corrected up to the very beginning of the daily session. This again requires great care and devotion on the part of the secretaries.

While speaking of these general matters, it may be well to refer to the practice, on the part of the officers of the sections, of inviting visitors and local men of scientific standing to become members of the sectional committees and even of the general committee, thus enlisting the interest and presence of desirable people at this meeting or that. This was especially appropriate at the Toronto meeting, in view of the presence of so many American men of science, some of whom came direct from the Detroit meeting of the American Association, and some from their vacation places. The international feature was marked, indeed, at Toronto. Besides the very remarkable number of the best-known British workers in many branches of science—whose names would fill a page—there was a sprinkling of German and French savants whose names are known in their subjects everywhere. Dr. Dohrn of the Naples Marine Biological Station, and Prof. Richet of the Faculty of Medicine of Paris may be mentioned as among those who were in regular attendance on the zoölogical and physiological sections, respectively. American science was very well represented both numerically and in quality.

In the meetings themselves there was nothing but cordiality and friendship, from the international point of view. Many public expressions of what Michael Foster called "English in a broad sense," Anglo-American, sentiment—possibly the phrase *All-English* might find American users—were made. Even more striking than the remarks of Prof. Foster in the address to be referred to again were the direct expressions of Mr. Bryce at the official banquet. His address on "Jingoism" has already gone—may it continue to go—the rounds of the press, and I need not summarize it; but, far as the speaker was from meaning it, many Americans nevertheless must have hoped that it would come home in our country with the same force with which Mr. Bryce's appreciations of our national life have come home to us on earlier occasions. It must be said, however, if one is to be frank, that the Canadians are not taking the international situation humorously. This was apparent even in this scientific meeting. They feel that American friendship is precarious, American policy capricious. The present writer has lived enough in Canada to feel the chill of the extraordinary change of sentiment which has come over Canadians of all stations in the last four years. It is not expressed formally, far less personally; but it is in the air—a general tone of un-American, pro-British and imperial feeling. The Dingley tariff seems but a climax to the reasons for irritation, a new stirring up of the vigorous reaction called out by the Venezuelan message. Readers who see the Toronto *Globe* and know its editorial position will appreciate the remark that, from Lake Simcoe to the Saguenay, I found no one who did not give its platform his approval. This is a digression from science; but it may be the more suggestive as being the pronounced impression of one visiting Canada on a purely scientific errand. A certain Canadian university professor hit this feeling off neatly; he called it "an eruption of self-respect." *

As to Toronto and its people, the city was most beautiful and its people most hospitable. Toronto citizens may say, apropos of lawns, flowers, and temperature: "It is an ill *rain* that brings nobody any good!" Toronto in August is not usually the flowery, bowery Toronto that the British visitors saw! But as much cannot be said of the people or of the civic authorities. The committee had their arrangements so well in hand that only the spark of actual arrival was needed to set off the mine. All the guests, American no less than British, will remember the untiring energy and the boundless kindness of those on whom the burden of the home arrangements fell—President Loudon of the university, Mr. B. B. Walker of the Canadian Bank of Commerce, and the local Secretary, Prof. A. B. Macallum. Among the publications of the "Publication Committee" (Prof. R. Ramsay Wright, chairman), the 'Handbook of Canada,' a volume of 400 pages by numerous writers, is of permanent value. The functions of a quasi-social character were a convocation at the University, at which honorary degrees were conferred upon Lord Kelvin, Lord Lister, Sir John Evans (Dr. Gibbs, the President of the American Association, was also to have been thus honored); a similar function at Trinity College (a Church-of-England institution); a reception by the Governor-General, Lord Aberdeen; a conversazione at the University; an official banquet to Kelvin, Lister, and Evans; and garden parties, excursions, etc., in all the intervals. At a special meeting the city authorities also welcomed the association. In addition to all this, private citizens vied with one another in showing kindness to those visitors whom they wished to entertain. The speeches made at the banquet were of a high character, international sentiments being expressed by Lord Aberdeen, Mr. Bryce, and others. The American Association was represented among the speakers by two of its officers, Prof. Putnam and Dr. McGee.

In another brief letter I shall speak of the scientific meetings. J. M. B.

*A distinguished cabinet minister of the Dominion, a man of most liberal views, was not long ago kept waiting in the antechamber of one of our Houses in Washington, and forced to hear an intemperate and insulting discussion of himself and his country pending his admission as a guest. No doubt such incidents are more widely published in Canada than in the United States.

THINGS NEW AND OLD IN MODERN GERMANY.

BERLIN, August, 1897.

What in contemporary Germany most forcibly strikes one who has been out of its reach for some time is its intense modernness. It seems as though within twenty-five years the country had completely changed its moral complexion, as though it had leaped at a bound from a comparatively patriarchal condition into the very midst of modern capitalism and industrialism. That the very rapidity of this development has destroyed a good deal of what constituted the principal charm of German life in the time of our fathers, it would be idle to deny. The average German of to-day, at least if he be selected from the higher classes, is not any more the youthful enthusiast and idealist of the old liberal type; he is rather a shrewd observer and a cool-headed manager of affairs, who despises the Greeks for having gone to war without having provided themselves with the necessary wherewithal. And the average German home of the same stratum of society, far from being distinguished for its simplicity and frugality, is rather marked by a degree of high living and display that would have astounded the contemporaries of Freiligrath and Platen. Whatever one may think of the present Emperor, he certainly is an adequate representative of an age full of restless ambition, overflowing with vitality, seeking new avenues of activity in every direction, luxurious, revelling in success and enjoyment, but somehow lacking in the finer aspirations and feelings. And no truer artistic index of this newest phase of German life could have been found than the gorgeous monument which, by his Majesty's decree, has been erected in front of the austere old Hohenzollern castle in memory of Emperor William I.—the "Wilhelm in der Löwengrube," as Berlin popular humor has dubbed it, on account of the roaring lions that surround the equestrian statue of the Emperor himself—a work so pompous and supercilious that one rubs one's eyes to realize that *this* is meant to be the simple, good old man

whose sole ambition it was to perform his daily duty well.

Fortunately signs are not lacking that all this outward display has not yet deeply affected the nation as a whole, so that, as it has been the result of the sudden accumulation of wealth, it will pass away with the gradual absorption of this wealth by the masses. For alongside of the great industrial and commercial prosperity there has come an intellectual awakening also which, although it has not had the same outward effect thus far, cannot fail to exert its influence on the future. I refer to the educating and humanizing work done by the Socialist workmen clubs; to the extraordinary advances made by the woman movement; to the realistic wave in educational methods that set in with the school legislation of 1892; to the new public activity of the church, as shown on the one hand in the great philanthropic undertakings of the conservative Pastor von Bodelschwingh, and on the other in the efforts of the liberal Pastor Naumann to create a national workingmen's party, and, above all, to the new literary movement.

It is, indeed, a matter for national rejoicing that just at this time two men of such profound earnestness of purpose and of such signal ability to grasp the one thing needful have come to the front as Hauptmann and Sudermann. Both men are now approaching the zenith of their power; both may look back upon a career of constantly ascending achievements. Hauptmann has risen from the hopelessness of "Vor Sonnenaufgang" to the *vita nuova* of the "Versunkene Glocke"; Sudermann, from the bitter sarcasm of "Sodoms Ende" to the Messianic forebodings of his "Johannes." Both seem predestined to conciliate the ideals of the old patriarchal Germany with the unruly claims and strivings of the new industrial Germany. And even now they seem to be nearer that harmonious view of life which is the indispensable condition for the creation of truly great works of art than their master Ibsen, who, by his uncompromising radicalism, is prevented from ever fully gratifying that most natural and most human demand of the ordinary man, the desire to be elevated and edified.

While youngest Germany is thus working out its destiny under auspices upon the whole encouraging, old Germany is by no means dead. Some days ago I had a glimpse of it, when Herman Grimm gave me a drama written by his wife, Giesela von Arnim, the daughter of Bettina, which he himself, since her death some eight years ago, has edited with loving care. Herman Grimm himself is a noble representative of that golden age of letters at the beginning of this century, when it was still possible for the man of culture to develop all his faculties into a harmonious whole; and as he sat opposite me in his study, talking in his fascinating manner—a combination of frankness, melancholy, gracefulness, benignity, and humor—about his hopes for America, about the formalism of modern philological learning, about his uncle Jacob, his father, Bettina, and other noble shades of the past, it seemed to me that I had never seen a man who was so perfect an embodiment of mental and moral refinement, or such a living protest against the materialism of the day. Giesela must have been a woman in every way worthy of a man like Herman Grimm and in every way worthy of the noble traditions implied by the name of Arnim. And it is probably not too much to say that it is partly the inherited longings and aspirations of the Arnim family which in this posthumous drama of hers (the work of decades, as her husband tells us) have found a supreme poetic expression.

Its title is "Alt Schottland"; its plot centres around the futile efforts of Charles Edward, the last Stuart pretender, to reconquer the throne of his fathers. The conflict which pervades the action is similar to that now being waged between the old Germany and the new: on the one hand, chivalrous old Scotland, with its mountains and lakes, its legends and songs, its secluded country homes, its faithfulness and devotion; on the other, commercial England, with its highly developed city life, its party struggles, its popular freedom, its selfishness and greed. In the midst of this conflict there stands a figure of wonderful impressiveness and pathos: Lord Jacob MacOrn, an old Scotch nobleman whose house is drawn into the ruin of the luckless dynasty with which all his best feelings are associated. Herman Grimm makes it probable that this Scottish lord is a composite portrait, as it were, of Giesela's father, Achim von Arnim, and of Jacob Grimm. Like Jacob Grimm, he is a silver-haired patriarch, revelling in the traditions of the past and feeling nowhere happier than in the quiet realm of his library. Like Achim von Arnim, he is an uncrowned king, undisputed lord of his estate and his family, with every fibre of his being bound to his native soil, but his face turned toward the regions of the infinite and the eternal. A cousin of his, instigated by an English wife, intrigues against him, seeking to put himself in possession of his estate. The lawsuit about the ownership of this estate, which has been going on for some time, would undoubtedly have been decided in Lord Jacob's favor if the perfidious English woman had not managed to destroy the documentary evidence; so that the case cannot be settled by the courts, but has to be submitted to the good pleasure of the King. And since Lord Jacob is reported to have given shelter in his castle to the fugitive Charles Edward, the King decides against him.

The scene where the old nobleman, upon receipt of the fatal news, takes leave of the home of his ancestors, and, surrounded by his family and his servants, goes out into the world, is the climax of the play and one of the most affecting in dramatic literature. The faithless cousin and his wife are staying as guests in the house, for it is the old patriarch's birthday and a gay festival has been planned by the household. But now the guests have suddenly become the owners, and the festival is changed to a funeral, It seems as though the old squire could not tear himself away from the spot where his whole life has been spent so honorably and fruitfully. He stops at every nook and corner of the ancestral hall; he addresses the chairs, the tables hallowed by sacred memories; he lingers over the thought of the beloved ones that have passed beyond from out these walls. At last, when he comes to the place where, years ago, he pressed the last kiss upon the lips of his wife, he faints away. He is thought to be dead. The children and the household burst into cries of mingled grief and wrath. Only Elinor, his heroic daughter, feels it cannot be the last. She kneels down at his side; she throws her arms around him; she calls up before him the form, the voice of her mother; she strikes on the harp the tune of "Old Scotland," an ancient national hymn which seems to voice the feelings of this family in all great crises. And now the old man rises as in a trance; he grasps the harp himself and fingers it mightily; the whole household breaks out with fervent passion in the beloved hymn, and thus, supported by his sons, and followed by his faithful folk, he strides away, a Cæsar, a conqueror of worlds invisible!

Truly, the whole Ibsenite company of cynics, modern prophets, and would-be reformers seem to sink into nothingness if brought face to face with characters of such genuine grandeur as this simple-minded country nobleman of the old school; and it is devoutly to be hoped that the rapid modernization of her social conditions through which Germany is at present passing, will not lead her away from the ideals of life which this man so superbly represents.

KUNO FRANCKE.

HANSEN'S FRANCO-RUSSIAN ALLIANCE.

PARIS, September 8, 1897.

M. Jules Hansen has undertaken to write the genesis of the Franco-Russian alliance, and has condensed in a small volume, 'L'Alliance Franco-Russe,' all that he could find on a subject which at the present moment is engrossing the attention of the whole world. Let me say first a few words respecting the author. M. Hansen is a Dane by birth. I believe he is a native of the provinces of Schleswig-Holstein, which were added by force to Prussia; he made himself very obnoxious to Bismarck, and had to leave his country. He found an asylum in France, where he has resided for many years; he became at the same time a diplomat and a journalist. The Foreign Office employed him not in the regular routine of what is called the "carrière"; he was a foreigner, and could serve only in a semi-official capacity. He wrote also in a number of papers and reviews, became an active correspondent of foreign newspapers. He knows many languages, and is probably one of the best-informed men in Paris in all matters which concern the general politics of Europe. He published his recent volume immediately after the two toasts read on a French man-of-war, the *Pothuau*, by the Emperor of Russia and by the President of the French republic. For the first time, the world was distinctly informed that France and Russia were "des nations amies et alliées." The pamphlet is dedicated to the memory of Alexander III.; for "I have," says M. Hansen, "a profound conviction that the Franco-Russian alliance is his personal work."

M. Hansen published in 1880 a book, 'Les Coulisses de la Diplomatie,' in which he reproduced some declarations made by Gortchakoff (the Prince was not named at the time, but his name is now given). Prince Gortchakoff said to his interlocutor: "The understanding, first between Prussia and Russia, and afterwards between the three Emperors, has ceased to exist, and is buried. The latent but ardent personal struggle which began some time ago between the two Chancellors of Russia and of Germany, is still a secret, but will some day be revealed in the memoirs of our time." Prince Gortchakoff prided himself on having persuaded Alexander II. that, by helping the

policy of Germany, Russia was merely playing the game of Bismarck.

I confess that I don't very well see that there could have been any difference between the policy of Germany and that of Bismarck; the German Chancellor was working for Germany, though he might have had his personal likes and dislikes. During his short ministry, Gambetta put himself in communication with Count Chaudordy, who knew well Prince Gortchakoff, and was on the point of sending him as Ambassador to St. Petersburg when he was upset by a vote of the Chamber. Gambetta had long spoken of the Franco-Russian alliance as an empty dream. He wrote to Madame Adam, the editor of the *Nouvelle Revue*, in 1876: " Il faut être effronté pour rêver l'alliance russe" (see number of September 1, 1897, page 144). He changed his mind, and, in his conversations with M. de Chaudordy, he went so far as to say: "I foresee that at St. Petersburg they will ask you to determine the French Government to take severe measures against Russian Nihilists in Paris. Well, you can assure them that I will do in this respect all that the Russian Chancellor asks me to do."

M. Jules Ferry, who was at the Foreign Office from November, 1883, to April, 1885, was generally thought to be favorable to an understanding with Germany and adverse to Russia. M. Hansen says that this opinion was not well founded, and that M. Ferry said to him personally: "I am profoundly convinced that France and Russia are destined to have some common understanding, as they have common interests not only in Europe, but in Egypt, in China, and in the Pacific Ocean."

In April, 1884, Prince Orloff was replaced in Paris by Baron Mohrenheim. The new Ambassador had known Prince Bismarck well in Berlin, and he had at Copenhagen often seen the future Tsar Alexander III., who made frequent visits to his father-in-law, King Christian. He found in Paris M. Hansen, whom he had known at Copenhagen. When Alexander III. ("the most Russian of Russians") ascended the throne, he became his own Minister of Foreign Affairs. He was persuaded, says Hansen, that the preponderance of Germany in Europe was a danger to Russia; but if he, the autocrat, was to place his hand in the hand of republican France, it was at least necessary that France should express her desire clearly, and should prove by actions that Russia could really trust her." An occasion came. On the 7th of January, 1887, three Bulgarian delegates came to ask the French Government to help Bulgaria in the choice of a prince and in the arrangement of her difficulties with Russia. M. Flourens, Minister of Foreign Affairs, told the delegates that, in his opinion, the Bulgarians ought to take great account of the feelings of Russia, to whom Bulgaria owed her existence. This declaration gave great satisfaction at St. Petersburg. On the 14th of March, 1887, was published a ukase of the Tsar, which forbade all foreigners to buy land in the occidental provinces of Russia. This measure gave great dissatisfaction to Germany; in answer to it, and in consequence of the friction which was more and more felt between the Governments of Germany and Russia, the text of the treaty of the Austro-German alliance was published *in extenso* (the date of the treaty is October 7, 1879) in the *Reichsanzieger* and the *Wiener-Abendpost* on February 3, 1888; and shortly afterwards the German Chancellor negotiated with Italy a military convention. Alexander III. was unmoved and changed his attitude no whit.

One of the difficulties which rendered the genesis of the Franco-Russian alliance so slow and seemed to make any understanding impossible, was the ministerial instability in France. In April, 1888, M. Floquet became President of a new ministry, and M. de Freycinet took the portfolio of War. There was a legend current in Paris which represented M. Floquet (then an unknown lawyer), at the time of the visit of Alexander II. to the Emperor Napoleon, screaming on the steps of the palace when the Tsar passed near him and some other lawyers, "Vive la Pologne, monsieur!" M. Floquet thought it necessary, when he became President of the Chamber, to get himself presented to M. de Mohrenheim; the legend was forgotten—somebody else had cried, "Vive la Pologne, monsieur," the Tsar had never heard the exclamation.

Under the ministry of M. Goblet there was an unfortunate incident. A war-ship, commanded by Admiral Olry, threw some shells at a band of Cossacks who, under the leadership of Atchinoff, had established themselves in a territory belonging to France, under pretext of a mission to Abyssinia. The incident had no consequences of importance, as the French minister believed that Atchinoff was an adventurer, who had no real mission. The successor of M. Goblet was M. Spuller, of whom M. Hansen says that " his personal character and his somewhat slow mind did not incline him to any great enterprises in the domain of foreign policy. . . . He considered prudence and reserve as the principal duties of a Minister of Foreign Affairs."

M. Ribot assumed the portfolio of Foreign Affairs on March 17, 1890, and on March 18 Europe learned with surprise that Prince Bismarck had resigned, after having conducted the affairs of Prussia and afterwards of Germany for twenty-eight years. The young Emperor was not disposed to accept an almost dictatorial direction, and "Bismarck had forfeited the friendship of Russia, which did not forgive him his ingratitude after the services which the Russian Government had rendered the German policy." On March 29, 1890, several Nihilists, denounced to the French Government by M. Durnovo, Russian Minister of the Interior, were arrested in Paris by order of the French Government, and Alexander III. offered his thanks to M. Laboulaye, the French Ambassador in St. Petersburg. This incident had probably much to do with the succcess which M. Laboulaye obtained when the Tsar consented to receive a French squadron at Cronstadt. For forty years no French man-of-war had been seen in the Russian waters of the Baltic. On July 25, 1891, the squadron of Admiral Gervais entered the port of Cronstadt, where it was visited by the Tsar, accompanied by the Empress and by all the members of his family. The Emperor of Russia heard bareheaded and standing the " Marseillaise." Popular demonstrations took place in St. Petersburg. It was felt that the Franco-Russian friendship was assuming the character of an alliance. M. de Laboulaye and M. de Giers, after the visit to Cronstadt, set to work to give a concrete form to these friendly relations. After negotiations, several times interrupted, final signatures were exchanged before the close of the year. They were given by M. de Mohrenheim and by M. Ribot in the name of their respective governments. "From this historical hour," says M. Hansen, "it may be said, the two countries emerged from the isolation in which they were before."

It was thought necessary to complete this accord by a military convention, as it was notorious that, since 1888, the Powers of the Triple Alliance had signed military protocols providing against all the eventualities of a war. Prince Bismarck and Moltke had taken a personal part in the negotiation of these conventions. In case of mobilization, these conventions gave an advantage to the Triple Alliance. M. de Freycinet in France and Gen. Vannovsky in Russia prepared the terms of a dual military convention, which was signed *ad referendum* in the autumn of 1892. In 1893 the Tsar decided to send to Toulon a squadron under Admiral Avellan, to return officially the visit to Cronstadt. Meanwhile negotiations were continuing between the two governments. M. Casimir Périer affixed his signature, at the end of 1893, to a new diplomatic document, which was signed in Petersburg by M. Giers; at the same moment the military convention received its definitive signatures, and thus, says M. Hansen, was accomplished "one of the most important acts of this century."

Here the account of M. Hansen stops. Great events have followed: the tragical death of M. Carnot and of Alexander III., the visit of the new Emperor, Nicholas II., and of the Empress to France in October, 1896, and lately the visit of M. Faure to Russia; but they have brought no change in the situation in its diplomatic aspect. The Franco-Russian alliance has existed since 1893.

Correspondence.

AN EMENDATION.

To the Editor of The Nation:

Sir: In a recent issue, you mentioned that a law had been passed lately by the Iowa Legislature which imposed a tax upon the premium income of European insurance companies greater than the tax imposed upon the premium income of American companies, and that such discrimination is forbidden by an article of the Treaty of 1850 between the United States and Switzerland. This article you quoted, with less than your usual care, as follows:

"No higher impost, under whatever name, shall be exacted from the citizens of one of the two countries residing or established in the other country in which they reside, nor any contribution whatever to which the latter shall not be liable."

Between the words "other" and "country" should be inserted the words "than shall be levied upon citizens of the." Even then, the sentence is not quite a model of precise expression. Somewhat clearer is the French version, which parallels the English in the Statutes at Large, vol. xi., p. 587.

Yours truly, F. J. B.

Baltimore, September 16, 1897.

GORDON AND HIS MISSION.

To the Editor of The Nation:

Sir: The God of things as they are has

not had His dues in Gen. Gordon's case. Will you kindly insert a correction as to matter of fact? Your issue of September 2 remarks that when Gordon reached Khartum "he began to cry out that the Mahdi must be smashed up and that *evacuation* would be an indelible disgrace." What he really said was that *abandoning the garrisons* would be an indelible disgrace; a very different utterance, for evacuation meant the safe withdrawal of the various garrisons, which made one-half his mission; Mr. Gladstone's words in the House of Commons being that he had been sent "for the double purpose of evacuating the garrisons and reconstituting the country." Gen. Gordon's honesty of purpose and of deed is plain enough for those who take the trouble to investigate the *facts*.

LOUISE KENNEDY.

SEPTEMBER 18, 1897.

[Gordon's mission, however, was intended to be a peaceful one, and his conversion of Khartum into the base of operations for a ruthless war was neither in the spirit of his instructions nor calculated to relieve the garrisons whose abandonment he thought would be "mean." In short, his policy was non-evacuation.— ED. NATION.]

DANTE AND HIS COUNTRYMEN.

TO THE EDITOR OF THE NATION:

SIR: "Dantophilist's" explosion of righteous wrath, in your issue of September 16, against the notion that "in Italy itself the great poet is a name to worship conventionally more than elsewhere," reminds me of a like explosion on the part of Byron. I note in his journal, Jaunary 29, 1821:

"Read Schlegel. Of Dante he says, 'that at no time has the greatest and most national of all Italian poets ever been much the favourite of his countrymen.' 'Tis false! There have been more editors and commentators (and imitators, ultimately) of Dante than of all their poets put together. *Not* a favourite! Why, they talk Dante—write Dante—and think and dream Dante at this moment [1821] to an excess which would be ridiculous but that he deserves it."

The cheap two-volume Murray edition quotes, in a foot-note, this parallel utterance from Medwin's 'Conversations':

"I don't wonder," said Lord Byron, "at the enthusiasm of the Italians about Dante. He is the poet of liberty. Persecution, exile, the dread of a foreign grave, could not shake his principles. There is no Italian gentleman, scarcely any well-educated girl, that has not all the finer passages of Dante at the finger's ends; particularly the Ravennese. The Guiccioli, for instance, can almost repeat any part of the Divine Comedy."

J. M. H.

ITHACA, September 21, 1897.

TOKENS OF WOE ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: Having but just returned from a sojourn of more than a year in Greece and Europe, I have been overhauling the periodicals that have accumulated in my study during that period. Consequently, I have just discovered Mr. Ridgeway's learned article in the *Journal of Hellenic Studies* for 1896, entitled, "What People Produced the Objects Called Mycenæan?" An outline or announcement of this article had already appeared in the *Academy* in July, 1895. Mr. Ridgeway examines the ancient authors to see if they supply us with accounts of any people which (1) occupied Peloponnesus, Attica, Crete, Thessaly, Bœotia, Thera, Asia Minor, Egypt, Rhodes, Cyprus, Italy, and (2) used a form of script which was intelligible to people who lived in places distant from each other; for instance, in Peloponnesus and in Asia Minor.

The following is a survey of the results of Mr. Ridgeway's profound study:

(1.) An ancient people called Pelasgi inhabited Greece.

(2.) A class of remains are found not only in Hellas, but in Asia Minor, Egypt, Rhodes, Thera, Crete, Italy, and Sicily, all of which places, according to Greek tradition, were occupied by Pelasgians.

(3.) The Pelasgians were the primitive inhabitants of Mycenæ and Tiryns, and were conquered by the Achæans only a short time before the period of the Homeric epos.

(4.) The Pelasgians were the builders of Mycenæ and Tiryns.

(5.) The palace of Menelaus at Sparta was built by the Pelasgians.

(6.) The same is true of the palace of Alcinoos.

(7.) The prehistoric walls at Athens are Pelasgic.

(8.) The prehistoric building at Cnossus in Crete is Pelasgic.

(9.) The Tokens of Woe are mentioned by Homer in connection with Proetus, the Pelasgian King of Tiryns.

(10.) The Tokens of Woe were understood in Lycia at a time when there were absolutely no Greek colonies on the seaboard of Asia Minor.

(11.) Symbols resembling the Hittite have been found on gems of Crete and Peloponnesus, and on vessels from Peloponnesus and Attica.

(12.) Legends show contact between Greece and the East in three quarters: (1) Egypt (Io, Danaus), (2) Lycia (Cyclops, Bellerophon), (3) northwest end of Asia Minor (Argonauts, Telephus, Pelops).

(13.) There are serious discrepancies between the civilization of the Homeric poems and that of the Mycenæan age.

The Pelasgians were the only race that answers all the conditions; it was, therefore, the creator of the Mycenæan art and the inventor of the Tokens of Woe. Mr. Ridgeway is but carrying out the view held by Thucydides in regard to the Pelasgians, who yielded to the superior valor and weapons of a kindred but less numerous and less civilized race.

J. R. S. STERRETT.

AMHERST, September 13, 1897.

A UNIQUE REFERENCE LIBRARY.

TO THE EDITOR OF THE NATION:

SIR: The Grosvenor Library of this city is a reference library from which books cannot be taken away. It is in receipt of a small income from the city. I wish to draw your attention to the way in which its money is being expended. As I cannot trespass upon your valuable space to any great extent, I take one subject—the human intellect. The following works, all of them of the first class, are not obtainable at the Grosvenor: Maudsley's 'Physiology of the Mind,' the same author's 'Pathology of the Mind,' Bastian's 'The Brain as an Organ of Mind.' The following books have been bought *this year:* Fowler's 'Self-Instructor in Phrenology' (published in 1857), Combe's 'Elements of Phrenology' (published in 1835), Grimes's 'Etherology and the Phreno-Philosophy of Mesmerism and Magic Eloquence' (published in 1851).

I presume that the excuse for buying the last three books is that there has been a demand for them. A suitable answer would be that it is the duty of the trustees of a library aided by the city to try to turn the minds of readers in the right direction, and that a person who asks for a book upon phrenology should be referred to a cyclopædia, where he will learn the truth, and not to an antiquated treatise which contains virtually nothing that is true. The library of which I am writing has no money to waste upon books that have no value beyond some trivial historical interest, and the absence of standard works by recognized authorities reflects no credit upon the institution. Since the beginning of the year, more than a dozen out-of-date pseudo-scientific books have been placed upon the shelves, while true science has, in my opinion, been neglected, although some scientific works have been bought.

If any of your readers know of any other reference library, aided by city funds, where a similar policy is pursued, I should be interested to learn the name of it.—Yours, etc.,

LAWRENCE IRWELL.

76 WEST TUPPER STREET,
BUFFALO, N. Y., September 14. 1897.

Notes.

Preliminary autumn announcements of D. Appleton & Co. include 'Industrial Freedom,' by David MacGregor Means, with an introduction by David A. Wells; 'Evolutionary Ethics and Animal Psychology,' by E. P. Evans; 'The Psychology of Suggestion,' by Boris Sidis, with an introduction by William James; 'Bibliography of Education,' by Will S. Monroe; 'Punctuation, and Other Matters of Form,' by F. Horace Teall; 'The Story of the Cowboy,' by E. Hough; R. Lydekker's 'Natural History,' illustrated; 'French Literature,' by E. Dowden; 'A History of Dancing,' by Gaston Vuillier, copiously illustrated; and a translation of the 'Suppressed Letters of Napoleon' just edited by Léon Lecestre.

Edward Arnold will bring out 'Recollections of Aubrey De Vere'—*of* in the subjective sense; 'The Autobiography and Letters of the Right Hon. John Arthur Roebuck,' edited by Robert Eaton Leader; 'A Memoir of Anne J. Clough,' principal of Newnham College,' by her niece, Bertha Clough; 'Style,' by Prof. Walter Raleigh; 'Old English Glasses,' drinking vessels, by Albert Hartshorne, illustrated; 'Rowing,' by R. C. Lehmann; 'The Art of Deer-Stalking,' by William Scrope; 'Reminiscences of a Huntsman,' by the Hon. Grantley F. Berkeley; 'Benin, the City of Blood,' by Commander Bacon, R. N.; and 'The Chippendale Period in English Furniture,' by K. Warren Clouston.

Fleming H. Revell Co. have nearly ready 'Seven Years in Sierra Leone,' by Dr. A. T. Pierson, who records the missionary service of William A. B. Johnson from 1816 to 1823; and 'The Gist of Japan,' by the Rev. R. B. Peery.

The new firm of book publishers in this city, Doubleday & McClure Co., begin with a

series of "Little Masterpieces," edited by Prof. Bliss Perry of Princeton; 'Tales of the Real Gypsy,' by Paul Kester; 'The Open Boat, and Other Tales of Adventure,' by Stephen Crane; 'Character Stories'; 'Taken from *Life*,' verses by J. Whitcomb Riley, etc., from that periodical; and 'Bird Neighbors,' by Neltje Blanchan, with an introduction by John Burroughs and fifty full-page pictures in color. They will also control the New York market for Mark Twain's forthcoming work, 'Following the Equator.'

Macmillan Co. will have ready next month 'Social and Ethical Interpretation in Mental Development,' by Prof. James Mark Baldwin of Princeton.

George W. Jacobs & Co., Philadelphia, have in press 'The Latimers,' a tale of the Western Insurrection of 1794, by Henry Christopher McCook, and 'Ole Rabbit's Plantation Stories,' collected from original sources by Mary Alicia Owen, with illustrations.

'The New Man: A Chronicle of the Modern Time,' by Dr. Ellis Paxson Oberholtzer, will be published by the Levytype Co., Philadelphia.

'Memorial Day, and Other Poems,' by Richard Burton, and 'Free to Serve,' a tale of Colonial New York, are to be issued next month by Copeland & Day, Boston.

The fifth volume of 'Harvard Studies and Notes in Philology and Literature' (Ginn & Co.) will be a Child memorial volume, with contributions by Profs. C. E. Norton, A. S. Hill, F. B. Gummere, G. L. Kittredge, Kuno Francke, and others.

William Doxey, San Francisco, will issue a new and enlarged edition of 'The Purple Cow,' a collection of vagaries from Gellett Burgess's *Lark;* the *'Lark* Almanac,' thirty-two cartoons from that periodical of blithe memory, with decorated cover; 'The Little Blue Fox, and Other Creatures,' by President Jordan of Leland Stanford University, illustrated by child readers; and 'The Art of Little Children,' by Corrado Ricci, translated by Louise Maitland.

There is much that is mediocre in 'Voices of Doubt and Trust,' selections, in prose and verse, by Volney Streamer (Brentano's), yet it is a fresh compilation that will commend itself to many. It has not overlooked such late appearances as Goldwin Smith's 'Guesses at the Riddle of Existence' and William James's 'Will to Believe.' Huxley and Morley are freely drawn upon, and here is Darwin's famous confession of perplexity on the subject of the existence of a supreme being. Good judgment has been shown in what has been taken from Whitman; the Browning excerpts are not remarkable in themselves. We have observed some and suspected more carelessness in the proof-reading—"thou *are*," p. 8, "new-pledged hope," p. 163, and punctuation that needs rectifying even if true to the original.

In the "Heroes of the Nations" Series (G. P. Putnam's Sons), Col. W. C. Church gives the 'Life of Gen. Grant.' It is a somewhat larger volume than most of the similar series, and the author has used his space judiciously to introduce occasional quotations from others. It takes the strongly eulogistic view of every phase of Grant's life, military and civil, as seems almost a necessity in the conception of such a class of books. Its variation in method from the preceding lives of Grant will, however, give it a distinct and useful place.

'Tom Moore in Bermuda' is the title of a little brochure privately printed at Lancaster, Mass., by the author, J. C. Lawrence Clark. It gathers up the facts and some of the legends connected with Moore's residence in the "bright little isle," which, with liberal citations of his verse and a good supply of illustrations, make a not unpleasing whole. Moore continued to hold the office of Registrar in Bermuda for many years after his return to England, his actual discharge of its duties having been limited to less than four months. In 1844 he was removed from office by an unfeeling government, on the ground of non-residence—a non-residence which had then continued for forty years! Truly those were the pre-Adamite days of the civil service.

Mr. R. Van Bergen's 'The Story of Japan,' published by the American Book Company, is an extremely accurate as well as entertaining sketch of the history of Japan for school or home reading. Its numerous pictures are very valuable for a history, and are intelligible specimens of Japanese art. Map, index, and print are unexceptionable, and in the whole work we have been able to discover but one misprint, that of *Lagoda* for *Ladoga*, the name of an American ship. Mr. Van Bergen's position, as a teacher in the Nobles' School in Tokyo, and his knowledge of Dutch and Japanese, make this a trustworthy sketch of the history of Japan, and it is rendered attractive by a good many characteristic anecdotes and classic stories. Besides dealing not too roughly with the ancient mythology, he brings the story down to the present time, showing clearly, also, that the moving force in Japan and the creator of public opinion is still, as for a thousand years past, the gentry, who constitute about one-tenth of the nation. The style is suitable for young people.

The thirty-second annual issue of the 'Jahrbuch der Schweizer Alpenclub,' just published by Schmid & Francke at Berne, is a volume of 452 pages, with thirty-nine illustrations and a *Beilage* containing four maps and a catalogue of the library of the club. The contents are chiefly records of excursions with their scientific results, and reviews of recent works on Switzerland. Especially interesting are Dr. A. Zschokke's "History of Mountain-Climbing," H. Correvon's "The Flora of Switzerland and its Preservation," and a paper on "The Periodic Variations of the Glaciers of the Alps," by F. A. Forel and L. Du Pasquier.

Irma von Troll-Borostyani's 'Das Weib und seine Bekleidung' (Leipzig: Spohr) is an earnest and urgent plea for a thorough dress-reform as one of the essential conditions of woman's success in higher education and in the realization of her present aims and aspirations. The author's strictures on female apparel as unhygienic, unæsthetic, and unpractical are sensible, and ought to be effective at a time when the supremacy of the bicycle has already begun to emancipate the fair sex from the tyranny of fashion.

In its fore part the *Harvard Graduates' Magazine* for September is emphatically a memorial number. Here are to be found the three addresses in commemoration of Col. Robert Gould Shaw, with a photographic view of St. Gaudens's masterpiece; and here also are portraits of the late Prof. Lane and Prof. F. D. Allen, with brief sketches. Prof. Hart, by the way, calls attention to the rule at Harvard that members of the faculty die in vacation rather than in harness. Mr. T. W. Higginson contributes some highly interesting correspondence with his father on the part of Dr. Cogswell, Ticknor, and Everett during their stay at Göttingen. In the abundant provision of university news are to be noticed the formal transfer and taking over of the Peabody Museum, and the movement to erect a suitable memorial to the late Charles Eliot, "to associate his name with some permanent feature of that Metropolitan Park System which is so largely his creation." Contributions may be sent to C. S. Rackemann, No. 23 Court Street, Boston. The committee to determine the application of the fund is headed by Charles Francis Adams, and embraces Prof. C. S. Sargent, Messrs. Olmsted, Mr. H. S. Hunnewell, and other apt counsellors of both sexes.

The October number of the *American Historical Review* will contain a series of interesting letters from and to Eli Whitney, displaying more perfectly than has hitherto been possible the history of the invention and early promotion of the cotton gin—an invention which has been groundlessly supposed to have arrested the groundlessly assumed tendency of Southern slavery, at the close of the last century, to terminate of its own accord. The same number and the succeeding will print a posthumous chapter of the late Prof. Herbert Tuttle's 'History of Prussia,' covering nearly the whole of the campaign of 1758.

We are glad to notice, among the numerous signs of a revival of historical study in the South, the appearance of the first of an annual series of Historical Papers, published by the Historical Society of Trinity College, Durham, N. C. A sub-title, "Reconstruction and State Biography," is descriptive only in part of the contents, which range as far back as "Raleigh's New Fort in Virginia, 1585." Still, the most recent topics treated are the most profitable, particularly the opening paper on "Fort Hamby on the Yadkin," a striking picture of local demoralization on the break-up of the Confederate army in 1865. Among the several biographies is one of the late zealous antiquarian, Edward Graham Davis, whose portrait accompanies it. The papers are the work of students, and are purposely not severely revised for the literary form.

The Yukon gold fields and Alaska are the subject of a very useful note in the September Bulletin of the Boston Public Library relative to a list of the works, practically complete, which it contains on this region. There is also a list of fifty-one titles of the most valuable magazine articles which have appeared from 1870 to the present time.

The project of constructing a railway from the Mediterranean to Aleppo, which twenty-seven years ago excited so much interest, has been revived, this time by the son of the Governor-General of the district. He is making strenuous efforts to obtain a concession to build the road, and does not ask for an indemnity, believing the traffic would be amply sufficient to enable it to run on a paying basis. The American Consul at Alexandretta, the Mediterranean terminus of the proposed line, and the only natural harbor on the Syrian coast, estimates that caravans numbering half a million animals annually come to this port from Bagdad and the country beyond the Euphrates. There are shipped to the United States alone 60,000 camel-loads of licorice root yearly. The port is served by twenty-four regular steamers a month, besides "numerous 'tramps' and sailing ships."

According to recent news from Athens, Kavvadias has found an inscription which assigns the building of the temple of the Nike Apteros to the middle of the fifth century B. C. with absolute certainty. This is very gratifying to Dörpfeld, who has maintained, against Furtwängler and Wolters, that this temple was older than the Propylæa.

Recently an inscription was found in Megalopolis concerning Diæus, the Megalopolitan General who is mentioned at length, but with disapprobation, by Polybius and Pausanias. He was General of the Achæans repeatedly during the period of the capture of Corinth, and summoned the Achæans to the hopeless struggle against Mummius. He was censured because, after the defeat, he fled from Corinth to Megalopolis, where, after killing his wife to prevent her being made prisoner, he committed suicide by drinking poison.

When the Jubilee honors were distributed, it was announced that Queen Victoria had awarded a peerage to Sir Donald Smith, a wealthy Canadian, who represents the Dominion in London as High Commissioner. Much curiosity arose as to the title the new peer would choose. Some hundreds of telegrams went to Sir Donald from Canada, saluting him as Lord Glencoe; but, if that had been the new peer's selection, he would have raised the whole clan of the Macdonalds against his presumption. Then, there was the chance of Montreal being taken for the title, for it is with that city that Sir Donald has been particularly identified. Here, again, there was an objection, for that place had already been annexed when Mr. Powlett Thompson, a former Governor of Canada, was raised to the peerage as Baron Sydenham and Montreal. The existence of these difficulties, no doubt, caused the delay in the gazetting of the grant of the peerage, which was done only on the 24th of August, when it was made known that the High Commissioner for Canada had become "Baron Strathcona and Mount Royal, of Glencoe in the County of Argyll, and of Mount Royal in the Province of Quebec and Dominion of Canada." The result is a compromise, which shows that the junior nobleman of the United Kingdom had one eye upon Glencoe and the other eye upon Montreal.

F. Gutekunst, the well-known photographer of Philadelphia, has issued copies of a striking imperial portrait of Mrs. John Drew, taken in 1895. The distinguished actress is represented as she appeared in private life, and the entire absence of theatrical accessory or affectation is one of the most noteworthy and pleasing characteristics of the picture. The facial expression is admirably natural, and is strongly suggestive of the mental and bodily vigor with which Mrs. Drew was endowed almost to the very end of her long life.

—Houghton, Mifflin & Co. announce for early publication the third five-year supplement (1892-96) to 'Poole's Index to Periodical Literature.' The late Dr. Poole's associate and successor in this work, Mr. W. I. Fletcher, has been assisted in the present new issue by Mr. Franklin O. Poole of the Boston Athenæum, a nephew of Dr. Poole. The volume, as the first issue since Dr. Poole's death, will contain his portrait and a brief biographical sketch. This supplement will be nearly one-third larger than either of the preceding ones, and will contain references to 1,355 volumes, belonging to 185 distinct periodicals. These are all that have survived of the 404 publications which have been included in Poole's Index, all the others having been suspended. Of the sixty-four oldest periodicals in the Index, beginning with the *Edinburgh Review* in 1801, just one-eighth survive, three of the eight being American, namely, the *North American Review* (1813), *American Journal of Science* (1819), and *Journal of the Franklin Institute* (1826). While only three-eighths of the survivors are American, forty, or nearly two-thirds, of the original sixty-four were such. The following tabular statement is interesting:

Decade.	No. of "Poole" sets started.	No. stopped.	Net gain.
1801-10	6	0	6
1811-20	18	2	16
1821-30	22	15	7
1831-40	29	23	6
1841-50	47	21	26
1851-60	31	14	17
1861-70	57	29	28
1871-80	49	45	4
1881-90	90	37	53
1891-96, 6 years	55	23	32

As these figures relate only to the periodicals included in 'Poole's Index,' which is always decidedly conservative as to the inclusion of new ventures, they show but a part of the truth as to the rapid rise and fall of periodical publications.

—Some dozen or more years ago a separate department of classical antiquities was created at the Boston Museum of Fine Arts, and an expert was appointed as its curator. The wisdom of this step soon made itself apparent in the numerous and well-chosen additions to the collection of casts of Greek and Roman sculpture, and still more in the publication of an excellent catalogue of this collection. Such a catalogue is indispensable to every serious student in the earlier stages of his progress, but to this day no other considerable museum in the country has anything valuable of the sort to offer. The greatest forward stride, however, has been made by the Boston Museum within the past three years. Generous bequests have put the institution in possession of funds, no small portion of which has been devoted by the Trustees to the purchase of original works of Greek art. Opportunities for such purchases do not lie in every one's way, but they may be hunted out by alert and experienced connoisseurs, as new objects of value are unearthed or as old collections in private hands are dispersed. Such opportunities have been skilfully seized in the interest of the Boston Museum. The acquisitions of the last two years have been for some time installed, and a third lot is, we understand, soon to arrive. If measured by comparison with the great museums of Europe, the collections in Boston are still small. Only a beginning has been made, but such as already exercises a potent attraction upon students and lovers of Greek art, far and near. Here, as nowhere else in America, fine examples of almost every branch of Greek art may be seen and enjoyed. Thus there are excellent specimens of the beautiful coinage of Greece, as well as of Greek goldsmiths' work. The collection of Greek vases is more extensive, and bids fair to become, in quality at least, one of the famous collections of the world. There are already in the cases pieces of which any one is worth a long journey to see, and we hear that a vase more magnificent than anything previously acquired, a great crater, well known to specialists as one of the most superb productions of the Greek potter's art, is soon to be received. To crown all, there are pieces of sculpture in bronze and in marble of such beauty that they would be eagerly coveted by any museum in the world. Photographs and casts, indispensable as these are, can never take the place of such original masterpieces. The Trustees of the Boston Museum, by their enlightened and liberal policy, have earned a gratitude which will be more and more widespread as the facts become more generally known and as the serious study of art history develops among us. Should they go on in the path upon which they have entered, Boston may come to take rank, if not with Athens, Rome, Paris, London, and Berlin, at least with Vienna, Munich, and Florence, as a centre for the study of Greek art.

—An Anglo-American sends us the following note from London:

"When in the neighborhood of Oxford recently, I looked in at the Bodleian Library. The Assistant Librarian, Mr. Falconer Madan, was so good as to draw my attention to the fact that, among the Clarendon manuscripts calendared by him, there were interesting papers relating to the early colonies in North America. Fellow-students of the history of English Colonies in America will welcome the following extracts from Mr. Madan's work:

"16188. Papers relating to the colonies of New England between 1661 and 1713. The places or subjects specially prominent are New York, about which there are many papers, 1667-1713; and the Five Nations of the Indians, 1701-08. There are also papers about the Bermudas (1661: fol. 1.), Rhode Island (1664-5: fol. 5), Connecticut (1660: fol. 10), Pennsylvania (1694 1701: fol. 24, cf. 160, 'State of the case between William Penn and the Fords,' 1707), Canada (1702: fol. 38). Among the separate papers are: (*a*, fol. 19) 'Copy of my L[d] Bellomont's letter to my L[d] Summers, N. York, 12th May 1698'; (*b*, fol. 67), 'Journal of the General Assembly for . . . New York, . . . 5 Oct. 1703 to 23 Oct.'; (*c*, fol. 77), 'An Act for the defence of the Frontiers,' 1704; (*d*. fol. 217), 'Proposal as a means for the Advancement in the province of New York . . . ,' by the Rev. John Sharpe, 11 Mar. 1712-3, suggesting a public school, library, and chapel, and giving a list of books 'given towards laying the Foundation of a Pu lic Libra y at New York.' by Sharpe, May 15, 1715 (fol 225) Some of the documents are petitions to the first Earl of Clarendon; many are connected with the administration of his grandson, the third Earl, as Lord ornbury, Governor of New York (1701 08). At fol. 205 is a letter from the latter (Apr. 28, 1710), alluding to his 'escape' from New York, and at folio 150. 'Extracts from some letters & memorials relating to the Rt. Hble the L[d] C. . . . ' 1702-07, testifying to his care for the Church. These papers appear, from fol 8, to be partly at least lots 105 (and 106 8?) on the second day of the Radcliffe sale, 1764 Now MSS. Clarendon 102

"16189. 1 (p. 1) 'A briefe Narrative of the late Negotiation between his Majestjes Colony of the Massachusetts, and . . . his Majestjes Comisioners,' 18 May 1664—4 Mar. 1664-5, followed by a comment on it. 2 (p 113) A briefe description of New England, the present Gouvernment & the Townes therein,' written in about 1670; beginning 'Westward from Pennobscott.' The writer fortified a house in 'Winnisime' near Boston in A. D. 1625 (p. 6). 3 (p. 141) A Latin report, by Sir Walter Walker, on the claim of France to the restoration of Nova Scotia (Acadia), written in about A. D. 1665, and signed by the author; beginning, 'Recepto omni cum reverentia.' Now MSS. Clarendon 103"

—K. Waliszewski's 'Peter the Great' (Appletons) has been translated from the original French by Lady Mary Loyd in the most admirable manner, with very few exceptions. The author is very decided in his views, and, as a whole, eminently fair in his handling of disputed points, and in his inferences

from the facts which he draws from widely chosen historical sources. Occasionally, he seems inclined to take the ground which a Pole and a Roman Catholic would naturally occupy where questions of national character and religion are concerned, and the reader feels that the matter in hand might, possibly, admit of a diametrically opposite interpretation. The point which he does succeed in setting forth with praiseworthy force and clearness is, that Peter was the heir of his ancestors' ambitions and strenuous efforts to obtain Western civilization, and not exclusively an original genius in any direction, although in all directions he was the typical Russian. This is, in fact, the text upon which the author insists, and rightly. "Peter," he says, "was not a great man only—he was the most complete, the most comprehensive, and the most diversified personification of a great people that has ever appeared," and he shows how his hero aroused the slumbering talents and the spiritual powers of his now mighty empire. A very excellent feature, which greatly facilitates the difficult task of making a satisfactory portrait of such a man, is the division of the book into major and minor topic-parts. Another very valuable feature, especially for those who have access to foreign libraries and can read the necessary languages, lies in the detailed and exact references to the historical sources of information. The style is graphic, and the volume is as easy to read and as entertaining as a sensational novel, to which class of literature such a biography seems inevitably akin, at times. One or two serious misprints and errors should be corrected in future editions; such as, 1728 instead of 1718, on p. 281; and the statement on p. 443 that the Patriarch Philaretus ruled the country, in the name of his *brother* Michael, the first of the Romanoffs. Michael, elected Tsar at the age of sixteen, was the son of the Patriarch Philaretus. We may add, with a view to helping the English reader over the difficulties of pronunciation, that the accents upon the Russian words refer to the quantity of the vowels in French, not to the emphasis upon syllables in the original.

—'Le Sifflet et la Claque' is the title of a curious historical study, full of research, which M. Louis Schneider contributes to the *Revue Bleue* of July 24. M. Schneider holds that both applause and hissing, in modern civilization, date from an epoch not more remote than the seventeenth century. In the Middle Ages and during the Renaissance, theatrical representations were organized by the Church, and so were for the most part sheltered from criticism. Hissing was, in fact, a novelty to Racine, who attributes its origin to a comedy of Fontenelle's, "Aspar," which was played in 1680:

> "Mais quand sifflets prirent commencement,
> C'est (j'y jouais, j'en suis témoin fidèle),
> C'est à l'*Aspar* du sieur de Fontenelle."

Up to that time, he said, an audience when bored at the theatre had the choice only between going to sleep and going away. The claque is of even later date, an offspring of the eighteenth century, born at the epoch when actors, becoming of more and more importance, and also more and more "cabotins," found the need of assured and constant applause. The public, almost from the beginning, resented the demonstrations of the "Romans," as claquers were then called, and a long contest began. This was particularly lively during the First Republic, and continued under the Empire. In 1809 it had become of sufficient gravity to occasion the arrest of the leader of the claque, a certain Leblond, a wig-maker, with forty of his followers. The police report on this occasion shows that Leblond received tickets and jewels and money from dramatic authors, as well as from the actors and actresses. It would be long to follow out the steps of M. Schneider's interesting history. It is enough to say that the claque still survives throughout Europe, and is really as flourishing as ever in spite of all attempts to abolish it. In 1877 the Théâtre-Français attempted its suppression, but in vain. The Théâtre-Historique actually suppressed it; but it was the Théâtre-Historique, and not the claque, that died. In Vienna last year a fierce campaign was carried on against it, but the singers at the Imperial Opera threatened to strike in case this were not given up, and only some months ago the jubilee of Schoentag, for twenty-five years the leader of the opera claque, was celebrated at Vienna. Schoentag, however, has a certain quasi-critical authority: he is a judge of playgoers, if not of plays, and is able often to give valuable advice to authors and actors. As to the vexed question of the right of the spectator to express his feelings by hisses or applause, French law appears to lay down as a rule that one may applaud as much as he likes, but hisses at his peril.

—According to the *Berlingske Tidende* of Copenhagen, Dr. Edvard Ehlers's study of leprosy in Iceland is soon to have a practical result. The members of the I. O. O. F. of Denmark were so impressed by the statement of this specialist as to the increase of the disease that the order undertook, last year, to raise a fund for building a hospital on the island where those suffering might receive proper treatment without exposing others to contagion. Last May, when a large part of the required 100,000 kroner ($27,000) had been subscribed, Messrs. Beyer and Thuren, respectively physician and architect, were sent to Iceland to decide on the site and the character of the building, and to make arrangements with the local Government. They were received by the latter with the greatest enthusiasm, and everything was done to facilitate their work. The city of Reykjavik has presented for the site the peninsular Langarnaes, which is about two miles out of town, and all running expenses are to be borne by the Government of Iceland. Should the building for three consecutive years be put to any other use, it is to revert to the Order; and in case at any time leprosy should die out on the island, its future disposition is to be determined by joint agreement of the Order and the Althing. A contract for the foundation has been made, and the building, which is to be of wood, as offering a better protection against earthquakes than either brick or stone, will be built either in Norway or Sweden and sent in sections. Not the least important feature in this new movement in the battle with disease is the power given to the authorities, by a recent act of the Althing, to compel the isolation of patients that are unwilling to leave their homes. The only source for regret is the fact that the new hospital will accommodate only a quarter of the 250 lepers in Iceland.

RAMSAY'S CITIES OF PHRYGIA.

The Cities and Bishoprics of Phrygia; being an Essay of the Local History of Phrygia from the Earliest Times to the Turkish Conquest. By W. M. Ramsay, D.C.L., LL.D., etc. Vol. I., Part ii., West and Central Phrygia. Oxford: Clarendon Press; New York: H. Frowde. 1897.

In a recent issue the author of the article on the British School at Athens mentioned the timorousness of British archæologists in the face of the classical and ecclesiastical traditions that prevail among British scholars. The above title of Mr. Ramsay's book illustrates the point in question, for on the continent of Europe the secondary title would be regarded as exactly descriptive of the scope of the work. But Mr. Ramsay has to pacify the conservative element, which is more or less hostile to archæology, pure and simple, and consequently the primary title of the book becomes 'The Cities and *Bishoprics* of Phrygia,' whereas, in point of fact, the Bishoprics of Phrygia play a small rôle in this and the preceding volume, and even then they are disposed of in a summary manner at the close of the several chapters. Again, the latter part of the title, "from the Earliest Times to the Turkish Conquest," is open to criticism, because, in spite of its many conceded merits, the book cannot be regarded as a consecutive chronological history of Phrygia. The little that can be said of the *earliest* times Mr. Ramsay says, but, roughly speaking, the book deals with the period from about 400 B.C. to 400 A.D.; the Byzantine period is more or less ignored, and a few words at the end of each chapter serve to do up the Turkish conquest; the evident object of the author being in some fashion to justify the broad title which he has chosen for the book. The book is not a *history* of Phrygia; an exact title would be, "Scraps from the Local History of Phrygia," for that characterizes it precisely.

The book is marred by polemics. Mr. Ramsay seems to have the unhappy faculty of making enemies of nearly all those who have travelled in Asia Minor in recent years; not only of those who have worked in coöperation with him, but of men who travelled in entire independence of him. When he began his work in Asia Minor, some sixteen years ago, he owed much to the friendly suggestions of Gustav Hirschfeld, the specialist on Asia Minor, the polished gentleman, the brilliant scholar, who, after a sadly disappointing sojourn in the New York Cancer Hospital, of which the fame had brought him all the way from Königsberg in Prussia, went back to Europe two years ago to die miserably. But Mr. Ramsay succeeded in making a deadly foe of Hirschfeld, who was disgusted at the treatment his work in Asia Minor received at Mr. Ramsay's hands, and he said so, in clearest terms, in his painstaking review of Ramsay's 'Historical Geography.' Consequently, Mr. Ramsay's work for some years thereafter bristled with polemics against Hirschfeld, whom he constantly scored.

Latterly Mr. Radet, author of 'En Phrygie,' has taken the place formerly occupied by Hirschfeld in Mr. Ramsay's books. The chief reason is that Radet makes the same charges against Ramsay that Hirschfeld made (we shall not repeat them here), and consequently Ramsay pours hot shot into Radet throughout this book. Mr. Radet, in his brilliant but hurried and unbalanced

work just named, reasons on incorrect principles in regard to the difficult questions of Phrygian topography, which in his hands seem simple enough, for the reason that he complacently leaves the difficulties entirely out of sight, because his knowledge of the topography of Phrygia is insufficient or incorrect. In the historical part of his book, however, he is more successful, because he is more at home. Now, we believe that Mr. Ramsay is always right in his criticisms of Mr. Radet's topographical work. He tries hard, too, to conceal his temper and write in courteous terms of Radet, but not always successfully. Not only in his preface, but throughout the book as well, Mr. Ramsay claims that the world is quite wrong in charging him with failure to do justice to his co-laborers in the exploration of Asia Minor. And yet, for all that, the world is right on that question, at least, and Mr. Ramsay seems to be blind to the fact that he seldom mentions his co-laborers except in disapproval. That, however, might be easily excused by the necessity for brevity, but for the fact that his remarks of disapproval are often couched in terms that cannot fail to wound and offend, because they are curtly dogmatic and oftentimes hardly called for by the exigencies of the case. It must be confessed, however, that in the present volume Mr. Ramsay is more courteous than formerly, for the criticisms of his earlier works have not failed to point out this sin, and he has been taught to be more circumspect in regard to his fellows, all of whom, he declares, are "his valued friends if they will allow him to say so."

The present volume, then, is much better than its predecessor, and it treats of more important subjects. Besides that, Mr. Ramsay knows his ground better, having travelled over it repeatedly in successive years in order to verify, add to, or correct the work of former journeys. And yet, in spite of these many journeys, we read with surprise, which almost approaches dismay, that there are still districts of Phrygia which he has not explored properly (*e. g.*, the Karamyk Ora); and that in places which he has visited repeatedly (*e. g.*, the Sebaste region) future travellers may confidently hope to make epigraphical and topographical discoveries. But still, certainty is oftener reached in this volume, which, he tells us, was written and printed under more favorable circumstances, *i. e.*, less hurriedly, for the former unfavorable circumstances were due, after all, to Mr. Ramsay's great hurry to get into print—a hurry that made it impossible for him even to put his manuscript in proper order. This unfortunate hurry has marred all of Mr. Ramsay's work, from start to finish, brilliant though it be and lasting though it be.

In spite of the greater certainty attained, a great many places are located conjecturally, though, in the absence of positive documentary proof, this must not be reckoned against Mr. Ramsay, for we feel that in such cases he has made the very best use of the evidence before him. His books fairly bristle with interesting and suggestive facts, most of which may not be controverted, and must therefore be the basis of the work of every student of Anatolian matters, as of every future traveller in Asia Minor. Ramsay's books are clearly the offspring of genius; they are live creations, because created by a powerful and ingenious mind that is stored with marvellous special learning. And by this special learning we do not mean simply a command of the entire literature of the subject, for that is supplemented by an intimate acquaintance with the topography of the country, which, of course, is quite independent of book learning. All this is backed by judgment, keen critical insight, masterful power of analysis and combination, and clear-cut originality.

In chapter x. we find a lucid discussion of Eumeneia, the earliest Christian city of which record remains, its religion, history, monuments, government, tribes, and people. In chapter xi. the immensely important Kelænæ-Apameia-Kibotos is treated fully and satisfactorily. Every school-boy has read of Kelænæ in his 'Anabasis,' for there the palace of Cyrus was situated, and in its park Cyrus used to hunt wild animals when he needed exercise. Ramsay's discussion of this locality, which has been so interesting from the earliest dawn of history to the present day, involves a dissection of the views entertained by Arundel, Hamilton, Hirschfeld, Hogarth, and Weber, all of whom have discussed the topography of the venerable site. But all of these men wrote without accurate and intimate knowledge of the topography, whose many difficult problems, as we confidently believe, have been settled definitely by Ramsay's knowledge, ingenuity, and astuteness. It is interesting to note here that, with the help of Mrs. Ramsay, he discovered the Laughing and the Weeping Fountains. Equally interesting is the discussion of the fair Aulokrene, across the mountain east of Kelænæ. This celebrated fountain will not fail to inspire the traveller because of the hoary legends associated with it. Of it Mr. Ramsay says:

"One lingers by this beautiful fountain, as loath to quit it as the traveller is to leave the shade of its trees and the murmur of its waters, and to go on over the shelterless plain on a hot day in summer. Hardly in Greece itself is there a spot more consecrated with legend. Here Athena sat on the rocks playing her newly invented flute, and saw her distorted face mirrored in the water; here she threw away her flute, and Marsyas picked it up; here Marsyas contended with Apollo, and on that large plane-tree he was hung up to be flayed; in the plain below, Lityerses was slain by the sickles of the reapers; and so on. The physical features of the plain are so remarkable that we need not wonder to find so many legends attached to it."

Then on he goes to a discussion of other Kelænæan matters, such as Kelænæ under Lydian rule, historical myths, Eumenes and the great landholders, the Pergamenian and Roman conquest, under the Roman Republic, under the Roman Empire, the public buildings, sepulchral monuments, national and imperial cultus, popular assemblies, societies, guilds, magistrates, and officials, the Byzantine period, the Turkish conquest, the territory of Apameia. Let the above serve as an indication or specimen of the contents of the succeeding chapters.

For the student of the history of the early Church the interest begins with chapter xii., which, along with chapter xvii., will be studied with equal care and delight by geographers, archæologists, and Church historians. For Mr. Ramsay is clearly right in his claim that, for the future, the Christian antiquities of Phrygia are not to be a field for vague guessing: for instance, the theory of St. Paul's North-Galatian travels must henceforth be banished from scientific works on Church history, and the Christian origin of the grave-stone of St. Abercius must cease to be a matter of controversy. The Church historian will be astonished at the flood of light which innocent and unpromising stones from the graves of men who had been incited to a new and better life by the converts of St. Paul, can be forced by the expert scholar to shed upon the history of early Christianity. We learn, among numerous other things, that Christianity did not immediately remake the whole life and manners of its converts, who continued to live in many respects as before, being characterized by most of the habits, and some, or even many, of the faults of their old life and of the society in which they lived. They did not break with all their old habits, thoughts, feelings, and friends when they were converted. Externals remained the same; they continued to live in company with the pagans, similar in respect of food, dress, surroundings, and appliances, frequenting the same forum, market, baths, shops, fairs, etc.; they observed the same laws of politeness in society; their houses were the same; they kept up the same family names, and when they died their graves, tombstones, and epitaphs were in the ordinary style at the very first, though soon slight variations in the epitaphs were introduced in order to avoid using the too pronounced pagan forms, while preserving the general character of the pagan epitaphs (pp. 485-6). Epitaphs were not openly Christian until a comparatively late date, for in order to maintain their legal status in the state the Christians had to "keep dark." But as time went on, even early epitaphs began to be full of *double-entendres*, or hidden meanings, full of words or phrases that had an exoteric and an esoteric meaning by which they might easily be recognized by the faithful. Indeed, their epitaphs often express publicly the deepest facts of the Christian faith, in language that would not offend pagan feeling, and that, too, on monuments which stood plain before the eyes of the world as witness to the faith.

The elucidation of these esoteric phrases, formulæ, symbols, and the general criteria of the Christian epitaph makes intensely interesting reading. In the fourth century, which for Mr. Ramsay is late, all this was changed, for then the Christians, as such, had a legal standing; but still instances of open avowal of Christianity in epitaphs occur as early as 180-200 A. D., *e.g.*, in the case of Avircius Marcellus, Bishop of Hieropolis. One curious fact in connection with the early Christian inscriptions is this, that the parentage of the deceased is rarely mentioned, probably in strict compliance with the injunction of Matthew: "Call no man your father upon the earth, for one is your Father which is in heaven." The early martyrs disclaimed not only their parentage, but all the other relations of ordinary life, country, occupation, and rank, though this does not appear in the epitaphs of ordinary society until later (pp. 487-500). It thrills one to know that the bishop's chair and the bema that belonged to the earliest Christian cathedral, that of Eumeneia, are still in existence in the neighborhood of that city. They ought to be in some museum, instead. Another interesting fact is this, that to the present day the Moslems who live in the neighborhood of Pepouza, the home of the fanatical Montanists of antiquity, are the most fanatical people in Phrygia, and probably no Christian dog can get through the region without having to

submit to insults in great variety. Deeply interesting, too, is the account of the tombstone of St. Abercius, which was found by Ramsay and Sterrett in 1883, at the hot springs created by St. Abercius with the help of the devil. Nothing in all the history of the exploration of Asia Minor has ever created such a furor in Church circles, mostly Catholic, as did the discovery of this stone, for it proves that what apparently was one of the most outrageously mythical Lives in all the 'Acta Sanctorum' had nevertheless an astonishing foundation in fact. A small library has been created by the numerous discussions of this stone, which now rests, as a priceless relic, in the Lateran Museum in Rome. The Pope estimated so highly the great importance of the stone for early Church history that he had a special medal struck with which to reward the labors of Mr. Ramsay, but we believe that his co-laborer, who did the most of the work, received no recognition at the hands of the Pontiff.

Mr. Ramsay's commentary on the many (515) inscriptions which he prints in this volume as documentary vouchers for the views expressed in the text, is superb, and may well serve as a model for all future editors of inscriptions, though few indeed will have the ready learning wherewith to equal, much less to excel, Mr. Ramsay's fine treatment. And yet we have several criticisms to make precisely upon these inscriptions. They do not form a corpus for any given region. The uncial text of inscriptions is always helpful to the scholar, and yet Mr. Ramsay has always sinned in regard to uncials, though he rigidly demands them in others. Above all, no references, except in special cases, are made in the text to the vouching epigraphical documents, which the reader has to search for painfully in a distant portion of the volume. In this connection we feel that we are justified in asking whether the great body of inscriptions in Mr. Ramsay's hands will ever be published in a corpus with the uncials and commentary. As it is, Mr. Ramsay doles them out to the public only as his various writings demand, so that inscriptions that were copied by him and Sterrett as far back as 1883 are only now seeing the light of day, while others are still hidden away in his desk in distant Aberdeen. It must be confessed, however, that Mr. Ramsay uses them with effect when he does publish them.

In this volume, the Addenda and Addenda to Addenda are far less conspicuous than in Mr. Ramsay's former efforts. The references in the footnotes to books or articles are often made simply by means of the names of the authors, whereas a little additional trouble in giving titles and pages would have spared the reader exasperation and the laborious task of searching for the authority in question. Again, great numbers of villages are mentioned in the text though they are not on the maps, and it happens very often that a perfect understanding of the author's words is absolutely dependent upon knowing the exact location of a given village. The earnest reader consults the map and is disappointed, to put it mildly, when he finds that it is not to be found. Another source of vexation is Mr. Ramsay's spelling of Turkish names, though that is a point upon which he has always been open to criticism. He sticks stubbornly to English symbols in expressing sounds unknown to the English tongue, or for which there is no symbol in the English alphabet. For instance, who could imagine that his *keui* (the frequently recurring Turkish word for *village*) should be pronounced *kiöi?* A host of similar vexations might be adduced against Mr. Ramsay, but we could in time become reconciled to his many idiosyncrasies if he were only consistent in his spelling. Yet that, too, were a small matter if he would only preserve on the map the spelling of the text, but he does not. For instance, in the text we find *Ahar Dagh*, but the map gives *Aghar Dagh;* in the text we read *Geuzler* and *Geuzlar*, but on the map we find *Giozler;* in the text we see *Köpli-Su*, but the map knows only a *Koplu-Su*. Such criticisms might be multiplied. Mr. Ramsay does not often display ignorance of the literature of his subject, but he seems to have forgotten that a portion of the inscriptions of Sebaste were published by Sterrett in the *American Journal of Philology* in 1883.

MACLEOD'S HISTORY OF ECONOMICS.

The History of Economics. By Henry Dunning Macleod. G. P. Putnam's Sons.

Perhaps the most pathetic figure among the writers of books is that of the man who, with real ability and with intellectual work of good, though not at all the highest, quality to look back upon, refuses to be content with the recognition the world gives him; who dreams that he is among the great geniuses of the race; and who spends the later years of his life in an unavailing demand for recognition. Such a one is Mr. Henry Dunning Macleod. He is the author of books, big and little, on banking which have gone through several editions; people have got into the way of saying that he knows so much of banking that we may charitably disregard a few extravagant ideas and exaggerated claims. But it is these ideas and claims that Mr. Macleod is bent on making us take seriously. It was in a case drawn up by him in 1853 that he tells us to find "the origin of the modern Science of Economics"; it was he who "raised Economics to the level of a great Inductive Science"; and a treatise of his on the 'Elements of Economics' we are bidden to look upon as "in every way entitled, so far as regards its subject, to rank with Newton's 'Principia.'" Some five years ago, he even printed an address to the (English) Civil-Service Commissioners, "claiming as a public right the Examinership in Economics, as being the only person fit to be intrusted with the fortunes in life of the selected candidates for the civil service of India." Too long had these guiltily careless commissioners allowed themselves to be "made the catspaws of," and "led by the nose" by, "young men in the universities"; too long had they disregarded a judgment of the Court of Exchequer confirming, so he declared, Mr. Macleod's doctrines, and "binding all universities, colleges, and professors" (in England) "who give instruction in Economics."

Such pretensions kindness would lead one to hear in silence were it not for two reasons. It chances that of late Mr. Macleod has been treated in some quarters with an unwonted degree of respect, because he has abided by the severest type of monometallism while other economists seemed to be making dangerous concessions. And, moreover, for this new book—new in name and arrangement only, for in substance it is a réchauffé of what he has printed over and over again—Mr. Macleod has hit upon a catching title. Not a quarter of it can, by any stretch of the term, be properly called a History of Economics. Nevertheless, the literature under that title is at present so scanty, and there is such a growing interest in the subject, that it is quite possible the book will find readers, and even confiding ones. It becomes a duty, then, to say one or two things with an explicitness otherwise brutal.

The book contains a good deal of information and a good deal of sensible criticism of other writers, which will repay perusal by those who have sufficient knowledge to be able to sift the wheat from the chaff. But we are bound to come at once to the positions which Mr. Macleod regards as fundamental. First, then, "the cause of all the mischief and confusion in the science" (p. 45) is that Economics has been treated as the science of the "Production, Distribution, and Consumption" of Wealth, as those words are commonly understood, instead of as the science simply of "Exchanges." It need hardly be said that the proposal to limit Economics to the problems of Exchange is not a new one: most text-books say something of Whately and "Catallactics"; nor is it necessary to enter upon the considerations, obvious enough, that have led economists to take a wider range. But Mr. Macleod declares, not only that this is the wiser conception of Economics, but also that it is the original conception of the science as taught by its founders, the French Economists of the eighteenth century. He furnishes us with the following astounding bit of historical and philological explanation: "Production, Distribution, and Consumption" was originally, according to him, a mere alternative phrase for "Exchange." "The true and original meaning of Production in Economics is to place anything in the market and offer it for sale" (p. 540), not "the process by which the product is obtained" (p. 544). "Distribution" meant nothing but "traffic" (p. 47; cf. p. 115); and "Consumption, in the language of the Economists, and also of Adam Smith, simply meant purchase or demand; it involved no idea of destruction." But unluckily J. B. Say "misunderstood" this formula (p. 45; cf. p. 113), and took it to mean—what we all take it to mean. This mistake has opened the floodgates of error.

The original meaning of the phrase has no real bearing on the question of the proper limitation of the scope of Economics. But this is just one of those parts of the book which produce an impression of profound learning; and so it must be bluntly said that the whole statement is a bit of philological moonshine. The writer who supposes that with the French Economists "Distribution" just meant trafficking, simply shows that he is unacquainted with their characteristic doctrines. It was they who first set going the idea, which has dominated most writers ever since, of an apportionment or allotment to each of the economic classes constituting society of their share or portion of the total produce; the idea of what Adam Smith, in the heading to Book I., calls "the order according to which the produce of labor is naturally *distributed* among the different ranks of the people." The writer who supposes that by Production the Physiocrats understood bringing into market, can never have thought of the meaning of

produit net, the key to their whole system. The writer who tells us that Consumption in Adam Smith does not mean what it means now, must have forgotten Smith's section on the taxation of "consumable commodities."

From the scope of Economics, Mr. Macleod passes to its subject-matter, *Wealth*. This he defines as all that possesses the quality of exchangeability (p. 48); and he calls attention, as others have done before, to the inconsistency of those who try to combine this with other criteria. So far, good; but now Mr. Macleod proceeds to enunciate his one great pet idea, that "Credit is Wealth" (pp. 49-66, and *passim*). This is "the solid and impregnable foundation upon which the majestic structure of Economic Science is to be erected." Not satisfied to let the proposition rest on its own intrinsic merits, he appeals to "the ancients"; from Aristotle, with his explanation of *chremata* as everything whose value can be measured in money, to Ulpian and the later Roman lawyers, who included debts and rights-of-action under *res*. Easily intelligible as are these citations, Mr. Macleod is never tired of insisting on their importance. He compares himself to a Layard or a Schliemann, for sweeping away the rubbish that has accumulated over these "doctrines of the ancients"; and, with an unexpected distrust of his own powers of translation, he makes "a knowledge of Juridical Latin and Greek" "indispensable" to those who would "comprehend Economics" (p. 166).

As Mr. Macleod goes on himself to point out, most people have always recognized the fact that *to the individual* a claim upon another, *if the other is solvent*, is as much "wealth" as goods or money in hand. But he goes a good deal further, and maintains that debts are a part of the wealth of society. He recognizes that "the word Debt has two meanings—both the Creditor's Right of Action, and also the Debtor's Duty to Pay" (p. 441); yet he actually supposes that the Rights of Action can be reckoned into the wealth of a society without being balanced by the equivalent negative quantities represented by the corresponding Duties to Pay. "Public Loans have augmented the Public Wealth," he says (p. 444); and when M. Gide, as a *reductio ad absurdum*, inquired whether France has added to her national wealth by contracting her debt to pay the German indemnity, he boldly replied, "Yes"; because "by this debt she redeemed her independence." With such an argument there is no reasoning. As well might we say that a family would become wealthier if one brother borrowed from another so that he might pay hush money to save the family honor.

Apparently, Mr. Macleod draws no practical conclusion from this doctrine of his that might not just as well have been reached without it. He does not propose that a government should run into debt as a way of increasing national wealth. In fact, one of the most surprising things in this bewildering book is to discover that even when he has laid his foundation he builds nothing particular on it. After the "Nature and History of Economics" have been disposed of in Book I., occupying 168 pages, then follow 520 pages of Book II., devoted to "Fundamental Concepts and Axioms." Never was there a more complete misnomer. Instead of an orderly exposition of a science, or even a thorough consideration of a few "fundamental concepts," we are given a series of articles arranged alphabetically as in a dictionary. These articles may be rearranged in two groups. There are a number of essays on well-worn topics, like Rent (though some, like Wages, are conspicuous by their absence); and there are a number of explanations of technical terms, chiefly in Roman commercial law, such as "Acceptilation." These explanations are useful, but their utility is absurdly overestimated, and there is a perfectly childish belief in the advantage to be derived from the decoration of the pages with a few signs of *plus* and *minus*. The other group—the essays—are worth looking over, but they contain nothing startlingly new, nothing that has not already been said in support or criticism of familiar doctrines, and certainly nothing that justifies the preliminary blowing of trumpets. The whole book is a case of much cry and little wool. Or, to change the metaphor, there is a novel and savage monster, by the name of Credit, on the canvas outside; but when we get inside the show we are disappointed to find the same old sleepy beasts—Gresham's Law and the Fallacy of Reciprocity and the rest—that have done duty in scores of shows before. And in this caravan they are not even particularly well groomed.

The Dungeons of Old Paris: Being the Story and Romance of the Most Celebrated Prisons of the Monarchy and Revolution. By Tighe Hopkins. Illustrated. G. P. Putnam's Sons. 1897.

Mr. Hopkins essays to make up an entertaining volume from the records of past suffering. One detects no ulterior purpose or special moral in his pages. He is bent on furnishing amusement, partly for its own sake, and partly, unless we do him an injustice, because he is not indisposed to attract a certain portion of the purchasing public. He has skill enough to avoid the crude atrocities which disgust all but confirmed readers of the Newgate Calendar, and, by discoursing of the Marquise de Brinvilliers, Marguerite de Valois and La Môle, and the "Prisons of Aspasia," he will doubless collect an audience more or less large. Gaboriau's detective stories are not farther in advance of their English imitations than are the annals of French crime in advance of the heavy brutalities that crop out in Anglo-Saxon communities. Ingenious villany has its admirers, even its devotees, in every land, but the French have broken the Decalogue more artistically than any other race of modern Europeans save the Italian. A light and airy writer of fiction like Mr. Hopkins should find slight difficulty in filling out a book of reasonable dimensions with a choice selection from the *causes célèbres* of Paris. He writes with very apparent ease and is true to the broad facts of his subject. For instance, he is no supporter of the fiction which maintains that the state-prisons of the old régime were only fortified inns where excellent entertainment was provided at fair charges. The Ciceronian conception, "Carcer non ad puniendos, sed ad continendos homines haberi debet," was pretty well forgotten in the days of the *vade in pace;* and when Mirabeau at Vincennes blasted the *lettre-de-cachet* system, he showed that it, too, while not involving unmitigated distress, might mean much more than detention.

If one is bent on getting from Mr. Hopkins anything beyond a number of vivacious or of dreadful stories, one will observe how fully his material illustrates the mediæval idea that confinement in prison should entail acute hardship and anguish. Vengeance, not the reform of the culprit or the protection of society, was what was aimed at during those centuries between Louis XI. and Louis XVI., to which he mainly restricts his attention. "Justice," *i. e.*, the perversion of justice, is one of his leading themes. "Something is shown, it is hoped, of every kind of justice that was recognized in Paris until the days of '89, when everything that had been, fell with the terrific fall of the monarchy: feudal justice, the justice of absolute kings and of ministers who were but less absolute, provosts' and bishops' justice, and the justice of prison governors and lieutenants of police." The criminal procedure here referred to is presented in extremely popular form, but a sufficiently vivid impression is created of how imminent the prison was in an age of force. Mr. Hopkins discusses the most famous dungeons of Paris, one after another, in eleven chapters, including at one end of the scale such historic fortresses as the Bastille and Vincennes, and at the other such distressing mews as La Force and La Roquette. The particular prison with its vicissitudes is his unit. Matters petty and grave, local and national, romantic and sordid are huddled together according to the place of punishment with which they are associated. We must say that Mr. Hopkins, without being painfully technical, is happy in characterizing his various prisons. Before bringing his criminal or political offenders on the scene he uniformly describes the situation and origin of the forced abode where they are to play their parts in his little drama. Every prison has its distinctive quality. Vincennes holds the great Frondeurs and other noted rebels against the monarchy. The Luxembourg is "above all others the aristocratic prison of the Revolution." Bicêtre is "the Bastille of the canaille and the bourgeoisie." Saint-Lazare is both a place of durance and of asylum for female outcasts. A classification of this sort will illuminate many who scamper through French history without stopping to consider whether there may be any particular difference between the Bastille and the Conciergerie, between the Temple and Sainte-Pélagie.

Though all Mr. Hopkins's episodes may not wear the first flush of youth to the well-informed in French memoir literature, they are treated with ability and liveliness. It is apart from our business to say that his subject is distasteful to squeamish people. At least, we can commend this book to those who in comfortable circumstances find themselves afflicted with discontent. Familiarity with the real miseries of the past may lead them to admit that their own subjective woe is not "triste comme les portes d'une prison."

History of the County of Annapolis. With biographical and genealogical sketches. By the late W. A. Calnek. Edited and completed by A. W. Savary, M.A. With portraits and illustrations. Toronto: W. Briggs. 1897. 8vo, pp. xvi, 660.

The early history of this Nova Scotian county has a peculiar, almost unique, in-

terest. Its principal town, of the same name, originally known as Port Royal, was founded by the French three years before the settlement of Jamestown and sixteen before the landing of the Pilgrims. A border-town, it was subjected to more sieges and captures, probably, than any other place in the New World. Six times in the first hundred years of its existence it fell into the hands of the Virginian and New England colonists; and after it had finally become an English possession, its recapture was attempted more than once by the French and Indians. Nor do its annals lack in romantic and dramatic episodes—the strange fortunes of Charles La Tour and his heroic wife being an instance of the one, while for dramatic pathos few stories surpass that of the expatriation of the Acadians. This region can boast, also, of being the birthplace of American industries. On one of its streams was built the first mill on the continent, and in its Basin was launched the first of American vessels.

The early annals (1604–1605) are contained in the first eight chapters. The ninth is a defence of the Acadians, by the editor, against the charge, made by Mr. Parkman among others, that "they would neither leave the country nor take the oath." This statement, he says, "is contradicted by every record bearing on the question," and he certainly makes a strong case against Gov. Lawrence, the chief agent in their removal. He implies that had their "friend," "the gracious and graceful, but brave-hearted soldier," Gov. Mascarene, who "knew and understood them better than any of their other rulers," been in power, the English Government would have been spared the disgrace of this act.

The history of Annapolis and the other towns of the county, Granville, Wilmot, and Clements, after this time possesses little general interest, except in so far as they were affected by the wars of the Revolution and of 1812. A pitiful story is told of the privations and sufferings of the Loyalists, who came in such numbers as greatly to overtax the ability of the inhabitants to provide for them. In 1784 even "the court-house and every store and private building was crowded with people." Two settlements in the western part of the county, Waldeck and Hessian Lines, were, as their names show, the refuge of disbanded Waldeckers and Hessians, and the wild lands granted to them are still cultivated by their descendants.

The second half of the volume contains biographical memoirs of members of the provincial parliament for the county, and biographical and genealogical sketches of the early settlers and grantees. These show a vast amount of labor on the part of the author, Mr. Calnek, who died in 1892, leaving his work incomplete. His manuscript material has been revised, partly rewritten, amended and added to in some important particulars by the editor, Judge Savary of Annapolis, to whom a large part of the credit of the work—a valuable contribution to our history—belongs. The narrative is illustrated by some interesting portraits, of Mascarene, Gen. Sir W. F. Williams of Kars, a native of Annapolis, and Judge Haliburton, among others, and views and plans. We regret that a map of the county, showing the position of the different settlements, was not added.

Hannibal, Soldier, Statesman, Patriot; and the Crisis of the Struggle between Carthage and Rome. By William O'Connor Morris, sometime scholar of Oriel College, Oxford. G. P. Putnam's Sons. 1897.

If there must be a "Heroes of the Nations" Series, Hannibal must have a place in it; yet his story has been told often and lately, and in the total absence of any new material a new life is hardly called for. Nor does his present biographer put the old material in any new light. Like most Oxford scholars, he swears by Mommsen, and, like him, puts Hannibal on a superhuman eminence, while he seems unable to discern the exalted greatness of Scipio. For this latter reason he cannot bring himself to accept entirely the judgment of Polybius, "who was under the influence of the Scipios." But Polybius would hardly have been more kindly disposed to Carthage and Hannibal if he had been under the influence of Cato, whom Judge Morris does not once mention. Repudiating with scorn everything Livy says against Hannibal's character, no words are too bitter for him in describing the Punic race and polity, from the bosom of which Hannibal sprang; nor does he notice that the charge of bad faith against Hannibal appears in Cicero, not as blind spite against a dreaded enemy, but in contrast with the honor and probity of the equally dreaded Pyrrhus. He is never tired of telling us that Carthage sent no reinforcements to Hannibal, yet he offers no explanation of the thirty-three elephants which appear unexpectedly at the siege of Capua in B. C. 211. He brings Scipio seriously down in the line of strategists for allowing Hasdrubal and Mago to slip by him; but he cannot see the real genius of that great man in carrying out his ancestors' conception, striking at the vitals of the Carthaginian power, and arraying their western subjects against them, as Hannibal had never been able to do with the eastern allies of Rome. Such questions are numberless and never will be settled, but it requires something more profound than Judge Morris's enthusiasm to master them.

One particularly teasing point in the book is the way places are dealt with as to the ancient and modern names. No sort of rule is followed. Carthago Nova is never called anything but Cartagena, while Garganus is most superfluously explained in a foot-note as Gargano. When Clastidium, a tolerably well-known Roman colony, is first mentioned, it is by the very obscure name Casteggio, the Latin name not appearing for many pages. Later, a whole string of Latin names in the toe of Italy are assigned to Calabria, which designation has been transferred in later days from the back of the heel.

The printing of the American edition is not all satisfactory; the Greek quotations in particular are sadly in need of proof-reading. The illustrations are many of them superfluous; in particular, Kiepert's plan of Augustan Rome appears as an illustration of Rome two centuries before Augustus, reduced to such a small scale as to be illegible, and the author's name printed in the list as Keippert!

The Book Worm. By Irving Browne. East Aurora, N. Y.: The Roycroft Shop. 1897.

Mr. Browne gives those whom the *Green Bag* and *Albany Law Journal* have taught to admire his peculiar humor, the opportunity of securing among them (according to the law of priority to the diligent) an edition of 590 signed and numbered copies of this little volume of essays. The subject is an old and trite one, but, treated in Mr. Browne's whimsical manner, and enlivened with his punning doggerel, it makes amusing reading. Some of his remarks on book-plates, binding, and extra-illustrating contain much sense, mingled with wit, a very fair example of which is the following observation on the ethics of bibliomania:

"It is singular how expenditure in books is regarded as an extravagance by the business world. One may spend the price of a fine library in fast or showy horses, or in travel, or in gluttony, or in stock speculations eventuating on the wrong side of his ledger, and the money-grubbing community think none the worse of him. But let him expend a few thousands in books, and these sons of mammon pull long faces, wag their shallow heads, and sneeringly observe, 'Screw loose somewhere.' . . . As Ruskin observes, we frequently hear of a bibliomaniac, never of a horse-maniac. . . . If a man in business wants to excite the suspicion of the sleek gentlemen who sit around the discount board with him, or yell like lunatics at the stock exchange with him, . . . let it leak out that he has put a few thousand dollars into a Mazarine Bible, or a Caxton, or a first-folio Shakespeare, or some other rare book. No matter if he can afford it, most of his associates regard him as they do a Bedlamite who goes about collecting straws. Fortunate is he if his wife does not privately call on the family attorney, and advise with him about putting a committee over the poor man."

The book is handsomely printed, with ornamental initials in red, and on good paper; but for work so pretentious the proof-reading leaves something to be desired.

A Ride through Western Asia. By Clive Bigham. Macmillan.

The greater part of western Asia is getting to be pretty well-known ground, where travellers can no longer look on themselves as explorers, and where a journey, though attended with hardships, is not apt to be particularly difficult or startling. And yet, when they come to write about their wanderings, it is often better that they should ignore their predecessors. Mr. Bigham is a little too much afraid of repeating what has been told already. He "was in Asia eleven months, during which time I travelled 8,217 miles, 4,008 of which I had ridden on horseback," visiting Asia Minor, Turkish Arabia, Persia, Russian Central Asia, Kashgar, and western Siberia; he saw many interesting people and things, and he has condensed his experiences into a very readable volume. Its weakness is that, as he covers a great deal of ground which he is conscious has been described before, he merely touches here and there, telling very little about any place, and taking for granted more knowledge than he will find in the general reader. It is hard to keep such a work from being rather scrappy and confusing. On the whole, however, the book is well written, as both matter and style are good, with every now and then an excellent bit of description.

In Turkey the author naturally heard much about the Armenian question. On pages 68 to 70 he quotes some interesting if not very original opinions of an intelligent observer in the country. As for himself, while not attempting to deny the atrocities, he seems to have no great sympathy for the victims, even declaring (p. 30), "The Kurds are in general far more attractive to the casual observer than the Armenians. In

spite of their brigand lives, they are more honest and straightforward, and they bear pain with remarkable fortitude. They probably suffer as much, if not more, at the hands of the Government, but their plaints do not reach so far."

The illustrations of the book are in the main discreetly chosen, but we question the taste of getting the crowd at an execution in Persia to pose for a photograph which is reproduced, including the corpse, for the benefit of the reader.

The Bulgarian Language. By W. R. Morfill, M.A., Reader in Russian and the Other Slavonic Languages in the University of Oxford. [No. XXIII. of Trübner's Collection of Simplified Grammars.] London, 1897. 12mo, pp. 108.

In 1844 there appeared a small pamphlet, privately and anonymously printed at Smyrna, containing in twenty-four pages the essence of the Bulgarian language. The author of it was the American missionary and scholar Elias Riggs, to whom belongs the honor of having written the first grammar of that tongue. It demanded then a great deal of courage and fine discrimination to speak of rules and laws, where several dialects were occupied in an impotent struggle to survive as a literary language. Meanwhile Bulgaria has been freed politically, and of late its language, too, is assuming more and more that uniformity which will insure it a healthy growth. There have appeared many grammars within the last fifteen years (the best are in German and Bohemian), which have treated in a masterly yet popular way the difficult subject of this Slavic language. Mr. Morfill thinks that the time has come when English "travellers or those engaged in commerce" may need one written in English. For this purpose he has consulted a large number of printed sources and natives, in order to make the book as complete as possible.

The mechanical execution of the work is, as in the Polish grammar of the same author and collection, very, very bad. Accents are wanting on hundreds of words, or are wrongly placed, many words are misspelled, forms belonging to one case are accredited to another. Should the student possess an unusual amount of ingenuity to overcome all these stumbling-blocks, he would discover that he has to know a certain amount of Old Slavic in order to comprehend why declensions and conjugations are mentioned by title when, under the respective headings, he is told that they do not exist in Bulgarian. The author has given almost verbatim the whole of the verb paradigms as they stand in Miklositch's Comparative Grammar—a commendable thing to do in a scientific grammar, but hardly in a "simplified" one, intended for travellers, etc. The examples for the declensions closely resemble those in C. F. Morse's 'Grammar of the Bulgarian Language,' published in 1859 at Constantinople. After the patient student has plodded through the grammar, he is regaled on the first page of the "Short Reading Lessons" with two extracts, in which there are a number of forms explained neither in the grammar nor in the dictionary. It was Oxford that exactly two centuries ago gave forth the first Russian grammar ever printed; this Bulgarian Grammar cannot be thought to sustain the reputation for Slavic studies earned by that institution so long ago.

Grundriss der Englischen Metrik. Von J. Schipper. Vienna: Wilhelm Braumüller.

Schipper's 'Englische Metrik' (3 vols., 1881-88) has been before the public for some years, and has been recognized as the most important work on the subject ever published, but it is too bulky for general use. Moreover, the investigations of Sievers made necessary a revision of the first part of that work, since Sievers's results have been accepted by nearly all Old English scholars. A revision and condensation has been supplied by Schipper in the volume whose title heads this notice. It is divided into two main books, the first treating of the structure of verses (lines), and the second treating of the structure of strophes (stanzas). These are still further subdivided, the first part of the first book discussing the national metre—that is, the alliterative long line—of all periods, and the second part, foreign metres. The stanza is also considered in its general structure and in its special forms during the Middle and Modern English periods. A summary is given of the old discussion of the *Zweihebungstheorie* and the *Vierhebungstheorie* of the half-verse in the Old English alliterative line, and Schipper adheres, with all the greater firmness since the studies of Sievers, to his former view endorsing the first theory. He sums up the whole discussion with a quotation from the Abbot Aelfric on another subject: "If any one does not believe this, he is *unbeliefful*," *i. e.*, incapable of belief.

As to the structure of the alliterative line, Schipper follows the five forms of Sievers. In treating the development of the alliterative long line in Middle-English poetry, he follows Luick, and will press this line also into the five forms, with certain modifications and combinations, but it is doubtful if such a Procrustean system will fit the facts of the case. The Middle-English line is descended from the Old-English line, but with much freer movement and much less regard to the quantity of syllables—accent, and not quantity, ruling; so that these efforts to lay more stress than hitherto on quantity in English verse cannot be regarded as altogether successful. They do not explain all the phenomena, and they necessitate a very involved system of verse.

The foreign metres that began to show themselves in English verse a hundred and fifty years after the Norman Conquest—iambic and trochaic, anapæstic and dactylic—are treated with considerable fulness. Of these the iambic was the only one that appeared in the Middle-English period, the others being of later introduction. Schipper adheres to the classical terminology, in which two iambic feet make a metre, though this has been abandoned by most writers on English metre, the Chaucerian line being regarded as iambic pentameter, not as iambic trimeter brachycatalectic. There seems no more reason in English metre, where accent is the ruling principle, for assuming that two iambi make a metre than for assuming that two dactyls form one.

The rhythm of the verse as variously affected, the measurement of syllables, and particularly the accent of words, both Germanic and Romanic, are all well treated by Schipper; but exception may occasionally be taken to his reading of particular lines. The usual occurrences that disturb the regular rhythm of English verse, such as reverse rhythm, variable accent, failure of thesis, double anacrusis, double thesis, all come into consideration in the several kinds of verse discussed. The earliest examples of the iambic pentameter Schipper finds, not in Chaucer, as is usually thought, but in two poems of the last half of the thirteenth century found in MS. Harl. 2253; in this he differs from Ten Brink. In the case of Shakspere's blank verse, Schipper differs from Abbott in assuming failure of thesis at the beginning or within the verse, where Abbott would prolong the monosyllable; here Abbott's view seems preferable. Many modern examples of iambic-anapæstic and trochaic-dactylic verse are considered. The effort to regulate the classic dactylic hexameter in English according to the laws of quantity, as recommended by Cayley and Matthew Arnold, is characterized as *ganz verfehlt* (p. 259). Extracts from Longfellow's 'Evangeline' are given as good examples of the use of the hexameter in English, but we miss mention of Kingsley's 'Andromeda.'

The second book, on the structure of the strophe (stanza), is very full and shows very wide reading. Every conceivable variety of stanza, and of rhyme within the stanza, seems to be included, and still each poet feels at liberty to introduce a new stanza or a new way of rhyming in an old one. Schipper takes exception to the common view that the term rhyme-royal was applied to the Chaucerian stanza because James I. of Scotland composed in it his 'King's Quair,' and he agrees with Guest that it was derived from the French expression *chant-royal*, a term applied to certain poems written in this stanza in honor of God or the Virgin Mary and repeated at the poetical contests at Rouen on the choice of a King (p. 327). This is an historical question, and can be settled only by the discovery of the first uses of the term in English as applied to this stanza. The Spenserian stanza and those of the Pindaric odes are taken up, but Gray's two odes are barely named. The sonnet stanza receives interesting consideration, and the work closes with mention of other Italian and French forms that have been here and there imitated in English.

We have noticed a number of errata, but they can be easily corrected; one of the most serious is *Senkung* for *Hebung* (twice) on p. 51.

Enfranchisement and Citizenship: Addresses and Papers. By Edward L. Pierce. Edited by A. W. Stevens. Boston: Roberts Brothers.

The late Edward L. Pierce was well known as a legal author and by his 'Life of Sumner.' This collection of papers, made a year ago, is chiefly valuable as a memorial of versatile activity in other directions. The most interesting part of the volume, which consists mainly of occasional addresses, will be found to be the first 141 pages; these are historical and autobiographical, and give an account of Mr. Pierce's services during the war. When Mr. Lincoln's first call of seventy-five thousand volunteers was made, Mr. Pierce, then a man of thirty-two, deeply

interested in the anti-slavery movement, enlisted as a private in the New Bedford City Guards (3d Regiment Mass. V. M.). "A Private Soldier in Virginia" tells the story of his soldiering, and throws some interesting light on the first days of the war. The writer was not merely a soldier; he was also a war correspondent, supplying news with regularity to the Boston *Traveller*. On May 31, 1861, we find him making a report to Gov. Andrew, at the latter's request, upon the condition of the troops at Fortress Monroe. While serving as a private soldier, he was requested by Gen. Butler to take permanent charge of the incoming negroes, but he preferred to remain with his regiment. His last days of service in Virginia, however, were passed in charge of negroes at Hampton, and an article contributed by him to the *Atlantic Monthly*, on "The Contrabands at Fortress Monroe," attracted a great deal of attention. It will bear rereading now. The writer predicted that the consequences of arming the blacks then so much dreaded would never follow, and they never did. Later in the year he was sent by Mr. Chase, then Secretary of the Treasury, to Beaufort, "in connection with contrabands and cotton," and he made two important reports. These have been combined in the present volume with another article from the *Atlantic*, making a paper called "The Freedmen at Port Royal." In this the author shows both good sense and foresight, vindicating the negro's right to freedom by the fruits of observation and experience. Another paper gives an account of the assault on Fort Wagner, of which Mr. Pierce was a witness.

YALE MIXTURE.

The choicest tobacco made, and preëminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

Now Ready. Published by the Century Co.

Dr. S. Weir Mitchell's Great Novel of the American Revolution,

"HUGH WYNNE, FREE QUAKER

Sometime Brevet Lieut.-Colonel on the Staff of his Excellency, General Washington."

Pictures by Howard Pyle. In two vols., small 8vo, $2.00.

If "Hugh Wynne" is not the long-sought great American novel, it at least comes closer to it than any novel of the decade.—*The Outlook.*

It is the best story Dr. Mitchell or *The Century* has yet published.—*Washington Times.*

Not only the best work that has emanated from the pen of this distinguished author, but one of the really great American stories.—*Medical Age*, Detroit.

"There are not wanting those who think that Dr. Mitchell has now written the great American novel."—DR. W. ROBERTSON NICOLL, in *The British Weekly.*

A singularly complete and attractive picture of American life in the last century.—*London Daily News.*

"I am almost tempted to say that with the exception of Cooper's Spy it is the only successful Revolutionary novel that I know. It is more than a merely interesting and powerful book, for it has in it the element of permanence."—THEO. ROOSEVELT.

"I do not recall any American novel of a semi historical character which is at once so intricate in its disclosures of manners and men, so courageous in dealing purely with historic figures, and so full of vitality, variety, and charm."—HAMILTON W. MABIE.

THE SCHOLAR AND THE STATE.

By Henry C. Potter, D.D., LL.D.

Bishop of New York.

8vo, cloth, 355 pages, $2.00.

A COLLECTION of Bishop Potter's public utterances, mainly on civic questions. Besides the papers bearing directly on civic righteousness, there are others on "The Rural Reinforcement of Cities," "The Ministry of Music," "The Gospel for Wealth," etc.

THE AUTOBIOGRAPHY OF JOSEPH JEFFERSON.

New Edition. 8vo, 500 pages, illustrated, $4.00.

A NEW EDITION, with a supplemental chapter. The story of the famous comedian's life, told by himself. Profusely illustrated with portraits of the author and of contemporary actors and actresses. *The Critic* calls it "the best book of its kind the century has produced."

ISSUED UNDER THE AUSPICES OF THE EMPIRE STATE SONS OF THE AMERICAN REVOLUTION.

With Introduction by Chauncey M. Depew.

THE CENTURY BOOK OF THE AMERICAN REVOLUTION.

BY ELBRIDGE S. BROOKS.

Author of "The Century Book for Young Americans," etc.

The Story of the Pilgrimage of a Party of Young People to the Battle-fields of the Revolution.

MORE THAN TWO HUNDRED ILLUSTRATIONS. A COMPLETE PANORAMA OF THE WAR.

NOT since Benson J. Lossing published his "Pictorial Field book of the Revolution" in 1855 has any one thought to get up a book which describes and illustrates the battle-fields of the Revolution as they really look. "The Century Book of the American Revolution," one of the most delightfully written of Mr. Brooks's many popular books, contains the story of the Revolution told in the account of the trip of a party of boys and girls with their uncle to these historic scenes. Not only are the Northern fields—Lexington, Concord, Bunker Hill, Long Island, Harlem Heights, Monmouth, Princeton, Germantown, Brandywine, Saratoga, etc.—described; but the trip extends to the Southern fields—Eutaw Springs, Camden, Guilford Court House, King's Mountain, Cowpens, Savannah, and Charleston,—about which less has been written. 250 pages, large page, 208 illustrations, attractive binding. Price, $1.50.

MASTER SKYLARK.

By JOHN BENNETT.

A STORY of the time of Shakspere. The hero and heroine are a boy and a girl, but the great dramatist and Good Queen Bess appear as characters in the story. Full of stirring adventure and reflecting all the romance of the Elizabethan Age. 12mo, about 350 pages, with nearly forty beautiful illustrations by Reginald Birch. Cloth, $1.50.

A NEW BABY WORLD.

Edited by Mrs. MARY MAPES DODGE.

A SUCCESSOR to the popular books for very little readers, of which thousands of copies have been sold. A new selection of stories, poems, jingles, and pictures from ST NICHOLAS with a few of the old favorites retained. The book embraces the work of many popular writers, and there are pictures on every page. Quarto, about 200 pages. Cloth, $1.50.

JOAN OF ARC.

By M. BOUTET DE MONVEL.

A SIMPLE account of the life of the Patron Saint of France, written especially for children, by the great French artist, Boutet de Monvel, to accompany 43 superb illustrations drawn by himself in his most characteristic style, and richly printed in colors by Boussod, Valadon & Co. of Paris. The text is translated by A. I. du Pont Coleman. A beautiful and unique art work. Folio, oblong. Price, $3.00.

THE LAST THREE SOLDIERS.

By WILLIAM H. SHELTON.

A WAR STORY of the North and the South. Mr. Shelton, who served in the war himself, has evolved a unique plot. Three Union soldiers, members of a signal corps stationed on a mountain-top in the South, are led to believe that the Confederacy has triumphed, so they cut off all communication with the world and become castaways. 12mo, about 300 pages. Twenty illustrations by B. West Clinedinst. $1.50.

Ready October 8th.

Rudyard Kipling's First American Novel: "CAPTAINS COURAGEOUS"

Sold by all booksellers, or sent, postpaid, by

THE CENTURY CO., Union Square, New York.

CHARLES SCRIBNER'S SONS'
Newest Books.

St. Ives.

Being the Adventures of a French Prisoner in England. By ROBERT LOUIS STEVENSON. 12mo, $1.50.

"St. Ives" is a story of action in the author's most buoyant style; and although one does not expect commonplaces in Stevenson, its opening chapters contain tragedy grim enough to surprise even those who remember the welter on board the brig *Flying Scud*. The remainder of the story is full of movement and vigor and abounds in evidences of the author's unique genius. Indeed, Stevenson has rarely equalled either the exquisite style or the continuity of interest and sympathy which are the characteristic features of this charming story.

READY OCTOBER 9.

This Country of Ours.

By BENJAMIN HARRISON, Ex-President of the United States. 12mo, $1.50.

This is essentially a unique volume. In it General Harrison has described, so simply and directly that the most uninformed person cannot fail of enlightenment, the way in which this vast country of ours is governed. The various departments of our National Government, with their functions and their individual peculiarities, are thus characterized and described by an author who has himself occupied the chief place and the most responsible position in this tremendous and complex machinery; and the result is a book which for the first time presents an adequate view of a subject that is of prime interest to every American.

READY OCTOBER 9.

The Tormentor.

By BENJAMIN SWIFT, author of "Nancy Noon." 12mo, $1.50.
Nancy Noon. *Fifth Edition.* 12mo, $1.50.

Vasari's Lives of the Painters.

By GIORGIO VASARI. Edited and annotated in the light of recent discoveries by E. H. and E. W. Blashfield and A. A. Hopkins. *Library Edition.* 4 vols., 8vo, $8.00.

"Vasari's 'Lives' are something more than one of the most useful contributions to the data of art criticism. They are also literature. . . . Read with the assistance of such notes as the present editors have provided, he is not an authority invalidated, but a classic purged of the ill effects of time . . . It is just because he is not academic that Vasari is immortal; it is because he gives us at first hand a vivid picture of the art amid which he lived that he carries conviction, and, with conviction, a peculiar delight."—*N. Y. Tribune.*

English Lands, Letters, and Kings.

The Later Georges to Queen Victoria. By DONALD G. MITCHELL ("Ik Marvel"). 12mo, $1.50

PREVIOUS VOLUMES. Each, $1.50.

English Lands, Letters, and Kings. From Celt to Tudor.
English Lands, Letters, and Kings. From Elizabeth to Anne.
English Lands, Letters, and Kings. Queen Anne and the Georges.

The 4 volumes in a box, **$6.00.**

American Nobility.

A Novel. By PIERRE DE COULEVAIN. 12mo, $1.50.

The burning question of "international" marriages has never been so ably handled in fiction as in the present story. The novel opens with the courtship of a rich American girl by an impecunious French marquis, and the succeeding developments, with the striking pictures of French life in the Faubourg St. Germain, at the château *en province*, and at the seaside, are of intense interest.

The Bible and Islam

Or, The Influence of the Old and New Testaments on the Religion of Mohammed (*Being the Ely Lectures for 1897.*) By HENRY PRESERVED SMITH, D.D. 12mo, $1.50.

A History of Christianity in the Apostolic Age.

By ARTHUR C. MCGIFFERT, D.D., Ph.D., Professor of Church History, Union Theological Seminary, New York. Crown 8vo, $2.50 *net.* (*International Theological Library.*)

The Battle of Franklin.

By Hon. JACOB D. COX, ex Governor of Ohio. With maps, 8vo, $2.00.

General Cox speaks with authoritativeness on matters connected with the civil war, and he has now produced a final summing up of the much discussed and crucial engagement at Franklin on which the March to the Sea depended, and which was the "beginning of the end" of the war.

Selected Poems.

By GEORGE MEREDITH. Arranged by the author and including all his most popular works. With portrait. 12mo, $1.75.

"Not since Shakespeare has England produced a man with so extraordinary a gift of poetic expression."—*I. Zangwill, in Pall Mall Magazine.*

The Providential Order of the World.

By ALEXANDER BALMAIN BRUCE, D.D., Professor of Apologetics and New Testament Exegesis, Free Church College, Glasgow. (*Being the Gifford Lectures, 1896-1897.*) Crown, 8vo, $2.00.

Catherine Schuyler.

By MARY GAY HUMPHREYS. (*Women of Colonial and Revolutionary Times.*) With photogravure portrait. 12mo, $1.25.

PREVIOUS VOLUMES IN THE SERIES:

Margaret Winthrop. By ALICE MORSE EARLE.
Dolly Madison. By MAUD WILDER GOODWIN.
Eliza Pinckney. By HARRIOTT HORRY RAVENEL.
Mercy Warren. By ALICE BROWN.
Martha Washington. By ANNE HOLLINGSWORTH WHARTON.

Each 12mo, $1.25, or the complete set, 6 vols. in a box, $7.50.

The History of the Lady Betty Stair.

By MOLLY ELLIOT SEAWELL. Illustrated by Thule de Thulstrup. In an original binding similar to "The Sprightly Romance of Marsac." 12mo, $1.25.

Already Published.

The Sprightly Romance of Marsac. By MOLLY ELLIOT SEAWELL. Illustrated by Gustav Verbeek. 12mo, $1.25.

Thomas and Matthew Arnold

And Their Influence on English Education. (*The Great Educators.*) By Sir JOSHUA G. FITCH, LL.D., late Inspector of Training Colleges in England, and Lecturer on Education at the University of Cambridge. 12mo, $1.00 *net.*

The Express Messenger

And Other Tales of the Rail. By CY WARMAN. 12mo, $1.25.

Previously Published:

Tales of an Engineer. With Rhymes of the Rail. By CY WARMAN. 12mo, $1.25.

CHARLES SCRIBNER'S SONS, 153-157 Fifth Avenue, New York

John Lane's Autumn Announcements.

RUBÁIYÁT OF OMAR KHAYYÁM. A paraphrase from various translations. By RICHARD LE GALLIENNE. Edition limited to 1250 signed copies, printed on hand-made paper at the Wayside Press. Small 4to, $2.50 *net.*

Intending subscribers should at once give their names to their booksellers, or send them direct to the publisher.

THE EARTH BREATH and Other Poems. By A. E., author of "Homeward Songs by the Way." With a title-page and cover design by Will Bradley. Printed at the Wayside Press. $1.25.

THE CHILD WHO WILL NEVER GROW OLD. By K. DOUGLAS KING. Printed at the Wayside Press. $1.25.

WINTER TALES. By H. B. MARRIOTT WATSON, author of "Galloping Dick." $1.25.

POOR HUMAN NATURE. By ELLA D'ARCY. 75c.

SECOND EDITION.

THE HAPPY HYPOCRITE. A Fairy Tale for Tired Men. By MAX BEERBOHM. *Bodley Booklets No. 1.* Printed by Will Bradley at the Wayside Press. 32mo, wrappers, 35 cents.

THIRD EDITION.

PATIENCE SPARHAWK AND HER TIMES. By GERTRUDE ATHERTON. Crown 8vo, $1.50.

I am extremely grateful to Mrs Atherton for what I consider one of the greatest novels of our time, and one of the most vivid pictures of life as it is near the centre of our American maelstrom. "Patience Sparhawk" should interest the people of to-day.—*Town Topics.*

"Patience Sparhawk" may be placed alongside of "Tess" and "Esther Waters" so far as dramatic power goes, whilst in its insight into character it reaches a level which we have hitherto very rarely encountered outside the pages of George Eliot.—*The New Age* (London).

DERELICTS. By WILLIAM J. LOCKE. Crown 8vo, $1.50.

A novel with a sweeter, saner tone and with a finer pathos than "Derelicts" it will be hard to find in the year's list.—*Commercial Advertiser.*

Mr. Locke has written a novel of more than ordinary power and interest, one that bears witness to a subtle comprehension of the inwardness of a man's nature banned as was his hero's, and one that will bear that crucial test of the merit of a book, a second reading.—*Pittsburg Leader.*

A NEW VOLUME OF POEMS by WILLIAM WATSON. Uniform with the "Father of the Forest." $1.25.

ALL THE WAY TO FAIRYLAND. More Fairy Tales by EVELYN SHARP. With 8 colored illustrations and decorated cover by Mabel Dearmer. Uniform with "Wymps." $1.50.

KING LONGBEARD. By BARRINGTON MACGREGOR. Illustrated by Charles Robinson. $1.50.

A CHILD IN THE TEMPLE. By FRANK MATHEW. $1.25.

FANTASIAS. By GEORGE EGERTON. Uniform with "Symphonies." $1.25.

NEW ESSAYS TOWARDS A CRITICAL METHOD. By JOHN M. ROBERTSON. $2.00.

SEVENTH EDITION.

THE GOLDEN AGE. By KENNETH GRAHAME. $1.25.

SEVENTH EDITION.

THE QUEST OF THE GOLDEN GIRL. By RICHARD LE GALLIENNE. With cover design by Will Bradley. Crown 8vo, $1.50.

THE QUEST OF THE GILT-EDGED GIRL. By RICHARD DE LYRIENNE. *Bodley Booklets.* 35 cts.

SYMPHONIES. By GEORGE EGERTON. Crown 8vo, $1.25.

The New York *Evening Sun* says: "'Symphonies' is, in our opinion, the best volume of short stories which has appeared since the last of Rudyard Kipling. Strong, frank, outspoken, and complete. In bringing out character, the author's methods are subtle and almost impossible to define. The stories are fascinating, and contain many passages to which one returns."

MIDDLE GREYNESS. By A. J. DAWSON. Crown 8vo, $1.50.

There have been many "Bush" stories since Charles Reade's "Never too Late to Mend," but few better than "Middle Greyness."—*Boston Transcript.*

The author has embodied in the character of the old outcast much of the spirit of weird sadness and grim, cynical despair in the vast shadows of the great Australian bush.—*New York Sun.*

THE MAKING OF A SCHOOL GIRL. By EVELYN SHARP. *Bodley Booklets.* 32mo, wrappers, 35 cts.

MAX. A Novel. By JULIAN CROSKEY. Crown 8vo, $1.50.

To be had of all booksellers, or will be sent, postpaid, on receipt of price by the publisher.

140 Fifth Avenue, New York City.

PRELIMINARY LIST OF

Stories of Western Life and People.

THE OLD SANTA FÉ TRAIL.

By Col. HENRY INMAN, late of the U, S. Army. With full-page Plates by FREDERIC REMINGTON, and other Illustrations, also a Map of the Trail.

A FOREST ORCHID AND OTHER TALES.

By ELLA HIGGINSON, author of "From the Land of the Snow Pearls."

THE GENERAL MANAGER'S STORY. Old-Time Reminiscences of Railroading in the United States.

By HERBERT ELLIOTT HAMBLEN, author of "On Many Seas."

The Letters of Elizabeth Barrett Browning.

In two volumes. With Portraits, etc. Medium 8vo. *Ready in October.*

These frank, simply written letters display every period of Mrs. Browning's life from her early girlhood, with many sketches of well-known people who were her visitors. Thus she gives us one of the very few *English* views of George Sand's striking personality.

BOSTON BROWNING SOCIETY PAPERS.

Selected to represent the work of the Society from 1886 to 1897. Cloth, 8vo. $3.00.

THE STATUE IN THE AIR. An Allegory.

By Miss CAROLINE LE CONTE A prose poem of classical beauty, with pages which recall the Socratic legends.

A Second Series of the

GOLDEN TREASURY OF SONGS AND LYRICS OF THE ENGLISH LANGUAGE.

Modern Poetry.

Selected and arranged with Notes by FRANCIS T. PALGRAVE, M.A., late Professor in the University of Oxford.

F. Marion Crawford's New Italian Novel: CORLEONE.

Another Story of the Saracinesca Family.

Mr. Crawford's most popular novels are held to be those which reproduce Roman society and are chiefly concerned with the fortunes of the different generations of the Saracinesca family. In his latest novel we follow our old friends Don Orsino and his cousin San Giacinto into the Sicilian mountains, where they fall afoul of the *mafia* and have exciting adventures.

In Two Volumes, Cloth extra. Price, $2.00.

The Study of City Government.

An Outline of the Problems of Municipal Functions, Control, and Organization.

By DELOS F. WILCOX, A.M., Ph.D. The author holds that the City Problem is the key to the immediate future of social progress in this country, and offers for the first time a systematic outline of the whole subject, indicating the chief problems of function, of control, and of organization.

NEARLY READY.

THE FINANCES OF NEW YORK CITY.

By E. DANA DURAND.

A well written, clear, straightforward, and interesting history of an important subject.

A POLITICAL PRIMER FOR NEW YORK STATE AND CITY.

The City Under the Greater New York Charter. With maps.

By ADELE M. FIELDE, Secretary of the League for Political Education.

75 cents. *Just Ready.*

Singing Verses for Children. *Just Ready.*

Decorated in Colors and set to Music. Verses by LYDIA AVERY COONLEY. Color designs by ALICE KELLOGG TYLER. Music by FREDERIC W. ROOT, ELEANOR SMITH, JESSIE L GAYNOR, and FRANK H. ATKINSON, JR. Cloth, 4to, $2.00.

Simple, natural verse, so varied that something is appropriate to each season. The illustrations show a rare sense of color and a sympathetic imagination. The music is suited to the verse, and is designed to be sung *to* children as well as *by* them.

Citizen Bird: Scenes from Bird Life in Plain English.

By MABEL OSGOOD WRIGHT and Dr. ELLIOTT COUES. Illustrated by LOUIS AGASSIZ FUERTES. Cloth, crown 8vo, $1.50.

"In this book, a volume which cannot be too widely circulated, is a most charming story."—*Daily Advertiser*, Boston.

A Book about Animals. By ERNEST INGERSOLL. Cloth, 12mo, $1.50.

Chapters on Animals in their homes and in captivity. Freely illustrated.

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 30, 1897.

The Week.

After considerable backing and filling, the Bryan Democracy of Ohio finally concluded to make their fight on the silver issue, and the campaign was formally opened last Thursday. The very day selected for the opening was significant of this issue. To the average citizen the 23d of September does not differ from the 22d or the 24th, but to the devotee of free coinage it is a day which stands out from other days in the month, and is, indeed, one of the great days of the whole year. It was on the 23d of September, 1780, that "the captors of Major André refused to set him free for a bribe of British gold," and, of course, there could be no better day than the 23d of September for opening a campaign to throw off the gold shackles in 1897. Fantastic as was this choice of a day, necessity really compelled the Bryanites to stand by the silver issue. They made it in their platform, and it is impossible to drop it now. The real contest is for the control of the Legislature and the senatorship which goes with it. Each party is ready to trade off the governorship for the greater prize, and charges of treachery are already heard on either side. There is nothing inspiring in the appeals for votes by one party or the other, and while the defeat of the Bryanites is to be desired, the success of the Republicans holds out no prospect of progress.

The National Democrats are the one body of men who have principles which are worth defending and courage enough to defend them. Nebraska is now added to the list of States in which they refuse to endorse the surrender to Bryanism. They have held a convention at Omaha, put a ticket in the field, and adopted a scund platform, in which they condemn equally the subserviency of their old party organization to Populism, and "the hypocrisy and double dealing of the Republican party in keeping a trinity of proselyters abroad pretending to solicit foreign governments to embark in the free coinage of silver, when it is known that the entire drift and tendency of all commercial nations is towards a universal gold standard as a measure of values, with a limited coinage of silver on a gold basis under suitable safeguards of law." Mr. J. Sterling Morton, Secretary of Agriculture under Cleveland, was one of the moving spirits of the convention, and was put on the ticket as a candidate for Regent of the University. He is one of those men who never shrink from leading a forlorn hope, and there ought to be enough Democrats of like mind with him to prevent the triumph of the fusion Bryanite ticket in November.

On the other hand, delightfully inconsistent were the proceedings of the county committee of the National Democracy in this city last week. They first gave formal approval of the candidacy of Judge Alton B. Parker for Chief Judge of the Court of Appeals, after listening to a letter from him in which he said he voted for Bryan last year. In defence of his course it was said that he voted as a Democrat, in accordance with his lifelong habit of always voting the party ticket, and that he should be forgiven for it. The assumption was that he could vote for Bryan without giving his approval to Bryan's platform, and it was declared that, since he was a candidate for merely a judicial office, his course on the silver issue of last year did not enter into the question of his fitness at all. This was certainly an extraordinary position to be taken by Democrats who had regarded the silver issue as one of such momentous importance last year as to justify them in leaving their party and doing their utmost to help elect the Republican candidate for the Presidency. They looked upon the issue then as one far above politics, being entirely one of morals and patriotism, and surely this is preëminently an issue which ought to appeal to a man holding one judicial office and aspiring to another. For a judge to vote for a candidate whose principles he disapproved, simply because of a lifelong habit of voting his party ticket, no matter what its character, is a curious qualification for higher judicial honors. After formally accepting such a candidate, and thus taking his position that platforms were of no account anyway, the committee turned about and adopted a strong gold platform. Could there be a nearer approach to burlesque than this?

Gen. Tracy's acceptance of Platt's nomination for the mayoralty, of course, is not due to any expectation of election. Of that there is not the remotest possibility. The only two motives we can think of are a desire to oblige Platt, of whose son he is a law partner, and a desire to "keep the party together." All Republican candidates in this city for forty years have been run simply to "keep the party together." What this means now is to sustain Platt's power over the Legislature, or, in other words, to maintain his boss-ship, and enable him, as the opposing boss, to make "deals," or use "diplomacy," as he calls it, with the Tammany boss, who may possibly win at the next election, for it is he only who can win if Mr. Low should be defeated. That Gen. Tracy should lend his aid to such a scheme will surprise some people, but it ought not to surprise them. It is the not unnatural result of being the partner of Platt's son, and engaging in a practice which must be largely semi-political—that is, must be due a good deal to the supposed influence of Platt himself on the government of the State. A gentleman connected in this way with the Platt family could hardly disoblige Platt unless he were willing to retire from business. It is extremely important, too, for Platt to prevent the success of such a nomination as Mr. Low's, as it would rapidly lead to the destruction of the system of nomination by elected convention, which is playing such havoc with free government all over the Union. In so far as Gen. Tracy's nomination, therefore, will have any effect on the election, it will be to help Tammany. The effect on himself personally, in the eyes of his fellow-citizens, will not be serious, because the discredit of the connection began to tell some time ago.

Official outgivings both at Washington and Madrid assure us that Minister Woodford has presented no ultimatum to the Spanish Government, has fixed no time within which Spain must either subdue the Cuban rebellion or acknowledge her inability to do so, but has merely tendered the good offices of the United States in the most friendly manner to aid in securing the restoration of peace and good order in the island. Notwithstanding these pacific assurances, all the organs of public opinion in Europe persist in holding the contrary view, and their comments have reacted upon Spain to such a degree that Minister Woodford himself has become uneasy, and, according to one account, has asked permission to publish the communication that he delivered to the Duke of Tetuan, in order to quiet the excitement. Despatches from Washington say that Secretary Sherman was in favor of publishing it, but that the President deemed it best to wait a while; also, that the Administration fears trouble at the reassembling of Congress, and aims to do just enough to keep the Jingoes under control and not enough to get into a war with Spain. This is a rational explanation of all that has been done and of all that has been published as yet. The Senate at the last session passed a joint resolution recognizing the belligerency of the Cuban rebels. The House was not organized for general business and Speaker Reed kept the resolution on the table. It was commonly supposed that if a vote could

have been taken the House would have passed it also. Then the President would have been compelled either to sign it or to veto it. It seems altogether probable that Mr. McKinley will still have to face the issue. That he desires strongly to avoid a foreign complication is plain.

We do not see why all this hubbub is made in the press over the question whether England has "backed out" of her agreement to take part in a sealing conference. Our position is eminently satisfactory, whether she has or not. If she confers, it is because Mr. Sherman frightened her into it by charging her with bad faith. If she does not, why, there is more bad faith in the act, and what better could we ask? Our diplomatic triumph is assured, as it always is, no matter what England does, no matter what the arbitration tribunal decides, no matter what it costs us, no matter what the facts are. This is of more value than many seals. In fact, the supposition that we as a nation care anything about the seals, except as animals which we reserve the exclusive right to slaughter, is grotesque in view of the sealing correspondence and the reports of experts. In December, 1894, when there was talk of prohibiting the killing of seals for one year, both on sea and land, Mr. Gresham objected; he said, and truly said, that such a course would "raise a great outcry in this country." No later than last year, when our Government was reproaching the British for pelagic sealing, with its danger of exterminating the herds, we allowed the killing of 30,000 seals on the islands, which cannot but be regarded, experts say, as an "exhaustive slaughter." Instead, therefore, of bothering about England's intentions, we think our press and State Department should give their time to a careful reading of the reply of the Colonial Office to the Sherman despatch. There are some pretty serious exposures in it of the misleading statements, the garbling, the misquotations of the document to which Mr. Sherman put his name.

The meeting and resolutions of bankers in London will probably do the directors, and especially the Governor, of the Bank of England a world of good. It has long been well known that there was more or less private pressure being brought to bear on these gentlemen to "do something for silver," or be "friendly to silver," by certain members of the Government, who shrank from any open declaration of their sentiments and who were rigorously kept in check by the Chancellor of the Exchequer, Sir M. Hicks Beach. None of them, indeed, blurts out much on the subject except Mr. Chaplin, who fulfils one condition of bimetallic soundness in being hopelessly insolvent. Social influence, too, which under this ministry is very powerful in English politics, has done some work for the ill-used metal, and it is very possible that the wretched Smith (the Bank's Governor) got into his present scrape partly through a desire to stand well with "smart people," without committing the Bank to anything in particular. The good shaking up he is now receiving from business people will probably cure him and compel him to lead a strictly business life. The Government has already done much for impoverished land-owners, in granting them $12,500,000 to help them to pay their taxes. To ask it to enable them to pay off their mortgages at 60 per cent. discount is asking too much. A good many bright minds are at work trying to find out what good it would do the Manchester men to have free coinage in India, and they will report their discoveries in due time. Lord Farrer has assured us that his researches have been vain.

Lord Farrer sends a letter to the London *Times* in which he says that he has information that "a proposal has been made to the British Government by the Wolcott Commission to reopen the Indian mints to silver on the understanding that the United States and France shall open their mints to silver at a ratio of 15½ to 1." If Mr. Wolcott and his associates have made such a proposal as this they have much exceeded their authority. If President McKinley has authorized them to make such a proposal he has much exceeded his authority. Moreover, there is not the least probability that Congress, the only competent authority, will ever open the mints to the free coinage of silver without the concurrent action of Germany and England as well as of France and her monetary allies of the Latin Union. When the English delegate to the Brussels conference, Mr. Alfred de Rothschild, proposed that the European Powers should join in an agreement to purchase £5,000,000 worth of silver yearly on condition that the United States should continue her purchases under the Sherman act, Mr. McCreary, in behalf of the United States, said that such a plan could not be accepted. At the Paris conference of 1881 a proposal similar in substance was laid on the table by the representative of Great Britain, and it was pronounced unacceptable by Mr. Thurman on the part of the United States, and by other bimetallists. Mr. Thurman said that no plan could be considered by the United States which would expose the country to alternate drains of silver and of gold, according as one or the other might be higher or lower in the market, *i. e.*, above or below the legal ratio. There is no sign of any change of public sentiment in this regard since the Brussels conference, nor do we believe that Congress would tolerate any scheme of bimetallism based upon the coöperation of France and India merely.

The bimetallic flirtation in London has called forth an article from the pen of M. Leroy-Beaulieu in the *Journal des Débats* protesting against the plan of plunging France into the financial chaos implied by opening her mint to the free coinage of silver, either with or without the company of the United States and India. He can understand how the United States might find an advantage in bimetallism, being a silver-producing country, and being also very little exposed to the chances of war. For France, however, which produces no silver and is under the necessity of keeping up heavy armaments all the time, it would be, he says, sheer madness to plunge into such a venture. Why? Because, in the event of a war, gold would be the only money available for war purposes. It is the only kind of money that "goes itself," the only kind that is universally acceptable, the only kind that needs no propping up by international conference. To open the mint to the free coinage of silver would expose France to the loss of her gold. If 15½ ounces of silver becomes the legal equivalent in France for one ounce of gold, a steady stream of silver will flow there to be exchanged for gold at that ratio, because the largest stock of gold in the world is either lodged in the Bank of France or is in circulation among the French people. That France should part with that gold and take silver in exchange for it is simply unthinkable. Ministries may be upset on that issue, but the thing never will be done.

Dickens's treasurer of a charitable society, who read his annual report of expenditures with a coughing-fit over the pounds but coming out clear and strong on the shillings and pence, has evidently been employed by the *Tribune* to explain in a Washington despatch how the "Deficit is Vanishing." The way it is vanishing is by growing larger. Only about $3,250,000 added to it in September, begins the despatch. Then deeper in, and in a much quieter voice, it is stated that the total Dingley deficit for the first quarter of the fiscal year will be only about $28,000,000. Then in a whispered aside the despatch goes on, "estimating the deficit for the next three months at $17,000,000." The added hint is given, quite inaudibly and mostly in pantomime, that there will be "exceptionally heavy" expenditures in January; but still, and here the news is trumpeted, "the Treasury officials confidently predict" that soon after the turn of the year the receipts will equal expenditures. In other words, they confidently predict that the fiscal year will close with a deficit of at least $45,000,000. That is the way it is "vanishing."

The announcement that Gov. Stephens of Missouri has received an unsolicited offer from New York capitalists to fund the entire debt of the State ($4,900,000) at 3 per cent. interest, instead of the 3½ now paid, is only one of many signs that the rate of interest in the West is falling and that all borrowers profit by it. The head of the State Insurance Department of Missouri, who has served as chief clerk of the State Treasurer, has recently placed a batch of $150,000 bonds of Calloway County at 4 per cent., and he insists that there is no reason why all the counties should not refund their bonds at the same rate instead of keeping on at 4½ or 5, as in most cases, or even 6, 8, and 10, as in some. The same tendency affects farm mortgages. The rates on such mortgages have been 7 or 8 per cent., but Gov. Stephens says that he knows of many cases where farmers are securing a reduction to 6 per cent. without any difficulty. This will "spike another gun" of the silverites, who have told the farmers that, no matter how much the prices of farm produce might fall, they still must keep on paying a high rate of interest on their mortgages.

A host of Western farmers will be able to do much better this year than merely to get a lower rate of interest on their mortgages. They will clear off their indebtedness entirely, and a large share of this class will take pains never to have any more interest to pay. The loan companies of the East find a great difference in this respect between the agricultural element in the West and in the South. As the agent of one such company puts it, "These Western borrowers want to clean up and get out of debt as soon as they find themselves able, while the Southerner will go on year after year paying interest as if it is a natural condition with him." The Southern farmer has been slower than the Western to resist the passion for increasing his holdings of land beyond all reason or profit, and while a good wheat crop will lead its raiser to pay off his mortgage, a good cotton crop will often result in the planter's using his profits to enlarge his plantation, without paying anything on the principal of his old debt. There are signs that the advantages of small holdings are coming to be recognized in the South, but the Eastern investor who seeks permanency in a loan will long find it more easily secured there than in the West.

The decision of Judge Foster of the United States District Court of Kansas in the case of Greer, Mills & Co. vs. the Kansas City Live Stock Exchange is a severe blow at the live-stock monopolies that have grown up at various points in the West. Greer, Mills & Co. are themselves members of the Exchange. One of the rules prohibits a member from transacting business with any person violating any rule of the Exchange, or with an expelled or suspended member. This rule, says the Judge, "in practice, as amply appears from the testimony of many witnesses, shuts out all dealings and business intercourse between members and non-members of the association." Greer, Mills & Co. attempted to do business with an outsider, and were boycotted and posted on a blackboard kept for the purpose of displaying the names of such persons. The Exchange numbers 300 members. "The outcome is inevitable," says the Judge; "the combined opposition of 300 men against one can produce but one result. In vain does the outside dealer offer attractive bargains for the sale or purchase of stock; they will have no intercourse with him. This state of affairs is known and circulated among stock-growers and shippers, and they dare not ship their stock to the boycotted broker or firm." Such boycotting is held to be in violation of the anti-Trust law of Congress, and in restraint of interstate commerce also. The effect of the decision is to dissolve the Exchange, since it can no longer enforce its policy of exclusion. Of course, an appeal will be taken, but meanwhile the Exchange must give bonds to compensate the plaintiffs for damage done to them by boycotting.

The first effective step toward the punishment of lynching that we have noticed in any part of the country has been taken in Georgia. Some time ago a white man and a negro were arrested on charges of murder, and while they were in jail at Jonesboro a mob gathered one night and demanded that the Sheriff surrender his prisoners. Fortunately, that official had been warned in time to summon a large guard, and he was able to protect the prisoners until he could take them to Atlanta the next day. Although this was a case where lynching had been only attempted, not accomplished, the authorities resolved to bring to justice those who had sought to break the laws, and the grand jury has just found true bills against eight men who are charged with conspiracy to lynch. Of course, it still remains to try and convict them, but it is a great gain to get such offenders indicted. Even this step has not been taken in the case of any of the leaders of the mob who lynched a negro in the most barbarous manner a few months ago at Urbana, O. And yet that Northern community, with its dozen churches, its excellent private and public schools, its public library, and its university, doubtless considers itself much further advanced in civilization than Clayton County, Ga.

An equally encouraging sign of the times in the South is the attitude taken by the Sheriff of Palo Pinto County, Tex. A band of so-called "regulators" served notice on certain peaceable and law-abiding colored citizens that they must leave the county. No reason was assigned except the fact that they were "niggers," and that the white ruffians did not want to have them around. The "regulators" claimed to be 117 strong, and defied the authorities. But they soon found that the Sheriff was not the sort of man to be intimidated by their threats of vengeance in case they should be interfered with. He immediately issued a proclamation defying them, in which he said: "I recognize the right of an American to live in the home of his choice as one of the dearest privileges of an American citizen, and I know my duty is to protect them, and I will perform it." Similar outbreaks by "regulators" against the negroes of Fannin and Johnson Counties were met in the same spirit by the sheriffs of those counties. A pleasant sequel to this action by white officials was the holding of a mass meeting of colored people at Dallas, which adopted resolutions setting forth the injury done their race by the "regulators," many having been frightened from their homes by the threats and others kept in constant fear, expressing "the sincerest appreciation of the sheriffs and other officials and good white citizens who have denounced this outrage on the colored people," and declaring that "this course has had the effect of still further increasing the confidence of the colored people as to just treatment by the whites, and of determining them to improved and higher relations and to arouse in them greater desire to help have all the laws obeyed."

Peace is concluded between Turkey and Greece, or appears to be concluded, but Lord Salisbury cannot adopt Disraeli's grandiloquent phrase after the Berlin Congress, and say that he has brought back peace with honor. Lest there should be any misunderstanding of what has occurred, Mr. Gladstone is out with a biting characterization of "the pain, shame, and mischief of the last two years in the Eastern policy." He sums up the results as: (1) The slaughter of 100,000 Armenians, with no security against a repetition; (2) Turkey stronger than at any time since the Crimean war; (3) Greece weaker than at any time since she became a kingdom. All this, says Mr. Gladstone, is the proud achievement of the European Concert, which he happily defines as no concert at all, but "the mutual hatred and distrust of the Powers." The truth is, as Lord Salisbury's supporters are forced to confess, he has been driven by the Concert or the Sultan from nearly every position which he had publicly announced to be unalterable. The scene of operations is now transferred to Crete, where the Sultan is already preparing fresh humiliation for the British Premier.

THE DISCRIMINATING-DUTY CLAUSE.

The decision of the Attorney-General which annuls the discriminating duty in section 22 of the Dingley tariff act, whether sound in law or not, has probably saved the Republican party from deserved punishment for a rascally trick in legislation. It has certainly saved the country from serious complications with other maritime Powers. The opinion, we must admit, is not very intelligible. It is extremely obscure in its phraseology. Confusion of language usually springs from confusion of ideas. Yet it is possible to disentangle ideas from the words, and when this is done a substratum of common sense can be discerned. This substratum is found at the conclusion of the opinion, where the Attorney-General lays down the maxim that a law of Congress cannot be repealed by inference, but only by words appropriate to the end and as clear as those of the law to be repealed.

Section 22 of the Dingley act contains two entirely different provisions which are patched together in a clumsy way. As originally reported and passed by the House, it was the old proviso which has appeared and reappeared in numerous tariff bills. Prior to the Dingley act it read as follows, being section 14 of the Wilson tariff:

"That a discriminating duty of ten per centum ad valorem, in addition to the duties imposed by law, shall be levied, collected, and paid on all goods, wares, or merchandise which shall be imported in vessels not of the United States; but this discriminating duty shall not apply to goods, wares, and merchandise which shall be imported in vessels, not of the United States, entitled, by treaty or any act of Congress, to be entered in the ports of the United States on payment of the same duties as shall then be paid on goods, wares, and merchandise imported in vessels of the United States."

The first amendment to this section was made in the Senate, where Senator Allison moved to strike out the words "or any act of Congress." Mr. Allison had charge of the bill, and his motion was agreed to *nem. con.* The object of striking out these words was not perceived until after the bill had become a law. Then it was discovered that the aim was to impose a discriminating duty of 10 per cent. on all goods imported in foreign ships, except in cases where a treaty obligation would be violated thereby. Very few Senators could be expected to carry in their minds our navigation treaties with foreign countries, or to remember the various acts of Congress supplementary thereto, or to recall the history of our navigation laws.

The truth was, that as long ago as 1828 we had adopted the policy of admitting goods in the ships of foreign countries at the same rate of duty as those in American ships, provided those countries observed the same rule toward us. In other words, we had adopted the principle of reciprocity in the carrying trade. The act of Congress which embodied the principle was section 4228 of the Revised Statutes, which provides that upon satisfactory proof being given to the President by the Government of any foreign nation that no discriminating duties are imposed by it on ships or cargoes belonging to citizens of the United States, whether the cargoes are of domestic or foreign origin, the President may issue his proclamation applying the same principles to the ships and cargoes of such foreign nation. This is the law which was evidently intended to be repealed by dropping the words "or any act of Congress." So we are informed by the weekly paper *Seaboard*, edited by the Secretary of Mr. Arthur Sewall's Merchant Marine Association, which exists for the sole purpose of getting discriminating duties in favor of American ships enacted. This paper says:

"It was feared by the Republican leaders in Congress that to attempt to restore the policy of discriminating duties fully in the new tariff bill might cause the defeat of the bill. Hence, it was not attempted. But the Elkins bill providing for the restoration of the discriminating-duty policy was condensed as much as possible and incorporated in the tariff bill as section 22—all except the part which abrogated treaties exempting imports from the discriminating duty. This was purposely done, so as to facilitate at a future time the passage of such a measure as would fully restore the discriminating-duty policy, by abrogating such treaties as stood in the way of that restoration. In accordance with this purpose, the words 'by any act of Congress' were left out, because it was not the desire or intention of Congress that any act of Congress—but treaty or convention alone—should any longer entitle any imports to exemption from the discriminating duty. That having been the objective, and that being the accomplished fact, how can it be said that this was not intended?"

This is clearly an admission that an attempt was made to secure the adoption of a new policy in regard to an important matter by stealth, since otherwise there would be no reason for going about it in this slovenly, hap-hazard way, not knowing what treaties on this subject were in force or what would be the general effect of the repeal of section 4228, Revised Statutes. The Attorney-General tells us that on the same day that the Dingley act was passed, another law was passed on the subject of tonnage duties which recognized section 4228 as still in force—which rebuts the presumption that Congress intended to repeal it by inference.

Section 22 of the Dingley act contained another clause which was introduced at a later period in the committee of conference, and was intended to put a discriminating duty of 10 per cent. on foreign goods brought through Canada into the United States. On this point the opinion of the Attorney-General is not so clear as it is on the other. That an excellent law cannot be repealed by a mere inference is a sound proposition. Section 22 of the Dingley act must be read as though the section 4228, Revised Statutes, were still in full force, and, according to Dingley himself, the other clause in reference to Canadian railroads was inserted to carry out the principle embodied in the supposed repeal of section 4228. The Attorney-General holds that since the latter section is not repealed, the Canadian clause is of no effect. But this does not necessarily follow. There may be a debate on this subject when Congress assembles in December, but we should advise the parties who are responsible for the discriminating-duty clause to adopt the policy of modest silence and humility. The best thing for them is to turn the thoughts of Congress and the country into widely variant channels. "Least said soonest mended," should be their motto.

Meanwhile there is a general expression of surprise among intelligent people at the obscurity of the Attorney-General's opinion, in view of the fact that, though he is not well known to the nation, he has an excellent reputation on the Pacific Coast, and has served with credit as United States Circuit Judge. The Washington correspondent of the Philadelphia *Ledger* makes a statement that Mr. McKenna originally reached the conclusion that the section in dispute plainly imposed discriminating duties, and that, if he had been left to himself, the opinion put forth would have been to that effect; but that "representations were made to the President that such a decision would seriously affect political as well as commercial interests in New England," and that, after a discussion in the cabinet, the Attorney-General was required, against his vigorous protest, to change the opinion, in order "to meet the political demands of a geographical section." This theory accounts for the confused reasoning of the decision, but it involves a moral delinquency of the gravest character.

The sharpest critic of the Attorney-General is Steve Elkins. The West Virginia Senator ridicules the reasoning of the opinion, and announces his determination to renew his efforts at the next session of Congress to secure the passage of a bill which will impose the discriminating duties in unmistakable terms. Mr. Elkins is entirely justified in criticising the Attorney-General's arguments and in organizing a movement to secure openly, after due consideration, the legislation which he seeks. But he does not stop here. With almost inconceivable audacity, he confesses to the country that he was responsible for the section which, as Speaker Reed puts it, "slipped into the bill," and that he smuggled it in because that was the easiest way of accomplishing his purpose. Did ever a United States Senator boast of a worse performance than this:

"I am not ashamed of the part I have played; I am proud of it. The section would have meant for the ocean what the tariff meant for the land. I think it was Ameri-

can, and for that reason I pushed it. This country is bound to be the mistress of the seas just as soon as we get time to attend to it. I wanted to hurry it along. There was no trick about it at all. *I simply worked to succeed. Of course, I was not going to tell those opposed to the scheme all about it.*"

THE CANADIAN TARIFF.

Our neighbors on the north have apparently taken a leaf out of the McKinley tariff in framing a new fiscal policy for themselves, but have improved upon their model in some slight degree. It will be recalled that when the late Mr. Blaine went to the room of the finance committee in the interest of reciprocity, and denounced the McKinley bill and smashed his hat on the table, declaring that it would not make a market for an additional bushel of wheat or barrel of pork for the American farmer, the astute Mr. Aldrich prepared a scheme for reciprocal trade which was eventually incorporated in the bill. It provided that whenever and as often as the President should be satisfied that any country exporting tea, coffee, raw sugar, and raw hides to the United States, which articles were made duty free by the bill, was imposing duties on exports from this country which were reciprocally unfair and unjust, then he might by proclamation impose duties at fixed rates on such articles arriving at our ports from those countries. Here the principle of differential duties as regards different countries, to be determined and regulated by the executive branch of the government, was embodied in our law for the first time. We had had reciprocity treaties before, but the terms had always been embodied in the law of Congress. Now we had adopted the principle of a general tariff, with exceptions in favor of or against particular countries, according as those countries might treat us.

The new Canadian system is very ingenious and quite in accord with the McKinley precedent. As explained in the last number of the *Economic Journal* (of London), it consists first of a general tariff, and second of an offer of a reduction of one-eighth of the duties to any country which admits Canadian products on as favorable terms as Canada offers to them. This offer holds good till June 30, 1898. After that date the reduction is to be equal to one-fourth. The offer is not restricted to Great Britain or the British colonies. If Germany, for example, should admit Canadian products at as low rates as Canada admits German products, Germany would receive as good terms as England does, although the latter admits Canadian products free. A few articles upon which duties are imposed for revenue and not for protection are excluded, viz.: alcoholic liquors, sugar, and tobacco.

Another clause of the Canadian tariff is significant at the present time and is well worthy of imitation by us. It provides that whenever the executive branch of the government shall be satisfied that any article is monopolized by a Trust or combination, it shall have power to abolish all duties on the article so monopolized. This is a great step in advance of anything in our legislation. It is a real protection to the people against monopoly, whereas our anti-Trust laws are a sham. The virtue of the Canadian law lies in the fact that it is self-executing, whereas ours cannot be executed by all the powers of the federal and State governments combined. Although Senator Sherman declared more than once that every shred of protection ought to be removed from any article produced by a Trust or combine, neither he nor any other Republican Senator ever offered a bill to carry that plan into effect. The truth is that the Republican party dares not offend the monopolies which its own tariff laws have created. It is pursued and devoured by its own monsters.

The effect of the new Canadian tariff will be to put the United States at a disadvantage of 12½ per cent. as compared with Great Britain in the sale of manufactures to Canada. This may not countervail the advantage we enjoy in the way of nearness. Freight charges and loss of time are elements of cost to the Canadian importers. These can hardly be less than 12½ per cent. in the kinds of goods which we habitually sell to them. But next year the differential will be 25 per cent., and then we shall begin to lose trade in that quarter. We may make it up in other parts of the world, but with the Dingley tariff serving to stir up hostility everywhere, it is difficult to see where we shall gain anything. We have deliberately adopted the policy of curtailing foreign trade and irritating other nations. In so far as we succeed in "making foreigners mad," in so far does protection justify itself to its advocates. One of the most potent and oft-repeated arguments in favor of the clandestine clause in the Dingley bill which aimed to cut off imports by way of the Canadian Pacific Railway was that it would make the Canucks furious. Jingoism and protectionism are close allies. They act and react upon each other, for ever breathing hate, malice, and all uncharitableness.

The Canadian tariff is the more exasperating because we can avoid its consequences by our own act at any time. If we want to recover our position as sellers in their market, all that we need to do is to make our tariff as low on their products as theirs is on our products. We need not adopt free trade with them. It would be quite sufficient if we should go back to the Morrill tariff —the tariff of the war period, when we were taxing everything in order to save the nation's life. We have gone so far beyond Mr. Morrill now that we even impose duties that we do not want and that nobody asks for—duties on articles that we export—duties neither for protection nor for revenue, but merely to deceive our own agricultural classes and keep them submissive to the plunder of the Trusts and combines which prey upon them. If there is anything that we could easily dispense with, and should never miss, it is the tariff on Canadian farm products.

A USEFUL COMPARISON.

Tammany has such a bad name that a great many people naturally think that the worst thing which can befall the city is the triumph of the Tammany candidate for the mayoralty. At the risk of seeming to be paradoxical, however, we venture to assert that the worst thing which can befall this city and State is the perpetuation of the Platt system of government and political management, by whatever name we choose to call it. The personnel of Tammany is so brutal, ignorant, debased, corrupt, that its *full* rule, such as prevailed between 1889 and 1894, can hardly in any civilized community prevail very long. The first experience New York ever had of complete Tammany sway was under Grant and Gilroy, and we saw the result. After three terms of it men of all parties joined in putting an end to it, not simply for the sake of good government, but of decency and civilization. The use it made of the police bench, for instance, was one of the most striking scandals in modern days.

Now this sort of régime in our time cannot be very demoralizing. The man who says openly, "Evil, be thou my good," is never a very dangerous man. The man who beats his wife, gets drunk every night, and sends his children to steal, never sets a very bad example or shakes many people's faith in justice and order and law. He is generally a warning, not an example. The tales of horror, therefore, which were unfolded every day during the police investigation, had but little effect on public opinion, except to rouse shame and remorse over the tolerance and even support which had once been given to such creatures as Grant and Gilroy. We may be quite sure that the same thing would occur again. Four years more of Tammany would be a terrible calamity for our city, but it would nourish, not destroy, the seeds of better things. Tammany rule is a thing which provides its own cure by its monstrosity. It compels even the most hardened and cynical of those who do not profit by it, to take arms for social order, and proclaim by their votes their belief in a moral government of the world.

The Platt régime is very different. Platt is not a brutal Irish ex-prize-fighter or saloonkeeper. He is an American, who spent two years in Yale College, and has actually received an honorary degree from it. He is a Presbyterian, has a pew in a church, and a pastor to whitewash him and back him up. With

these advantages he deliberately set to work some years ago to pervert the government of this State from the sort of government which its written Constitution provides for, into something entirely different, pervaded from top to bottom by the two things freemen most abhor — secrecy and corruption. By means of a fund secretly raised as blackmail, he makes a nominating convention the expression of his, not of the popular will; he fills all the offices of the State with his creatures and not with qualified public servants, and offers steady but private opposition to all attempts to better the State, which he has not originated and does not control. Finally, he has taken legislation out of the hands of the Legislature in which the Constitution placed it, and frames it in his own office to suit his own purposes. In fact, he has effected a change in the government of New York which was never before effected in any country except by armed force. If this be a tribute to his ability he is welcome to it.

Now he has been enabled to do all this by disguising himself and his followers as what are called "Republicans." He gives out that he is doing it, not for his own sake, but in order to exert influence on the currency, Hawaii, and the tariff, especially the tariff; and he gets thousands and tens of thousands to believe him. Not only do they believe him, but they believe him so much that they agree, in order to help him, to put their police, their schools, their hospitals, and their taxes into the hands of such men as Charles Murray, Mike Kerwin, and Lem Quigg, and with permission to do what they please with them, as long as what they do is done for "Republican principles." What "Republican principles" are in the government of a city nobody knows but Quigg, and he never tells. What is the "Republican" way of sweeping a street, arresting a thief, or teaching a child to read, has never come out, and the only reason for believing that there is such a way is that Platt says so.

At this moment he is bitterly opposing a body of citizens who, whatever their faults, have confessedly only one object in view, the improvement of the city, not as a voting-place, but as a dwelling-place. And such is the effect on the imagination of a great many decent people, not tramps, not bummers, not fences, not saloonkeepers, not gamblers, but merchants, lawyers, brokers, artisans, of the "Republican principles," that they are ready to support this man in changing their government in city and State, and founding on the ruins of the old Constitution a despotism which for meanness, baseness, rascality, and decrepitude, for the discouragement of honesty, ability, for everything but cruelty, has had no parallel in the Western world. To find a match for it in pure shabbiness, we must go among the more indecent and harem-ridden Orientals. A man who can do this, who has done it, we call a dangerous man. We say it is ludicrous to compare him to Croker, or Tweed, or Kelly, or Sheehan. He does more harm in a week than they do in ten years. They rob and bribe and are filthy and ignorant, but they do not corrupt the soul of decent Americans. They disgust them. Does any one, for instance, suppose that ten years ago—aye, even five years ago—a man of Gen. Tracy's standing, an ex-cabinet minister, a leader of the bar, a man whose career has shown that he cherished high ideals through life, would have allowed his name to be used to help this man in conspiring for the defeat or obstruction of an honest effort of honest people to make their city a more beautiful and comfortable place of abode? We believe he would have repelled the suggestion with scorn, and yet he is out today as a Platt candidate, for "Republican principles," and thousands of respectable men are glad of it.

It must be borne in mind that the contest in which we are engaged is not a contest between two opposing schemes of city improvement. Platt has no scheme of city improvement at all. He does not propose to do anything for it except govern it on "Republican principles." "His accounts may not be straight, but his heart beats warmly for his native land." "He loves his country and his home, but he cannot live on wind." In short, he wants the city, wants us all, to submit to Tammany, or any sort of government that may overtake us, in order that he may "name" Governors and legislators, may draft legislation, levy blackmail on corporations, and sit sanctimoniously in his pew at church instead of joining Croker in a bar or a stable or a gambling-house.

AN INJUNCTION SYMPOSIUM.

The Chicago *Times-Herald* has made a curious contribution to the discussion about strike injunctions, by publishing a number of replies by "eminent jurists and prominent laymen" to four questions propounded by its editor. The questions were: "(1.) What are your views on the power and practice of courts in issuing injunctions in labor disputes? (2.) How is such power derived, and is it misused? (3.) Do injunctions interfere with the constitutional guarantee of trial by jury? (4.) Should Congress specifically define and limit the power of courts in issuing injunctions?" The answers obtained, if carefully examined, throw some light on the subject, but it is evident from the way in which they have been discussed by the press generally that they are not illuminating to the wayfaring man. The usual way of analyzing them seems to be to count up the number of eminent jurists and prominent laymen who think well of injunctions, and to offset them by the others who think ill of injunctions, and then to say, "There you are"—a process which cannot be thought to advance matters.

The value of such a symposium as this is seriously impaired by a fact which does not appear on the surface, viz., that those who are most competent to throw light on the matter—the judges of the highest repute—are precisely those who are restrained, by considerations of propriety, from answering newspaper inquiries. The necessary result is that the answers actually obtained, so far as they come from judges, are sent in by men of merely local and in some cases doubtful note, and whose opinion is of little consequence one way or the other. As a rule, the readiness with which a judge writes to the newspapers giving his "views" about questions which may come before him for decision, is in inverse ratio to the weight of his authority. That most of the judges whose replies have been obtained in this case are not great lights is made clear by the nature of their replies. The most curious thing in the whole symposium is that one only of the symposiasts, President Rogers of the Northwestern University, shows that he is distinctly aware of the fact that at least three-quarters of the questions put have been disposed of and left where they are beyond question by the unanimous opinion of nine far more eminent jurists than any whose replies are now published—jurists, moreover, whose opinions are enforced by the whole civil power of the United States.

Down to the year 1895 there was, no doubt, considerable difference of judicial opinion as to the proper use of injunctions in labor disputes, and it was an open question whether organized demonstrations, assemblages, trespasses, and interferences with property rights designed to promote a strike and calculated to lead to irreparable damage, but not necessarily producing violence or riot, could be enjoined, or whether they were solely within the province of the criminal law and the general police power. The matter came before the Supreme Court of the United States in the Debs case in 1895, was fully considered there, and was decided in an opinion delivered by Justice Brewer and concurred in by every judge on the bench. This judgment was reported in the regular series of reports (158 U. S. 564), and has been accessible to the public for two years; and if anybody wants to know what the law actually is about strike injunctions, the place to find it is not in his own head, nor in the "views" of other judges, but in this decision.

The law, then, as laid down by the Supreme Court, was substantially this: Wherever a strike agitation takes the form of serious, practical danger of ir-

reparable injury to property rights, an equity judge must enjoin, not the strike or the agitation, but the specific acts out of which the danger grows. His injunction he must enforce by all the power at his command; arrest, followed by fine and imprisonment after hearing, being the recognized method. The fact that the acts are criminal in their character was held to have no bearing on the question, and it was further decided that there was no invasion of the constitutional right of trial by jury (p. 594). The decision is, no doubt, binding only on federal courts, but no one can read it without seeing that the principles laid down are general principles of preventive relief, and that there is nothing peculiarly federal about the grounds on which it is made to rest. If any more proof were wanted, it might be furnished by the history of the recent coal strikes, during which the principles of the Debs case have been generally followed by the judiciary, federal and State.

The Debs case, then, answers conclusively the following questions: What is the law of strike injunctions? What is the power and practice of courts in issuing them? Whence is such power derived? Do such injunctions interfere with the constitutional guarantee of trial by jury? The case is of the first importance, because if the power is misused or liable to lead to abuse, the remaining question is, What is the remedy?

On this point the Debs case throws no light; but the Constitution of the United States (art. iii., sec. 2) provides that the judicial power shall extend to all cases "in law and equity" arising under this Constitution, and it is from this clause that federal courts get their jurisdiction to issue strike injunctions, as well as the power to enforce them by contempt proceedings. It is at least very doubtful whether Congress has any power under this clause to define and limit the power of courts in issuing injunctions, and the same remark applies to the summary power to enforce injunctions by contempt proceedings, without which injunctions would be waste paper. The enormous difficulty of suggesting any practical change in the law may be inferred from the fact that, although Senator Hill got a report from the Senate judiciary committee, a year or more ago, in favor of novel machinery affecting the judicial power to enforce decrees by contempt proceedings, his bill was found to threaten such a paralysis of the courts that it has not been heard of since.

Without going into the question, therefore, of whether legislation by Congress is or is not advisable, the points for practical men, and especially editors and politicians, to bear in mind are (1) that the law of the matter is perfectly well settled, no substantial difference of judicial opinion existing about it; (2) that if legislation is desired, some way must be found not yet suggested of overcoming the constitutional obstacles in the way; and (3) that the constitutionality of any legislative attempt to hamper the equity powers of courts or to curtail their summary power to enforce their own decrees, is a matter which can be finally decided only by the courts affected.

Another practical point about the present use of injunctions in strikes, which ought to be borne in mind, is the question of the alternative. In the Debs case the court commended the Government for asking for an injunction, instead of deciding the case for itself and calling in the police and military. At the time we took the opposite view, and expressed the opinion that efficient police measures were what the case demanded. But to nine out of ten of those who denounce "government by injunction" one alternative is as odious as the other. The essence of a strike agitation, as carried on by men such as Debs and the leaders of the coal strike this summer, is a terrorism ruinous to property and to freedom; and to men engaged in this work one sort of prevention is just as bad as another. There would be something, in fact, rather comical in a man insisting on his right to be policed, but denouncing an injunction as tyrannous, if we did not know that his real reason was apt to be a doubt as to the efficiency of the police. It is only twenty-five years since the corporations could deal with strikes only by hiring a sort of private constabulary furnished by a "detective agency" for the occasion. Injunctions issued and enforced by regular courts are better than this; and so, in the fulness of time, we may get beyond government by injunction, and rely, as other civilized communities mainly do, on the police. But injunctions will never be given up till we get something better. As John M. Palmer modestly says, "Speaking for myself, I prefer a government by injunction to anarchy."

THE BRITISH ASSOCIATION AT TORONTO.—II.

QUEBEC, September 6, 1897.

It would not be in place to report the details of the work of the sections of the Association in this journal. It may be in order, however, to note the sciences represented, seeing that a very broad and liberal meaning is given to the word Science. The sections, with their respective Presidents for the Toronto meeting (corresponding with the sectional Vice-Presidents of the American Association), are as follows: Mathematical and Physical Science, Prof. A. R. Forsyth (a very large section, taking in meteorology, seismology, etc.); Chemistry, Prof. W. Ramsay; Geology, Dr. G. M. Dawson; Zoölogy, Prof. L. C. Miall; Geography, J. Scott Keltie; Economic Science and Statistics, Prof. E. C. K. Gonner (in his absence, Sir Charles Freemantle); Mechanical Science, G. F. Deacon; Anthropology, Sir William Turner; Physiology, Prof. Michael Foster; Botany, Prof. H. Marshall Ward. The presence in this list of Economic Science and Statistics, as well as that of Anthropology, will be noticed. The last is given especial recognition this year in the person of Sir John Evans,* the President, a man who is without university connection or even university training. There is a movement toward the recognition of Psychology in the British Association; it took this year the form of a sort of sub-section of the section of Physiology—a classification to be expected in England, where experimental psychology proper is hardly known. It is through the interest of Prof. Michael Foster that so much was done; and it is a pity that the American psychologists did not come up in greater force and show what American psychology is doing. Possibly the classing of psychology under anthropology, as in the American Association, is preferable; but why should it not be given its own name and an independent place? No doubt a great step toward this end is made in the recognition of psychology, simply as such, in the Royal Society's scheme for the bibliography of science, to go into operation in 1900.

The features of most interest to the public at these meetings are the presidents' addresses and the popular evening lectures. Of these at this meeting the latter were, I think, disappointing. Prof. J. Milne lectured on "Earthquakes and Volcanoes" in a discursive and very popular manner. Sir Roberts Austen's lecture on "Canada's Metals" was well spoken of. I have no intelligence of the impression made by H. O. Forbes's lecture on Borneo for the workingmen, except that the class for whom it was intended did not largely attend—a common thing also in England, as I was informed. The presidents' addresses were, of course, of the high character to be expected from the men who delivered them. That of Prof. Foster was a broad survey of physiological progress since the last meeting in Canada in 1884. Among his points of emphasis, the one which especially interested the present writer was his optimistic prophecy of the probably rapid advance of brain anatomy and physiology by the method of Golgi. His description of the revolution wrought by Golgi's method, in the hands of Ramón y Cajal and others, painted upon the background of the obscurity which reigned in this realm before, was remarkably vivid and interesting. May his optimism be justified by the result! The literary charm and freshness of Prof. Foster's address were universally remarked.

Sir William Turner's address on "Some Distinctive Characters of Human Structure" dealt especially with the curvature of the human spine as compared with that of the anthropoids, and served to show the utility of the curvature with reference to upright walking. It is a useful summary of results in its field. The remarks upon the brain, however, with which he extended a paper already too long, were necessarily neither exhaustive nor critical, and readers who are acquainted with the work of Flechsig, to which Sir William referred, will wish that he had left the matter over for a separate paper. The other addresses of the presidents of sections, which fell

* Similar recognition of anthropology was made at the Detroit meeting of the American Association by the election of Prof. Putnam to the presidency of that body.

within the present writer's interests, were that of Prof. Miall on "Transformations of Animals" and that of Prof. Forsyth on the general value of mathematics. The latter can be read by people of intelligence generally who love what is clear when it is attractively presented. The President of the Association lectured on "Primitive Man." His address having already appeared on this side of the water in *Science*, I need not do more than refer readers to it in that periodical. It may also be obtained bound up in paper with the addresses of the sectional presidents (London: Offices of the Association, Burlington House. Price, 1 shilling.)

Of the sectional proceedings it is not in place here to speak. There were no sensations, it seems, unless the physicists so count their enthusiastic reception of the new Harmonic Analyser of Prof. Michelson of Chicago. The impression prevailed that the work was up to the usual level in quantity and quality, some of the sections, indeed (notably those of Physical Science and Physiology), having more papers than the time sufficed to accommodate. Among the "Reports" adopted were two which are likely to lead to important results. One was a recommendation to the home Government in favor of the establishing of a national physical laboratory, and the other a similar report urging the founding of a bureau of ethnology for England and the colonies, possibly in connection with the British Museum. A grant was made to assist the project of a lake biological station in Canada.

In conclusion, another general word. It must be a source of gratification to all workers in science in this country that this great body of our kinsmen has been in session so near our doors, traversing (not a few of them) our country, and becoming acquainted with our universities and teachers. It is to be hoped that the interests of science will be advanced, and it is also to be hoped—perhaps more earnestly, because the need is greater—that these men will use their influence in spreading in all three of the countries from which they came assurances that the political and social interests of our Anglo-American life are one as the interests of science are one.

J. M. B.

INTERNATIONAL CONGRESS OF ORIENTALISTS.

PARIS, September 10, 1897.

The number of Oriental scholars and of those who are interested in Eastern research is larger, perhaps, than might be supposed; and as the diplomatic and commercial relations between the East and the West daily grow closer, an International Congress of Orientalists is an incident not without importance. Such gatherings have been held every third year during the last quarter of a century, and Paris is the city that was selected for the eleventh Oriental Congress, which takes place this year, September 5-12. The halls of the Collège de France and of the Sorbonne are the scene of the scientific sessions; the Congress is under the patronage of the President of the French republic; and M. Charles Schefer, Administrator of the School of Modern Oriental Languages of Paris, is the presiding officer. Prof. Maspero, the Egyptologist, and Prof. Cordier, the Chinese scholar, have charge of affairs as secretaries of the Congress.

Oriental scholars from various lands have laid aside their books for a time, and have bidden adieu to their libraries, to assemble in France and meet their colleagues in kindred fields, in order either to discuss their common work or to gain advantage from travellers or diplomatists whose paths have led to the region of the rising sun. India and Persia, Egypt and the Levant, China and Japan, Australia and the far East, as well as the remote parts of Africa, are represented both by men busied in research into the history and civilization of these countries, and also by natives whose Eastern costume lends a certain charm in contrast to the Western scholar's dress. Among the Americans are President William R. Harper of the University of Chicago, Prof. George S. Goodspeed, Prof. Paul Haupt of the Johns Hopkins University, Prof. R. W. Rogers, New Jersey; Prof. Morris Jastrow, jr., Philadelphia; Prof. Hans Oertel of New Haven, and Prof. A. V. W. Jackson of New York. Special inquiries are made for Profs. C. R. Lanman, M. Bloomfield, and C. H. Toy, who were named as delegates, as well as for other American scholars who were prevented from being present.

The general attendance is larger than at any preceding Oriental Congress. Some of those present have come to offer the results of their latest finds in the way of manuscripts or of archæological treasures; others have contributions to add to the fund of knowledge of Bible lands; several can fill in missing paragraphs in the pages of ancient history; a number have suggestions to make which may prove serviceable in the future in dealing with special questions of Eastern life and civilization; one or two are in position to point out important corrections to be made in our ancient maps, or to corroborate identifications of localities on our modern charts. All are able to lend some help toward improving our acquaintance with the languages of the other hemisphere, or to give some aid which enables us better to understand the significance of the past with respect to the present.

The division devoted to India and its history is presided over by an Englishman, Lord Reay, and the opening session of the section was marked by an interesting essay in which Prof. H. Oldenberg of Kiel, Germany, showed how brilliantly the French critic Taine had presented to the public the essential features of Buddhism, in an article published years ago. The most important, however, of the communications made in this section was the presentation of a plan, proposed by M. Senart of Paris, for establishing a fund for exploration in India, similar to the Egyptian Exploration Fund. In the Iranian division, Prof. Jules Oppert discussed the ancient Persian calendar of King Darius, which he believed must have originated more than a thousand years before the Christian era. In the linguistic department, the French philologist M. Bréal proposed a new explanation of the Greek adjective *sophos*, 'wise,' the original meaning of which seemed to be 'sweet.'

Numerous sessions were held by special savants in the wisdom of China, Japan, and the Far East, and students of the ceramic art might possibly have gleaned interesting information from Dr. F. Hirth's dissertation on the early history of pictorial art in China. The Munich professor's long residence in the Celestial Empire enables him to speak with authority on special Chinese subjects. Arabic scholars and missionaries will be glad to learn that Prof. I. Goldziher of Budapest has completed the plan for publishing a great Mussulman Encyclopædia, and Prof. Ehrmann of Berlin has arranged to bring out a dictionary of the hieroglyphic writings of Ancient Egypt. This latter important work is to receive substantial support through the liberality of the German Government.

The meetings of the Semitic section were especially well attended, and the members had something to learn from the scholarly and spirited discussions of Profs. Haupt of Baltimore, Hommel of Munich, Halévy of Paris, when Hebrew and Assyrian questions came up for debate. The section devoted to Greece and the Orient enjoyed an interesting paper from Franz Cumont on the early worship of the Persian god Ormazd in Asia Minor. Among the topics announced in the African division was an ethnographic communication by M. Rey de Morande, on the primitive negroes and their ancestors; there were also a number of monographs presented which deal with the folk-lore of the East. When the printed Transactions of the Congress appear, they will be found to contain, besides, numerous contributions to the particular field of the science of religion or in the comparative study of Oriental literature; among these might be mentioned contributions by the English scholar Rhys Davids and by the Swiss investigator Eduard Hardy.

But the Orientalists do not merely meet for conference and discussion within the lecture-rooms of the Collège de France and of the Sorbonne; the circles of French literary society have thrown open their salons by tendering formal receptions to the visitors or by extending private invitations of hospitality. On Monday evening, M. Rambaud, Minister of Public Instruction, formally welcomed the representatives of various lands. On Wednesday evening, Prince Roland Bonaparte kindly greeted each visitor to his palatial residence, whose spacious walls recall, amid republican times, the days of the First Empire. One of the pleasures of the evening was a visit to the Prince's private library, which contains a famous collection of works on folk-lore and dialects, even more diversified than the polyglot and polyethnic assembly, his welcome guests. To-morrow the distinguished Indianist M. Senart and Mme. Senart expect similarly to entertain the representatives of Oriental studies. The social side is thus brought into happy harmony with the scientific side of the Congress, and the members are given a better opportunity of becoming personally acquainted and of feeling in closer contact than is possible through pages of long volumes of research.

There still remain two days for the presentation of learned disquisitions and for the friendly interchange of ideas; the Congress will formally close with a banquet on Saturday evening, September 12. The next international meeting of Orientalists will be held in the year 1900, the place of meeting to be decided upon before the members now disperse; the eleventh Congress at Paris, however, will certainly remain one long to be remembered.

A. V. WILLIAMS JACKSON.

FIRST IMPRESSIONS OF THE HAWAIIAN ISLANDS.

HONOLULU, August 29, 1897.

As the steamer draws near to Honoluiu, the traveller on board is struck with the beauty of the scene before him. Indeed, a seaport with mountains in the background can hardly fail to be beautiful from without, particularly if the line of the coast be jagged; and here, to add to the effect, we have the wondrous green of tropical vegetation breaking the mass of the houses, and forming the rich transition between the town itself and the bare mountain tops behind. The shipping in the foreground adds to the picturesqueness, as well as to the interest, even if the artist would not find much to admire in the Japanese man-of-war *Naniwa* and the American *Philadelphia* and *Marion* resting grimly near each other. Although the port is safe enough from trade winds, but for the reef it would not be well sheltered, in marked contrast to the almost land-locked Pearl Harbor a few miles away.

Honolulu, we can see at a glance, is a well-kept and thriving place. The roads and sidewalks are in good order, the crowds are busy, and several of the buildings are new and substantial. A little further inspection shows us that there is a large number of dwelling houses whose owners must be well-to-do; in fact, people are making money here, and there are many who would have little to complain of with existence were it not for the worries of politics. In the streets we see plenty of variety among the passers-by. The Europeans and Americans, whose white clothes remind us that we are in the tropics, though the absence of the sun-helmet proves that the heat cannot be intense, are the upper class, the business and professional men, the owners of the large stores and the employers of labor. It is true that the Portuguese, by far the most numerous of the people of European blood, still, for the most part, have modest occupations, such as market gardening, but they are to be found in the suburbs rather than in the heart of the city, and they are not always easy to distinguish at first sight from the half-breed Hawaiian.

The stranger looks with especial interest at the natives, the former masters and owners of these islands, now dwindling as rapidly in numbers as in importance. They are not an ill-looking race—in fact, we see some really handsome forms and faces, chiefly among the men, though the girls of mixed blood seem to have some of the beauty that can be found among our own mulattoes. The Kanaka has a bright brown complexion, his heavy, round features suggesting easy good nature rather than the qualities that help in the struggle for life. The civilized garb in which he is arrayed does not sit strangely on him; he even looks perfectly at home in the uniform of the conductor or the policeman. His womenkind usually wear a Mother Hubbard dress, called a "holoku."

John Chinaman is everywhere. He was imported to work in the fields, as he still does to a certain extent, especially in the rice fields, where he is hard to replace; but he has poured into the town, where, besides making one of the best household servants in the world, he has found scope for his talent for retail trade. Many of the smaller shops are in his hands, and in a few cases he is already rich. He has his son educated, and a short while ago, at the chief school here, the prize essay on an American patriotic subject was won by a young Chinaman. However, the small boys we see with pigtails are often the children of native mothers, for here, as elsewhere, John frequently finds it easier to get a wife of another color than to import a compatriot.

The Japanese, few of whom are in their native costume, meet the eye less. They are of more recent importation than the Chinese and have come into the city less, though their women are in demand as nurses. Still, besides occasional shops scattered among the Chinese, they have a small quarter of their own, patronized at the present time by the sailors of the *Naniwa*.

The architecture of Honolulu is not unsightly, at least judged by the modest standard of an American town. The Yankee in the tropics has adapted himself, learning from his English brother and from nature; the business buildings are low, and the projecting piazza roofs, even if they be of corrugated iron, make a grateful shade. We notice some new city blocks in a good-looking dark gray stone. Standing in the middle of a beautiful garden is the royal palace (now the seat of government), which, if it were that of a minor German prince, would be a creditable specimen. But the thing that glorifies the residences here is the splendid tropical vegetation, the cocoanut, the date, the royal and other palms, the poncianas, the banyans, the algarobas, the bananas, the countless kinds of other trees that have been introduced and have flourished. Every house with a pretence of a garden finds it difficult to be ugly. The horrors of American suburban architecture are softened. Queen Anne, half covered by tropical vines, falls in with the landscape. What really harmonizes with the surroundings is the low bungalow construction with the deep veranda from which, fanned by the breeze, we gaze on the intense blue of the sea or green of the land.

There are various excursions we can make from Honolulu, either in the gentle horse-car, not yet replaced by the trolley, to the charming suburb of Waikiki, for sea bathing, or rides into the hills, or in the train for thirty miles between mountain and ocean, amid rice and sugar-cane. The most famous drive is to the "Pali," six miles away from here, the top of a pass, from which there is a grand view to the sea on the other side across the plain lying sheer below.

As for the celebrated climate of the Hawaiian Islands, on the whole, I believe the praise showered upon it is well deserved, and that such phrases as "perpetual summer" and "never too hot and never too cold" are truer than usual, tempered, to be sure, by the mosquitoes—a plague introduced from South America about 1826. It is not merely that the winter differs from the summer chiefly in the amount of rain—something of the same kind could be said of Singapore, which is more trying than India. What makes the days here so delightful is the continual presence of cool breezes, the trade winds that blow almost all the year round. The nights appear to be a little more oppressive, but perhaps a hotel in the heart of the town is not the place from which to judge them. This is the climate of the plain. If one is enervated in the long run by its warm monotony, one can easily find lower temperature by going up into the mountains, four thousand feet high in this island, nearly fourteen thousand in that of Hawaii proper, where snow lies for the greater part of the year.

THE COMMONWEALTH PARTY.

TO THE EDITOR OF THE NATION:

SIR: In connection with the discussion going on in your columns regarding the formation of a new party and the selection of an appropriate name therefor, permit me to suggest that the name "Commonwealth party" be given some consideration.

Working upon the reasonable assumption that a new party is a necessity, to the above name certainly those objections could not be raised that seem to prevent the adoption of older names, of terms more frequently used, or of hyphenated abominations. Those who cling to the Republican party by reason of its past work and glory, and those who maintain their allegiance to the Democratic party through love for its length of years, its traditions, and its early service, need not feel that they are going over to the enemy by becoming members of the new organization. And for those who find in the word a shibboleth of strength, certainly as much may be said for the word "Commonwealth" as for either of the others.

Under its ample cloak might the limited protectionist and the conservative free-trader find common shelter. There too might meet in harmony the Radical and the Conservative, the Liberal and the Strict-Constructionist. In fact, all those who desire to escape the increasing woes of extravagance, paternalism, a taxation excessive in amount and uncertain in its bearings and its benefits, a government by party for its friends, the encroachments of corruption, and the burden of unwise and too many laws; all those who are actuated in their citizenship by love for the Commonwealth, by pride in its purity, in its good name at home and abroad, might make common cause against foes that endanger its life, and, with Commonwealth for shibboleth, and Commonwealth the end and aim, they might certainly move forward to a success as glorious, and a fame as worthy, as that which rests upon the achievements of the parties that have lived their day.

Yours very truly, HERBERT JONES.

DUBUQUE, IOWA, September 21, 1897.

A DISENCHANTED EXPLORER.

TO THE EDITOR OF THE NATION:

SIR: Prof. William Libbey of Princeton seems to have been particularly unfortunate in his maiden venture into the wilds of New Mexico. He went thither valiantly and specifically to attack the time-honored Indian legend which relates that the rock of Katzimo, or "Enchanted Mesa," was occupied before the Spanish conquest by the Quéres Indians, who now occupy a similar position on the summit of the mesa next south—the Acoma, already vaguely heard of by Fray Marcos of Niza in 1539, and visited by Coronado in the year following. After a good deal of preliminary publicity for his projected expedition, Prof. Libbey reached New Mexico, cleverly got a life-line over the great rock, and went up in a boatswain's

chair. After two or three hours the clouds promised rain, and he came down and away. In a despatch to the New York *Herald*, as soon as he reached a telegraph office, and in various articles since (notably in the *Princeton Review* and *Harper's Weekly*), he has celebrated the "Disenchanted Mesa," as he facetiously terms it. The latter article (*Harper's Weekly*, August 2) is particularly witty over the downfall of the old tradition at his hands.

Six days later (September 3) Mr. F. W. Hodge of the Bureau of Ethnology, a field student of long and honorable record, mistrusting Prof. Libbey's conclusions, scaled the mesa for himself—a doubly plucky thing to do, in the face of so oracular a verdict. Mr. Hodge does not walk over Indian artifects without recognizing them. He found not only arrow-heads (which by themselves might only prove visitation and not habitation), but stone axes, fragments of pottery, of bracelets, etc., establishing beyond question that the rock was tenanted in prehistoric times. The wall vestiges have undoubtedly been swallowed up (as was suggested in the *Nation* of August 19) in the huge gulf which relatively modern erosion has hollowed in the southeastern end of the mesa. Mr. Hodge also found (what has before been noted, but Prof. Libbey seems not to have observed) numerous similar artifects in the talus just where the wash from this hollow has fallen.

This affair, rather curious in scientific annals for the swiftness and completeness with which the tables have been turned, is instructive to such as need to be instructed that actual Indian legends are not Mother Goose. They have a dignity and weight not to be carelessly run against by unprepared iconoclasts. CHAS. F. LUMMIS.

LOS ANGELES, CAL., September 16, 1897.

OREGON VEGETATION.

TO THE EDITOR OF THE NATION:

SIR: In the instructive articles, "Glimpses of Southern Oregon," the writer makes the "salal-berry" a coarse vaccinium. That plant is closely allied to our aromatic wintergreen, and is known to botanists as *Gaultheria Shallon*. The Indians in Lewis and Clark's time called it Shallon.

Instead of *Symplocarpus fœtidus*, which I have never found on the Pacific slope, we have *Lysichton kamtschatcense*. The two plants are strikingly similar in appearance and habit, but the latter lacks the renowned odor of the former.—Yours very truly,

A. S. BERTOLET.

CHICAGO, ILL., September 22, 1897.

A NEEDED CLASSICAL MANUAL.

TO THE EDITOR OF THE NATION:

SIR: Among the many desiderata for students of the classics, especially in secondary schools, is one which I hope some enterprising publisher will supply shortly, viz., a brief manual of mythology and antiquities of the Greeks and the Romans. There are many manuals of mythology, some good, more bad. There is at least one manual of the public and private antiquities of the Greeks and the Romans. There are classical dictionaries which range in price from the Pauly 'Real - Encyclopädie,' costing $100, to the new 'Dictionary of Classical Literature and Antiquities,' which sells for $7. But these books are too expensive. Few students in secondary schools and not many in colleges can afford to own them; and where they are found in the school libraries (and they are not found in many), only a few students have the time to consult them during school hours.

What is needed is a brief manual of about 250 pages, containing the essentials of the mythology and antiquities of the Greeks and the Romans—a book which could be sold for $1.25 a copy, perhaps less, if the publisher would be content with a small profit and large sales. It should be the constant companion of every student of the classics in our secondary schools if the greatest advantages are to be derived from the study of the masterpieces of the two great peoples of antiquity, and it would be a useful book of reference after school days were ended.

A TEACHER OF LATIN.

SEPTEMBER 16, 1897.

Notes.

Harper & Bros. will be the American publishers of the new venture of the London *Times*, viz., a weekly journal called *Literature*. This periodical, of which Mr. H. D. Traill will be the editor, aims to be at once an authoritative critical review of books and a "comprehensive and trustworthy medium of literary intelligence." It will invite correspondence on, and will itself deal with, any subject within the broad scope of its title, and will at frequent intervals publish bibliographies of timely topics. It will neglect worthless books, and seek to be prompt with the best. Most of the reviewing will be anonymous.

Macmillan Co. have in preparation 'Practical Idealism,' by President Hyde of Bowdoin College.

T. Y. Crowell & Co. will be the American publishers of Richard Le Gallienne's forthcoming book, 'If I Were God.'

Mr. Fred. Mather's angling sketches, 'Men I have Fished with,' in *Forest and Stream*, are to be made into a book by the publishers of that periodical.

M. F. Mansfield, New York, has in preparation the annual volume called 'The Pageant,' composed of specimens of the literature and art of the day, for the most part, with twenty-six full-page illustrations.

Among the works in preparation by the Clarendon Press are the concluding (third and fourth) volumes of W. L. Newman's 'Politics of Aristotle'; 'Indices to Andocides, Lycurgus, and Dinarchus,' by L. L. Forman; a translation of the Abbé J. A. Dubois's 'Manners, Institutions, and Ceremonies of the Hindus,' edited with a biography by H. K. Beauchamp; a 'Dictionary of Proper Names and Notable Matters in the Works of Dante,' by Paget Toynbee; 'Aetolia: Its Geography, Topography, and Antiquities,' by W. J. Woodhouse; 'Studies in International Law,' by T. E. Holland; and the second volume of E. J. Payne's 'History of the New World Called America.'

Conjuring anew with the name of "The Riverside Library for Young People," Houghton, Mifflin & Co. have reissued and placed in the above series, uniformly bound, Miss Alice Mabel Bacon's admirable monograph on 'Japanese Girls and Women,' together with Mrs. Olive Thorne Miller's 'Four-handed Folk,' Mr. S. H. Scudder's 'Frail Children of the Air (Excursions into the World of Butterflies),' and Alexander Black's 'Photography Indoors and Out.' No objection can be raised to this classification, with its appeal to many youthful tastes. The first book is highly susceptible of illustration, but it alone is without any. The same firm, in disregard of President Andrews, have ventured a new edition, now first at a low price, of the late Christopher Pearse Cranch's 'Aeneid of Virgil,' rendered into blank verse. The intervening twenty-five years have not, perhaps, done much to make the choice of metre more acceptable; Mr. Cranch's handling of it, and his poetic qualifications generally, will, on the other hand, be judged at least as strictly now as in 1872.

Two more little volumes in the "Temple Dramatists" (London: Dent; New York: Macmillan) are the "School for Scandal," edited by G. A. Aitken, with a portrait of Sheridan, and "Edward the Third," for which Mr. G. C. Moore Smith supplies the preface, notes, and glossary, and, discussing the authorship of the play, indicates those parts in which Shakspere's hand has seemed visible to many critics.

Seven of Poe's tales compose the first volume of Doubleday & McClure Co.'s "Little Masterpieces," edited by Prof. Bliss Perry. The form and the general air of the typography are here much to be praised for their attractiveness, and Prof. Perry's graceful introduction is full of insight.

We gave recent notice of the promised issue of the fourth edition of Mr. C. Washington Eves's 'West Indies.' The volume, which is published under the auspices of the Royal Colonial Institute by Sampson Low & Co., has now come to hand. It is a well-filled duodecimo of open and handsome letterpress, provided with numerous fresh and very interesting half-tone illustrations of the scenery of the archipelago and with the necessary maps. There is no index to this valuable reference book, but the chapters are quite capable of being read consecutively and with pleasure, for Mr. Eves's task has been performed *con amore*, particularly in the case of Jamaica—a sanitarium for the adjacent continent far from being appreciated or availed of.

Luzac & Co., London, send us a pocket 'Guide to the East Indies' produced under the auspices of the Royal (Dutch) Steam Packet Company, and translated by the Rev. J. B. Berrington. It is full of minute information for the tourist, and is well supplied with maps and plans, a certain number of views in not very good half-tone, and an index.

Of the merits of Baron Pierre de Coubertin's 'Evolution of France under the Third Republic,' as a convenient chronicle of contemporary French history, we spoke at the time of its first publication in French. An English version is now sent us by T. Y. Crowell & Co., with an introduction by Albert Shaw which does not err on the side of conciseness or restraint. The translation, which is by Miss Hapgood, appears, from such examination as we have been able to give it, to be adequate, though signs of carelessness resulting from haste are not wanting; for "four hundred years" (p. 56), read one hundred and four years; for "twenty-five years, and a residence in one commune of one year and six months" (p. 57), read twenty-one years, and a residence in one commune of six months; for "municipal communes" (p.

58), read municipal councils. "Mugwumps" is a well-meant but perverse and misleading translation of *ralliés* (p. 266).

The success of Mr. T. H. S. Escott's book, 'England, its People, Polity, and Pursuits,' some twenty years ago, and the present Jubilee demand for Victorian retrospects, have suggested to that writer another venture in the same direction, 'Social Transformations in the Victorian Age' (Scribners). The result is disappointing. The present book is not only slighter than its predecessor, it is in every way inferior in substance and quality. From a writer of Mr. Escott's large experience, there cannot fail to come an occasional shrewd observation, such as those on the relation between the County Councils recently established and the new classes of residents in the rural districts (pp. 95-96), on the effect of club life upon the drinking habit (p. 117), on certain characteristics of "the new journalism" (pp. 383-387). There is even an epigram here and there. But, on the whole the judgments of the author are superficial, the information scrappy, and the style awkward.

Part ii. of the Civil Judicial Statistics of England and Wales for the year 1895, edited by Mr. John Macdonell, contains a wonderfully detailed enumeration of the particulars of litigation. It is not easy to describe these statistics, because we have nothing of the kind with which to compare them. We can, however, assert in a general way that the volume of litigation in England is far less than with us, and we should probably not be mistaken in laying the difference to the pernicious activity of our legislatures. The total number of proceedings begun was 1,245,659, but of these no less than 1,130,274 were in the county courts, and some 25,000 were in other minor courts, so that the number of really important cases was not very large. The amount for which judgment was signed in the county courts was only £1,765,306. The petitions in the divorce courts numbered only 735, and it is remarkable that of 573 petitions for dissolution of marriage about 62 per cent. were by husbands. Improved business conditions have had their natural effect in reducing the business of the insolvency courts in England, both petitions in bankruptcy and liabilities declining. The experiment of establishing commercial courts appears from these returns to be more successful than was anticipated, the business of these courts attaining a very considerable volume. Some new features have been introduced by the editor, and his tables would seem now to afford all the statistical information that could be desired.

The September Bulletin of the New York Public Library prints a letter of Franklin's from its MSS. (Adams papers) to the Massachusetts provincial leaders Thomas Cushing, Sam. Adams, John Hancock, and William Phillips. It is dated London, February 2, 1774, expresses concern at the destruction of the tea in Boston harbor, and bespeaks a "speedy reparation," conformably to a given precedent. How many of our school text-books suggest the existence of this contemporary view of the famous "Tea Party"? In the same number is begun a check-list of American genealogies.

Mr. Thomas Meehan, in *Garden and Forest* for September 15, makes the interesting revelation that he this summer discovered, in the vault of the American Philosophical Society in Philadelphia, the collection of serviceable plants made by Lewis and Clark on their expedition to the Pacific in 1804-1806, in accordance with Jefferson's instructions. Time and the museum beetle have wrought much damage to these specimens, which Mr. Meehan thinks might well embrace edible plants that would bear cultivating and improving for our tables as they graced the Indians'.

A very precious find is described, with illustrations, by Mr. Charles Henry Hart, in *McClure's Magazine* for October. These are life busts, made from casts upon the living person, of many eminent men of the first and second quarters of the present century, by a New York sculptor, John Henri Isaac Browere. The secret of his process has died with him, but the results as here shown are remarkable for their spirit and minute fidelity. Both Jefferson and Adams were thus imaged on the eve of their simultaneous dissolution, and with undeniable lifelikeness. Madison, Charles Carroll of Carrollton, and Lafayette complete the present group, but the busts of Clay, John Quincy Adams, Charles Francis Adams as a youth of eighteen, De Witt Clinton, Van Buren, Commodore David Porter, and other celebrities are in the possession of Browere's descendants, and it is clear that some if not all of them should be cast in bronze without delay. They might well adorn the National Library at Washington. Mr. Hart's story of his discovery is not very skilfully told, but it is curious reading.

The October number of the *Pennsylvania Magazine of History and Biography* has to record the death not only of its own founder and editor and the Historical Society's librarian, Dr. Frederick Dawson Stone, but also of Mr. William Spohn Baker, whose Washingtonian researches have been as valuable as they have been indefatigable, and whose diary of "Washington after the Revolution, 1784-1799," chances to be concluded in the present issue of the magazine.

Commenting on the rather whimsical ministerial notion to promote in foreign countries the establishment and proper filling of chairs of the Italian language, a lively writer in the Milan *Corriere della Sera* of September 6 advocates a different line of defence of the mother tongue. Mewed up by bad weather in an Alpine resort in German Switzerland this summer, he warded off ennui by examining a handy dictionary, Italian-German, published by Teubner at Leipzig in the Feller collection. Though intended for daily needs, he found it crammed with "Ostrogothic creations," and with a most extraordinary technical and commercial lingo, out of which he constructs an amusing commercial letter relating to the sale of a horse. The writer proposes a prohibitory duty on such works (all the more pernicious because small), and asks if the Government, instead of emulating the Eritrea fiasco with its founding of foreign chairs, might not better patronize the editing of international dictionaries in which the Italian shall not be caricatured.

The *Revue Pédagogique* for July gives some space to a conference held at Bastia in Corsica in April last upon the suppression of the vendetta and banditism. M. Poletti, professor in the lyceum at Bastia, was the principal speaker. He denied, and supported the denial by abundant proof, the statement often made that the Corsican banditti are, apart from this one failing, respectable men. They are criminals who escape justice because respectable men gloss over their crimes. He estimated that during the present generation a hundred thousand men, mostly in the flower of their age, had lost their lives through the vendetta. He would correct the evil by early instruction in the family and the school, such as might come through publicity and honesty in dealing with these crimes, and an earnest effort to suppress them.

The general diffusion of popular education in Bavaria is shown by the fact that of the 25,712 recruits for the army in 1896, only five were unable to read and write. The deficiency in these cases was due to unusual and untoward circumstances; one of the five had been sickly from his birth, and was rather weak mentally, while the others had passed their youth in foreign countries, one of them as the child of itinerant acrobats, and were thus beyond governmental control.

—The two latest volumes of the invaluable 'Dictionary of National Biography' (Macmillan) advance the alphabet well into S. In volume 50 are to be remarked Leslie Stephen's sketch of Bolingbroke (St. John); and the notice of William Sacheverell, the "ablest parliament-man of Charles II.'s reign," as being the first that has found its way into any dictionary. Here it fills more than three pages, and furnishes a good instance of the service the present work renders to students of history for men prominent in their time, but lost to view in the competition for place in general biographic collections. Saint-Évremond makes a somewhat unexpected appearance here; but has not that loose fish burial and a bust in Westminster Abbey? Timely are the sketches of Sir R. H. Sale, the heroic defender of Jalalabad, and of Sir R. Schomburgk, whose "line" has fallen in the pleasant places of diplomacy. And American in their aspect are the accounts of the Saltonstalls; of Robert Sandeman, the sectarian who numbered Faraday among his followers, established congregations in New England, and died in Connecticut; of the too lately deceased W. Noel Sainsbury; and of Tom Sayres. Volume 51 opens, and is liberally besprinkled with, names that would have made Quintilian stare and gasp, but in the range from Scoffin to Sheares embraces Sir Walter Scott and Shakspere, to whom respectively are allotted twenty-five and fifty pages. These articles, moreover, proceed from the former and the present chief editor of the Dictionary, and well exemplify their individual ability. Mr. Leslie Stephen had virtually a closed book to condense in the sketch of Scott, and who so well fitted as he to make a story compact without dryness, and omitting no essential detail? His judgments of Scott and his works are purely incidental to the narrative, and his tone is less enthusiastic than would have marked a writer from beyond Tweed. Mr. Sidney Lee, on the other hand, had the enormous task of presenting Shakspere up to date in but twice the space devoted to Scott. His sketch may well be put on the shelf for revision a quarter or half-century hence, when more will perhaps have been learned, and when Mr. Lee's too frequent "doubtless" has been tested by documentary certainty. The article closes with a list of portraits and memorials, a bibliography and a survey of Shakspere's reputation, both contemporary and posthumous, in all countries. The Bacon-Shakspere controversy brings up the rear of the customary footnote, occupying little more than a column of fine print. There are

other great names, like Selden and Granville Sharp, between these covers, and Crusoe Selkirk is fitted out with all his latest discovered wills. Here, too, in fit companionship, are two New England worthies, Judge Samuel Sewall and Captain Joshua Scottow, on whose death Sewall wrote in his diary, "Thus the New England men drop away." But the notice of Sewall is written from the outside, without the personal note.

—It is eminently fitting that such companion-pieces as Boswell's 'Johnson' and his 'Tour to the Hebrides' should be printed within one set of covers, but it is done for the first time in the edition undertaken by Percy Fitzgerald (Whittaker). Seldom have intelligent book-making and good editing wrought together so effectively for the production of a popular edition of a classic in a single volume. Though the book is large, it is not unwieldy, and a clear, full-faced type spares the eyes of the reader. Mr. Fitzgerald's editorial labors are limited, but most useful. He adds few notes to Boswell's own, his innovations being a half-page pointing out, by way of guide to the inexpert, the passages in the 'Life' and 'Tour' which are richest and raciest in the reading, and short biographies of persons mentioned in the 'Life.' This does not mean absolutely all the persons mentioned—on p. 15, for example, there are five names which do not figure in Mr. Fitzgerald's list; but we judge that all the really important persons are there. This is a great convenience, and, of course, a distinct addition to the value of the edition. Perhaps as great value, in another way, resides in the index. This is of Mr. Fitzgerald's own construction, and is most enlightened. It is no machine-made thing, but an intelligent key to the best things in Boswell, provided by one who himself knows and loves them. In other words, much of the perfunctory rubbish of a perfunctory index is omitted altogether, and the reader put on track of what he really wants to find. For example, under Burke there are twelve entries, each with some catchword or phrase to awaken and guide the memory. Of course, one finds omissions—the striking phrase about Burke's mind winding into a subject like a serpent, is left out—but the method followed is most praiseworthy and helpful. Speaking still of Burke, the entry under his name in Mr. Fitzgerald's biographies may serve to illustrate the somewhat jejune, and occasionally perverse, nature of his performance in that department. Here it is in full:

"Burke, Edmund, b. 1729, d. 1797. Perhaps the most solid and generally distinguished of all English orators. He was born in Ireland and never lost his brogue. He was affectionately regarded by his friends. He wrote 'A Treatise on the Sublime and Beautiful.' "

But, with every allowance made, the edition is a remarkable achievement, and the astonishingly low price at which it is put upon the market should insure its popularity.

—Amateurs of humorous verse and collectors of political pamphlets will do well to procure 'Sir Wilfrid's Progress through England and France in the Jubilee Year' (Montreal: Sterling Publishing Co.). In this little brochure, now very popular in the Dominion, Mr. A. M. R. Gordon has pleasantly and effectively hit off the intense satisfaction felt by all Canadians in the attention paid to their representative in England and on the Continent. In form the 'Progress' is a monologue, in which one French Canadian describes to another, in *habitant* English, the triumphs of "Sir Wilfrid de Great." The Queen, in sending out invitations "for mak' some jubilee," insists particularly on the attendance of Mr. Laurier:

"If Wilfrid Laurier will not come,
I not be glad no more!"

Whereat Wilfrid—"not bad fellow, him"—replies:

"Ma Reine, you must not fret
'Bout little t'ing like dat.

"To Londres, on de day in June
You tole me, I will come,
And show you w'at is like de French-Canadian gentilhomme."

The knighting of Laurier follows, and the great figure he cut next day, riding "on state and in *chapeau de coque*," the greatest man in England "excep' de Queen," is enthusiastically described. Sir Wilfrid then crosses the Channel and shows President Faure and the ladies "w'at de kin' of man dis co'ntrie represen'." The tale concludes with the triumphant and really felicitous stanza:

"En bref, our Wilfrid capture France,
He's capture Anglan' too!
I t'ink he will annex dem bot'
To Canada.—Don' you?"

The whole is full of spirit and good feeling, and, in its loyalty to England, fondness for *la patrie*, and pride in Canada, is thoroughly characteristic. The sketchy illustrations interpret the verses and have just the right touch of caricature. We should be glad to see some "political poetry" of equally good quality on our side of the line.

— Among the papers of the gentlemen of England that are being calendared under the direction of the Historical Manuscripts Commissioners, are those of Mr. Leyborne-Popham of Littlecote, Wiltshire. Some of these old documents cannot but have an interest for Americans, as members of this family lent a hand in establishing the early English colonies in North America. Chief Justice Popham, of the time of Queen Elizabeth and James the First, was himself a "favourer of Plantations." Moreover, it is probable that some of the family papers may disclose something fresh about Sir Walter Raleigh, as Chief Justice Popham was the judge who sat in judgment upon him for his share in the transactions relating to the attempt to place Lady Arabella Stuart upon the throne of England instead of James. The Chief Justice's descendants became extinct, in the male line, in the last century, when the heiress of the family married an officer of the name of Leyborne, of an even more ancient family than were the Pophams. Gen. Leyborne assumed the name of Popham, in consequence. He became Governor of the southern Caribbee Islands, in the West Indies, and, while holding that office, died on the island of St. Vincent. His descendant, Mr. Leyborne-Popham of Littlecote, is a very large landowner in Wiltshire and Somersetshire. His promotion of the schemes of Capt. Wiggins for opening up trade with Siberia by navigation cannot but be regarded, by believers in heredity, as an instance of revival of the old spirit of promoting plantations that was manifested by his predecessors in their American ventures.

—The meeting of the eighth Evangelical-Social Congress, held last June at Leipzig, was signalized by the address of Prof. Schmoller on the present position of the middle classes in Germany, which is now to be obtained in a separate form ('Was verstehen wir unter dem Mittelstande? Hat er im 19ten Jahrhundert zu- oder abgenommen?" Göttingen: Vandenhoeck). Outspoken as have been the recent attacks on Prof. Schmoller, they have been less bitter than those directed against the Congress; and it was evidently a feeling of chivalry which led him to take this opportunity to show his sympathy with its general purpose. Many of his hearers must, however, have been surprised to find him arguing (and, if figures can prove anything, proving) that the last twenty-five years have not been characterized, as the Social-Democrats maintain, by the gradual disappearance of the middle classes; that, on the contrary, they have maintained themselves in their numerical relation to the rest of the population. If certain old crafts have suffered, new occupations providing at least equal comfort and independence have come into existence. Of especial interest is the evidence, derived from the last Prussian census of employments, that the peasant proprietor has borne the strain of agricultural depression better than the large landowner. The general result of Schmoller's argument is not unlike that of Mr. Charles Booth in relation to London. He thinks it necessary to guard himself, in his preface, against the charge that he has modified his opinions to satisfy official pressure. He recognizes that his conclusions to-day differ from those he expressed in 1870 in his well-known book on the 'Small Industries of Germany'; but he explains this partly by the fact that better statistics are now available, partly by the circumstance that the outlook is actually a more cheerful one; and he points to various writings of his during the last few years to show that he has not suddenly come to new conclusions. The recent election of Prof. Schmoller to the Rectorship of the University of Berlin is the reply of the faculties to the proposal to limit academic freedom.

CONTEMPORARY EUROPE.

Histoire Politique de l'Europe Contemporaine: Évolution des partis et des formes politiques, 1814-1896. Par Ch. Seignobos. Paris: Armand Colin. Pp. xii, 814.

This book is remarkable for its range, its precision of statement, and its insight. Seignobos has not undertaken more than he could accomplish—praise which cannot be given to others, like Gervinus and Stern, who have wished to write the history of the nineteenth century. To spend a lifetime on a work of which the first volumes must be obsolete before the last are printed—if, indeed, the conclusion be reached at all—indicates a grave defect, we had almost said a disqualification, in a writer of history. Equally serious a defect is the choice of a second or third-rate subject. What a waste of energy and of talents often rising to genius in Kinglake's 'History of the Crimean War'! Probably not ten persons a year read his work through—for the theme has, in a single lifetime, sunk into hopeless insignificance, and one can no more afford to read eight volumes on the siege of Sebastopol than on the war of the Austrian Succession. M. Seignobos, on the contrary, has gauged his subject and his capacity so nicely that he has produced an important work on what must be to all of

us the most important period of recorded time. Of the political development of each European country since the Congress of Vienna he gives us a summary which is clear and synchronous; we do not feel that since writing the earlier portions he has changed his mind, or discovered new material which invalidates the point of view with which he began. We insist on this merit because so many historical works fail for lack of it.

Equally noteworthy, however, is the fact that, so far as the present writer is aware, M. Seignobos's work stands alone. Fyffe's 'Modern Europe' covers the same period, but aims at the rapid narration of outward events rather than at the dissection of the many-stranded lines of causation. Mr. A. L. Lowell's recent study, excellent within the limits its author marked out for it, begins only in 1848, pursues a different method, and treats only five countries instead of all Europe. Of briefer manuals, like Müller's and Maréchal's, it is unnecessary to speak, because they do not enter into competition with M. Seignobos's history at all.

The importance of an adequate review of nineteenth-century Europe need not be urged. M. Seignobos has several qualifications which fit him to succeed in his task. He sees with almost an engineer's precision the rack-and-pinion play of cause and effect. He states with unfailing impartiality the principles of political sects and parties. He discerns the first symptoms of party disintegration, the earliest premonition of new movements, the eddies as well as the currents of evolution. His style has generally the lucidity if not the charm peculiar to French scholarship. He writes with the compactness of a geometer, and yet manages to avoid the vagueness which belongs to general axioms. Specialists will find his summary of their chosen themes remarkably distinct and vital, instead of the desiccated pith which epitomizers often purvey.

After chronicling the internal political evolution of each European state, beginning with England, the pioneer in constitutional progress, M. Seignobos devotes an important section to the description of the recent material changes common to all civilized countries, another to a statement of the position and diplomacy of the Catholic Church, and a third to a brief account of the international revolutionary movements. Finally, he summarizes the international relations of the various countries since 1815, showing how the Holy Alliance and Metternichism naturally followed the Napoleonic upheaval; how, next, the rivalry of England and Russia became the pivot on which European diplomacy turned; how Napoleon III., having engrafted his dynastic ambition on this Eastern question, and helped England to reckon with Russia, became the active fautor or passive witness of national wars; and how, since 1870, the ascendency of Germany has meant the conversion of Europe into an armed camp. By these various methods of treatment, following now the geographical, now the logical, and now the chronological order, we penetrate the century in its length, breadth, and thickness, and, from witnessing its evolution, we form what idea we can of its import and of the future.

The chief business of the nineteenth century in Europe has been, of course, the spread of democracy; but there are almost as many varieties of democracy as of Christianity, and it is one of the merits of this book that it distinguishes clearly among them. The Greek Boulé, the Spanish Cortes, the Prussian Landtag are all representative bodies, but they are representative in a very different sense from the British House of Commons. Indeed, a review of the process of democratization since 1815 shows how the habits and instincts of race transcend, or at least structurally modify, mere political forms. Thus, M. Seignobos points out that conservatism, one of the strongest political traits of the Anglo-Saxons, has dominated Saxon England, while Liberalism has advanced upon it from Wales, Lancashire, Yorkshire, and Scotland. Thus, too, he is careful to distinguish between constitutionalism and parliamentarism, between the substance and the shadow of free government.

There are many points which we should like to comment upon if space permitted. M. Seignobos would persuade us, for instance, that the convention of Olmütz was not so ignominious for Prussia as it has generally been regarded. Still more interesting is his diagnosis of French Republicanism, which he holds to be too firmly rooted now to fear monarchical assaults. From 1792 to 1870 the Republicans seized France four times, "always by the same means, a *coup de main* at Paris," and, being always in a minority, they were subsequently displaced by a restoration; but now the great majority of Frenchmen are Republicans, and neither Bonapartists nor Bourbons have a formidable backing. Popular government in France is in jeopardy, not from monarchical intrigues, but from the frequency of interpellations and from the meddling of Deputies in the business of legislation; the former causes the rapid overturn of cabinets, the latter perpetuates a "spoils system" which would delight a Pennsylvania Republican or a Tammany Democrat.

Especially interesting is M. Seignobos's chapter on the Catholic Church: it would be difficult to refer to any other book on this subject containing so much information in so small a compass. M. Seignobos concludes that the Church exerts a far greater influence in Europe at the end of the century than it exerted at the beginning; and this despite the fact that the privileges and immunities, not less than the direct political action of the Church, have been abolished in nearly all Continental countries. He would not imply, however, that the Church has been strengthened through the strengthening of the faith of its members—on the contrary, the number of believers in Roman theology is constantly decreasing; but the conservative forces of society are rallying more and more to the Church as the most conservative of all institutions, and the one most likely to withstand the storm of Socialism which has long been looming ominously over Christendom. Belgium offers a striking example of the way in which intermediary groups have been swept away, leaving the two irreconcilable parties of the Church and Democratic Socialism to confront each other. Is this to be the political evolution elsewhere? And, in the ultimate conflict between these irreconcilables, which will win? M. Seignobos does not predict. For the present, he says, "the practical direction of political life belongs everywhere to the intermediary parties, whether parliamentary or liberal conservatives, parties of compromise, occupied with practical affairs rather than with doctrines, parties which, deadening the shocks between two opposite conceptions, maintain, amid heated polemics, a social peace and a liberty which Europe had never before known."

As an offset to this conclusion, one should read the epitome of the International Revolutionary Parties, in which the ideals of the latter-day Utopians and Anarchists can be compared with those of the men who represented Radicalism in the first half of the century. M. Seignobos does well to point out that all the important schemes of social regeneration which are now agitated were broached long ago. Several of them were experimented with in the days of our fathers—the city of Paris especially having made one memorable attempt, in the spring of 1848, to pay an army of loafers out of the public funds. But the dreams of French and English Utopians have passed through the brains of German doctrinaires and Russian fanatics, and have been transmuted into the politico-social principles which now alarm conservative Europe. Even anarchy is no new thing—it has always existed in the form of murder, pillage, and arson—although Bakunin is credited with the invention of "philosophic anarchy." Any comparison of the Radicals of to-day with those of 1840 is greatly to the disadvantage of the former. From Mazzini, for instance, to Bebel and Kropotkin what a fall! So in economics, what a fall from John Stuart Mill to Messrs. Kidd and Bellamy! In 1840 the watchword was liberty—individual and collective liberty. Every generous soul believed that to dignify men and nations they needed only to be free. But in 1897 Radicalism has turned its back on liberty to proclaim the gospel that the able and industrious must be brought down to the level of the idle and incompetent. Absolutism, too, has degenerated. Wilhelm, the beau-ideal Absolutist of 1897, makes but a sorry figure beside Metternich, the leader of Absolutism two generations ago. Nevertheless, despite the menaces of socialism, the truculence of the German Emperor, the mad acts of political assassins, we have only to see the course of European destiny as M. Seignobos sees it in order to be reassured. He does not anticipate a sudden or a widespread revolution; on the contrary, he finds the governments of Europe more firmly established than at any time in the past, and he believes that our improved means of communication as well as latter-day arms and explosives add to the resources of the preservers of social order instead of making its would-be destroyers more dangerous.

Although M. Seignobos writes throughout, as we have intimated, with the objectivity of a scientist, and although his work is a remarkable record of apparently impersonal forces, still he is too sane not to recognize the supreme influence of a few individuals on recent history.

"A natural tendency," he says, "to attribute great effects to great causes leads us to explain political evolution, like geologic evolution, by deep and continuous forces, larger than individual actions. The history of the nineteenth century accords ill with this conception. . . . The Revolution of 1830 was the work of a group of obscure Republicans, served by the inexperience of Charles X.; the Revolution of 1848, the work of some Democratic and Socialist agitators aided by Louis Philippe's sudden loss of courage; the war of 1870, the personal work of Bismarck prepared by the personal policy of Napoleon III. For these three unforeseen facts one finds no general cause in the intellectual, political, or economic state of the

Continent. It is three accidents which have determined the political evolution of contemporary Europe."

So important a work ought readily to find a translator. It is unfortunate that the French publisher has brought it out in a single ponderous volume, instead of in two or three convenient ones, and it is inexcusable that such an encyclopædia of historical information is provided with no index.

WASHINGTONIANA IN THE BOSTON ATHENÆUM.

A Catalogue of the Washington Collection in the Boston Athenæum. Compiled and annotated by Appleton P. C. Griffin. With an Appendix by William Coolidge Lane. The Boston Athenæum. 1897. Portraits and facsimiles. Pp. xi, 566.

The most valuable portion of this collection is naturally what was purchased of Henry Stevens in 1848. These were volumes from Washington's own library, many containing his signature and bookplate. A number of sales of books from the Mount Vernon library have occurred since that time, but the Athenæum has added only one such volume to its original purchase. This bulky catalogue of nearly six hundred pages must therefore be regarded as incomplete, though the inventory of the library deposited with Washington's will is printed as an appendix; yet in its incomplete state it will be essential to every Washington collection, if only as a check-list. Its contents are far above the bald record of the usual catalogue. The compiler has examined many manuscript collections to learn how or when Washington obtained his books, and what has become of them since the library was scattered, and much interesting material has thus been discovered and incorporated into this bibliography.

In examining the list of books belonging to the library of Washington, it is a source of gratification to feel that he was not responsible for the selection of the larger part. His public service made him a mark for writers of little repute but high ambition; for a word of commendation from him, or permission to use his name in connection with a new publication, would have been the best of advertisements. He was overrun with requests for his endorsement and for permission to dedicate the book or pamphlet to him—requests which were firmly yet courteously denied, the smart of disappointment being generally salved with a subscription for one or more copies of the work. In one case he did go so far as to commend in strong terms an enterprise—Carey's Museum—but that was an exception to his general rule. As recipient of presentation copies Washington soon had a "library," but the quality is proved by this catalogue in such a way as to destroy any belief in Washington's love of reading that may still remain. Only recently two very adulatory essays on this very point have been published, in which a most enticing picture has been drawn of the retired President "in his library," peacefully reading after the fatigues of public life and the heavy demands made upon his time. A fanciful list of his favorite works has been compiled from the book-lists of that day, and he is seen with all the accessories of a well-equipped study of a modern realistic novelist. It is painful to feel obliged to prick so pretty a bubble. It is not usual for the reading habit to be formed late in life, and Washington's career, from his appointment as surveyor, was not one that would permit him to indulge in much study or to form habits of steady reading. His life was one of action, and was so engrossed by the calls upon him as to prevent his attending seriously to the humanities. Further, had he been a reading man, some results would have appeared in his writings. To the last, they are devoid of a literary flavor or of quotation from or reference to any literature of the day, save in the constant recurrence of a few sentences taken from Addison's 'Cato.' This single instance may be traced from the time of his service in the colonial militia of Virginia, through the Revolution and well into his Presidency—a curious instance of persistence of an early impression. Indeed, we should be sorry to believe that Washington could spend many hours in reading the sermons, the flattering poems, the essays on all manner of subjects, the technical treatises, and the efforts of weak-brained enthusiasts which poured in upon him as gifts "from the author." Mr. Griffin has industriously traced many letters accompanying these gifts, and prints them with the usual formal reply conveying the thanks and appreciation of Washington. They make a curious collection, for they show the "interested selfishness" of the writers, the one to secure a nod from the ex-President, the other to ward off the attempt in a few cold sentences that might yet carry comfort. Yet the collection of works is a sorry one, and would, apart from the personal interest attaching to it, be relegated to the top shelf of the most inaccessible part of the Athenæum library.

Of course there are exceptions. Some of the productions of the libellers of the day, like Callender and Cobbett, are to be found, with the issues by Bache of the despatches from the French Minister, but Duane is missing; and Monroe's defence, with Washington's careful annotations, is in the library of Harvard University. Randolph's 'Vindication' is here, as well as Paine's scurrilous 'Letter to Washington,' but neither contains a scratch of the pen to show what feelings they excited in the person so bitterly attacked. In connection with the latter document, Mr. Griffin notes with pride that he has run down the author of one of the many answers to Paine, C. L. Pinckney Horry, a discovery which every collector will appreciate. So Boucher's Discourses are in the collection, and the compiler of the Catalogue prints the very doubtful letter of the Tory clergyman, said to have been sent to Washington at the beginning of the Revolution. Carey's copy of Washington's letters, containing his reasons for omitting paragraphs and entire letters, is traced to Bishop Hurst's library. Outside of the state papers, only a single volume of his own writings—his speeches to Congress—appears in the Athenæum collection.

One more item may be mentioned. The books that Washington did read related to agriculture, and to these he devoted much attention. Not only did he make careful summaries of their contents for his own use, but his letters to his overseers are full of evidence of his application in practice of the results of his reading. The works on farming in this collection would be notable by themselves, and most of them contain the signature of the owner—a slight indication of the estimation in which they were held. The volumes from Arthur Young, James Anderson, and Sir John Sinclair show how readily he had made this interest of his known to specialists in Great Britain; but it was earlier and more curious writers on agriculture that received his special consideration. Next to agriculture may be mentioned works on the military art, and to these two subjects it may be said that Washington did show decided leaning.

So much space has been devoted to the Washington collection proper, that only a reference can be made to the long list of works relating to Washington also included in this catalogue. Mr. Griffin has been very industrious in his annotations, and the list is certainly a long one. Still, it may be doubted if it equals the Lenox, Baker, or Ford collections in completeness. Some omissions may be accounted for by the length of time the catalogue was in press, of which evidence is given in more than one place. In the main, the notes are full and judicious. It might have been well to allude to the doubtful origin of the so-called Trumbull sketches, if indeed any doubt could exist, for the subjects and treatment only too plainly proved their fraudulent character. A line might have warned the unwary from the ridiculous production of Welles tracing the family of Washington to Odin. The Henkels pamphlet on a MS. will of Washington was of the same character, for the will did not contain a letter of Washington's writing. Mr. Griffin repeats the assertion that the list of the authors in the Hearst 'Federalist' is in Madison's script, though no expert believes it to be so. Some omissions could be made good. The list of British officers (p. 539) was given to Washington by Elias Boudinot, then Commissary-General of Prisoners. The "Wharton" who owns Washington's copy of Adam Smith's 'Wealth of Nations' is Mr. Joseph Wharton, whose long-continued monopoly of nickel in this country through a prohibitive import duty was in strong contrast to the general teachings of that work. We do not find any mention of the facsimile of Washington's letter to Madison giving the first outline of what was developed into the Farewell Address, a facsimile so perfect that it has often been offered as the original. Is not the Secretary Noylan (p. 302) intended for Moylan? And is it not strange to find so well known a name as that of Mathew Carey so constantly misspelled? Carey reproduced in facsimile one of Washington's letters to him, and used the back for his business correspondence, but the Athenæum does not appear to possess an example. The 'Narrative' mentioned on p. 148 probably related to one of the escapades of Lord Baltimore, and, if so, was published in 1768, not 1788, as is suggested. In an Appendix Mr. Lane prints the inventory of Washington's library, filed with the will, but now lost.

This catalogue, in sum, constitutes one of the most interesting contributions to Washington literature, and the labor involved in its preparation has borne rich fruit.

The Encyclopædia of Sport. Edited by the Earl of Suffolk and Berkshire, Hedley Peck, and F. G. Aflalo. G. P. Putnam's Sons. Parts I.-VI.

"Sport" is so comprehensive and elastic a term that it seems proper this encyclopædia should have a trio of editors. Their fitness

for their task is shown at the outset by success in obtaining the assistance of men whose names alone are a guarantee of practical acquaintance with the subjects assigned them. The six parts now issued bring the work down to Fencing, and contain 376 pages; all except forty of these pages are occupied by signed articles written by some sixty different persons. While many of these also wrote for the "Badminton Library of Sports and Pastimes," the staff of contributors is drawn from a far wider field. A Russian, Prince San-Donato, describes deer-stalking in the Caucasus; Herr Schlick, an Austrian, gives a vivid account of the dangers of chamois hunting, a favorite diversion of his emperor; Theodore Roosevelt writes entertainingly of the buffalo and the caribou; and an Oriental, Prince Ranjitsinhji, the crack batsman of 1896, is one of the half-dozen joint authors of the article on cricket.

As might be expected in an English work, the national game is awarded some forty pages. The rules of the Marylebone Club are printed as the constitution, so to speak, of the game; how a match is played is clearly set forth by the aid of diagrams; subsequently the several points are discussed at great length, and with a seriousness that reminds one of the exhortations of the coach of an American football team at the beginning of the collegiate year. There are no "short cuts," we are told, "to good cricket. The ordinary mortal can only win his way forward by determination, patience, and practice." In this connection mention may be made of the admirable article on baseball by R. G. Knowles, and of the praise bestowed on the American game. "Everybody is given a chance to excel both at the bat and in the field. In cricket, should you get out first ball, your chance is gone, in all probability, of distinguishing yourself at the bat for that day. It is not so in baseball. As the nine innings are played, you have five or six chances more of retrieving your honor. From the sportsman's point of view, baseball should stand ahead of most manly games."

To the editors credit is due for the valuable and unusual feature of elaborate glossaries that are appended to the principal articles. These give in succinct form much information that could not well be introduced into the main text, and that cannot be obtained elsewhere, at least in such close juxtaposition with that fuller description of the sport so indispensable to the general reader. Of a score of terms selected at random from these glossaries, the reviewer could not find satisfactory definitions for five in either the 'Century,' the 'Standard,' or Murray's 'Historical Dictionary.' The bibliographies are another useful feature. They vary much in length, archery being without any save brief references in a footnote, and cricket having an exhaustive one of fifty titles and two hundred volumes.

Every reader will feel grateful for the attractive and beautiful illustrations, which are furnished with lavishness. Many of the smaller ones, taken from instantaneous photographs, give, at the same time, vivid and instructive views of the exercises described in the text. The full-page engravings are often triumphs of the pictorial art, and, if placed by the side of the woodcuts in the last edition of what may be regarded as the predecessor of this work, Blaine's 'Encyclopædia of Rural Sports,' furnish a startling contrast. Altogether, the publishers are to be congratulated on issuing what promises to be the most attractive, the most comprehensive, and the most useful single work that has yet appeared on this subject.

In conclusion, the reviewer cannot refrain from accepting the invitation of the preface and offering two suggestions which may be of service to the editors. The work is deficient in cross-references; for instance, Disc-throwing is treated under Athletics, but no indication of the fact is given at the place where most readers would look; under Bowling there is no reference to Tenpins or American Bowls, as it is generally called in England. The article on Dogs is confined to "sporting" dogs—a division carelessly defined as including those "used for the purposes of giving amusement to their owners or for providing them with food." It describes the German mastiff, yet gives no clue as to where an account may be found of the English mastiff. A more serious grievance is the scant attention thus far given to sport in the United States. For the Spanish bull-fight seven pages are found; the capture of the blue-fish is dismissed with a single sentence. The writer on Big Game in North America implies that there is little left save in British Columbia, and that shooting a moose means wasting a whole season, as far as other game is concerned. He must be ignorant that a single short railroad in one of the Eastern States forwards, during the three "open" months of each year, nearly one hundred and fifty moose, about the same number of caribou, and over two thousand deer. The same writer describes camping out on this continent, in a special article under that title, and is provokingly silent as to the charms of that combination of canoeing, fishing, and hunting offered by the lakes and rivers of the State of Maine and the adjacent British provinces, and each year enjoyed by hundreds of American sportsmen.

Contributions to the Science of Mythology. By F. Max Müller. 2 vols. Longmans.

Prof. Max Müller is to be congratulated on having been permitted, like Mr. Herbert Spencer, to "crown the edifice." The recently published 'Contributions to the Science of Mythology' fills the gap left between the 'Lectures on the Science of Language' and the author's voluminous writings on the 'Science of Religion' and the 'Science of Thought.'

It has been the fashion of late to gird at Max Müller. He does not stand quite in the splendid isolation of Athanasius *contra mundum*; but the disciples of Whitney in America, of Brugmann in Germany, and the light infantry of Mr. Andrew Lang in England, constitute a formidable body of assailants. "Verily, old sire, the young champions press thee sore." The austere censors of the press, too, have learned to shake their heads gravely over him, as an intellectual middleman and a mere popularizer. Now all this is an exaggeration, and a much less amiable exaggeration than the naïve admiration of Englishmen in the sixties for the man who had opened up the new world of comparative philology to them, or than the old scholar's innocent retrospective delight in his own achievements. Max Müller is not the inventor of comparative philology. He has not created the sciences of mythology, religion, and thought. But in earlier years he laid his brick in the edifice of science, and the popular works which have since flowed in such profusion from his pen, despite their loose rhetoric, their verbosity, and their occasional positive lapses, have diffused much information in an entertaining form, and contain many stimulating suggestions in domains of thought quite beyond the ken of some of the verbalists who raise their eyebrows at his etymologies. Even these notorious etymologies hardly justify the charge of ignorance or sciolism. Exact science may frown upon the equations θεός = deus, Varuna = οὐρανός, Ahanâ = Athena, Dahana=Daphne, Kerberos=Sarvara, Here=Svârâ, Hermeias=Sârameya, Helena=Saramâ, Erinnys=Saranyû, Orthros=Vritrâ. But the reaffirmation of them in full *connaissance de cause*, and after a review of opposing arguments, may possibly be set down to perversity or self-will—it is not an argument of ignorance.

Similarly with regard to the lively criticisms of Mr. Andrew Lang and the anthropological school. Müller's mental habits date from the pre-Darwinian days. He has an instinct for the effective, exaggerated, popular way of putting things. In the development of his favorite thesis he appears to ignore all the qualifications which he is quite ready to admit if questioned. He delights to magnify the Vedas, to which so much of his life has been given. It is easy for polemical criticism to cull sentences in which he seems to bid defiance to Darwin and all rational theories of human development, and pictures the primitive Aryan leading an exquisite idyllic life in the bosom of his family, discoursing in high figurative speech of the weather, and nourishing his mighty youth on the fundamental intuitions of monotheism and the categories of the Kantian philosophy. Possibly such passages are fair game. But, taking his works as a whole, we cannot fairly accuse him of this kind of irrationalism. He does not really maintain that the Aryans are primitive in the anthropological sense. They do not pose quite so proudly in his prose as in the witty verse of Mr. Lang. His doctrine of Henotheism does not affirm a developed and conscious monotheism antecedent to polytheism. He does not ignore the part played in the evolution of mythology by fetishism, animism, totemism, plant worship, and the rest. He merely maintains that the pantheon of the Vedas and of Homer is in large measure the outgrowth of imaginative conceptions of the great agencies of nature and the misapprehension of metaphorical or riddling speech about them. He does not assert the absolute priority of the higher religious and moral intuitions in the development of humanity; he merely suggests the possibility that these intuitions were already the possession of gifted tribes as far back as our investigations can reach, and that the savages of to-day may in some cases be degenerates or failures. He does not reject the method of accounting for the irrational element in mythology by a reconstruction of the general psychology of primitive man. He merely points out that, after this broader analogical explanation, there still remains the more definite, perhaps insoluble, historic problem: Why was this particular fable told in its special form of this divine personage?

Now, whatever our favorite key to all mythologies, the special combination that turns the lock is generally supplied by language. Mythology, Mr. Lang tells us, is

mainly due to the savage's curiosity about the reasons of things, and his credulity in admitting explanations. But the things to be explained are in a large proportion of cases names, that is, words. Names were originally, of necessity, metaphors. The original sensuous intuition or apprehension of an aspect or quality that gave rise to the name is forgotten or concealed by a change of form, and primitive reflection supplies its place by an ætiological myth built up about some grotesque or plausible etymology. The constituent elements of such a myth are doubtless found in the psychology of the savage mind; but the provocation and the first links of association are generally verbal. The uncertainty of etymologizing, and the exaggerations of dawn and solar mythologists, cannot affect the truth that to this extent "mythology is a disease of language."

Such are some of the more general reflections suggested by an unpartisan perusal of the volumes before us. There is no space to criticise them in detail, or to attempt to separate the wheat from the chaff. The first volume, in addition to three discursive, polemic, and apologetic chapters on the methods and problems of comparative mythology, offers an interesting study of the Mordvinian mythology in confirmation of the author's theory, and a long review of the progress of the science of comparative philology during his lifetime. This survey has two objects: to show that the advance of the past twenty-five years has been an evolution rather than a revolution, and to plead for a greater license of etymologizing in the case of proper names. It is naïvely biographical in form. The second volume is a series of notes on Vedic mythology, accompanied by many bold and interesting Greek parallels. Few of the etymologies on which these comparisons rest are approved by professional philologians, and it is impossible to admit the author's repeated contention that they ought to be accepted as provisional hypotheses until something demonstrably better is produced. It is not necessary to salvation or to peace of mind to hold any opinion concerning the etymology of Aphrodite or Apollo. The classical scholar who, Mr. Müller says, is uncharitably prone to assume that Sanskritists have forgotten their Greek and Latin, will smile grimly over Phygalia, Ἄπολλον Ἀγυιεῦ, 'Apollo, my leader,' and the citation of *alte* [*sic*] *tonantem credidimus Jovem*, as a case of the direct accusative, with *credere*.

The Life and Times of Thomas Wakley, Founder and first Editor of the *Lancet*, Member of Parliament for Finsbury, and Coroner for West Middlesex. By S. Squire Sprigge, M.B. Cantab., etc. With two Portraits. Longmans, Green & Co. 1897. Pp. xix, 509.

Centennial or *fin-de-siècle* literature is increasing, and that very naturally. It results from our disposition at the close of any long period to look backward. It grows with the growth of surveying all institutions historically. It furnishes a strong justification for family memorials. But a book on Thomas Wakley could never need ask pardon for being born. During four decades of our century his name was so prominent in connection with vital questions that the world will not let it die. With peculiar fitness is his belligerent memory kept green by his son and grandson, who still edit the *Lancet*, which he founded in 1823. It is well also that they have escaped suspicions of family partialities by securing for the writer of their memorial a man not of their kindred, and who betrays few symptoms of the *lues Boswelliana*. For those who have read the *Lancet* from its first numbers, no biographer was needed—they know Wakley altogether; but that class is now become as a gleaning of grapes when the vintage is done.

Wakley's bust was inscribed "Senator, Coroner, Medical Reformer." Here, as oftentimes elsewhere, the half is more than the whole; or, rather, one word would be better than four. "Reformer" alone would describe him altogether. He strove persistently and with imminent risk of bankruptcy to force his way into Parliament—and into the office of Coroner; but that solely as means to his chief end, Reform. The *Lancet*—which is his autobiography, and in which he still lives—though started in his twenty-eighth year, was a natural birth after long gestation of his ideas on reform. Ramifications from this nucleus comprise all his watchwords, work, and worry through forty years of intensest exertion. Broad-spreading, they yet never lost their original raciness. He was born with fists clenched, not like Dante's grasping miser, but for pugilistic fight; and he never forgot the Irish fighting maxim, "Wherever you see a head, hit it." Of such bulldog stuff effectual reformers have ever been made.

When this man Wakley came, the hour for him had fully come. English conservatism, always ready to cry, "Touch not one cobweb of St. Paul's for fear you shake the dome," intensified throughout the era of the French Revolution, at its collapse became preëminently triumphant and domineering. Positions and preferment in hospitals and medical schools, no less than in the army, navy, and church, were bought by money, and not by merit. Worst of all, this venality had become so intrenched that it was considered a finality. Accordingly, only a free lance would assail such an impregnable system; and Wakley, in his single-handed crusade, recalled Don Quixote riding forth on a spavined Rosinante to redress a world of grievances. His *Lancet*, nevertheless, was a success from the start. It was felt to be from the people and for the people; for the masses as against the classes, and for classes as against cliques and interior rings, self-perpetuating juntos.

Aside from his outside reformatory achievements, Wakley's career as a medical reformer is thus summarized:

"In 1823, when the *Lancet* was founded, there was no medical act either protecting the public or regulating the medical profession; nepotism was the one prevailing force at the metropolitan hospitals. Speaking of his colleagues, several of whom Wakley had proved unfit for their places in the Royal Hospital, Sir Astley Cooper, its head, had incautiously said, 'Mr. Travers was my apprentice; Mr. Green is my grandson; Mr. Tyrrell is my nephew; Mr. Key is my nephew [and known to be professors because nephews]; Mr. Morgan was my apprentice.' The horrible trade of the resurrectionist was thriving, [in 1828 it led to the coinage of the word 'burking'], and the provisions for medical education were disgraceful, and so it was a hotbed for noodles or knaves.

"Within forty years the hospitals of London had resolved that the first qualification which a member of their staffs must have was merit—no more hole-in-the-corner surgery; the Anatomy Act had abolished the resurrectionist; the Medical Act had met many of the crying grievances of the profession—a bill working against quacks and securing to skilled practitioners adequate compensation for testimony and other public services, etc.; and the London medical student was receiving a magnificent education. To obtain this education he had no longer to pay exorbitant fees; and to become in turn a teacher and hospital official himself he had to buy out no predecessor. In the fight for all these reforms Wakley led the way" (p. 439).

Publicity was his first remedy. Whatever of word or work is good in hospitals, he said, let it come to light for the public good; whatever is evil there, let it be exposed to safeguard the public. But whoso would understand the secret of Wakley's success must read the story of his life, which, though voluminous, cannot be abridged. His methods were never mean, and, as he contended, never ran counter to the spirit of the law. Yet he was usually convicted of transgressing the letter of the law in ten suits which were brought against him in the first decade of the *Lancet*. Such suits, however, proved the best of advertisements. Eight thousand pounds damages was demanded in the aggregate, but in one case only one farthing was granted, and about £150 in all. Thus, if judges were against Wakley, juries were on his side. So, too, were the people who paid his legal costs as a martyr by enthusiastic subscription; and not a little of it was paid by the medical rank and file, whom he had taught how to work out their own salvation from an oligarchy.

The Colonial Tavern: A Glimpse of New England Town Life in the Seventeenth and Eighteenth Centuries. By Edward Field. Providence: Preston & Rounds. 1897. Pp. ix, 296.

For an institution which filled so conspicuous a place in the lives of the men of colonial New England, the tavern has found few chroniclers or describers. Its services to its age were essentially transitory, and do not yield readily to historical treatment; but, as Mr. Field points out, the tavern was a factor in colonial life to a degree now difficult of realization; for, besides the primary use of entertainment for travellers (often indifferently performed), it was to the men of the time "their club, their board of trade, their 'exchanges,' and, indeed, to most of the colonists, it served as their newspaper." In the handsomely printed volume under review, Mr. Field has presented a gossipy, entertaining sketch of this servant of the social wants of early New England. The sale of beverages was a leading cause in the establishment of colonial taverns. The tap-room was their best furnished, as well as their most frequented room; and naturally, therefore, Mr. Field's book has a spirituous flavor. He brings before us Gov. Endicott regaling himself and his associates with "beare and cacks," and, guided by the light of many contemporary bills and account-books, we follow the potations of judges and of lower officers of justice, of militia gathered for training days, of selectmen, and of ordinary citizens, as they refreshed themselves with "sillabub," "cyder," flip, "bear," or the well-nigh universal rum. The author points out the attempts of the colonial governments to secure worthy keepers of these necessary

houses of entertainment, to regulate their sale of beverages, and to secure their good order; but, though it is doubtless true that in many instances throughout the colonial period the hosts were excellent as well as influential citizens, he also makes it clear that the strictures of Nathaniel Saltonstall and John Adams upon the New England taverns of the seventeenth and eighteenth centuries had substantial basis.

Mr. Field's book is not a history or a description of a particular tavern. Possibly it might be more instructive, though probably less entertaining, were it so. It is a composite sketch, the materials for which have been gathered from a wide range of sources of information.

BOOKS OF THE WEEK.

Adams, O. F. A Dictionary of American Authors. Boston: Houghton, Mifflin & Co. $3.00.
Aitken, G. A. Sheridan's "Rivals." [Temple Dramatists.] London: Dent; New York: Macmillan. 45c.
Altsheler, J. A. A Soldier of Manhattan, and his Adventures at Ticonderoga and Quebec. Appletons. $1.
Baldwin, C. S. The Expository Paragraph and Sentence. Longmans, Green & Co.
Balzac, H. de. Cousin Betty. London: Dent; New York: Macmillan. $1.50.
Beard, J. C. Curious Homes and their Tenants. Appletons. 65c.
Bennett, John. Master Skylark: A Story of Shakspere's Time. Century Co. $1.50.
Bigelow, Poultney. White Man's Africa. Harpers. $2.50.
Boothby, Guy. Shellah McLeod: A Heroine of the Black Blocks. F. A. Stokes Co. 75c.

HAVE JUST PUBLISHED:

GUYAU'S NON-RELIGION OF THE FUTURE.

8vo, $3.00.

Though based on vast learning and exhibiting profound thought, this book is "easy reading." It maintains that religion, so far as it is not an emotion, and so far as it is a mass of truth, is a symbolic accounting for truths discovered by our ancestors, and that this symbolic accounting is disappearing as science more and more occupies the field. The author indicates the future of society when science shall entirely occupy that portion of the field hitherto occupied by religion.

TAINE'S JOURNEYS THROUGH FRANCE.

Being Impressions of the Provinces. With seven illustrations. *Library Ed.* 12mo, $2 50.

"He takes his readers all over France, from Brittany, with its Catholic peasantry, to the Nord with its calm Flemish population . . . at Strassburg one can incidentally see how struck Taine was with the German temperament in Alsace. . . . To the student and the traveller the book is equally attractive . . . the impressions of the great philosopher of the people which he knew better than any of his countrymen."—*London Athenæum.*

THIS WEEK **EDWARD ARNOLD** PUBLISHES

BRITISH CENTRAL AFRICA By Sir HARRY H. JOHNSON, K.C.B., F.Z.S., F.R.G.S., F.R.S.G.S., H. M. Commissioner and Consul-General in British Central Africa. With six maps and two hundred and twenty illustrations, reproduced from the author's drawings or from photographs. Large 8vo. Price, $10 00.

"The most complete compendium of information relating to Central Africa ever crowded into a single volume."—*San Francisco Chronicle.*

"The best work that ever has been written on Central Africa."—*Chicago Inter Ocean.*

"The most valuable all-around book on its part of the Dark Continent yet published."—*Literary World.*

OLD ENGLISH GLASSES An Account of Glass Drinking-Vessels in England from Early Times to the End of the Eighteenth Century. With Introductory Notices of Continental Glasses during the same Period, Original Documents, etc. By ALBERT HARTSHORNE, Fellow of the Society of Antiquaries. Illustrated by nearly seventy full-page tinted or colored plates in the best style of lithography, and several hundred outline illustrations in the text. Super royal 4to. Price, $25 00.

A full prospectus, giving a complete account of the principal contents of this elaborate and magnificent work, which treats of a subject never before comprehensively undertaken for England, can be had, post free, on application.

RECOLLECTIONS OF AUBREY DE VERE In one volume, with portrait. 8vo $4 00.

It is not often that we have the privilege of publishing the reminiscences of a man who, a distinguished poet himself, can look back upon a personal acquaintance with Wordsworth. Mr Aubrey de Vere was born and bred in a literary atmosphere, and has known nearly all the greatest thinkers and writers of our time, not merely from casual meetings in society, but as friends enjoying a sympathetic communion of intellectual tastes. But Mr. de Vere's reminiscences are not confined to literary circles. As a Catholic he was on terms of intimacy with Cardinal Newman and Cardinal Manning. As an Irishman he witnessed many exciting political changes, and has numerous anecdotes and good stories to tell, pervaded with the racy humor characteristic of the country.

FIRE AND SWORD IN THE SUDAN By SLATIN PASHA. Translated and edited by Colonel WINGATE, C.B., Chief of the Intelligence Department, Egyptian Army. *A new, revised, and cheaper edition of this famous work.* Illustrated. Price, $2 00.

STYLE By WALTER RALEIGH, Professor of English Literature at University College, Liverpool; author of "Robert Louis Stevenson," etc. One volume. Crown 8vo. Price, $1 50.

ROME: THE MIDDLE OF THE WORLD By ALICE GARDNER, Lecturer in History at Newnham College; author of "Friends of the Olden Time," etc. With illustrations and map. Crown 8vo, $1 25.

THE BAD CHILD'S BOOK OF BEASTS By H. B. and B. B. Illustrated. One volume. 4to, $1.25.

THE INVISIBLE MAN By H. G. WELLS, author of "The Wonderful Visit," "The Wheels of Chance," "Thirty Strange Stories," etc. 12mo, cloth, $1.25.

EDWARD ARNOLD - PUBLISHER - 70 FIFTH AVENUE, NEW YORK

Announcement.

HISTORY
OF THE
Pequot War.

Edited, with Notes and an Introduction, by CHARLES ORR, Librarian of Case Library.

We have pleasure in announcing the publication, for the first time in one volume, of the four contemporary accounts of the Pequot War written by Captain John Mason, Captain John Underhill, P. Vincent, and Lieut. Lion Gardener. It has seemed to the publishers that the placing of accurate reprints of these important documents within the reach of a larger circle of readers would be appreciated by librarians and students of American history. An introduction by Mr. Charles Orr will set forth in detail the history of the narratives themselves, and all needed notes and data will be added. Readers will appreciate the clear-cut, bold-faced type. The book will be printed on antique deckle edged paper. It will be bound in full buckram, with gilt top. The edition will be limited, and each volume will be numbered. These will be assigned as subscriptions are received.

Price, prepaid, $2.50.

THE MASSARENES.
By OUIDA.

Ouida in her old age has written her best book.—*Evening Sun.*

DON'T FAIL TO READ IT.

The Nation.

NEW YORK, THURSDAY, OCTOBER 7, 1897.

The Week.

The Monetary Commission, of which ex-Senator Edmunds is chairman, has organized itself in three sub-committees and prepared a list of questions upon which it has solicited the opinions of business and professional men. The list has been sent especially to those who have given attention to the subject in hand and have acquired reputation as instructors therein. It was found impossible within the limited time, and with the means at the disposal of the Commission, to go about the country, hiring rooms and taking testimony like an investigating committee of Congress. Nor is it certain that the best results would be achieved by such means, since all the facts that are needed are within reach at Washington city and are presumably in possession of the members already. A roving commission would be likely to accumulate a great amount of lumber which it could not use, since everybody who has a plan of his own for straightening out the national finances would insist upon being heard orally. Few Americans are without such a plan, and in that fact lies the main difficulty. If questions of public finance were left solely to those who understand them, as is the case in most civilized countries, there would be no monetary question now and no need of a monetary commission. The present Commission does well, therefore, not to expose itself to personal contact with all the cranks who would like to give a public airing to their respective systems.

To the three sub-committees are assigned the three branches of the main subject, viz.: (1) metallic currency; (2) demand obligations of the Government; (3) banking. The first has to deal with the standard of value—to decide whether it shall be gold, or silver, or what is commonly called the double standard, but is really the alternate standard. This will necessarily include the question whether international bimetallism is practicable. The second deals with the outstanding paper greenbacks and Treasury notes of the United States, but not necessarily with the silver certificates—these being merely warehouse receipts for silver dollars held on storage by the Government. As the Government has promised to keep the dollars at par with gold, the certificates will be at par as long as the promise is fulfilled. The third sub-committee deals with bank issues only, but this question is the most complicated of all, and upon its right solution depends the success of the whole investigation.

The degradation in which Bryanism has involved the Democratic party of the nation could not be more vividly illustrated than by the contrast between the State convention in Massachusetts on Tuesday week, which nominated George Fred Williams for Governor, and the gathering of National Democrats which made William Everett a candidate for the same office on Thursday. Williams is a perfect type of the harum-scarum men who have come into control of the "regular" organization; and the noisy convention, which required the intervention of the police to save it from riot, fitly represented the lawless tendencies which Bryanism develops. On the other hand, the gathering of National Democrats included a large number of the men who helped William E. Russell to his three elections as Governor, and it nominated in William Everett a candidate for the same position who would adorn the office. Dr. Everett's address of acceptance and Moorfield Storey's speech as chairman of the convention fully vindicated the policy of those Democrats who cannot support Bryanism and who are equally opposed to modern Republicanism. The Republican State convention, which was sandwiched in between the other two, had nothing to do except to renominate the full ticket of State officials now in place. Gov. Wolcott has made an excellent executive, and his reëlection is, of course, assured. The platform on which he stands says the first good word for Mr. McKinley's attitude towards the civil-service law which has yet come from a Republican convention in any State, commending him for, "under severe pressure for place, not merely maintaining, but wisely extending, the merit system in our civil service." It was, however, unworthy of the gold sentiment of the Bay State to praise him also for "instituting an honest search for honest bimetallism, which an international agreement alone can effect," when there is not an intelligent man in the State but recognizes the humbug of the roving Wolcott-Stevenson-Paine commission.

The significance of the nomination of Gen. Tracy against Seth Low—in fact, the significance of the whole anti-Low movement in the Republican machine—lies in the fact that the corporations which hold city franchises of one kind and another do not want Seth Low, or any man of that stamp, for Mayor. These and other corporations furnish money to the Republican boss to pay for what they call "protection," and the boss distributes it among the politicians who control the nominating conventions. This makes a self-working, self-perpetuating machine, and is the greatest menace to free institutions that exists anywhere in the world to-day. The managers of these corporations say that they must be protected against "strikers" in the Legislature, and that they must buy protection where it can be had. The only question with them is whether it will cost more to buy off the strikers after the Legislature meets or before it is elected. They have tried both ways, and they find the latter cheaper, more reliable, and less troublesome. "Protection," it should be remarked, means anything that they feel the need of. As long as they and the boss are the only ones concerned in defining the word, it may mean whatever they please. If they simply want to be let alone, that is protection. If they want something they do not now possess, or have grabbed it without authority and have been caught red-handed, then protection has one meaning to the public, but another meaning to the grabbers. If they want something that they cannot grab, but which they think they ought to have, then protection has a still different meaning.

The "Henry George movement" took shape on Friday evening, when his acceptance of the nomination for Mayor was received by the Bryan Democrats in convention assembled. Whatever this movement may prove to be in point of numbers, every vote that it musters will be taken from the Tammany ticket. Not one will come from the Gold Democrats, not one from the Republicans, not one from the Citizens' Union. The movement will, therefore, be welcomed by all the other parties except, possibly, the Platt machine, which will find its chances of a post-election deal with Croker dwindling in proportion as Tammany's voting strength is drawn away by the George movement. In a four-cornered fight Mr. Low's chances are decidedly the best.

Few more amazing things have occurred in New York city politics than the sudden appearance of ex-Mayor Grace and Francis M. Scott as parties to a disreputable "deal" with Tammany Hall. We use the term disreputable advisedly, for, if the plan which they undertook had succeeded, it would have involved the delivery in a body of the local oganization of the National or Sound-Money Democracy to Tammany Hall as the price of a Supreme Court Judge nomination for Mr. Scott. That this was the proposition is not our assertion, but that of Mr. Scott's political associates, and it is also his own virtual admission. Its success was thwarted by the refusal of the honest and self-

respecting men in the organization to submit to such a base betrayal. If Tammany had nominated a decent municipal ticket, the proposal might have been defended on reasonable party grounds, but, coming as it does on the heels of Van Wyck's nomination, there is absolutely nothing to say for it. It will fail, we have no doubt, utterly and overwhelmingly, when the organization reassembles this week. The Brooklyn section of the National Democracy has taken the only course which, as reputable men, the members of the party everywhere can take—that is, to declare in favor of Mr. Low. What excuse is there for delay? We know what Tammany proposes and we know what Platt proposes. We know also what Mr. Low stands for. Either the National Democracy is in favor of honest government or it is against it, and the member of it who desires more time in which to make up his mind is seeking something quite other than nonpartisan government.

It is not the least of the encouraging elements in the situation in this city that Tammany will be virtually without advocacy of its cause in the local press, provided, of course, that the old Tammany *Sun* does not return to its first love when it shall be forced to the alternative of doing that or favoring honest government. No newspaper of any character or influence is in favor of the restoration of Croker and Sheehan, and this absence of support will be a serious loss in the campaign. In fact, we begin to see already how great a change has been wrought in public sentiment during the past few years in regard to municipal government. It is a much more difficult thing now than it ever was before for a newspaper or a politician of character or a citizen of repute to take sides with Tammany Hall, especially when Tammany Hall does not think it necessary to put on an appearance of decency. As the campaign advances, we shall have more evidence of this kind, for every day's discussion will make the issue clearer. It is not conceivable that there is in the enlarged city a majority of voters who are willing, when the choice is laid so plainly before them, to select the worst possible kind of government in place of the best.

The Pennsylvania courts continue to annul laws passed by the Legislature on the ground of their obvious unconstitutionality. The last act thus overthrown was a particularly flagrant attempt to tamper with the ballot law. It provided that the name of any candidate should not appear more than once upon the ballot to be voted at any election. The practical effect of such a restriction, as has already been illustrated, would be to prevent the Democrats of Philadelphia from putting their judicial candidates on their ticket because the Republicans had been before them in nominating the same men, and to debar the Democrats of Schuylkill from renominating and having on their ticket a judge of their own party because the Republicans had renominated him first. The absurdity and injustice of such a provision are obvious, and it is most fortunate that the courts find it as obnoxious to the Constitution as it is to common sense and fair play.

Senator Morrill begins the publication in the *Forum* of some "Notable Letters" which he has received from public men. He includes a few written on the tariff in 1860-'62 by Henry C. Carey. The tariff of those days was of pre-historic simplicity and moderation, compared with the tariff as we now know it, but even then one thing was needed which is needed now. "Nothing less than a dictator," wrote Mr. Carey in 1860, "is required for making a really good tariff. Would to Heaven you or I could fill the place for a week!" The tariff-dictators have greatly increased and multiplied since those idyllic days. Not all of them are in Congress—many do their dictating by telegraph, many on manufacturers' letter-heads, some from Wall Street. Latest developments, however, look as if even the dictator would have to yield to the thimble-rigger in tariff-making. Mr. Nimmo informs us that "as much true Americanism" was put into section 22 of the Dingley bill as is to be found "in all the other sections of the act combined." Yet this true Americanism was not put into the bill by a dictator, but by a midnight trick, a juggler legislator. Thus a new era in tariffs opens before us. We still need a dictator to make Congress vote, but we need also a head trickster to manipulate in secret the bill which Congress passes without knowing what it is.

The interest which moves the Government to let the decree of foreclosure in the Union Pacific Railroad case, which has been entered in the United States Circuit Court, stand undisturbed, lies in the fact that the Government needs the money. It makes a difference of nearly $46,000,000 in a pinch whether the decree of foreclosure is allowed to stand or whether an appeal is taken. Considering the dreadful botch, or series of botches, which Congress has made in its attempts to deal with this problem, it must be regarded as a piece of extraordinary good luck to the present Administration that its predecessor took the responsibility of coming to a settlement with the insolvent company. Instead of leaving matters to drift, thereby prolonging litigation and multiplying lawyers' fees and other expenses, and perhaps dismembering the property altogether, the terms of a decree of foreclosure were agreed upon, without attempting, however, to prevent the McKinley Administration from reopening the question by appealing to the Supreme Court if it should elect to do so. The matter was left in such shape that if Mr. McKinley's Attorney-General does nothing, the sum of $46,000,000 will presently drop into the Treasury, and the Government will be relieved of something which has been a nuisance to it for a great many years. Moreover, Congress will be relieved of a problem which it has shown itself incapable of solving, and the country will be spared a future torrent of words from Senator Morgan of Alabama.

If Neal Dow, who died on Saturday at a great age, had died thirty or thirty-five years ago, he might have departed with the comforting conviction that he had discovered the most effective way to repress the liquor traffic. For some time after "the Maine law" went into operation, it was possible for a sanguine believer in the policy of State prohibition to claim that legislation would cure the evil. For many years past, however, the veteran champion of this system has been forced to admit that the law was openly violated in the cities and large towns, and that each new Legislature must pass some more rigorous statute on the subject, only to find that this had failed as badly as its predecessors. The fact is now confessed by all candid residents that prohibition as a State measure is an utter failure, and that Maine would be far better off with a local-option system, under which towns opposed to the liquor traffic could forbid it, and those where it flourishes would impose a proper tax or license fee.

Advocates of Hawaiian annexation are much relieved to hear that the Sugar Trust has withdrawn its opposition to the treaty. Just how the thing has been arranged is not clear; but simultaneously in Honolulu and San Francisco it is announced that, somehow, Spreckels has been "squared," the island planters have been let into the "deal," and now all is clear sailing. If this is so, we shall expect the Senate to return at once to its high moral plane in discussing annexation. There was, for a time, a mercenary tinge to the debate, which must have pained Senators—there was much talk of the selfish opposition of beet-sugar growers and sugar refiners, and hints that there would be something substantial "in it" for certain Western Senators if they could beat the treaty. It is well if all this is now removed from the debate, and if it can again dwell upon the lofty morality of 3,000 aliens giving away the territory and sovereignty of 97,000 natives and residents. We are glad also to see that Senator Morgan is already in the field with the argument from high naval strategy. He knows now beyond a peradventure just how

the great circles and the radii cut the Hawaiian islands, for he has been there himself and had his foot right on the intersection.

Those who expect any great change in the Cuban situation from the accession of a Liberal ministry in Spain would do well to recall certain facts. One is that the present Cuban rebellion broke out under a Liberal Prime Minister—under Sagasta himself—and that he was doing his best to put it down with a hard hand when he fell from power in 1895. Another is that the "reforms" for Cuba again promised are not likely to appease discontent now, after two years' fighting, any more than they did when first offered by Sagasta three years ago, before there had been any fighting at all. Nothing showed more clearly the refractory nature of this insurrection than the fact that it broke out right on the heels of a vote by the Cortes of the largest measure of self-government ever offered by Spain to a colony. Since then even more extensive concessions in the line of home rule have been proposed by the Conservative Government, but have had no effect in diminishing the intensity or cruelty of the war in Cuba. That sore, evidently, cannot now be poulticed by a grant of autonomy. Furthermore, the change of political leadership in Spain cannot have altered the policy which Mr. McKinley and his advisers have determined upon in respect to Cuba. That policy, whatever it is, was deliberately adopted weeks ago, and Gen. Woodford's instructions were framed, not for this Prime Minister or the other, not for Conservative or Liberal government as such. They cannot be changed, as, indeed, it is announced from Washington that they will not be, by Sagasta's return to power.

While the new Spanish cabinet has not the names of some of the abler Liberals who it was supposed would have portfolios, it seems to be strong at the critical points. The new Minister for Foreign Affairs is not, it is true, a man known for commanding ability, but in any case Sagasta would have to be his own Minister for Foreign Affairs, as Cánovas was before him. But his Minister for the Colonies, Señor Moret, who will have to look after the vexing details of Cuban and Philippine affairs, is a Liberal of distinguished services and great influence. Both he and Sagasta have lately exposed themselves to the charge of being unpatriotic by severely criticising the policy of the Conservatives in foreign affairs, and by asserting that, despite the official reports, matters were going badly in Cuba and the Philippines. How truly do such utterances look to a change of policy, now that the Liberals are in power? Or did they simply indicate a wish to gain power? That the latter was the case, to a considerable extent at least, Spaniards themselves, when talking not for publication, will not deny. But the greatest difficulties in the way of a real change of policy respecting Cuba are, of course, the pride of the Spanish people, and the fatal inertia of the administrative and military machine.

A correspondent of the London *Times* makes some illuminating comments on Gov. Smith's proposal to use the permission given in the act of 1844 to the Bank of England to hold part of its reserve in silver. He shows from Sir Robert Peel's speeches when introducing the bill in 1844, and in amending it in 1848, that what Peel had in mind was the possibility at that time of liquidating obligations to France profitably in silver, owing to the fact that, under the French bimetallic law, silver was now and then overvalued in Paris. Peel wished the Bank of England, in short, to be able to get the benefit of this whenever it happened. Another reason Peel assigned was, that it might be well to have a stock of silver ready for shipment to the East, especially India. Of course, this is now totally unnecessary. Dealers stand ready at a hundred points to ship silver by telegraph to anybody who is foolish enough to want more of it. In fact, it would appear that Mr. Smith never took the trouble to look up the original reason of the permission to keep some silver in reserve. The conditions have totally changed. There is no profit to be made on the Continent by sending silver over. If anybody now sees silver coming to him instead of gold, he tries to make his escape, and the Bank's keeping it in reserve is about as necessary as keeping copper and iron would be.

The Greeks find the treaty concluded by the Powers, over their heads, fixing the amount of damages they have to pay for the fun of making war on the Turks, and creating foreign control of their finances, too much for their stomachs. On its submission to the Boulé, not for ratification, but for approval, confidence in the ministry was refused by a vote of 90 to 30, and Mr. Ralli's resignation followed. The treaty has made the situation a little better than it was, but not much. The money has still to be paid, and the Turk has agreed to leave Thessaly a month after he gets it. But if anything about the Turk can be learnt from experience, he will not leave Thessaly. He was bound far more solemnly than he is now—for he had to face Gladstone and Bismarck—in 1881 to give Thessaly to Greece, and he agreed to do so; but he did not do so until Gladstone got ready to use force. There is no Gladstone now, or Bismarck either, and if the Turk leaves Thessaly until somebody threatens or attacks him, he will do what he has never done before. Turkish territory has never been ceded except under the guns of a conqueror, and we greatly fear the Greeks may pay their money long before they get Thessaly. The Sultan is sure to find some excuse for not evacuating, and he will then wait to see whether he is going to be compelled; but who will undertake the job of compelling him? Jingoes have done much mischief in their day, but we doubt if anywhere else they have brought so much ruin on a community as they have brought on Greece. When the Powers met to consider the case of Crete, autonomy and the withdrawal of the Turkish garrison would doubtless have come before long, and then annexation to Greece would probably have soon followed, for nobody would have interfered to prevent it. But the Athenian Jingoes felt that, without a war, the national character would run down. So, like true Jingoes, without stopping for a moment to count the cost, they rushed into the field, and were broken like spray on the bayonets of the silent and resolute Ottomans. The crisis is pitiful and it is not over.

The prosecution of the Frankfort *Zeitung* for *lèse-majesté* in criticising the course of Emperor William is one of the most daring steps yet taken in the campaign for the suppression of free speech in Germany. It may be Bismarck's turn next, or that of his personal organ, the Hamburg *Nachrichten;* they have certainly made some dangerous suggestions lately that the Emperor was not absolutely all-wise and infallible. But it is gratifying to observe that the German people are not going to lie down tied hand and foot and gagged under the boot-heels of their swashbuckling Kaiser. The sharper the policy of repression, the more ominous the rumblings in all parts of the empire. All observers agree that political unrest in Germany is reaching a dangerous pitch. Prof. Rheinhold of the University of Berlin lately said with truth: "Things have come to such a pass that almost everybody in Germany belongs to the Opposition." All this is, of course, water for the mill of the Social Democrats. But the Liberals, too, are beginning to bestir themselves. They lately held a meeting at Nuremberg, where the liberalism of the North, led by Richter, struck hands with the discontented and almost revolting South Germans. The choice of Nuremberg for the place of gathering was significant, as was explained by one of the speakers, Herr Schmidt, a member of the Reichstag. He said:

"Nuremberg showed, some centuries ago, how vengeance is taken upon robber barons. In that good fight it was not the peasant but the lord who was crushed to powder. In the city hall, where lately banqueted a company of princes, one reads the inscription: 'Suprema lex salus populi.' Let us adopt this motto, for the council of Nuremberg, which caused it to be placed there, was itself also an authority by divine right!"

ANNEXATION, HAWAIIAN STYLE

We have received the full press report of the proceedings of the Hawaiian Senate on September 8 and 9 in ratifying the treaty of annexation. An impartial summary of the reports, speeches, and acts should be of interest to Americans, whose part in annexing remains to be played. It will at least help to dispel some illusions.

The Hawaiian Senate was summoned in extra session on September 8, for the sole and express purpose of ratifying the treaty. On September 6 a mass-meeting of anti-annexationists was held in Honolulu, and adopted resolutions, of which the more important were the following:

"Whereas, The native Hawaiians and a large majority of the people of the Hawaiian Islands have been in direct opposition to the annexation of Hawaii to the United States of America; and,

"Whereas, The native Hawaiians and a large majority of the people of these islands have fully believed in the independence and free autonomy of these islands and in the continuation of the government of Hawaii as of a free and independent country governed by and under its own laws; therefore, be it

"Resolved, We, who in mass-meeting assembled on the 6th day of September, A. D. 1897, at the city of Honolulu aforesaid, for ourselves, and for and on behalf of the people of Hawaii, as well as for the large majority of the people of the Hawaiian Islands, earnestly protest against the annexation of Hawaii to the United States of America in any form or shape."

The next day, September 7, a committee of fifteen, mostly natives, waited upon the President and cabinet to lay this protest before him. President Dole said he was sorry the resolutions had not been brought to him "several days ago," for then he "might have had more time to think about it." As it was, there was the Senate called to meet the next day, and the "time for consideration was very short." The Government was there "to look after the rights of the people," and it was certainly "right for the people to express their views." Then he shook hands cordially with the committee, and, after the Attorney-General had said how glad he was, too, to "have the people express their views," that part of annexation was safely and satisfactorily over.

The natives, nevertheless, lodged their protest with the Senate committee on foreign relations. But that body pointed out in a special report that the protest was evidently intended to prevent the President and cabinet from giving their approval to the treaty. The President and cabinet had, however, already approved the treaty, so that the protest was evidently not in order. Besides, the committee were "firmly and sincerely of the opinion that, in refusing to ratify the treaty, we would not be acting for the benefit more especially of the native Hawaiians." It was clear, therefore, that the natives were protesting "on the grounds of sentiment," and the only thing to do with their protest was to lay it on the table, which was done by unanimous vote.

Then came up the main report of the committee advocating ratification. This was argued for on the explicit ground that "the experiences of recent years have shown that, under the changed conditions which have resulted from circumstances beyond human control, good government cannot be permanently maintained in these islands without aid or assistance from without." Furthermore, the committee was convinced that from "the benefits received" and "to be received," the United States was the government to which "we must turn for assistance of every kind." It had been through the "agency of Anglo-Saxon civilization" that "progressive institutions" had been established in Hawaii, and it was "for the benefit of all" that these institutions should be maintained.

In the debate on the report, Senator Brown said that he had long been against annexation, but latterly had "grown satisfied that the salvation of the country and the people was to be obtained through annexation." Moreover, in addition to salvation, "prosperity" was to be obtained, and therefore he was prepared to vote for ratification "with pleasure." Senator McCandless followed, asserting that annexation was a "vital necessity," and that the Hawaiians opposed it "through mere sentiment," most strangely not giving a thought "to the prosperity which will be theirs." Senator Schmidt also said he favored the treaty, and then the debate was about to close; further remarks might have excited the fear in Speaker Reed's bosom that the Hawaiian Senate is a deliberative assembly. But an untimely interruption came from Minister Damon of the Finance Department. He rose and said:

"I understand that the adoption of the report of the committee carries with it all the views expressed therein, and these views naturally will be made public through the press of the United States. As a Hawaiian, one who has been identified with the government since its inception, I cannot agree with the committee in saying that good government cannot be maintained in the Hawaiian Islands unless we have support from without. In that expression we are tacitly admitting that we are unfit to become a part of the great republic across the sea. In view of the events of the past four years, in view of the support given the Government by men of all classes at the time when its safety was threatened, and in view of the fact that the Government of Hawaii has grown steadily stronger since its formation, and in view of the reports that have been sent abroad as to the strength of our position, I say that in the adoption of that clause of the report we would be stultifying ourselves. I believe it unwise to endorse that part of the report. It is one of the statements so often made in the opposition press, and the one which our friends have so strenuously denied in our behalf."

In a similar vein spoke the Attorney-General and the Minister of Foreign Affairs. But they were roughly put down by the impatient Senators. Senator Baldwin said: "Things have been getting worse here on the islands for the past few years, and that is what has made me an annexationist." Senator Brown remarked: "The Minister of Finance is wrong; no form of government, monarchical or republican, can thrive under that flag [the Hawaiian], and for that reason, I say, we want the United States to take us." There being "no other remarks," the motion to ratify was put and carried unanimously.

The situation was described the next day by the *Hawaiian Gazette*, the faithful organ of the missionaries and of annexation, in language which we commend to the attention of our ardent annexationists. Of "the native," the *Gazette* says that he "looks with simple, childlike thought, dazed and perhaps wondering at it [annexation], as if it were a strange, mysterious act." The part-Hawaiians, "innocent victims of the contact, almost criminal, of the stronger and weaker races," naturally "take a wider vision." They hear "the rough voices of the aggressive race coming over the sea"; this makes them "pathetic." The Chinese look upon annexation as bringing them "further humiliations." The Japanese see in it something which will "cripple their commerce, and prevent their freedom of travel and residence." "The intelligent Portuguese" think annexation will give them "a large share in the local government." The "few remaining missionaries see in it the wheels of the juggernaut of modern progress passing over the little autonomy which they labored to create and preserve." The only thoroughly satisfied element of the population is, according to the *Gazette*, "the recent Anglo-Saxon"; and he is satisfied because he sees in annexation "a firmer footing for the god of the world, gold," and because he beholds "a writing over every mountain and valley side, 'Good Business Chances Here.'"

The only comment we have to make at present on this story of annexation, Hawaiian style, is that this "republic" which now offers itself to the United States, "unfit" and "stultified" in the language of its own Minister of Finance, is, on the face of it, a sham republic, a confessed fraud and failure. Less than 3,000 of the "recent Anglo-Saxon" are pretending to have a right, and are brutally exercising it, to dispose of the lives and fortunes of 25,000 Japanese, 24,000 Chinese, 15,000 Portuguese, 40,000 Hawaiians. And they are doing it under the proud device, "Good Business Chances Here"!

MR. NORTH ON THE TARIFF.

A very remarkable explanation and defence of the Dingley tariff law is that which is published by Mr. S. N. D. North, Secretary of the Wool Manufacturers' Association. Mr. North served as Secretary of the Senate committee on finance during the preparation of the Senate bill in the last session of Congress, so that his views and utterances

may be regarded as semi-official and as expressing the general sense of the committee. Further, as a good and even extreme protectionist, Mr. North may be looked to for a defence of the protective features of the new tariff law, a task for which his experience with the committee eminently fitted him. We cannot do better than to summarize his article, generally using his own words.

The feature of the Dingley tariff which chiefly distinguishes it from prior tariffs is its "especial care" for the crude products. Hence the duties on foods, fibres, minerals, crude substances of any and every sort. The farmer has received a good share of the good things. "There was nothing asked in behalf of the farmer, in the way of increased rates, which was not given to him." And after reading Mr. North's article we conclude that nothing in the form of protection asked by the manufacturers was denied. Everywhere the demands met with favor, and duties of prohibition were granted in many cases. "The silk schedule is particularly severe in its application to the very light fabrics of Japanese origin which have recently so troubled our domestic manufacturers. They will have no trouble from them hereafter."

In the cotton schedule there was a contest over the duties on yarns, the manufacturers of finer fabrics claiming that they could not obtain the necessary yarns in this country. They wished moderate duties on the higher counts; but "the spinners insisted that they can and will make all numbers required; and they finally had their way about it." So in the textile fibre schedule a like difference of opinion arose. The manufacturers of linens, who are in a position to know, declare that there can be found in this country no flax suitable for spinning the yarns required for the linen-thread industry. On the other hand, individuals and associations in great numbers "renewed their promises of 1890 that they can and will, under adequate protection, raise as fine a fibre as comes from any part of the world." The higher duties on the raw fibres would have led to increased rates on manufactured linens; but a further increase was made on the plea that the "extraordinary increase of cotton mills in the South has resulted in a production of cotton cloth that exceeds the consuming powers of the people"; and, to save themselves, a few New England mills were experimenting upon linens. Hence the duties on fine linen yarns were lowered and those on linen cloths were raised—a different policy from that pursued in cotton yarns. Mr. North doubts whether adequate results will follow. Linen mills will not be built, but cotton looms will be superseded by linen looms. But "it is a well-known fact that even in the countries where the linen manufacture has flourished for centuries, it shows a steady tendency to decline. Linen feels the stress of the closer and closer competition of cotton, just as the wool manufacturer feels it." As to burlaps, Mr. North makes a curious admission. "If Dundee can make burlaps in competition with Calcutta, and without any duty, the United States can make them in competition with both, under a protection sufficient to cover the difference in labor-cost." Mr. North might explain why his doctrine of labor-cost works only in regard to the United States, and not in the competition of Dundee with Calcutta. The duties on ramie fabrics are "a recognition of the birth of a new textile industry"—somewhat prematurely, it may be thought.

Naturally, it is with the woollen schedule that Mr. North is most explicit. The manufacturers, he states, asked less, and have received less, protection from Congress in comparison with the other industries. They were in favor of free wool, and had derived great and peculiar advantages from the repeal of the wool duties by the law of 1894; but they were overborne by the demands of wool-growing States. In fact, the extravagant expectations of this wool-growing interest to exact prohibitory duties on foreign wools were defeated only by the belief that such duties would "shipwreck" the cause of protection. As it is, the wool-growers have secured higher all-round rates than had been given them by either house, acting separately. With a tinge of sarcasm, Mr. North adds: "It is due to their special representatives in both houses of Congress to say that the interests of the wool-growers were cared for with consummate ability from first to last."

As to the rates on raw wools, they are "relatively higher than those of the McKinley law at the time of its passage, and higher, in their ad-valorem equivalents, than under any previous tariff in our history." The carpet-manufacturers especially have made a fortunate escape, as their interests at one time were seriously threatened through the unreasonable demands of the wool-growers. Can it be that the eminent leader of the wool-growers, Judge Lawrence, is intended when Mr. North speaks of the "constant presence in Washington of professional mischief-makers, seeking to curry favor with wool-growers for business purposes, who devoted their time to the dissemination of misleading and false information on this subject"?

Nor was it by rates of duty only that the manufacturers claim to have suffered. Since 1867 the classification of wools has been by "blood" and not by use. Now the symmetry of that classification has been destroyed, and some wools, without a trace of merino blood, have been transferred from the carpet to the clothing class. This was done to appease the claims of the growers that carpet-wools were used in higher manufactures, to the exclusion of the better and more expensive grades. The duties on waste, shoddy, rags, and flocks "were all fixed in the interests of the wool-growers, and the manufacturers had nothing whatever to say about them." Yet these many changes have produced a scheme of duties satisfactory neither to wool-growers nor to manufacturers. The latter are disposed to make the best of the situation, and look forward hopefully to the future. It is not stated whether carpet-wools will be raised in this country under the new rates—a point of some importance. In the past they have not, and it is hardly possible the sheep will change their coats to conform to tariff rates.

It would be interesting to follow Mr. North in his detailed study of the woollen schedule, but too much space would be required to make the matter intelligible. This may be said, that in few cases have the consumer's interests been considered, and in nearly every item the highest attainable rate of duty has been imposed. If the wool-grower seems insatiate, the wool-manufacturer has been amply compensated for the new wool duties, and does not appear in any more moderate light than the grower. It is with complacency that Mr. North views the results, and expresses his belief that "it will be found in practical operation to be the most perfect woollen schedule which has ever been enacted." When to high rates of duty is added a provision authorizing appraisers to take the market value of the goods in the United States as a basis of value—the home as distinguished from the foreign value—it does seem as if the manufacturer had reason to be satisfied.

It is another example of the ingratitude of republics that, after this defence of the wool schedule of the Dingley tariff, Judge Lawrence, the First Consul of the Ohio wool-growers, publishes a letter protesting against the appointment of Mr. North as superintendent of the census, and saying, too, that "President McKinley cannot afford to make an appointment so objectionable to wool-growers." This means that, if he does appoint Mr. North, the wool-growers will knife him on the first opportunity.

THE IOWA CAMPAIGN.

If a modern Diogenes were seeking a man among the Republican leaders the present year, he would have a troublesome search, but his diligence would not be wholly in vain. One such would be found in the person of Mr. Leslie M. Shaw, Republican candidate for Governor of Iowa. This gentleman has declared himself for the gold standard without any ifs or buts. Not only so, but he has made the most effective speech for the gold standard that has been made this year in this or any other

country. We can recall nothing in the literature of the subject more convincing than his speech at Red Oak on Saturday week. In the discussions of the money question which have been so profuse and diffuse during the past quarter of a century, there has been an intense craving for simplicity and clearness of exposition, and the most successful writers, speakers, and pamphleteers have been those who have succeeded best in bringing these subjects to the comprehension of untrained minds. In this endeavor Mr. Shaw has succeeded so well that we must conclude not only that he has a perfect understanding of the rather abstruse subject in hand, but that his reasoning powers in general are of a high order. We shall give our readers a few examples of Mr. Shaw's quality.

That one of the hardest things to define is a standard of value we have seen by many ineffectual attempts to define it. Perhaps the most dismal of all was that of the Supreme Court of the United States in the legal-tender cases, where we were told by the mouth of Mr. Justice Strong that there is no such thing as a standard of value, but that "value is an ideal thing." Mr. Shaw thinks differently, and he puts his opinion in the condensed paragraph which follows:

"What is meant by a money standard? As we have seen, each standard coin is worth the material of which it is composed. By gold standard is simply meant that the value of our dollar is determined in a definite amount of gold, and not in a certain amount of silver, or copper, or brass, or iron, or lead. There is no reason why a United States dollar has its present purchasing power except the fact that the standard dollar contains a fixed amount of gold. Had the framers of our monetary system seen fit to put 12.9 grains of standard gold in a dollar, the purchasing price would be one-half of what it is now. The word dollar divorced from its associations means nothing. We come to know its value when we associate it with its purchasing power, and its purchasing power is determined by the value of the material of which the standard dollar is composed."

Mr. Shaw had previously referred to the silver dollars and shown how they were kept at par by the limitation of their quantity and by the action of the Treasury, paying a high compliment to the ex-Secretary, Mr. Carlisle, for his public declaration that he would redeem the silver dollar in gold if it should be necessary in order to prevent its depreciation. In connection with this, Mr. Shaw came perilously near to the line of Mugwumpery, saying that he had no sympathy with that school of politics which denounces everything that the opposition does, whether good or bad, and supports everything that its own party does, whatever its evil effect.

The assertion often made in our political campaigns, that there is not gold enough to do the world's business, finds an equally brief, complete, and convincing answer in Mr. Shaw's speech, to wit:

"How much gold is needed to do our business? Just enough for convenience in measuring and determining the value of our currency; enough for redemption purposes and enough to accommodate those who desire to hoard it. How many fifty-pound standard weights, such as is used on the large class of scales for weighing stock and produce, is it necessary to have? They are used to balance the scales and to keep the pound and ton from fluctuating. Just enough of these weights are essential to accommodate the business. Your cattle will weigh no more if the weighmaster have two or a dozen of these standard weights than if he has one. It is essential that he have one, and that this one is of the same weight as those in the market where you bought your cattle. If this weight fluctuates you will not be safe in buying cattle in one town and selling them in another."

Equally clear and cogent was Mr. Shaw's refutation of the oft-repeated charge that the banks have an interest in making money scarce in order to oppress debtors and obtain high rates of interest. He showed that exactly the opposite condition was essential to the prosperity of a bank, because plenty of money implies large deposits. If its profits depended on its own capital, it could make more money for itself by not being a bank. A bank is obliged to keep 25 per cent. of its capital unused in its own vaults, whereas an ordinary moneylender can make all of his capital earn interest all the time. In order to be on as good a footing as a private moneylender a bank must have deposits—the more the better. But deposits always shrink when money is scarce. The shrinking of the deposits is the very thing that makes a tight money market. Therefore, the banks have no motive to make money scarce, even if they could do so.

In his broad view of the philosophy of life Mr. Shaw is equally strong and sincere. Compare, for instance, the following paragraph with the blatherings of Bryan, Watson, and Coxey:

"All that any party, or any standard, or any legislation can do is to see to it that every man has an open field and a fair fight. It cannot exempt him from the fight. Fight he must, and the best that the Government can do is to see to it that no one strikes below the belt. From the beginning of time to the present and to the end of time those who earn and save will have, and those who refuse to earn or fail to save will come in empty. . . . We look at our child in the cradle, or our boy coming to manhood, and tremble at the consciousness that he must go into this relentless conflict, where every man is selfish, and win or lose, on his own merits. To the utmost of its ability let the Government protect him and see that he has fair play. While we do all this, we must demand that he enter the ring, put on the gloves, and stand up like a man."

In such wholesome ideas as these, when they find expression in the mouths of candidates for high office, rests the security for free institutions. We welcome Mr. Shaw's speech as a sign of courage in a State where that quality is much needed.

BLACKSTONE.—I.

To the ordinary reader old books are unknown books, and he may, if he choose, find in them the charm of novelty. It is at any rate worth while occasionally to take up some work which has instructed or charmed our forefathers, and, reading it in the free-and-easy spirit which we apply to the publications of to-day, try to estimate its real worth. Of few books does this remark hold more true than of 'Blackstone's Commentaries.' They are known by name to every one; they have supplied to successive generations the current truisms or platitudes on the subject of the English Constitution; portions of the 'Commentaries' are read by every student of English law, and 'Blackstone's Commentaries' constitute the one law-book which has become a part of the literature of the English people. Yet it is common knowledge that the Commentator does not now command anything like the veneration which at one time surrounded him. It is an ordinary and in one sense a true saying that we need a new 'Commentaries on the Law of England'; and though you will with difficulty find a modern work on the history or the theory of English law in which Blackstone's name is not mentioned, his most ardent admirers must confess that the references to the 'Commentaries' more often take the form of criticism than of eulogy, and that of recent times jurists and historians are apt to treat Blackstone mainly as the propounder of legal fallacies or the perverter of legal history. But the criticism or detraction of to-day is still overbalanced by the appreciation of a former generation. The admiration of Mansfield, of Burke, and of Gibbon cannot go for nothing, and none but the rashest of critics will venture to disdain an author who is never mentioned otherwise than with profound respect by Story, and whose work, it is said, first aroused the enthusiasm for law in the mind of Kent. It is, then, no waste of time if we attempt to fix Blackstone's true position in the English world of letters.

How does it happen that Blackstone is now depreciated, not to say underrated?

A partial answer to this inquiry is found in the statement, which is true though paradoxical, that the real Blackstone is rarely read even by professional lawyers. The practical utility of his work, and the reputation which it at once achieved, have detracted from Blackstone's permanent fame. The original book, which derives half its charm from its literary perfection, has of necessity become obsolete as a statement of existing law. Hence it has been edited and re-edited, and altered and realtered, till it has been, as a work of letters, completely spoiled, and the students who think themselves to be reading Blackstone are in reality reading a treatise about as like the original 'Commentaries' as would be an edition of Gibbon's 'Decline and Fall of the Roman Empire' which should have been not only edited but to a great extent rewritten, first by Milman and then by Merivale, and then should have been overloaded with an infinity of notes added by authors of very inferior quality. We may, indeed, say that, in England at any rate, Blackstone's 'Commentaries' have been transformed into Stephen's 'Commentaries,' and that this transformation has been a public calamity; it has spoiled the work of two men of equal but of very dissimilar genius. Serjeant Stephen did not possess the literary gifts of Blackstone, the Commentator was deficient in the lucid precision and the logical acumen of his editor. The literary beauty of the 'Commentaries' vanished under the attempt to import into them a precise statement of the whole law of England which Blackstone never in-

tended to provide for the students to whom he addressed his lectures, while the time and power spent by Serjeant Stephen on the rewriting of the celebrated 'Commentaries' might, if more happily employed, have supplied us with such a logical analysis of the law of England as could have been produced by the author of the celebrated 'Treatise on Pleading,' and could, in his day at least, have been produced by no one else. The first step to be taken by any one who wishes to appreciate Blackstone's genius is to read the 'Commentaries' as Blackstone wrote them, and, if possible, to read them unencumbered even by the notes of subsequent editors.

But even when the 'Commentaries' are studied in their original shape, it will soon become apparent to a candid reader that Blackstone's fame has suffered from his own defects or peculiarities. He is not an original thinker; his constitutional dogmas, for example, are taken from Locke and Montesquieu, and are not improved in the borrowing. He is not a subtle logician. His knowledge of Roman Law, to which he not infrequently refers, is superficial and not particularly accurate. He is a well-informed and competent English lawyer, but he does not rank among the writers, such as Coke, who may be cited as "authorities"; he is said not to have raised his reputation by his decisions as a judge, and since his time there have lived many lawyers and judges who have surpassed him both in legal learning and in logical acumen. His style, which excited the admiration of his contemporaries, and which would have been commended by Johnson, does not happen to suit the taste of to-day, though it must be left an open question whether it be Blackstone's style or modern taste which is at fault. His general way, moreover, of looking at the world, his dignified and complacent optimism, is strangely opposed to the sentiment no less of modern democrats than of modern conservatives. We are divided from Blackstone by the gulf of the French Revolution; and whoever wishes to measure the width and nature of this division cannot better attain his object than by investigating the difference between the tone of Blackstone and the tone of every modern writer on politics or sociology.

The main cause, however, of the comparative discredit into which the 'Commentaries' have fallen is that Blackstone, from his very celebrity no less than from some of his defects, became the object of attack to two different and opposed schools of thinkers.

To the Benthamites, Blackstone was from the first an object of detestation. Bentham, indeed, heard the lectures which formed the bases of the 'Commentaries,' but he must soon have detected that he was opposed to his teacher both in his methods and in his aims. The celebrated 'Fragment on Government' is the boldest and most trenchant critique ever published by a young man on the doctrines propounded by a writer of the highest reputation, which were accepted as profound truths by the educated world of the day; and though the 'Fragment on Government' is itself open to criticism, it contains one of those attacks which were completely successful. It is easy enough to see that Bentham is by no means a fair critic, and that a logician might perhaps devise a defence for some of Blackstone's positions; but it is impossible to read the 'Fragment' without arriving at two conclusions: first, that Blackstone is a lax, not to say an inaccurate, thinker, and next that in Bentham he has met with a controversialist of tenfold his own power. Few are the men who would not have come off second-best in a controversy with Jeremy Bentham when in the full vigor of his youth, but assuredly no writer of real talent was likely to suffer a more complete defeat than did Blackstone at the hands of such an antagonist.

It was not, however, the logical weakness of Blackstone's positions which impelled Bentham to assault them. What aroused his indignation was the Commentator's peculiar form of optimism. Bentham was a born reformer. Utilitarianism was to him a living and inspiring faith. From youth to old age he labored at the removal of actual and palpable abuses. He was much more than a mere denouncer of wrong; he was a patentee of devices for the improvement of society. But before his reforms could be adopted it was necessary to convince the world of the need for reformation. Now Blackstone, though a man of benevolence, was by nature and conviction an apologist for and admirer of things as they were. With complete sincerity he held that the British Constitution was not only by far the best of existing polities, but also as nearly perfect as could be any commonwealth. His work is from beginning to end either a eulogy or an apology. He grants that the Constitution or the law may have slight flaws, but they are flaws which, in the eyes of an adorer, either approach to or are the necessary price of beauties. He mitigates even the defects which his judgment disapproves. He has something to say in favor of the scheme which excludes brothers of half blood from inheriting from one another. He dislikes the *peine forte et dure*, but he contrives to make it appear an abuse of little consequence. The ruffian who knocks down his wife is, it is hinted by Blackstone, a man who has an excessive fondness for the Common and a jealous suspicion of the Civil Law. Here we may suspect a vein of grim pleasantry and recall the legend that the 'Commentaries' were always written over a bottle of port. But, however this may be, their author stood right in Bentham's path. "Blackstonism," if one may coin the word, was the sworn foe of "Benthamism," and the whole tribe of Benthamites strove, not in vain, to discredit a writer who embodied all the prejudices which delayed the triumph of the Utilitarian creed.

Utilitarianism has done its work—which, be it added, was both a necessary and a noble work—and Benthamism has ceased to be a living force. Its influence has, for the time at least, been destroyed by enthusiasts for the historical method. But the decline in the authority of Benthamism has not revived the fame of Blackstone, for the historical school of thinkers have looked unfavorably upon Blackstone. They have done very scanty justice to the skill with which he has blended the history of law with the exposition of legal doctrines, and they have noted with extreme severity historical misconceptions which were rather the common mistakes of Blackstone's generation than his own peculiar errors. It cannot, of course, be disputed that, if tested by a high standard, he will be often found deficient in historical knowledge or insight. He is deeply impressed with the close connection between English institutions and feudalism; but feudalism is to him a mere name for barbarism, just as Romanism and the authority of the Pope are in his eyes nothing but names for superstition and priestly arrogance. His historical views or conjectures are often at fault. He knows that the landholders of England swore allegiance to William at his great court at Salisbury, but he misunderstands the whole effect of the ceremony, and uses language which suggests that the Conqueror introduced the feudal system into England at the very moment when William prevented the full development in England of the feudal system.

Blackstone, again, has studied with care the history of copyholds, but the Blackstonian theory of the origin of the manor has been pronounced by later investigators to be untenable; and all that can be said in its defence is, that the rival theories which have been propounded in more recent times are also open to grave objections. He is convinced that the English Constitution, as it existed in his own time, is the result of "a gradual restoration of that ancient constitution, whereof our Saxon forefathers had been unjustly deprived, partly by the policy, and partly by the force, of the Norman." No view of English progress could, it must be admitted, be more opposed to the facts of history; but before we condemn Blackstone too severely, we ought to remember that this faith in what has been termed retrogressive progress has been cherished as a pious belief by one of the most distinguished of English historians. Under the influence of Montesquieu he is too apt to look upon the English Constitution as a fabric designed and built up by the wisdom of our ancestors. It is here we touch upon Blackstone's weakness. He is a true son of the eighteenth century. He judges the past by the sentiments or principles of his own day, and exhibits an unhistorical attitude of mind. Hence he in no way anticipates the reaction in favor of mediæval institutions and mediæval modes of thought. He therefore never alludes to the Middle Ages without using language which grates upon the feelings of writers imbued with the sentimental mediævalism of the nineteenth century. They are far less offended by Blackstone's definite historical errors, many of which are, after all, very venial, than by his general tone of mind.

He was an old Whig, or, in other words, a strong Conservative of the time of George the Third. He was detestable to Bentham because he did not share the enthusiasm for reform which was the religion of the eighteenth century. He can hardly obtain toleration from the modern devotees of the historical method because he was imbued with the principles and the prejudices of the eighteenth and not of the nineteenth century. Whoever will weigh carefully the words in which Blackstone concludes his 'Commentaries,' will understand why it is that he has never received full justice at the hands of the reformers of his own time or of the historians of to-day:

"Of a constitution," he writes, "so wisely contrived, so strongly raised, and so highly finished, it is hard to speak with that praise which is justly and severely its due; the thorough and attentive contemplation of it will furnish its best panegyric. It hath been the endeavour of these commentaries, however the execution may have succeeded, to examine its solid foundations, to mark out its extensive plan, to explain the use and distribution of its parts, and, from the harmonious concurrence of those several

parts, to demonstrate the elegant proportion of the whole. We have taken occasion to admire at every turn the noble monuments of ancient simplicity, and the more curious refinements of modern art. Nor have its faults been concealed from view—for faults it has—lest we should be tempted to think it of more than human structure; defects, chiefly arising from the decays of time, or the rage of unskilful improvements in later ages. To sustain, to repair, to beautify this noble pile, is a charge entrusted principally to the nobility, and such gentlemen of the kingdom as are delegated by their country to Parliament. The protection of THE LIBERTY OF BRITAIN is a duty which they owe to themselves, who enjoy it; to their ancestors, who transmitted it down; and to their posterity, who will claim at their hands this, the best birthright and noblest inheritance of mankind."

YELLOWSTONE PARK IN 1897.

September, 1897.

Capt. Anderson, who was Superintendent of the Yellowstone Park from 1891 to 1896, pointed out in his last report to the Secretary of the Interior that the total number of persons who visited the Park in 1895 was only 2,588. He attributed this to financial depression, the tendency of Americans to spend their summers in Europe, their general ignorance as to the wonders of their own country, and also, in part, to the long railroad journeys necessary to reach them. The present Superintendent, Col. Young, will be able to note a great improvement in the tourist business for 1897. About 9,000 sightseers were taken through the Park this season. Many of these, it is true, were Christian Endeavorers, and others who availed themselves of the cheap rates offered all travellers to the Pacific Coast and back in July and August. There were so many of these that at one time the agents had to stop selling Park tickets for ten days because the stages and hotels had all they could possibly attend to. Yet the officials believe that this Pacific Coast excursion does not account for all the increase, and that the travel through the Park will continue to be much larger than heretofore. Having spent the last three weeks in the Park, long after all the Christian Endeavorers and others had passed through it, I have come to the same conclusion. Favored by fine weather, the travel remained large to the last days, many of the belated tourists being eminent Englishmen—among them Lord Lister and Lord Kelvin (Sir William Thomson)—from the meeting of the British Association at Toronto; and to judge by their comments, they will help to popularize our wonderland abroad.

No one desires to make a Coney Island of the Yellowstone Park, yet there is no reason why it should not be seen by 50,000 or even 100,000 tourists every summer. Capt. Anderson overlooked the main reason why the Park travel has increased so slowly; namely, the disposition of the transportation and hotel companies to arrange matters to suit themselves instead of to suit the tourists. The situation has been, and is to this day, positively amazing, not to say outrageous. When an educated person hears the name Yellowstone, what image arises in his mind? The picture of a geyser, in every case. True, the Park is famed also for its beautifully colored Grand Cañon, its picturesque lake at an altitude of 7,741 feet, its extensive forests, high mountains, and numerous trout-brooks; but there are trout-brooks as good, forests much finer, mountains much grander, lakes quite as picturesque, elsewhere, while the Yellowstone Cañon, though unique in its coloring, has only one-third the depth of the Grand Cañon of the Colorado in Arizona, and is correspondingly inferior in sublimity. But in its geysers the Park has an attraction in which only two countries in the whole world—Iceland and New Zealand—compete with it, without equalling it. It is to see these geysers in particular that ninety-nine out of a hundred tourists visit the Park; yet, by the present arrangement, they are exceptionally lucky if they catch a glimpse of the finest of them, and many go home in consequence disappointed of their main object. Let me explain how the matter is managed at present.

In the Upper Basin there are about thirty superb geysers, all differing from each other in appearance and the manner of their eruption. It is to see these geysers that the tourists—supposing they live at the East—have come two thousand miles, have expended hundreds of dollars since leaving home, and have undertaken a five days' dusty stage ride. And having got there, what arrangements do they find for seeing them? A large hotel, with comfortable rooms, overlooking the whole Basin so that they can watch for an eruption and hasten down to see it close by—a hotel where they can spend a day or two, or a week, so as to make sure of enjoying the wonderful phenomena they have come so far to see? That is what every uninformed person would *expect* to find there. But what is there in reality? A small wooden shanty in which a poor lunch is served, while as for rooms, not one is to be had for love or money. But where do the tourists stay while they remain to admire the geysers? Stay? Foolish question! They do not stay at all. The stage gives them four or five hours, during which a hurried guide takes them hurriedly across the Basin, and if some of the geysers happen to play while they are being "done," the tourists are lucky. And after this short visit, part of which is given up to the aforesaid lunch, the tourists are hurried—on, of course? Oh no! Back ten miles to the Fountain Hotel, and next morning they have to get up at six and for the third time traverse those ten miles between the Lower and Upper Basins! And all this time the geysers they came so far to see may be playing merrily, unseen.

To be perfectly fair, it must be said that the transportation company is not to blame for this state of affairs. Indeed, it would be only too glad to dispense with two of the three trips between the two Basins. The hotel company is the culprit. A number of years ago it had a building at the Upper Basin, which was burnt down as soon as completed and has not been rebuilt. Why? Heaven only knows. The managers say their business has not been sufficiently profitable to allow the rebuilding of that hotel. But why were funds available for the fine buildings at the Lake and the Fountain—the Fountain, in particular, which, if things were properly arranged, would be a mere lunch station? Why not tear down the Fountain Hotel and rebuild it at the Upper Basin? Something must be done soon. Congress ought to compel the company to build that hotel. It would be the company's gain as well as the tourists'. At present many of the latter are disappointed, declare that the geysers (which they have not seen) are a fraud and a delusion, and on returning advise their friends to avoid the Park. I heard not a few comments of that sort during the three days I spent at the Upper Basin. Until the hotel company desists from its penny-wise policy, the public should patronize the opposition company. I did not know until I arrived at Livingston that there has been, for two years, a new way of traversing the Park, by the same route, but upon an entirely different and much more rational plan. Mr. Wylie of Bozeman has secured permission to erect permanent camps at various places in the Park, and to take tourists through on his own wagons. He has large tents, divided into compartments and equipped with stoves for cold nights. The food is plain but good, in the "home-made" style. Mr. Wylie charges $5 a day for transportation, lodging, and meals, and instead of rushing tourists through, as the stages do, in five days and a half, he gives seven days to the trip, allowing two nights at the Upper Basin and two at the Grand Cañon. Tourists who prefer the comforts of a hotel may still make use of Wylie's camp at the Upper Basin, where they may stay as long as they please, taking their chances of being carried on to the next station by the other company, though these chances are not as good as they might be.

The provoking capriciousness of the geysers may be inferred from the fact that the Grand, as the corporal on guard informed me, had not played from July 2 to September 2, whereas in the week we were there it played four or five times. It seems, unfortunately, that the biggest ones (always excepting Old Faithful) are becoming more and more capricious and indolent. The prevalent theory is that they have been injured by being secretly "soaped"—that is, by having soap thrown into the cones to bring on an eruption. This soaping is strictly forbidden, and rightly so, as it cannot be well to have any substance thrown into a geyser. I have, however, noticed a curious circumstance, which seems to have escaped the attention of the experts, as a more plausible explanation of the apparent misbehavior of the big geysers. Right by the side of the Bee Hive there is a new geyser, only a few years old. It is called the Cascade, because its waters overflow directly into the river, forming a cascade in their descent over the bank. It is a pretty sight, but it does not atone for the quiescent Bee Hive from which, I believe, it takes away its ammunition—its steam and water—by its eruptions, which occur every twenty minutes. In the same way, the Splendid has ceased to play since the formation, by its side, of the Daisy, which plays every two hours. The Giant, Grant, and others seem to be similarly drained by recent formations adjoining them and acting as safety-valves. Geologists use centuries as yard-sticks where we use years, and they discountenance the idea that the Yellowstone geysers will cease to gush in the not very distant future. Mr. Arnold Hague could find no diminution in the intensity of their action since they have been subject to careful observation. I have myself, however, noted some changes at Mammoth Hot Springs and the Upper Basin in the interval of ten years since last I was there; and in an apparently sober description of that basin written in 1842 ('Life in the Rocky Mountains') occur expressions like "loud explosions and sulphurous vapors," "tremendous noises," "hollow, unearthly rumbling under the rock on which I stood," which indicate

more violent action half a century ago than can now be witnessed.

If the geysers are decreasing in grandeur, there is the more reason why arrangements should be made at once to have these wonders as accessible as possible. A steam railway would be an atrocity: it would endanger the forests and frighten away the game; but an electric trolley would not be open to the same objections. The power could be secured cheaply and invisibly from the falls and rapids; it would do away with dust and discomfort, and it would enable tourists to devote one-fourth of their week in the Park to travel and three-fourths to sight-seeing, instead of three-fourths of the time to travel and only one-fourth to sight-seeing, as at present. Capt. Runcie of San Francisco, who has lately made the tour of the Park with Col. Young, estimates that an electric road would cost between $1,500,000 and $2,000,000. As the expenses for annual repairs would be heavy too, owing to winter storms and snow pressure, it is not likely that our embarrassed Government could be induced to build such a road. But private capitalists have offered to assume the risk, and I see no reason why they should not be allowed to do so. An electric car could make the whole circuit of the Park (about 150 miles) in seven or eight hours; visitors, therefore, could spend a week there, with only an hour of daily travel. It must be distinctly understood that the great sights of the Park are separated by wearisome stretches of commonplace scenery which nobody would ever visit for their own sake—chiefly dense forests, not of large, noble healthy firs and pines, as in Oregon and California, but of puny, starved trees, thin as lead pencils, and looking as if afflicted with some skin disease; the disagreeable impression being heightened by the dense tangle of dead and fallen trunks at their roots. They are extremely useful as conservators of the vast river-system arising among the Park mountains, since they retard evaporation by several weeks; but scenically they need distance to lend enchantment to the view. Capt. Chittenden says in his book on the Yellowstone Park that in 1892 a vote was obtained from the tourists of that season as to the desirability of having an electric road through the Park, and that "the result was a majority of more than five to one against it." He does not state who took the census and who those tourists were.

One thing that struck me on my trip through the Park was that there seems to be a regular conspiracy against the Lake Hotel. Yet I found that hotel by far the best of all, more commodious, tasteful, and homelike than any of the others, and the meals fifty per cent. better, though the source of supplies is the same for all. We remained in it eight days, and daily blessed the manager, the caterer, the cook, and the very attentive waiter girls, so superior to the colored waiters at most of the other hotels. For literary work I know no place equal to it in America, except the Californian Lake Tahoe. The tourists who allow themselves to be persuaded that it is not worth while to take in the lake make a great mistake. The stage company saves a day by taking them from the Fountain Hotel direct to the Cañon Hotel, but the tourists lose some of the finest sights in the Park. There is not in all the Americas a more picturesque lake than the Yellowstone, especially in the evening, when the setting sun illumines the fine mountain ranges that surround it. Capt. Waters, too, gives you a chance to sail across this lake, at an elevation a thousand feet higher than the top of Mount Washington, from the bay called the Thumb across to the admirable Lake Hotel, stopping on the way at Dot Island, where the Captain keeps for the entertainment of his passengers some elk, antelope, mountain sheep, and five superb buffaloes.

As everybody knows, the Yellowstone Park was reserved not only as a scenic wonderland, but with the intention of making it a grand historic game preserve where America's characteristic fauna might be saved from utter extermination. It is only within a few years, however, that a serious attempt has been made to enforce the law. For a time the keepers were practically in league with the poachers, and Col. Young has come to the conclusion that it is not enough to enforce the law, but that additional legislation is imperatively needed if the game is to be effectively preserved. The present forest reserve, east and south of the Park proper, is so only by Presidential proclamation, and an act of Congress is needed before the superintendent has the power to punish properly those who disobey his ordinances. Nor is this enough. The Colonel is convinced that the southern boundary of the Park should be extended down to Jackson's Lake and the Three Tetons. That region is a favorite autumn resort of the Park animals, and dozens of camping parties go there in September and slaughter them by wholesale. It is useless to stop up a leak in a bucket on one side if you allow the water to escape on the other. The State of Wyoming would probably not object to this enlargement of the Park, because it will make it a real breeding-place, the overflow of which will in future restock that State. Ten miles more or less is a mere bagatelle to a giant State like Wyoming. The Park is as big as the State of Connecticut, yet it seems but a microscopic corner of Wyoming.

Col. Young has been lately promoted, and, in the due course of military events, he should join his regiment. It is to be sincerely hoped, however, that a way may be found to preserve him to the Park. He is just the man needed there. Of course he has made enemies by strictly enforcing laws that had heretofore generally been current on paper only; but such enemies are a compliment to him. "Every one," he remarked to me one day, "agrees that the laws are all right, but he fancies *he* ought to be an exception to the rule. For instance, I allow no dogs to run loose on the Park roads, because they scare away the wild animals which visitors are eager to see. Campers have been in the habit of putting their dogs in a wagon on passing a guard-house, and letting them run as soon as out of sight. I ordered a few of these dogs to be shot, and that had a salutary effect. I allow no exceptions whatever. Another day one of my highest officers came to me and asked to have his horse released. It had been taken in because, contrary to law, it had been turned loose to graze. I informed the officer that he could have his horse as soon as he had paid the fine, adding that I did not turn loose *my* horses." From others I have heard similar stories about the Colonel, and they have convinced me that he is the right man in the right place.

Since dogs were suppressed in the Park, tourists have had ample opportunity to see deer, coyotes, squirrels, birds, and other animals along the roads and near the stations. The most interesting illustration of the rapidity with which wild animals can be tamed when firearms are banished is afforded by the scene that can be witnessed at the Fountain Hotel every evening. It is customary there at six P. M. to dump the kitchen garbage at a place a hundred yards behind the hotel. The bears soon found it out, and every evening from half a dozen to a dozen (once there were sixteen) now come down from the woods for their supper. There they are—black bears, a few cinnamons, occasionally even a grizzly—quietly munching the bones and fruit peelings, while a dozen or two of the hotel guests look on ten yards away. One soon gets used to the scene; some men feed the bears apples out of the hand, and we ourselves adapted our habits so soon to the situation that when we met a bear in the woods afterward we paid no more attention to him than if he had been a dog. In reality these bears are harmless animals, unless wantonly provoked. Col. Young has come to the conclusion that the coyotes ought to be thinned out, as they have begun hunting deer in packs. The bears, too, he thinks are getting superabundant, and he advocates catching some and distributing them to museums. He has made a beginning by sending a dozen cubs—with some pelicans, squirrels, geese, porcupines, etc.—to Washington.

Col. Young has also been obliged to forbid fishing in some parts of the Park, for the benefit of future visitors, as the sport is not as good as it used to be. Eastern readers find it difficult to believe the story that there is a place here where you can catch a trout in the lake and cook it in a hot spring without taking it off the hook or changing your position. I have known Europeans who simply refuse to believe this tale. Yet, as a matter of sober fact, there are at least a dozen such places in the Park. Several of them are at the Upper Geyser Basin, along the Firehole River. At one of these, just above the lower foot-bridge, you can not only cook a trout, but cook him in three ways—steam him, boil him in the water, or bake him on the hot rocks.

HENRY T. FINCK.

Correspondence.

JUDGE PARKER AND THE NATIONAL DEMOCRATS.

TO THE EDITOR OF THE NATION:

SIR: Your criticism on the action of the county committee of the National Democratic party in endorsing the nomination of Judge Parker strikes me as entirely just. As I wrote to one of the party leaders in New York, it seems to me that a consistent voter would really feel more inclined to support a Republican who had voted for Mr. Cleveland and was not ashamed of it, than a Democrat who considered it necessary to come out and assure "my dear Danforth" and the "sincere friends of Mr. Bryan" that he stood by their ticket last fall. If Judge Parker had remained silent, his cause would have been in no way compromised. Frankly, however, it was really not so much the consideration with me that he voted for Mr. Bryan as was the apparent fact that he is

"chummy" with a man of such shady reputation as he of Madison Square Bank fame.

Beyond these facts the necessity of preserving the autonomy of the party in this state should have had weight with the committee. The National Democratic organization of New York is entitled to no respect if it is not held to be on a much higher plane than that controlled by Messrs. Hill, Danforth, Murphy, Sheehan & Co. Inasmuch as the party holds its position now solely on account of the votes polled for Mr. Wheeler in 1894, when he was nominated as a protest against the candidacy of Hill, it would seem absolutely necessary to keep free from alliance with the people above named.

If the National Democrats should, by fusing, lose their place on the ballot at the election next year, it would mean that there would remain practically no agency through which independent sentiment could be expressed. The present outrageous law placed on the statute-book by Raines, requiring at least fifty signatures in every county in the State in order to make an independent nomination for State officers, would prevent any action by the people, and leave us entirely at the mercy of the corrupt machines controlled respectively by Mr. Platt and Mr. Hill. For this reason it is to be hoped that the "Ship" Democracy will keep in the middle of the road and go ahead, following its own lofty ideals, and avoid combinations with other organizations whose only aim seems to be to secure spoils.—Yours truly,

EDMUND H. TITCHENER.

BINGHAMTON, N. Y., October 4, 1897.

OREGON PLANTS.

TO THE EDITOR OF THE NATION:

SIR: I am obliged to your Chicago correspondent for his rectification of my doubtless antiquated nomenclature of the Oregon plants mentioned. He may be interested to know that the yellow "bear's-food"—the *Symplocarpus Kamschaticus* of Bongart (*Lysichiton* of Schott, and *Dracontium* of others)—at least in British Columbia and Alaska, when bruised, has a very distinct mephitic odor, though less pungent than that of our Eastern skunk-cabbage. It far exceeds the latter in size; I have measured a single leaf four feet long, two feet wide, and with the leaf-stalk four inches in diameter.—Respectfully yours, W. H. D.

OCTOBER 2, 1897.

"RALLIÉS."

TO THE EDITOR OF THE NATION:

SIR: Your critic (*Nation*, September 30) characterizes my translation of *ralliés* into "Mugwumps" as "well-meant but perverse and misleading." Permit me to say that that translation was furnished to me by a French diplomat, long a resident of America, and as well acquainted with the English-American language and politics as he is with his own. He told me that the word and the thing exactly matched in both countries. He is, also, a friend of Baron Pierre de Coubertin, the author of the book in question. On the whole, I am inclined to believe that "Rallié: Mugwump" will prove a valuable addition to the 'Dictionnaire de la Langue Verte' (which title, also, may not be translated literally with impunity!) of your readers. But, nevertheless, I should be glad to listen to argument from the other side.—Very truly yours,

ISABEL F. HAPGOOD.

NEW YORK, October 4, 1897.

[The word is some four years old in its cant application, and was originally applied to the body of voters, not quite homogeneous but mainly Catholic, who had previously been irreconcilably opposed to the republican form of government in France, but who were at last led to abandon their opposition to it and accept it as definitive. The Pope was thought to have been influential in this "rallying" to the republic of its former enemies; and if he were to exercise the same influence in Italy and release the consciences of King Humbert's Catholic subjects who are held to abstinence from politics by the injunction, "Nè elettori nè eletti" (so long as the Pope is deprived of his temporal sovereignty), there would be added to the electorate not a mass of independents, of Mugwumps, surely, but of Catholic partisan voters seeking to promote the cause of religion and the papacy as best they might under the Savoy monarchy, accepted as legitimate and final.—ED. NATION.]

Notes.

Longmans, Green & Co.'s autumn announcements include 'The Liberty and Free Soil Parties in the Northwest,' by Theodore C. Smith, Ph.D., and 'A Bibliography of British Municipal History,' by Charles Gross, Ph.D.—new volumes in the Harvard Historical Series; 'The Life of Stonewall Jackson,' by Lieut.-Col. G. F. Henderson, York and Lancashire Regiment, in two volumes; the fourth and concluding volume of Dr. Liddon's 'Life of Edward Bouverie Pusey, D.D.'; 'The Life of Chauncy Maples, D.D., Bishop of Likoma (British Central Africa),' by his sister, Ellen Maples; 'Drake and the Tudor Navy,' by Julian Corbett; the second volume of Gardiner's 'History of the Commonwealth and the Protectorate'; further volumes in the "Builders of Great Britain" series; a select "Library of Historical Novels and Romances," edited by Lawrence Gomme, and arranged chronologically according to sovereigns, each with an introduction; 'The Water of the Wondrous Isles,' a prose romance by William Morris; 'Suffolk Tales and Other Stories,' by the late Camilla Gurdon; 'Early Italian Love Stories,' edited and retold by Una Taylor; 'The Diary of Master William Silence: A Study of Shakspere and of Elizabethan Sport,' by the Right Hon. D. H. Madden, Vice-Chancellor of the University of Dublin; 'The Queen's Hounds, and Stag-Hunting Recollections,' by Lord Ribbesdale, Master of the Buckhounds, 1892-'95; 'Racing and Chasing,' by Alfred E. T. Watson; 'A Book of Dreams and Ghosts,' 'The Pink Fairy Book,' and 'Wordsworth'—first of a new series of selections from the poets—by Andrew Lang; an entirely new edition of 'The Spectator,' in eight volumes, crown octavo, edited by George A. Aitken; 'Rameau's Nephew,' from the French of Diderot, by Sylvia Margaret Hill; 'Rampolli,' translations, new and old, from the German by George Macdonald; the first volume of a 'History of Intellectual Development on the Lines of Modern Evolution,' by John Beattie Crozier; 'The Origin and Growth of Plato's Logic,' by Prof. W. Lutoslawski of the University of Kazan; 'Teaching and Organization,' with special reference to secondary schools; and 'Parables for School and Home,' brief readings in applied morals, by Wendell P. Garrison, with pictorial illustrations.

Harper & Bros. will shortly publish 'The Personal Equation,' essays chiefly in literary criticism, by Prof. Harry Thurston Peck of Columbia University.

A Life of Prof. Henry Drummond, by George Adam Smith, will bear the imprint of the Doubleday, McClure Co.

Thomas Whittaker announces 'Potters, their Arts and Crafts,' by John C. L. Sparkes of the South Kensington Museum, and Walter Gandy.

The American Book Co. will publish 'A New Astronomy for Beginners,' by Prof. David P. Todd of Amherst.

A. C. McClurg & Co., Chicago, have in press 'Stories from Italy,' by Miss G. S. Godkin, and 'A Little House in Pimlico,' tales for children by Miss Marguerite Bouvet.

'Buddhism and its Christian Critics,' by Dr. Paul Carus, will be issued next month by the Open Court Publishing Co.

The Catholic Art Publishing Co. of Philadelphia has in press 'Angels of the Battlefield,' a history of the labors of the Catholic sisterhoods in our late civil war.

Cary's translation of the 'Divine Comedy,' first issued in 1812, has held its own with remarkable success in both England and America. Here it has been published at least three times, as early as 1822 and as late as 1889, and there have been many reprintings of these editions. The continued popularity of the version has led Thomas Y. Crowell & Co. to provide a new edition of it, prepared by Prof. L. Oscar Kuhns. Included with it is Rossetti's translation of the 'New Life,' which has also recently appeared in two American editions. Prof. Kuhns contributes a short introduction to the volume and a new set of notes to the 'Divine Comedy.' Rossetti's notes are retained, though others are added. Prof. Norton's translation of the 'New Life' excepted, Rossetti's is that best known, and Cary's version of the 'Divine Comedy,' whatever may be its defects, remains the easiest of all to understand. The reprint, therefore, is likely to meet with some measure of popular favor, particularly as it is illustrated and as Prof. Kuhns's introduction and notes, though not impeccable, are interesting and sensible. An ideal popular commentary, indeed, for students of the poem could be made by combining Prof. Kuhns's plan with that of Longfellow—that is, by adding to simple comments on difficult passages a whole set of delightful and enlightening extracts from contemporary historians and chroniclers.

Hopelessly commonplace is 'The Age of Milton,' by the Rev. J. H. B. Masterman (Macmillan), to which is prefixed a rather aimless introduction by Mr. J. Bass Mullinger. The volume can hardly be said to be up to the comparatively easy standard of its three predecessors in the same series. It lacks quality and illumination; its style is without order and grace; its literary criticism, while cautious and generally orthodox,

is marred by frequent touches of banality; and it shows very little of that power of generalizing its subject so necessary for a primer or handbook which aspires to be anything more than a mere list of names and biographical facts and bibliographical memoranda. We have noticed errata which injure the trustworthiness of the work as a school-book or book of reference at pages 35, 81, 111, 127, 128, 129, 146, 160, 212, and 214.

'A First Book in Writing English,' by E. H. Lewis (Macmillan), deserves notice, among recent contributions to the renascent art of the teaching of English prose composition, for its careful attention to the practical and pedagogic aspects of the subject. If the writing of English is to be taught as an art, the teaching and practice of it must not be deferred until too late in the student's course. It requires skill, however, and felicity of choice to eliminate the rhetorical abstractions and the dogmatisms from the more advanced text-books, and to present to the student in the secondary grades the heart of the matter in simple, practical, and yet attractive form. This, we think, Dr. Lewis has fairly succeeded in doing.

As a guide-book to the senior university of the English-speaking world, Mr. Wells's charmingly illustrated little book on 'Oxford and its Colleges' (London: Methuen) deserves a word of hearty commendation. Its method is mainly historical: a succinct account of the buildings of the various institutions described is followed by a sketch of their history and a mention of the celebrities that issued (or in some cases were propelled) from them. Needless to say, Mr. Wells's scholarship is excellent; he is thoroughly at home with his ground and his authorities, and generally succeeds in conveying a pleasing impression while skilfully keeping clear of sore points. And yet he not infrequently succeeds in gratifying his own and his readers' sense of humor in his selections from the storied past, and altogether manages to infuse into his tale not a little of the fascination of his theme. It is interesting to note (p. 301) how in the end the sense of the poverty of modern Oxford conquers its pride, and extorts from Mr. Wells an allusion to the deathless fame which Oxford has the power to bestow upon a generous emulator of the noble benefactors of the past.

The little war in Lombock of two years ago is described in 'With the Dutch in the East,' by Capt. Cool (London: Luzac & Co.). The author has written for his countrymen an impartial account of events with which they are in the main familiar, and which excited them much at the time, being to them thrilling as well as important. The object of the translation is less evident, for the work has not sufficient literary merit to make it easy reading. It is prolix, full of overwhelmingly long Malay names, and its artless rhetoric provokes a smile in the stranger unwarmed by the glow of Dutch patriotism. Still, the long chapter on "Our Knowledge of the Country and its People" contains a good deal of information, and the one about "The Attack" on the Dutch quarters at night is even exciting. The invading army, which was divided up at the time, narrowly escaped annihilation, and the impression left on the reader is that gross incompetency was shown—an impression not entirely effaced by the later successful operations; indeed, the author's own criticisms, however mildly expressed, point to the same conclusion. The translation is smooth, though occasionally ungrammatical, and marred by a tiresome misuse of the present tense.

The geology of Java forms the subject of a sumptuous report in French by R. D. M. Verbeek and R. Fennema, published at Amsterdam by the Dutch Government. A general description of the island is succeeded by an account of the geology of each of its twenty-two divisions or residences, including the neighboring island of Madura. A special feature of the work is a memoir on the fossil foraminifera of Dutch India, with eleven lithographic plates. There are numerous illustrations, and a superb atlas containing a geological map in twenty-six sheets, as well as more than twenty additional maps.

In 'Les Origines de la Monnaie considérées au point de vue économique et historique' (Paris: Firmin-Didot), M. Ernest Babelon, curator of the department of coins in the Bibliothèque Nationale, traces with adequate knowledge and with admirable clearness the actual development of money by the spontaneous action of individuals seeking each to better his own industrial situation. No plainer refutation will be found of the pernicious notions that money originated in human convention, legal or extra-legal, and that its purchasing power depends on a law of legal tender, than that which M. Babelon has given; and his refutation is not the less effective because he advances little theory of his own, but simply so marshals his facts that the candid reader is forced, as it were against his will, to the same conclusions which the author has reached. M. Babelon's book will be welcome to all readers who appreciate the superiority of an historical treatment to an a-priori treatment of the subject of money.

From Lemcke & Buechner we have specimen numbers of the artist monographs ('Künstler-Monographien') for some time in course of publication by the resourceful Leipzig house of Velhagen & Klasing. The text of these thin, profusely illustrated octavos in limp bindings proceeds from several hands; but the editor, H. Knackfuss, is the author of three of the five before us, viz., Rubens, with 122 illustrations, Hans Holbein the Younger, with 151, and Franz Hals, with 40. Ernst Steinmann treats of Botticelli, with the aid of 90 illustrations, including those for Dante's 'Divine Comedy' and the newly discovered "Pallas and Centaur." Perhaps the most famous book-illustrator of Germany, Chodowiecki, falls to Ludwig Kaemmerer, who can display no fewer than 204 examples of the often tiny vignettes of this masterly delineator of contemporary manners. The Holbein and the Botticelli offer the greatest pictorial interest, but in all these cases it is a great boon to have such extensive memoranda of the work of the artist commemorated. An index to each monograph would have been an added boon; but only in the Botticelli is there so much as a table of the paintings described. The moderate price, two to three marks apiece, would still bear, we think, the cost of a key to the contents.

"Certain Aboriginal Mounds of the Georgia Coast" is the title of a memoir by Clarence B. Moore in the latest number of the *Journal* of the Academy of Natural Sciences of Philadelphia. It is the result of an examination of more than fifty mounds between Fairview, Camden County, and Skidaway Island, Chatham County. The construction of the mounds, the human remains contained in them, together with the utensils and implements of copper, stone, shell, or earthernware, are minutely described. Evidences of both incineration and inhumation were found. Cremated remains were placed in cinerary urns, and large clay jars were used for the burial of infants and sometimes of adults. A peculiar custom, common in Florida, was observed to some extent in Georgia. The bottoms of vessels in which the dead were placed were perforated, either at the time of manufacture or afterwards. Skeletons were most frequently found with the knees and chin drawn well together. The author's conclusions are that the Georgia mounds are "relics of a race ill supplied with stone, almost without copper, but given to the manufacture of earthenware." The race differed from the aborigines of Florida in their methods of mound building and in their mortuary customs, practising cremation to a much greater extent.

The *Geographical Journal* for September opens with an account, by Col. J. K. Trotter, of an expedition to the source of the Niger by the French and English commission for determining the boundary between French Guinea and Sierra Leone. It is illustrated by reproductions of photographs and a map. In the continuation of his paper on sub-oceanic changes, Prof. Milne treats mainly of the curious testimony to these changes by the telegraph cables. Among the pictures of fractured cables is one showing a cable grown round with coral. Other articles are upon the physiographical features of the Lakes Nyasa and Tanganyika districts, the Roman roads of Morocco, and Mr. Keltie's presidential address before the geographical section of the British Association. In it he dwells upon the future work of geographers, which consists not only in exploring the still unknown parts of the earth, but also in the study of oceanography, and the relations between man and his geographical environment. Capt. Cleeve contributes an interesting "*aide-mémoire* to a comparison of certain geographical distances." Taking as a unit the distance from Land's End to Shetland Islands, 750 miles, he shows it to be a remarkable standard of measurement by a table of some hundred instances selected from all parts of the world.

The *Scottish Geographical Magazine* for September contains, in addition to the address of Mr. Keltie, a very interesting account of the investigations of Dr. Nüesch on the prehistoric remains at Schweizersbild, near Schaffhausen, by Prof. James Geikie. There is something very touching in the description of the Neolithic interments discovered, ten of which were children. "The great care with which the graves have been constructed, and the presence of the ornaments and other valuable objects [shells and finely finished flint implements] placed beside his dead little ones, show how strong was Neolithic man's family affection. The new-born infants were laid each within the right arm of its mother, while with the left arm stretched across her breast the latter seemed to hold the little one fast."

M. Eugène Ritter, whose work on the youth of J. J. Rousseau was reviewed in these columns last year, publishes in the *Revue des Deux Mondes* for September 1 some further researches on the history of

that ever problematic character. New light is thrown on the relations between Rousseau and M. de Montaigu, the French Ambassador at Venice, so harshly treated in the 'Confessions' for his dilatoriness in paying his secretary's salary. The latter was not let into the secret of the financial difficulties in which his superior found himself in consequence of the maladministration of public affairs under Louis XV. Thérèse Le Vasseur, it appears from M. Ritter's pages, did not deserve all the contempt which has been heaped upon her by many writers; her ignorance and illiteracy, however, were astonishing. To point out estimable traits, hitherto not sufficiently noticed, in Rousseau's character, as M. Ritter is able to do, must be especially gratifying. The article deserves to be read by those desirous to do justice to the memory of Jean Jacques and to understand more fully the causes of his influence.

Dr. Hans Reusch, Director of the Geological Survey of Norway, has been appointed for the year 1897-'98 to the Sturgis Hooper professorship of geology at Harvard University, this position having been vacant since the death of Prof. J. D. Whitney a year ago. Prof. Reusch will lecture during the first half-year on vulcanism and eruptive rocks, earthquakes, and movements of the earth's crust. In the second half-year he will treat of the geology of Northern Europe and its relation to general geology. The third meeting of each week will be given to seminary work. In the spring, Prof. Reusch proposes to take part with the other instructors of the geological department in practical study in the field.

—The Boston committee in charge of the Shaw monument wind up their trust in an elegant volume detailing the inception, completion, and unveiling (1865-1897) of the memorial (Houghton, Mifflin & Co.). Nothing could better typify the transition period—far from being yet ended—from oppression to justice than the speeches of Major Higginson, Prof. William James, and Booker Washington. Major Higginson has to apologize to Southern susceptibilities for his historical retrospect, and wofully to misrepresent the abolitionists, the subsoil—or, rather, considering his parentage—the very soil out of which Col. Shaw grew. Prof. James speaks in the humane and elevated tone of the national conscience on the subject of slavery, and does not omit to point out the civic evils that have flowed from a just war. Finally, Booker Washington, on behalf of his color—emancipated, but socially ostracised, both North and South—shows in brief but well-chosen words the incompleteness of the edifice erected on the ruins of slavery, the lack of "the full measure of the fruit of Fort Wagner and all that this [Shaw] monument stands for"; the duty also of completing it, and the mode in which the freedmen are to enforce their manhood claims by moral and intellectual training. As we close the volume, news comes that the School Board of Alton, Ill., is forcibly excluding colored children from the common schools—even those named after Lovejoy and Lincoln. Shades of the martyrs!

—In a very neat little volume, with illustrations, Mrs. Fairchild has printed a limited edition of the Journals of John Linklaen, agent of the Holland Land Company, describing his travels in Pennsylvania, New York, and Vermont in 1791 and 1792. The blunt and unimaginative voyager notes down in the simplest manner whatever meets his eye, and the result is very readable, and of interest as a rough presentation of the times. His special interest was shown for the maple-sugar industry in Pennsylvania. The industry was primitive, for, in place of the extensive works, buildings, and workmen he expected to see, he found a ruined hut, barely accessible because of the brambles, a couple of "chaldrons" and some other scattered utensils, but no workers. Five gallons of sap was required to make one pound of sugar. While noting the occurrence of the "mapple" tree, he was not blind to other economic features. The lie and quality of the land, the price per acre, and the yield of wheat and maize, the plans of new roads or proposed canals, and the ownership of the land were of interest, as the region through which he passed was held in large parcels and as speculative ventures. This did not prevent squatters "who have come to settle themselves with no other rights than those of nature." The inchoate condition of the country is well shown by the difficulties of travel—"mud up to the horses' belly"—which effectually prevented any trading of goods.

—Apart from the religious communities encountered, Linklaen met other social curiosities. The Oneida Indians were on a reservation, and carefully protected by law from any contracts with the white settlers. "Tilling the earth is burdensome to them, so that often they allow Americans to settle on & work their lands provided they give them 1-3 or half the yield. Even their gristmill is managed on this footing by an American." There he heard the "universal Friend," a woman from Rhode Island, who claimed to be an apostle of Christ, but he found her to deal in "a quantity of vain words without sense or reason." The general impression made by these notes is that wood-life at that time was one of great deprivation and almost wretchedness. It is well to have such an unvarnished record of the curiously mixed life in these new settlements. One detail needs explanation. In expressing values Mrs. Fairchild has used the symbol for the apothecary's ounce. As a rule it stands alone with the figure, but on p. 74 we find it intercalated between "2-6" and "sterling." It is reasonable to suppose it is only a shilling mark, and in this we are confirmed by an entry on p. 116. The note to Mr. Root on p. 74 is clearly wrong, for the local money is used unless the name of another State is added. This was the universal practice at that time.

—At the recent Congress of Orientalists in Paris M. Salomon Reinach read a paper upon the representation of female nudity in Mediterranean prehistoric art. The general subject of early undraped statues of women is one to which M. Reinach has given much time and study. About two years ago he read before the Académie des Inscriptions, and afterwards published in the *Revue Archéologique*, what may fairly be called a convincing paper, disproving the generally received theory that nudity in classic art is ultimately derived from a Babylonian source, the image of the goddess Istar. There was no nude divinity in the Babylonian pantheon. When Istar appears as a goddess, she is represented clothed and in armor; when she is disrobed, it is for her humiliation, her descent into hell. On the other hand, there have been found in the Archipelago and at Troy, dating from about 1200 B. C., statuettes of nude women, and one was also found in a tumulus in Thrace. Similar figures of life-size existed at the same period in the Greek islands, and some of these may have been carried off by a Babylonian conqueror and so have become objects of worship. It was, then, according to M. Reinach, from prehistoric Greece that the type of nude divinities passed into Babylonia, coming back centuries later through Phœnicia to historic Greece, and so to Rome. In his paper before the Orientalists M. Reinach brought new support to his theories from the art found in the caverns of the south of France, which is of the same type as that of the borders of the Archipelago. An instance that is at once quite new and highly corroborative was brought forward by M. Reinach in the very curious statuette discovered ten years ago in a grotto of Mentone, and acquired in 1895 by the Museum of Saint-Germain. This figurine appears to date from the end of the palæolithic period—that is, perhaps some 6,000 years before the Christian era. The statuette was shown to the meeting by M. Reinach. The *Débats* describes it as being "aux formes bizarres, aux saillies exagérées," and adds, with a certain conscious or unconscious humor, "c'est une œuvre réaliste, d'un art tout spontané."

—Michelangelo literature, already so voluminous, is on the point of receiving a considerable addition. Michelangelo's own letters have already been given to the world; they are to be supplemented by a collection of about eight hundred letters written to him which have been kept among the archives of the Casa Buonarroti in the via Ghibellina in Florence. The Casa Buonarroti belonged to Michelangelo (although he never lived in it), and remained in the possession of his heirs until the year 1858. In 1620 the house was put in order and decorated, and became a sort of museum of sketches and casts, drawings, plans, and autographs of the master, to which his family added from time to time such letters addressed to him as they could find or procure. By a will dated June 11, 1856, the last descendant of Michelangelo, the Count Cosimo Buonarroti, bequeathed the building and its contents to the city of Florence, and a corporation was formed to take charge of it. This corporation has administered its charge so well that the Casa has been from the very first self-supporting. In the will of Count Cosimo Buonarroti there were several hampering restrictions, the most annoying of which was one that forbade the publication of any of the manuscripts or other papers which the house contained. For a number of years these restrictions were observed; the first breach that was made in them occurring in Gothi's Life of Michelangelo, published in Florence in 1875, at the time of the celebration of the quadricentenary anniversary of the great man's birth. In this volume appeared some letters of his correspondents, and at a little later date Milanesi published thirty-six letters written to Michelangelo by Sebastian del Piombo between the years 1520 and 1533. The two scholars made no mystery of the fact that the originals of these letters were in the archives of the Casa. Others have followed them, but, in all, hardly more than sixty letters have so far appeared. The corporation has now swept all restrictions

aside, and the whole eight hundred letters are to be printed. The learned Commendatore G. Biagi, head of the Laurentian Library, is charged with their publication. The letters cover the period between the years 1506 and 1564, and their writers are many and of the most widely separated conditions in life, down to the humble *scalpellini*. Michelangelo counted many *scalpellini* among his friends, and it is said that these letters will throw much light on the social condition of this interesting class of men.

RECENT NOVELS.

The Christian: A Story. By Hall Caine. D. Appleton & Co.

The Martian. By George Du Maurier. Harper & Brothers.

Uncle Bernac. By A. Conan Doyle. D. Appleton & Co.

The Secret of Saint Florel. By John Berwick. Macmillan Co.

Constantine. By George Horton. Chicago: Way & Williams.

Susan's Escort and Others. By Edward Everett Hale. Harper & Brothers.

The White Hecatomb, and Other Stories. By William Charles Scully. Henry Holt & Co.

Love & Company (Limited). By John Wernberny and Another. J. Selwin Tait & Co.

Arnaud's Masterpiece: A Romance of the Pyrenees. By Walter Cranston Larned. Charles Scribner's Sons.

Since the fashion set in for using a problem in morals as the heart of a romantic legend, Mr. Hall Caine has been one of our most effective novelists. For the development of moral conflict leading to a sombre or terrible catastrophe, correct instinct has led him to choose rather primitive, simple people, in whom an excess of emotion over reason is probable and not discreditable. Such people move naturally through a drama which takes the full romantic license in action and sentiment, with only enough restraint to escape the absurdity and sentimentality of melodrama. Perhaps the escape from the worst dangers which beset an excitable, imaginative temperament, applied to the discussion in prose fiction of the soul's temptations, has been due more to the sincerity and passion thrown into the strife, and to Mr. Caine's intuition for phases and fine shades, than to the very slight technical restraints.

In his latest novel, 'The Christian,' the ever-threatening calamity has overtaken him. He has tackled a problem in morals which affects the whole world, not exclusively a small group of Manxmen, and the problem is greater than he is, even as the world is bigger than the Isle of Man. The subject, instead of lending itself willingly to the romantic, dramatic method, stands aside, rigid, unmalleable, refusing absolutely to be dragged or driven into harmony. The majesty of the redemption of the world declines association with scene, situation, climax, and silently contrasts its true self with Mr. Caine's artificial and violent presentation.

In one of those explanatory notes through which authors try to deliver readers from the consequences of their natural-born stupidity, Mr. Caine says: "In presenting the thought which is the motive of 'The Christian' my desire has been to depict, however imperfectly, the types of mind and character, of creed and culture, of social effort and religious purpose, which I think I see in the life of England and America." By the imperfect light of our own wits we take the thought to be that the world is far gone in sin, particularly in the sin of lust, and is in sore need of a redeemer. A just inference from the book, and one sustained by the title, is that Mr. Caine has desired to do more than record observations, and has wished to denounce sin and to depict the character of a redeemer, despised and rejected of men, through the medium of a readable novel which may be converted into an actable play. It was said of old that we cannot serve God and Mammon, and Mr. Caine's experiment offers no reason for a reversal of that judgment. But, putting aside a perhaps base suspicion, and looking for reasons of failure more particular than a disparity between the man and the work, the motive and the method, the most conspicuous are the conception of the character of a possible redeemer, and the author's predilection in favor of one sort of sinner. For the rôle of redeemer it would be hard for a person not a novelist to think of any one less fitted than John Storm. He is not supposed to be a primitive person, picturesquely governed by emotion, but a man of good birth, wide education and travel, prompted to devote himself to Christ by observation of universal injustice to and oppression of the weak by the strong. It is fair to assume that such a man would possess an intellect to be used for guidance, but John Storm rarely displays a glimmer of reason. He has no singleness or stability of purpose. The command, "Know thyself," is, by reason of his mindlessness, nothing but a stumbling-block. He has no sense of personal responsibility, for he refers his actions, good or bad, to the influence of God or the Devil. He pursues a mad career to a miserable end, never quite sure that he has really been blown about like thistle-down by passion for a woman; passion taking base forms, jealous, suspicious, insulting to its object. Whatever he does, whether he enters a monastery or leaves it, throws himself into a furious crusade against lust, drink, and hypocrisy, or spends weeks in solitary prayer and penance, the inspiring motive is always the young woman with the great mimetic talent and awful name—Glory Quayle.

In his relations with Glory, he is conspicuously lacking in the first of Christian virtues—charity. His best thought of her is that she is an adorable, though frivolous, worldling, and his worst (which is also his commonest), that she is the mistress of an amiable and rich young man named Drake. When her genuine love for him proves inadequate to his demand that she shall follow him to his London slums, he never thinks of compromise, going away from London and leading a decent, quiet, Christian life in a country parish, but proposes that she shall dedicate herself to lepers, to whom, on hearing of Father Damien's death, he at once feels that he is consecrated, and has a right to expect her coöperation. Bitterly disappointed by her rejection of this inhuman proposal, he rushes back to the monastery, previously abandoned, and takes the vows of chastity, poverty, and obedience. Afterwards he tries to kill her, but kisses her instead, and ends by marrying her, literally with his last breath. Storm may represent one of the kinds of culture which Mr. Caine thinks he sees, but it is not a kind which it is possible to admire or respect, or even greatly to sympathize with; it is not a kind of which a possible Christ or even a sincere and useful Christian is made. His failure to achieve any kind of good is not the failure of a great nature misunderstood, scorned and persecuted by those whom he loved and would have saved. John Storm failed because he never knew exactly what he wanted or how to take it, and because he was irresolute and violent and passionately prejudiced; because, in fact, he was almost always in the wrong.

The career of Glory Quayle makes a theatrically effective contrast to John Storm's, and is reminiscent of many careers described by unpretentious, frivolous novelists. She is a nice enough girl, with a shockingly artificial epistolary style, but for which and an easy-going tolerance of wicked lords and their vulgar mistresses, she would be nicer. Her long patience with Storm's harshness and insults, her passionate pity for his delusions and belief in his goodness, and her final renunciation of all for him are not exaggerated testimony to the strength of an affection sown in childhood and blossoming in the wonderful beauty of a first love. If it were not for that last thrilling scene in the slums with the dying Christian and the great actress for centre, the clergyman to the right, the Prime Minister waving a license from Lambeth to the left, and a background of bedraggled female ruffians, one could imagine Glory permanently forsaking the stage and devoting herself to the tedium of good works; but her eagerness for this climax betokens a theatrical instinct too vigorous to be buried in the graves of a dozen lovers.

Mr. Caine's treatment of the sin of the world is a deplorable exhibition of sentimentality, and his criticism of institutions such as hospitals and the Anglican Church is harshly censorious. Apparently the only sinners worthy of tenderness and charity are prostitutes. This view, of course, narrows any scheme of redemption, and is unimpressive; but it gives great opportunity for violent rhetoric, and is sure of applause from the gallery. The most serious aspect of the sentimental treatment of seduction and prostitution is that it is more likely to increase than to diminish their practice. All women are not doves any more than all men are birds of prey. The social law which makes unchastity a shame for the woman only is unjust and oppressive, but, like most rigorous social laws, its roots are deep down in human nature, and it restrains rather than encourages immorality. No wailing of hysterical humanitarians or rhetoric of sentimental novelists will ever cast the burden of shame on men, but these methods may undermine the sense of shame instinctive in women of all classes, and thus set stronger instincts free for unrestrained indulgence. Girls like Polly Love, for whom our sympathy is urgently invited, and of whom there are at least several in every community, can never be saved or reformed by being told that they are irresponsible victims of man's depravity, but this is an excellent way to encourage the vanity and frivolity which make them the easy victims of the Lord Robert Ures prowling about to devour. If Mr. Caine has a sincere desire to help both men and women to abstain from sins of the flesh, the road he must take is dull

and tedious and discouraging; an obscure and silent road, where electric light shineth not and the sounding brass and tinkling cymbal are never heard.

The three books written by Mr. Du Maurier have so many points of likeness that reading or thinking about one recalls vividly the one before and the one before that. The passion for physical beauty never ebbs; the view of men and manners continues frank, gay, and tolerant, and the imagination hovers about the incredible—particularly about successive incarnations of the soul and magnetic influence. In each the author is the most conspicuous character, and draws himself with an untrammelled vivacity which leaves little to speculation or future biographers. Of the three 'Peter Ibbetson' is the best story, and has the most literary value—using that phrase to mean the closest adherence to a central idea, coherent form, and a style that in many passages has the refinement and repose of all literature that becomes classic. In 'Trilby' the story is feeble, of secondary importance, the form correspondingly loose, and the style the freest that ever skipped with a smile and a wink into the formal kingdom of letters—a spontaneous, colloquial, volatile style, making every one intimate with one of the kindest, cleverest, and wittiest of men. One cannot imagine gloom so deep as to prove impenetrable by that buoyant, diverting spirit, and insensible to that happy manner. We cannot be grateful enough to the man who, at a time when novels were harder and drearier than the existence of any one mortal could ever be and continue, gave us such a fillip as 'Trilby.'

As an expression of Du Maurier's lovable nature, 'The Martian' is a supplement to 'Trilby.' We learn a little that is new about his feelings and experiences, and we feel all the old charm over again. Though we may not believe in the incomparable beauty, virtues, talents, and graces of Barty, Leah, and all the galaxy, we know that he believed, and our delight in him is unimpaired. As fiction is a representative art, it must make us believe, or fall short of good. Many people found a difficulty in accepting Trilby as a real girl, living, or ever having lived. Her praise was too ecstatically chanted and there were glaring discrepancies. The laudation of Barty, Leah, and the rest is riotous, too superlative; it excites suspicion, criticism, scepticism; its insistence and iteration bore us. Our imperfection perhaps resents so much perfection. The Lady from Mars, whose magnetic influence made Josselin "the greatest literary genius this century has produced," is purely fantastic. She is not a perfect invention, like the dream situation in 'Peter Ibbetson.' Her presence and performance are much remoter from the actual and possible than is Svengali, with his magnetism and magic. Her account of herself is a wild, unconvincing fabrication, and there is even a farcical suggestion in her trick of making Barty "feel the North." Putting this trick, reminiscent of Captain Cuttle, together with the lively ironies of her letters and personal narrative, one suspects that Du Maurier wrote her up for his own amusement, caring little whether she and her doings should appear probable or not.

He was not, thank Heaven! a serious novelist. He served no apprenticeship, and in none of his books, except the first, is there the slightest indication of his having paid any attention to the conventions or technicalities of novel-writing. Therefore the way to enjoy his books without any "ifs" or "buts" is to forget that they are called novels, and to regard them as descriptions of a most interesting life and as wonderfully expressive revelations of a man of happy outlook, whose sympathies were as wide as was his exceptional power of observation, and who gave unstintingly his heart and head and hand for the pleasure of us all.

Mr. Conan Doyle's Uncle Bernac is an irreproachable villain. His skin is of the texture and tint of parchment; his expression sinister, his coat snuff-colored. He speaks in sibilant whispers menacing as a serpent's hiss, and is always on the winning side. A participator in the vilest crimes of the French Revolution, he chased into exile a noble family, with which he was closely connected by marriage, taking to himself the confiscated estates and revenues. When it came to pass that every man's fortune depended on Napoleon's, none was more devoted to the risen star than Uncle Bernac. Mr. Doyle deals with him as the Emperor's spy, a traitor and coward; a miserable, degraded wretch, who deservedly comes to a bad end. The adventure which introduces young Louis de Laval to his delectable uncle makes a spirited opening—so spirited that the subsequent adventures are dull by contrast. Louis has not enough dash for a hero, but is a modest young man, whose good judgment shines in the reflection that Napoleon is the most interesting figure of this memoir. Napoleon stands very solidly on his feet. By a careful combination of fact and legend and by a clever selection of scenes, Mr. Doyle has contrived a lively and comprehensible picture of a character made up of contradictions and extremes, great and trivial, worshipful and detestable, sublime and ridiculous, always above or below common men. The vitality and compression of this sketch of the awful Boney imply careful preparatory study and display great literary skill. Beside it the tale of Louis de Laval's love and Uncle Bernac's iniquities is a flat, perfunctory performance.

It is to be hoped that the author of the 'Secret of Saint Florel' means never to write another tale of mystery and adventure. Painful beyond endurance, and futile without hope, would be his effort to find any first-rate mystery or horror which he has not already used for all it is worth. Spendthrift, too, of scene as of incident, the Arctic Circle alone remains to him, for the awful occurrences leading up to this secret exhaust the tropics and the temperate zones. The whole wide range of human character is, however, still at his service, for, with his superabundance of more immediately striking material, he has wisely held his psychic observations and theories severely in reserve.

Descriptions of the beauty of the Isles of Greece and of the ways not exclusively beautiful of their modern inhabitants make the most readable chapters of 'Constantine.' The figure of Constantine, wronged and defrauded from his birth, driven to madness by injustice and betrayal, is rather a tragic conception, but the author has not the power to keep up to such a high mark. He shows to more advantage in common characters and ordinary incidents; his domestic scenes, quarrels, reconciliations, and the every-day family intercourse being done with unusual point and truth.

In the rather curious preface to his volume of tales, Dr. Hale enters a plea of justification for the practice of telling stories which may appear to be true. He says that there are critics who hold that an author is successful only when no one can imagine his stories to be true. He does not like or approve of these critics. Yet his first tale, "Susan's Escort," and several others in the volume, are nothing if not sops thrown with intent to placate. They are quite triumphantly improbable, and base indeed are these critics should they fail to proclaim Dr. Hale as another Barty Josselin among authors. To the critics who do not make a canon of improbability, the merit of Dr. Hale's work, including this volume, is in the healthy moral tone, the practical energy and common sense, the word of good cheer aptly and heartily spoken to humble, obscure pilgrims on the monotonous by-ways of life. His success in America comes largely from his habit of addressing the American people, not the English or any other nation, in their own language, which is not exactly English, but (we hasten to say) not inferior to English or any other as a medium for the communication of ideas. He does not speak down to any class or up to any, but is always imperturbably on a level with all. He is one of the last of a band of American writers spiritually attached to the idea of human equality; and so long as his stories express that spirit, and are read and liked because of its presence, the opinion of critics of form and word makes very little difference.

'The White Hecatomb, and Other Stories' are as well and carefully written as the author's earlier volume, entitled 'Kafir Stories.' Among South African savages and Boers the horrible with hideous accessories is probably very much in evidence. Mr. Scully seems to find it without any trouble, and though he lifts it sometimes to tragedy, the sordid and squalid atmosphere will not vanish at his bidding. In following the passions and actions of savages black and dirty, with unpronounceable names beginning with two consonants, the point of satiety is soon reached. About the middle of the volume there is a sketch entitled "Derelicts." The reason for its being just there is not plain, since it has nothing to do with negroes, Boers, or Malays. Its subject is extremely painful, and none of the pain is spared in the treatment. The Derelicts and their madness of sorrow eat and drink and sleep with you and refuse to be banished for many days, so nothing need be said about the writer's force and power.

Several times the experiment of writing a story in collaboration has been tried by men and women. The little tale entitled 'Love & Company (Limited)' is a pleasant and successful venture of that sort. The compact made in the beginning is a situation so full of peril of sensuality or vulgarity that the authors' management of it is a quite surprising exhibition of good taste. The only indiscretion is Miss Morris's mistaking Mr. Horton's feet for the massive legs of her ancestral mahogany and persisting in the mistake through a long dinner. As this episode and the emotions of the participators are described with perfect gravity, there is a deficiency in the sense of humor, not otherwise conspicuous, and also a momentary yielding to temptations which had best be sternly resisted in the interest of polite letters. The man's and the woman's point of view are clearly distinguishable throughout, the style neat and befitting-

ly light, and the manner noticeably good-tempered and well-bred.

'Arnaud's Masterpiece' is more a succession of pictures than a coherent romance. The majesty of mountains, the freshness and fragrance of forests, the splendor of poppy fields, are more vividly present to the author than are human passion either of love and gratification, or of love and renunciation. The young monk and the outlawed Cagots and the beautiful Angela are like the figures of indifferent landscapes, mistakenly believed to add interest to the scene. There is much more effort, hard, conscientious work put into the people and incidents than into the descriptions of scene, but the heart and soul have disdained guidance and thrown themselves into the adoration of external beauty.

THE INDIAN VILLAGE COMMUNITY.

The Indian Village Community, . . . chiefly on the basis of the Revenue-Settlement Records and District Manuals. By B. H. Baden-Powell, M.A., C.I.E. Longmans, Green & Co.

It may seriously be questioned whether "the comparative method," which our fathers were so proud of having first applied to the history of society, has done more good than harm. It has helped to lift history out of mere antiquarianism; it has led to the formulation of sweeping generalizations, which have appeared to bring masses of tedious facts under easy control of the scientific imagination; it has helped to bridge over the chasm between "science" and the studies concerned with human society by facilitating the utterance of the current shibboleth of "evolution." But it is now becoming apparent that some of these generalizations were of the kind that the academic slang of the English Cambridge calls "hasty." They are now being, of necessity, either abandoned or profoundly modified; but meantime they have done a world of mischief. Men have, consciously or unconsciously, gone out for more than a generation to seek new illustrations for conclusions already assumed; they have often had eyes only for what, consciously or unconsciously, they wanted to see; and it has not been altogether a gain that has given us, in the place of the plodding and unspeculative scholar, the brilliant and pseudo-scientific essayist.

One amusing, were it not irritating, result of the recent confidence in certain results of the comparative method we are reminded of by Mr. Baden-Powell's welcome book on India. This is the way in which, as soon as a generalization, covering all the peoples of the earth, or perhaps only the "Aryan" peoples, begins to be called in question in its application to one particular people, there is a tendency to overbear criticism by an appeal to what it is alleged has been proved elsewhere. That, in apparently similar sequences of phenomena, a gap in one series should be provisionally supplied from another; that language which is obscure in the documents of one people should be interpreted by its significance (when it is clearly the same formulas that appear) in the documents of another—this is all very proper. But to be of any value, the appeal should be from the dubious to the certain; when it is from the dubious to the equally dubious, it is only waste of time. Yet there has been something like this in some of the recent discussions concerning the origin of property in land. It was taught pretty generally until quite recently that all peoples, or at any rate all Aryan peoples, had gone through a stage in which the "ownership" of the soil was vested in a village community. This idea was probably of German origin and originally applied to Germany only. Then the generalization was extended to England and, about the same time, to the vast area of Hindustan. A decade or so of popularization followed. When by and by the critical process began, and doubts were raised as to whether the proposition was true in its bearing upon England, nothing was more natural than to refer the inquirer to the example of Germany. Was it its truth as to Germany that was next called in question, the sceptic could be referred to India. And it was not long before in India itself the critics of the theory there were referred back—by those, of course, who had not followed the course of the discussion in Europe—to what was still regarded as ascertained fact with regard to Germany. So that actually four years after the appearance of his own magnificent work, 'The Land Systems of British India,' which ought to have placed the whole discussion on a new footing, Mr. Baden-Powell is obliged to recognize that some of his readers will "be disposed to regard the Indian case as necessarily concluded by a general verdict on the European evidence as to archaic common ownership of land"; and it is with the air of one who asks a favor that he "submits that, under the circumstances of doubt that exist as to the European phenomena, the Indian case may with advantage be dealt with on its own merits" (p. 5).

For more than twenty years almost all those who in Europe or America have had occasion, in the course of their study of the history of institutions, to pay any attention to the Indian village, have had recourse to Sir Henry Maine's 'Village Communities in the East and West'; while observers in India itself, called upon, in the course of their official duty, to draw up an account of conditions immediately before them, have been apt to see them through the spectacles of the same book. But Maine's work owed much of its authority to the reputation gained by its predecessor, 'Ancient Law,' to which it is in truth far inferior; his own range of observation had been curiously limited; and since his time there has been a vast accumulation of fresh evidence in the way of government gazetteers and Settlement records, which makes it absolutely impossible any longer to be satisfied with "the abstract and unified conception of the village" suggested by his writings. Mr. Baden-Powell has done us the great service, in the substantial volume closely packed with matter now before us, to bring all this material together. He attempts, and that with no small success, to disentangle its main results and dovetail them into one another, with a perception of their value which is the result at once of his own Indian experience and of his acquaintance with recent English discussion.

By far the larger part of the volume is taken up with an exposition of existing conditions of land-tenure and land cultivation, and of the geographical and ethnological considerations which have to be taken into account. He points out that there are two very different forms of village-tenure at present in existence. In the one, known as the *Raiyatwari* village, the land-owners are themselves cultivators, and own their land each in severalty; so that "the group of holdings in no sense forms a proprietary unit." This form is characteristic of more than two-thirds of India. In the other, called by the author the *joint* or *shared* village, there is something which may in a sense be called a common ownership; but this common ownership is that of a "landlord estate"—"the growth of some individual overlordship, or some settlement of conquering clans or expansion of families with their own notions of equal rights" among themselves, "and of superiority to inferior races," who have usually been allowed to continue as rent-paying cultivators of the soil. He then shows that the Raiyatwari form prevails in those parts of India which have been least affected by invasion. Finally, after an elaborate examination of the remnants of tribal organization still to be found in the Punjaub and other provinces, he sets forth tentatively his own conclusions. These are that "the right to land grows out of two ideas; one being that a special claim arises to any object, or to a plot of land, by virtue of the labor and skill expended in making it useful or profitable; the other, that a claim arises from conquest or superior might" (p. 400). Of these the first, if we are to call anything "primitive," would seem best to deserve that title. All the evidence of early law and of the actual practice of "aboriginal" races leads to the conclusion that "the early tribesman, under sanction of custom, appropriated his field or his share of the tribal land, as he would appropriate a tree to make a canoe or a plough." This claim or appropriation was perfectly compatible with the existence of a certain tribal control, or better (for it was rather a division of a tribe that held together than a tribe itself) of a certain control by the *clan*, both as against those within and those without. Neither the vague sense of clan-right nor the stronger sense of individual appropriation can be termed "property" without creating misapprehensions. Left to itself, however, the development ran steadily in the direction of what we can call individual property, as seen to-day in the Raiyatwari village; unless above the body of originally owning cultivators was imposed, by some one of the score of ways in which such things took place in India, a landlord or group of landlords claiming superiority of race. And in that case a body of non-cultivating joint proprietors might make its appearance, usually as the result of certain customs regarding *family* property. In no case does the self-governing village group of cultivating owners of Maine's hypothesis make its appearance as a distinct stage in agrarian history.

The discussion cannot be regarded as closed. We are still only at the beginning of our analysis of the tribe and the clan; and the lesson of past controversies is that we should not be in a hurry to suppose we know just what "tribal conditions" were or are. In the overwhelming mass of particulars brought together by Mr. Baden-Powell from provinces so far apart as Mysore and Cashmir, Assam and Sindh, there is abundant opportunity for differences of interpretation. It is perhaps ungrateful to say that there is still room for a statement from Mr. Baden-Powell's pen of the larger results of his studies, set forth in untechnical language, for the benefit of the general

reader. His volumes are fruitful in instruction to all who will take a little trouble; still, they present a severe aspect. But nothing can lessen our admiration for his learning, his thoroughness, his caution, and his intellectual candor. The book is a very considerable achievement.

A History of Our Own Times, from 1880 to the Diamond Jubilee. By Justin McCarthy, M.P. Illustrated. Harper & Bros. 1897.

Mr. McCarthy's first two volumes appeared in 1878. His object in writing them, as explained in his present preface, was to supply the "young student" with something he could not elsewhere get. Now that the book has been completed by bringing it down to the current year, its chief distinction undoubtedly is that there is no other work of the sort covering the same ground. It is a convenient book of reference for any one who wants to get a rapid résumé of an incident or episode, a brief account of a career, or a party struggle, as one might get it more laboriously from the newspapers of the day; but more than this we cannot say. Mr. McCarthy is not so much an historian as a ready writer, who has a reporter's gift for seizing upon the striking features of what is going on, and a turn for narration which the young student will be apt to value more than the old one. It would, indeed, be apparent without the preface that the author had had a youthful audience in mind throughout. His history, especially in this volume, reads sometimes like the story told by the good grandfather, after his retirement from active life, to the young folks at home. It is good for the young to hear it, and they may derive much profit from it, but we do not generally call it history. The volume is an uneven piece of workmanship. Of course there are chapters in which any mature man will find something to interest him, but we cannot help being irritated by a tone which continually suggests that, had the author made up his mind at the outset to write a Child's History of the Reign of Queen Victoria, we should have had a better book.

Occasionally Mr. McCarthy's method of treatment produces the effect of positive inaccuracy; as, for instance, in his account of the Venezuela dispute, in which he makes Canning urge the Monroe Doctrine on Monroe as a means of preventing "the fallen dynasties" of Europe from establishing themselves "on the shores of either America," and makes the Doctrine itself simply a declaration "that the United States could not regard with approval any attempt on the part of a foreign Power to set up a monarchy on American soil against the wish of the people who occupied that part of the country." We doubt if this would be accepted by any Monroe Doctrine publicist. We never heard that the Doctrine was directed specially against "fallen" European dynasties, and the implication that a local vote would authorize the establishment of a foreign monarchy on American soil contrary to our wishes, could commend it to no true patriot. The only safe plan is to quote the Doctrine. Still, the author gives us the general drift of the dispute, and we know of no subject on which more excuses may be made for a slight lapse from accuracy.

Another defect which the grown-up reader will notice, although, for purposes of reference, it adds to the value of the book, is the extraordinary importance attached by the author to what we may call the necrological side of history. We have not counted to see how many of the pages are taken up with what a journalist would call "obituaries," but it is a considerable part of the book. Chapter v. is called "On Fame's Eternal Beadroll" (the titles of the chapters are more adapted to a work of fiction than to a history), and contains critical notices of George Eliot, Lord Stratford de Redcliffe, Sir Alexander Cockburn, Lord Hampton, Carlyle, Dean Stanley, Archbishop McHale, George Borrow, J. H. Burton, Trelawney, Grenville Murray, James Spedding, Mrs. C. S. Hall, W. R. Greg, Edward Miall, E. A. Sothern, and Disraeli. Chapter xiv. is called "Only a Death Roll," and it is twenty-six pages long. Chapter xx., "Death—and Dynamite," ushers another batch of distinguished men to the shades; but this method of disposing of the *dramatis personæ* of history sadly interferes with the march of events. No doubt such biographical notices help us to understand the times, but masses of post-mortem notices, arranged one after another without any connection with the rest of the book, cannot but suggest to the reader a biographical dictionary.

One peculiarity the book has which is not common in works of this sort. As a general rule the historian endeavors to efface himself, and tell his story so that the reader shall seem to hear only the voice of History herself. If we want to know about Gibbon, or Macaulay, or Motley, we must seek for knowledge elsewhere than in the 'Decline and Fall,' the 'History of England,' or the 'Rise of the Dutch Republic.' In fact, in reading these works the reader's curiosity is greatly aroused to know more of the author. In Mr. McCarthy's case, on the contrary, the author puts himself with such naïve good-will into his pages that at the end we know quite as much about him as about the history, and are quite satisfied on the point as to which so many historians leave us curious. We would undertake to prove by the internal evidence afforded by this volume that the author is of a most excellent, but somewhat superficial disposition, sympathetic, humane, averse to domineering imposition of his will or his opinions upon others, and absolutely devoid of originality. He tells us his opinion of others' opinions in such a way as to let us see that he has few of his own, except on one point, that of Ireland's nationality, and even this seems to be rather a feeling or sentiment than a belief. He has acted with a party, and with a faction inside that party, for so long a time that, if he ever had the germs of original power, they have withered and shrivelled up for want of use. History is to him really a tale or drama which he personifies as a struggle between the Liberal party, or party of progress, and the Tories, or party of reaction; everything that happens is an episode in this struggle, and the struggle itself chiefly important, at least in these latter days, as bearing on the Irish question, the real nature and position of which Mr. McCarthy seems quite incompetent to describe except as a sort of tale of wrong and liberation. If the reader can find out from Mr. McCarthy, for instance, what the author means by "Home Rule," it is more than we have been able to do. There is a great deal, too, about land-law reform, but there is no clear account anywhere of what it has accomplished.

Much of the reign of Queen Victoria has been a great party struggle for freedom; the whole of it, considered as a narrative, is full of entertainment, but we fear that even admirers must admit that in this last volume the capacities of the story have often been injured in the treatment. The best things in it are the accounts of the Bradlaugh episode, the Gladstone-Austria imbroglio, and the description of the career of the leader of the "Fourth Party," though whether Mr. McCarthy does not attribute to Lord Randolph Churchill a too serious quality, we are much inclined to doubt. It is a pity that the author, in preserving one of his jokes, should not have mentioned what eminent pair of statesmen Lord Randolph had the hardihood to call "Marshall and Snelgrove."

Art and Life, and the Building and Decoration of Cities: A Series of Lectures by Members of the Arts and Crafts Exhibition Society, delivered at the Fifth Exhibition of the Society in 1896. London: Rivington, Percival & Co. 1897.

This new volume by members of the society whose long name appears in the title consists of five lectures, and therein differs markedly from its predecessor of 1893, in which a large number of short papers were bound up. It differs also from that volume in not having a long preface by William Morris. He has gone, and it does not yet appear who will replace him as the admitted chief of the Association. The first address begins with praise of Morris which must seem to many extravagant, as it is certainly unbounded. The word "great" used in the largest sense, as it is here, and the statement that Morris was "too great to criticise, to judge," would be so extravagant as to destroy any respect we might otherwise feel for the author of this address but for the fact that Morris had died on the opening day of the exhibition, October 3, 1896, and that such a circumstance as this might well excuse the undue enthusiasm.

The first lecture is by T. J. Cobden Sanderson, best known to Americans as a bookbinder who has given minute and delicate handicraft and considerable power of design to the production of costly bindings. His address is an attempt to define and explain Art as orderly and seemly living, moral grandeur, noble individuality, and noble communal existence. The reader is partly prepared, by this, to find the noble intention accepted as the great result; to find little said of works of fine art or of the way they have been brought into being, but much of the fraternal and emotional spirit which fancies more than it can realize. "I imagine," says Mr. Sanderson, "all men to be potentially artists." Those of us who know that the vast majority of men are not artists at all, in the sense that they have not the perceptive faculties nor the power of artistic expression which are needed to make an artist, will set Mr. Sanderson down as an amiable dreamer. And yet he is more than that, as is proved by the admirable remark (p. 7), "Art has its origin in craft, and craft in the needs of life."

The second lecture, "Of Beautiful Cities," is by W. R. Lethaby, one of the two authors of an admirable work on the Church of Sancta Sophia, at Constantinople, and author

of an extremely useful and sensible book on architectural lead-work, as well as a book less easy to characterize, 'Architecture, Mysticism and Myth,' published in 1892. This lecture, much longer than the first, is largely descriptive. The author's attempt has been to set before the modern reader, accustomed to ugly London, unorganized London, accidental and unadorned London, the beauty of the ancient and the mediæval city, as Athens and Jerusalem, Rome and Constantinople, thirteenth-century Paris and fourteenth-century London. Although this seems a somewhat ancient and time-worn subject for a lecture, and although there are those among our intelligent students of art who think, or who at least say, that the old commonplaces of good advice and sound criticism should be left to slumber, as having been said so often that they have lost their force, there is nevertheless reason enough to supply each new generation with the old advice and the old information, reshaped for the new age. The difficulty of treating in an intelligent way the huge modern city is as great now as it was thirty years ago; for, indeed, the cities and the communities which create them, grow faster than our knowledge of how to handle this terrible problem possibly can.

Walter Crane's paper, "Of the Decoration of Public Buildings," is less important, yet contains interesting hints in the course of description of some modern buildings and some modern mural paintings. Reginald Blomfield, one of the joint authors of that most valuable little book, 'The Formal Garden in England,' gives the fourth address, "Of Public Spaces, Parks and Gardens," and it is full of common sense. It seems that he and Mr. Lethaby must have put their heads together, so neatly does the fourth of these lectures carry on and develop the thoughts offered in the second. What "landscape architecture," as our modern phrase is, can do for cities and towns is extraordinarily well suggested in this really valuable paper. Finally, Halsey Ricardo has treated "Of Color in the Architecture of Cities." Here there is more difficulty, for no living man has seen color used successfully in external architecture in city or in country, and no one can imagine it except as the use of flower gardens may furnish color. Mr. Ricardo seems to perceive that the flower garden is his great chance, and attempts to translate the effect of flower gardens in city squares.

John Checkley; or, The Evolution of Religious Tolerance in Massachusetts. By the Rev. Edmund F. Slafter, D.D. Two vols. Boston. 1897. (The Prince Society.)

It is a distinct misfortune to the cause of literature that the publications of such book clubs as the Prince Society do not more often come out into the open and take the chances of life. As a matter of fact, they too seldom fall under the usual harrow of criticism, and, however great their merit, remain in the seclusion of private hands or on the shelves of a few large institutions. They seem to enjoy the right of asylum rather than the privileges of a tested reputation. Dr. Slafter's 'John Checkley' touches with a scholar's care and with a partisan though not ill-natured severity upon an important phase of New England history; but since his work in no sense enters the lists of literary competition, it may fairly claim the indulgence of an undertaking which does not seek to be weighed on its merits. In all candor, however, there arises a reasonable doubt whether, if the accomplished editor had subjected himself to the requirements of the open market, he would have allowed himself so much freedom and so little restraint and compactness, more particularly in the memoir of his subject.

The "persecution" of John Checkley in Boston during the early twenties of the last century is not a well-remembered incident. Checkley was by birth a New Englander, Oxford-bred, a non-juror, and a devoted propagandist of the Establishment in the colonies. His citadel was a small book-shop just opposite what is now the Old State-house; from this admirable site for any sort of enterprise he projected weapons calculated to hurt, in the shape, mostly, of reprints of forensics by English divines. The heaviest ordnance was Charles Leslie's 'Short and Easy Method with the Deists'; but Checkley did not fail to discharge a few lighter shafts of his own fashioning. For these various assaults upon the bulwarked faith of later Puritanism, Checkley was made to appear at the Court of Sessions, and, on appeal, at the Superior Court of Judicature and Assize. Before a court of which Samuel Sewall was Chief Justice, a protagonist of that black beast Episcopacy was sure to come off worsted, and Checkley was fined £50 for publishing and selling a "false and scandalous libel." Nothing could have been more strict than the adherence of the prosecution to the observance of law, but the spirit of liberty was on Checkley's side and not on theirs, and he, who at the time showed more than anything else a predilection for getting into trouble, remains in memory a martyr to intolerance. Some years later, not without opposition, he received orders in the Church of England, and ended his days as rector of King's Church, now St. John's, in Providence, Rhode Island, ever a haven against intolerance (though some would except the year of our Lord 1897). But with his trial ends the public career of Checkley; at most he was an incident and not an epoch of our earlier days.

It is easier to share Dr. Slafter's unconcealed indignation at Checkley's persecution than to follow his admiration for Checkley's abilities. That the Boston bookseller was persistent and courageous is undeniable; but neither his letters nor his printed remains proclaim him the rich scholar and man of conspicuous parts that his apologist so readily discerns. It is from a modern point of view that Dr. Slafter sees his hero loom so large. The story, however, is a clear illustration of the determination of New England to resist any ecclesiastical encroachments, great or small. There was intolerance, but, as on Checkley's side, there was no want of good courage. Dr. Slafter has discharged a volley at the already well-assailed Puritan, but, as we have not unpleasantly meant to say, from behind the ramparts of the Prince Society. That society's reputation for making a handsome book is again sustained. It is to be noticed, however, that Benjamin Colman's name is given as Coleman, and Peter Thacher's as Thatcher. Perhaps the editor has new light on these familiar names; otherwise such errors are the more to be regretted in a work not subject to revision.

For Dr. Slafter's "Bibliography of the Controversy in America Relating to Episcopacy, 1719-1774," in volume ii., students will have cause to be grateful. The subject, which is to increase in interest, receives an impulse from so excellent an array of titles.

Montaigne, and Other Essays. By Thomas Carlyle. Now first collected. With Foreword by S. R. Crockett. Philadelphia: J. B. Lippincott Co. 1897.

No one who raises himself out of obscurity and narrow means by the sole use of his pen escapes the experience of hack work. Afterwards, when independence and recognition come, the successful author is glad to forget his incunabula. Dr. Johnson's disinclination to be reminded of his Grub Street performances is notorious, and Carlyle had a poor opinion of his articles in Brewster's 'Encyclopædia.' He never cared to republish them; and Froude's judgment, conveyed in a footnote, was probably a reflection of his master's final feeling on the subject. The sketches in question, he says, "are little more than exercises." A publisher now rises up to dispute this censure by reprinting in collected form some seventeen essays written in 1821, and paid for by those checks of Sir David Brewster which made their way to Ecclefechan in forms suggested by true filial piety. In the face of Carlyle's own adverse criticism it must be the bibliographical instinct which has led to the present adventure, although the concluding words of Mr. Crockett's introduction breathe reverence for the young prophet undisclosed. This early work, having been rescued from the "densely-piled, double-columned débris of the 'Edinburgh Encyclopædia,' may now stand printed plain and fair on any man's shelf who, for the sake of the full-fed herd, loves even these firstlings of the flock." The fate of just oblivion has overtaken other articles of equal or greater merit which were contributed to the same compendium, and we very much doubt whether any one would have thought it worth his pains to unearth such forgotten papers were this not an age that collects postage-stamps and reprints ephemerides with the same typographical care it bestows on masterpieces. But while we are apathetic towards this particular scheme we find difficulty in dismissing Carlyle's early literary efforts, when once they are presented to us, without at least a word of comment.

The author of 'Sartor,' writing in stilted eighteenth-century phrase, presents the spectacle of Pegasus attached to a plough, or, perhaps, more fitly, to a threshing-machine. Contrast the easy action of the steed as he wanders at will through the limpid azure of his own disquisition, with his base mechanical trudge on the moving gangway of the 'Encyclopædia': "The fire-baptized soul, long so scathed and thunder-riven, here feels its own freedom; which feeling is its Baphometic baptism: the citadel of its whole kingdom it has thus gained by assault, and will keep inexpugnable; outwards from which the remaining dominions, not indeed without hard battering, will doubtless by degrees be conquered and pacificated." And over against this a sentence from the 'Encyclopædia' notice of Mungo Park's life: "The evils of an African journey were distant in place, and becoming more distant in time, while the disquietudes of his present situation had the painful quality of presence and reality, and he

turned from them with disgust to contemplate the more exalted prospects which imagination delighted to picture in the scene of his former adventures." Carlyle struck his own gait in ten years from the time he began to publish. A wider vocabulary and a more etymological use of words are the first signs of difference between him and the ordinary digester of facts. There is no evidence of a special desire to avoid trite expressions or constructions. With the length of his composition prescribed, the youth of twenty-six went through his books of reference, arranged an intelligible abstract, and delivered goods of an expected size and quality. The field being an easy one to work, the essays were turned out with very considerable rapidity.

The subjects are either men or districts. Arranged alphabetically, they extend from M to P; from Montaigne to William Pitt, the Younger. Carlyle was fortunate in having worthies only to portray, and the chief interest of the series springs from its revelation of his attitude towards the Great Man. By itself his constant praise may seem commonplace. Considered in the light of his teaching it is significant. His reputation having suffered somewhat from reaction, we are prone to forget the extent of his contemporary influence. One finds the germ of that stimulating effect he had on young men in his early enthusiasm for Montesquieu, Necker, Nelson, and the Pitts. The article on Nelson ends as follows: "The period is advancing when the naval superiority which he completed will pass away; but Nelson's name will always occupy a section in the history of the world, and be pronounced, wherever it is understood, as that of a Hero."

One requires but a modicum of biographical knowledge to perceive that these notices are incomplete. The modern editor of a good encyclopædia would demand more specialized information than Carlyle then possessed on the majority of his themes. The omission of notable facts and considerations, the misspelling of names, etc., fits in well with the general air of an abridgment. School manuals of literary criticism have a way of comparing Macaulay and Carlyle. The former shows off to advantage if one puts his contributions to the 'Encyclopædia Britannica' beside the latter's contributions to the 'Edinburgh Encyclopædia.' To be sure, Macaulay wrote for his friend Adam Black in the fulness of his powers, and treated subjects with which he had long been conversant, while Carlyle is at the disadvantage of immaturity and unfavorable circumstances. But regarded intrinsically, there is no comparison. Macaulay's sketches are models of their kind. A forward student in the Harvard Graduate School might hope to equal those of Carlyle. One notes particularly the extent to which his opinions on the French Revolution changed. Under Necker, Nelson, and William Pitt he has occasion to touch upon its principles and personages. Of Necker's decline in popularity after his return from Basel, he says: "With the most earnest desire to act uprightly and honourably, he soon found it impossible to unite an attention to the real interests of the State with the favor of an excited and ignorant mob, perpetually misled by wicked agitators, yet drunk with its new-found power, and indulging the most chimerical expectations from the actual posture of affairs."

We can discover no reasons for the republication of these articles other than sentimental regard for everything that Carlyle did, and the bibliographical desire to present his writings in their entirety.

The Voyage of the Mayflower, Penned and Pictured by Blanche McManus. New York: E. R. Herrick & Co. 1897. Pp. viii, 72.

In these days of wide-extended, if often superficial, interest in our colonial beginnings, it is not surprising that effort is made to present our early history with the maximum of external attractiveness. Such a volume, designed, one would suppose, for a fashionable drawing-room table, rather than the shelf of a student of New England history, is the one before us. The author and illustrator declares her purpose to be "that even, to those who are interested beyond the limits of these few pages, will be presented a new view of the susceptibility of artistic treatment and *ensemble* of historical briefs relating to any subject likely to prove of general or widespread interest." With the two-fold intent thus indicated, in which we may presume the artistic is the stronger motive, the author's pencil has ornamented a brief narrative of the Pilgrim movement from the flight into Holland to the arrival of the *Charity* at Plymouth in 1624. The sketches which fill the upper third of every page are effectively decorative in black and white, borrowing their motive from suggestions of the text below. To the whole the skill of the printer has given an attractive setting.

The accompanying text is of the slightest, and would scarcely call for comment did not the "Apologia" prefixed speak of it as "terse but authoritative," and claim the volume as not merely "original in its inception," but "correct in fact." Certainly such an assertion is far too pretentious unless reference be had only to the broad general outlines of the familiar story. The author, for instance, in referring to the Pilgrim church, speaks of William Brewster as "ordained their pastor"; certainly his well-known title of "ruling-elder" might have put her on her guard. She represents the Separatists as already fled to Holland in 1575 under Robert Browne—an event which did not take place till 1581. It is surprising to read of the Pilgrims at Leyden that "their church . . . received no further recruits from England and was not increased by proselytes from Holland," when one recalls —to mention no others—how a member of such later distinction as Edward Winslow joined them in 1617. Nor is the author more accurate in reproducing as familiar a series of names as those of the signers of the Compact and of the *Mayflower's* passengers. Besides an indiscriminate application of the then significant title "Mr." to all the signers except three, the more striking because William Bradford is left (in company with John Alden) without such distinction, there are several omissions in the list of emigrants, while Desire Minter masquerades as Winter, John and Francis Billington as Bellwright, and John Turner's son is entered as his wife. A similar want of accuracy leads the author to date the introduction of cattle into Plymouth 1622, rather than 1624; and one queries whether she could have realized the immense amount of labor that would have been involved had the statement been true that the *Mayflower* was "towed over to her anchorage for the winter," *i. e.*, from Provincetown to Plymouth harbor. It is no less surprising to find Peregrine White described as a "daughter to William and Susan White"—a change of sex which a glance at any competent compendium of Pilgrim history would have avoided.

Mercy Warren. By Alice Brown. [Women of Colonial and Revolutionary Times.] With Portrait. Charles Scribner's Sons.

This book has been called out, in large measure, by the immensely increased interest in past times aroused by the eagerness to join the so-called "patriotic-historical" societies. It is an attempt, enthusiastic and industrious, to bring before us in vivid outline one of the most prominent women of the first generation of American independence—matron, poet, historian, controversialist. The attempt is but partly successful. The lack of materials is admitted. Mrs. Warren's voluminous correspondence ran insatiably into moral and political aphorisms instead of personal incidents, and her biographer confesses that she has laid on the details of the picture pretty thick from her general information about the age. She has to "suppose" and "fancy" a good deal.

Apparently Miss Brown's object is to make the present generation more familiar with their great-grandmothers, and draw away the sort of stiff lustre that surrounds them, like saints in early Tuscan pictures. To effect this object, she writes in a strange style, a sort of cross between Stanley Weyman and a Washington correspondent, alternately gushing over the sentiment in Mrs. Warren's life, and making fun of its quaint solemnities. We are particularly introduced to misplaced capitals and false spellings in her letters, as if we could appreciate her character any better from seeing her MS. printed in a way no printer of her time would have let it pass. As a result, Mrs. Warren appears in these pages not so much in her own character, as the prima donna of a modern play, acted by very modern performers, and enlivened by modern gags.

The biographer seems to have gauged very correctly the value of Mrs. Warren's literary compositions; but these cannot have either their merits or their faults appreciated without a much more thorough knowledge of eighteenth-century writers than this book shows. Pope is mentioned; but no knowledge is betrayed that the lines which Mrs. Warren puts as a prologue on the title-page of "The Group" are taken from one of his best-known satires. Addison's "Cato" is never even mentioned; yet it continued to be a special favorite in American households as long as Mrs. Warren lived, and suggested the name Marcia, which resembled Mercy only by accident. Several times Mrs. Warren is called Mercy Otis Warren. Is there any evidence that this practice of preserving the maiden name existed at all in her lifetime? We have seen John Adams's wife called in modern writing Abigail Smith Adams; but she never wrote her name so herself. In those days, as in England now, a married woman dropped her own name when she took her husband's.

With the Trade Winds. A Jaunt in Venezuela and the West Indies. By Ira Nelson Morris. G. P. Putnam's Sons. 1897.

The author of this little volume, whose

preface describes it as a "desultory account" of his observations during a recent winter tour, is, to judge by the frontispiece, a young man, but he has avoided the fault, common among young observers of men and manners, of being too critical. He sticks throughout to description, and, tracing his footsteps through that part of the region traversed with which we are most familiar, we find him a pleasant, if somewhat immature, travelling companion. There are, as he says in his preface, so few books in English about the northern part of South America that every new one is of interest.

We note one or two points which have struck us. Mr. Morris found the harbor of La Guayra no longer an open roadstead, the great breakwater so long projected having been finally built. He notices that "one of the greatest disadvantages the present government has to contend with is the existence of contracts and agreements entered into by the previous ruler, Guzman Blanco, with various corporations and syndicates, which are thoroughly impracticable." This, however, is a chronic difficulty in Venezuela. Carácas is evidently improving, for our traveller can speak of his "comfortable quarters at the Grand Hotel," and he insists, with Mr. R. H. Davis, on that capital being "the Paris of South America." American interests he declares to be "steadily growing" in Venezuela, but gives no proof. He makes the surprising statement that the people of Venezuela "do not seem to know what we would call a good horse," the fact being that what we call a good horse is of a totally different breed from theirs, and cannot be acclimated, certainly not without great difficulty. His account of the behavior of the señoritas leads to the inference that the habits of South America are changing faster than we supposed. Can it be that they sit in the windows, directly on the street, "arrayed in becoming toilets, observing the passers-by and chatting with their friends"? In our time they were not visible, though they might have been observing the passers-by from behind the shutters. Elsewhere Mr. Morris says that on Thursday evenings, when the band plays in the Plaza, the señoritas "respond to their suitors," "coquettishly wandering in the shadows." He explains this by saying that "North American customs" have been introduced into Carácas; but we believe he has been misled, owing to the fact that Spanish-American customs are in this respect peculiar. Señoritas are to be met with, no doubt, in the Plaza in the evening, because it is a common meeting-place for every one, but the mother or chaperone of the young lady takes pretty good care that she shall not wander off into the shadows. Such at least was the case *consule* Blanco.

ROBERT E. LEE

AND THE SOUTHERN CONFEDERACY. 1807-1870. By HENRY ALEXANDER WHITE, M.A., Ph.D., Professor of History in the Washington and Lee University. No. 22 in the "Heroes of the Nations Series." Fully illustrated. Large 12mo, cloth, $1 50; half leather, gilt top, $1.75.

CHIEF CONTENTS: Birth—Family—Education—Marriage—Secession and Slavery—The Crisis of 1861—In Command of the Forces in West Virginia—The Seven Days' Battles in Defence of Richmond (1862)—The Campaign in Maryland—The Capture of Harper's Ferry—The Battle of Fredericksburg—The Campaigns of Gettysburg, Petersburg, and Appomattox—Lee as President of the Washington College.

Prof. White's biography of the great Confederate general is written from a Southern standpoint. His work will, however, appeal to all, whether north or south of Mason and Dixon's Line, as the record of an American whose nobility of character and soldierly qualities are unquestioned.

APPLETON'S
Popular Science Monthly.
OCTOBER, 1897.

Franklin's Kite Experiments with Modern Apparatus. ALEXANDER MCADIE. Illustrated.

A reproduction of Franklin's epoch-making experiments by means of modern apparatus, and a discussion of the kite as an instrument for meteorological investigation.

Science at the University of Chicago. Prof. FREDERICK STARR. Illustrated.

Describes and pictures the men and buildings devoted to the teaching of science in the newest of our great universities.

The Psychology of Belief. W. B. PARKER.

An interesting and instructive discussion of this curious trait of the human mind, which might almost be called an instinct.

Free-Hand Drawing in Education. H. G. FITZ. Illustrated.

Shows the importance of this subject when properly taught, and its absolute uselessness as ordinarily presented to the child.

A Decade in Federal Railway Regulation. H. T. NEWCOMB.

Shows how futile the famous interstate commerce law has been in checking the evils which led to its passage, and points out its radical defects.

Early American Chemical Societies. H. C. BOLTON.

A brief historical sketch of the origins and aims of what were practically the first scientific societies in this country.

Other articles: The Racial Geography of Europe—IX, Italy; Some Unrecognized Laws of Nature; The Idea of Murder among Men and Animals; Principals of Taxation—XI, Present Methods; The Economic Value of Animals; and Sketch (with Portrait) of Louis Figuier, astronomer.

Editor's Table; Scientific Literature; Fragments of Science; Notes.

50 cents a number; $5 00 a year.

D. APPLETON AND COMPANY,
72 Fifth Avenue, New York.

William Lloyd Garrison, 1805-1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (till recently published by the Century Company) has been reduced in price from $12 00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world wide importance. . . . It will be a standard work of reference"—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

The Nation

VOL. LXV—NO. 1685. THURSDAY, OCTOBER 14, 1897. [illegible] CENTS.

Public Library B. P. L. OCT 15 1897

D. Appleton and Company's New Books.

French Literature.

By EDWARD DOWDEN, D. Litt., LL.D. (Dub.), D.C.L., (Oxon.), LL.D. (Edin.), LL.D. (Princeton), Professor of English Literature in the University of Dublin. **Literatures of the World Series**, edited by EDMUND GOSSE, M.A. 12mo. Cloth. $1.50.

A critical and historical *résumé* of French literature, adapted to the requirements of students and entertaining to the general reader. The author, who is particularly well qualified to write this book, while not unmindful of historical and social influences, desires especially to fix the reader's attention on great individuals, their ideas, their feelings, and their art. Aided by the works of the ablest and most learned students of French literature, he presents a book which will at once find favor.

Natural History.

By R. LYDEKKER, F.R.S., R. BOWDLER SHARPE, LL.D., W. F. KIRBY, F.L.S., R. B. WOODWARD, F.G.S., W. GARSTANG, M.A., H. M. BERNARD, F.L.S., and Others. The first volume in The Concise Knowledge Library. With 500 Illustrations. 8vo. Half binding, $2.00.

This work aims to be a concise and popular Natural History, at once accurate in statement, handy in form, and ready for reference. The several departments of zoölogical science are treated by specialists, all of whom are distinguished as authorities and as original investigators.

Children's Ways.

Being selections from the author's "Studies of Childhood," with some additional matter. By JAMES SULLY, M.A., LL.D., Grote Professor of Philosophy of Mind and Logic, University College, London; Author of "Studies of Childhood," "Outlines of Psychology," etc. 12mo. Cloth, $1.50.

This work is mainly a condensation of the author's previous book, "Studies of Childhood," but considerable new matter is added. The material that Mr. Sully has collected and published in this volume is the most valuable of recent contributions on the psychological phases of child study.

Bibliography of Education.

By WILL S. MONROE, A.B., Department of Pedagogy and Psychology, State Normal School, Westfield, Mass. Vol. XLII. International Education Series. 12mo. Cloth, $2.00.

This book will prove of great use to normal schools, training schools for teachers, and to educational lecturers and all special students seeking to acquaint themselves with the literature of any particular department. It will be of especial value to librarians in the way of assisting them to answer two questions: (*a*) What books has this library on any special educational theme? (*b*) What books ought it to obtain to complete its collection in that theme?

The Story of the Cowboy.

By E. HOUGH, author of "The Singing Mouse Stories," etc. A new volume in The Story of the West Series, edited by RIPLEY HITCHCOCK. Illustrated. 12mo. Cloth, $1.50.

"A true picture of this fast-vanishing representative of a great human industry."—*New York Sun.*

"Nothing fresher or finer has been written in many a day. . . . An admirable work"—*Chicago Evening Post.*

"An unusually vivid and interesting picture of Western life."—*New York Herald.*

Volumes of this series previously published.

The Story of the Indian. By GEORGE BIRD GRINNELL. Illustrated. 12mo. Cloth, $1.50.

The Story of the Mine. By CHARLES H. SHINN. Illustrated. 12mo. Cloth, $1.50.

The Story of Germ Life.

By H. W. CONN, Professor of Biology at Wesleyan University; Author of "The Living World," etc. Library of Useful Stories. Illustrated. 18mo. Cloth, 40 cents.

In clear and popular language Professor Conn outlines the development of bacteriology, explains the nature and characteristics of bacteria, and the important part which they play in the economy of Nature and in industry.

APPLETONS' HOME-READING BOOKS. LATEST ISSUES.

Uncle Sam's Secrets.

A Story of National Affairs for the Youth of the Nation. By OSCAR PHELPS AUSTIN. Illustrated. 12mo. Cloth, 75 cents *net.*

A book especially useful to the rising generation in stimulating a desire to become better informed of the affairs of their country, and a love and reverence for its institutions.

The Hall of Shells.

By Mrs. A. S. HARDY, author of "Three Singers," etc. Illustrated. 12mo. Cloth, 60 cents *net.*

It is hoped that this volume may help to awaken an interest in the sea and its treasures, which can but grow with the years and afford an ever-widening and deepening source of delight.

Curious Homes and Their Tenants.

By JAMES CARTER BEARD. Illustrated. 12mo. Cloth, 65 cents *net.*

This book treats of an unusually attractive phase of zoölogical study, and gives to animal life and instincts a new and human interest.

The Mystery of Choice.

By R. W. CHAMBERS, author of "The Moon-Maker," "The Red Republic," etc. 16mo. Cloth, $1.25.

The same thread runs through Mr. Chambers's imaginative work—the strangeness of selection, the mystery which veils the reasons of decisions. In each adaptation of this general theme the author's fine imaginative quality, and his power of conceiving original situations, are shown at their strongest and best. A book so much out of the common will leave no reader indifferent.

LATEST ISSUES IN

Appletons' Town and Country Library.

Each, 12mo. Cloth, $1.00; paper, 50 cents.

The Clash of Arms.

By J. BLOUNDELLE-BURTON, author of "In the Day of Adversity," "Denounced," etc. $1.00.

In this stirring romance of the seventeenth century the reader shares the adventures of an English officer who serves under Turenne in his German campaigns. The author has written an engrossing story of love and war.

Fortune's Footballs.

By G. B. BURGIN.

Mr. Burgin has written a capital story of woman's persistence in righting a wrong, an end which involves dramatic situations. The novel deals with interesting phases of theatrical life in London, and it will be found to be full of color, action, and vivid characterization.

A Soldier of Manhattan,

And his Adventures at Ticonderoga and Quebec. By J. A. ALTSHELER, author of "The Sun of Saratoga."

This vivid colonial romance opens with a series of pictures of New York in the middle of the eighteenth century. The adventurous career of the hero includes a share in Abercrombie's defeat at Ticonderoga, and a period of captivity in Quebec, which was followed by an escape and an opportunity to play a part in the meeting of Wolfe and Montcalm on the Plains of Abraham.

The Science of Ethics,

As Based on the Science of Knowledge. By JOHANN GOTTLIEB FICHTE. Translated by A. E. KROEGER. Edited by the Hon. W. T. Harris, United States Commissioner of Education. 8vo. Cloth, $2.25.

This is one of the great philosophical works of the author, and ranks next after the Science of Knowledge as of equal importance with the Philosophy of Right. It contains an exposition of the author's clear insight into the freedom of the will and the doctrine of moral responsibility. The original work was published in 1798, and is now for the first time rendered into English.

For sale by all booksellers, or will be sent by mail on receipt of price by the publishers.

MAHAN'S NELSON

One of the Great

Biographies of the World.

THE LIFE OF NELSON. The Embodiment of the Sea Power of Great Britain. By CAPTAIN S. T. MAHAN, D.C.L., LL.D., United States Navy, Author of "The Influence of Sea Power Upon History, 1660-1783," "The Influence of Sea Power Upon the French Revolution and Empire." *Illustrated with 19 portraits and plates in photogravure and 21 maps and battle plans.* 2 vols., 8vo, cloth, gilt top, $8.00.

A masterpiece of biographical writing and portraiture.—*Chicago Tribune.*

Has all the merits of a faithful history, combined with the fascinating interest of a romance.—*London Daily News.*

It may be regarded as one of the most important biographical works yet contributed to English literature.—*Boston Transcript.*

Not merely the best life of Nelson that has been written, but also perfect, and a model among all the biographies of the world.—*Pall Mall Gazette.*

It will enhance his own reputation as a patient student, a judicious critic, a philosophical historian, and a vivid narrator of the dramatic and picturesque.—*The Literary World.*

The nineteenth century may flatter itself in its dying years that it leaves behind an adequate memorial of the great admiral whose achievements rendered its dawn illustrious.—*The Athenæum.*

Now in its Second Edition. First Edition of **5,000** *copies exhausted a few weeks after publication.*

"A Great Book from First to Last"

THE FEDERAL JUDGE

By CHARLES K. LUSH. Price, $1.25

"The object is plainly an attempt to show how far-reaching and subtle is the influence of the great moneyed men of this country. It is a story of the plan, boldly conceived and skilfully carried into execution, of appointing a Circuit Court judge to the Federal Court, and then having the capitalists cultivate his acquaintance and make him so completely one of their set that he comes to be entirely under their influence, without himself realizing that such is the case. . . . We feel safe in predicting that this book will prove very popular. It will be much read and discussed. Its plot is ingenious, the movement very vigorous, and the subject one daily growing in interest."—*Boston Daily Advertiser.*

"'The Federal Judge' is the new novel of a new man in fiction, which *is likely to make as big a hit as the 'Honorable Peter Stirling,'*" says the *Boston Transcript.*

"It is a great book from first to last."—*Boston Courier.*

"It is a capital story of the hour and for the hour. It is a book that every American who reads will be thoroughly interested in, and it is a book that ought to be read by every American. No more thrilling tale of the American life of to-day in the arena of commerce and politics has yet been published."—*The Bookman, New York.*

"The novel is certain to attract a good deal of attention and be widely discussed. It is a well-constructed story, of forceful originality, disclosing exceptional ability in the portrayal of character and a style of much graphic vigor."—*Philadelphia Press.*

"The singular merits of 'The Federal Judge' are not to be disputed. It is in the best school of realism. The story imparts a whole series of strong lessons pertinent to the days we live in."—*New York Times.*

"Most interesting story, written in a pleasantly brisk and direct style."—*Cincinnati Commercial Tribune.*

F. Marion Crawford's New Italian Novel: CORLEONE.

Another Story of the Saracinesca Family.

Mr. Crawford's most popular novels are held to be those which reproduce Roman society and are chiefly concerned with the fortunes of the different generations of the Saracinesca family. In his latest novel we follow our old friends Don Orsino and his cousin San Giacinto into the Sicilian mountains, where they fall afoul of the *mafia*.

In Two Volumes, Cloth extra. Price, $2.00.

BOOKS OF BIOGRAPHICAL IMPORTANCE.

THE STORY OF GLADSTONE'S LIFE.

By Justin McCarthy,

Author of "A History of Our Own Times," "The Four Georges," etc.

Cloth, 8vo. Fully illustrated with Portraits, etc. *Almost Ready.*

THE LETTERS OF ELIZABETH BARRETT BROWNING.

Two volumes. Demy 8vo. With Portraits, etc. $4 00.

These letters cover the whole of her life from her early girlhood, and contain interesting references to many important events, and persons with whom the Brownings were associated.

The Old Santa Fé Trail.

The Story of a Great Highway.

By Col. HENRY INMAN, late of the U. S. Army. Fully Illustrated with full-page Plates by FREDERIC REMINGTON, and other Illustrations showing Portraits of famous Trappers, Scouts, etc., and of places on the Trail of special historic interest in the form of initials and tailpieces. There is also a Map of the Trail.

Cloth, 8vo. Price, $3.50.

TALES OF THE EAST AND WEST.

Illustrating Life in India

IN THE PERMANENT WAY.

By FLORA ANNIE STEEL, author of "The Flower of Forgiveness," "On the Face of the Waters," etc. **Cloth, crown 8vo, $1.50.**

Of her previous book of short stories the *New York Sun* said: "Mrs. Steel does not introduce us to, but into the characters. We do not look at them, but with them. We think their thoughts, suffer with them and are merry with them. We know of them from the inside, not the outside."

and

Life in the New Northwest.

A FOREST ORCHID AND OTHER TALES.

By ELLA HIGGINSON, author of "From the Land of the Snow Pearls." **Cloth, crown 8vo, $1.50.**

Of her previous collection of short stories the *Public Opinion* said: "The merit of Mrs. Higginson's stories is their painstaking fidelity to truth. It is of the new Northwest that she writes, and chiefly of the Puget Sound Country."

A Golden Treasury of the Songs and Lyrics of the English Language.

Second Series. Modern Poetry.

Selected and arranged by FRANCIS T. PALGRAVE, late Professor in the University of Oxford. Uniform with the earlier volume in the *Golden Treasury Series.*

Cloth, 16mo, price $1.00.

PRACTICAL IDEALISM.

By WILLIAM DE WITT HYDE, President of Bowdoin College and author of "Outlines of Social Theology." Cloth, crown 8vo, $1.50.

"The natural sequence of Dr. Hyde's Theoretical 'Outlines,' which was pronounced a peculiarly original, interesting, and suggestive study."—*The Church Standard.*

THE SOCIAL TEACHING OF JESUS.

An Essay in Christian Sociology.

By SHAILER MATHEWS, University of Chicago.

Cloth, 12mo, $1.50.

It is based upon the belief that Jesus, as a strong thinker, must have had some central truth or conception.

The Study of City Government.

An Outline of the Problems of Municipal Functions, Control, and Organization. Cloth, crown 8vo, $1.50 net.

By DELOS F. WILCOX, A.M., Ph.D. The author holds that the City Problem is the key to the immediate future of social progress in this country, and offers for the first time a systematic outline of the whole subject, indicating the chief problems of function, of control, and of organization.

NEARLY READY.

The Nation.

NEW YORK, THURSDAY, OCTOBER 14, 1897.

The Week.

As was expected, the Government's October expenses are proving heavy, and the deficit for the month promises to be something handsome. But the officials at Washington are already arranging for still larger outlays. In the Navy Department, Mr. Roosevelt is prepared to prove that at least $11,000,000 must be had at once for dry-docks alone, if this nation is to be spared the shame of sending its battle-ships to Halifax to have their hulls scraped and painted. We can stand Halifax "frowning" upon us and "threatening" us, as Lodge's frenzied eye beheld her; that only means that we, too, must frown and threaten and give somebody fat contracts to enable us to do it. But if Halifax gives us the friendly use of a dry-dock, the cup of our humiliation is full, and nothing but an appropriation of $11,000,000 can restore our self-respect. Then Secretary Wilson of the Agricultural Department is sure he must have a great deal more money. He means to distribute tons and tons of beet seed, so that we may produce all our own sugar and be spared the mortification of raising $50,000,000 revenue from the imported article. Everybody, in fact, wants bigger appropriations, the revenue being, of course, a "mere matter of detail." Our Government, to tell the truth, is now run on the principle which, as displayed in the construction of the Duke of Argyle's castle, won Johnson's admiration—namely, a "total defiance of expense."

The *Herald* has a telegram from Paris to the effect that the Indian Government, in reply to a further pressing invitation by the English cabinet to consider Senator Wolcott's proposals, has answered that it cannot reopen the question of the Indian currency, and will not be a party to the reopening of the mints for the free coinage of silver. "In well-informed English circles," adds the correspondent, "it is not believed that Lord Salisbury's Government will dare to override the decision of the Indian Government. Senator Wolcott's mission must thus be considered abortive." This news is probably true. It is an easy thing for the people in Downing Street to throw the finances of India into disorder from which they would not themselves be the sufferers, but the men who have to deal with the question practically are bound to consider the question with reference to the interests of India solely. The contention of the bimetallists is that the mints should be reopened in order to secure a par of exchange between silver-standard countries and gold-standard countries. That desideratum is what India has secured by stopping the coinage of silver. To reopen the mints would be to reopen the disturbance. It would seem as though India had had enough experience with free coinage, under which the fluctuations of exchange have ranged as high as 50 per cent., taking the extremes of the whole period 1873-1893. Who is to guarantee that they will not fluctuate as widely in the next twenty years under like conditions? The theory is that an agreement between France, India, and the United States will hold the par of exchange steady at 15½ to 1; but supposing that it does not, who, in that case, is to make good the losses of the Indian Government? Will Parliament make an appropriation for that purpose? Will France and the United States do so? Will Senator Wolcott contribute something? The whole scheme is preposterous. No country is more interested than the United States in its rejection by India and every other country. The longer the question remains open, the longer will uncertainty continue as to the standard of value.

One of the surprising things about the letter of the Governor of the Bank of England, offering to hold one-fifth of its bullion in silver, is that it appears to have been written without consulting with his colleagues in the direction of the Bank. Mr. Smith's letter bore date July 29, yet on September 11 Mr. Grenfell, who described himself as "one of the senior members of the Bank Court," wrote to the London *Times* to deny the rumor that the Bank was going to take the silver dog by the ears, affirming: "I doubt if any opinion has been recorded or any determination come to at all." The question at once arises, If Mr. Grenfell knew nothing of the Governor's letter, did any of the Bank Court know? And if the Governor can venture upon such an important step without taking the opinion of his directors, what may he not do? A London financial paper declares bluntly that the whole thing was not a question of banking or finance, but of political intrigue; and that the reason Mr. Smith wrote his letter was that his eyes were fixed on "hypothetical stars—if not garters."

Many attempts have been made during the last six months to get Mr. Gage to take the public into his confidence, and the Peorians have at last drawn him. He dedicated the Bradley Polytechnic Institute of their town last week, and unbosomed himself. Like other sphinxes, however, he did not say what was expected, and did say something that his friends, certainly, could not have dreamed of hearing. About the currency he was mum as ever, while he discoursed at length on the "service due from wealth," and roundly denounced all who had imported goods while the Dingley bill was going through Congress. This, he said, was "sharp and inequitable," because the importers did it "to anticipate and take over to themselves the revenues which Congress was endeavoring to secure for the good of all." This view may take in Peoria, but it certainly will not among the importers, who forced the retroactive clause out of the Dingley bill last spring. What they urged was, that it was "sharp and inequitable" that a law should be made to stop their business before it was passed by Congress. Mr. Gage is a very good banker, but that does not make him a good ethical teacher. Besides this, the retroactive-clause question is absolutely disposed of, while the currency question is still up. Some expression of opinion about it in his report in December will be read with interest.

The withdrawal of England from the joint sealing conference because Russia and Japan are to be members of it is evidently due to the objections raised by the Canadian Government. Although the conference is deliberative merely, having no power to alter the rules laid down by the Paris tribunal, the Canadians apprehend the adverse influence of a majority vote against their views and interests. The grounds upon which England puts her refusal to meet Russia in this conference are set forth in the recently published Blue Book. This document contains the communication from the British Colonial Office to the Foreign Office dated July 26 of the present year, in which it is said that "the reason's which induced her Majesty's Government to decline to enter upon a joint negotiation with the three Powers interested in suppressing pelagic sealing were, that since 1893 Great Britain has had an arrangement with Russia in regard to the seal fishery in which that Power is interested, and that, as the seal herds are generally alleged to be quite distinct and not to intermingle, no advantage would have been gained by a joint negotiation which could only have been based upon incomplete knowledge of the facts." It appears also that Lord Salisbury's acceptance of the conference, which was dated July 28, was for a conference "between Great Britain, Canada, and the United States," and that was expressly limited to the object "of arriving, if possible, at correct conclusions respecting the numbers, conditions, and habits of the seals frequenting the Pribyloff Islands at the present time as compared with the several sea-

sons previous and subsequent to the Paris award." The seals frequenting the Russian islands were not contemplated in the negotiations for a conference. These negotiations were conducted solely by Ambassador Hay. The bringing in of Russia and Japan seems to have been the work of Mr. John W. Foster, of whose prowess as a coercionist and tail-twister there was much talk in the newspapers three or four months ago.

The decision of Judge Baker, in the United States District Court for Indiana, regarding the right of removal from office takes essentially the same view of the question as had previously been expressed by Judge Cox of the District of Columbia Supreme Court and Judge Jenkins of the United States Circuit Court at Chicago. This latest case was one where a United States marshal had removed a deputy, who was in the classified civil service, for no other reason, apparently, than the fact that he represented the opposite political party. Judge Baker held that his court, as a court of chancery, had no jurisdiction in the matter, but he proceeded to state his position as to the points that had been raised. The substance of it all was that no rule or regulation of the Civil-Service Commission, nor any executive order, could change the law under which the marshal has the right to appoint and dismiss deputies.

The Judge, however, showed the way in which responsibility can be brought home to every official who removes a subordinate in defiance of commission rules or executive orders. "The enforcement of such rules or regulations," he said, "lies within the domain of executive departments, which possess ample powers to enforce the proper observance of and subordination to the rules and regulations promulgated by the Executive for the government of those employed in any executive department of the government." In other words, the head of any department directly—as the Attorney-General in the case of a United States marshal—and the head of the Government finally, can compel obedience to any rules or regulations by their power of removing the superior who violates such rules or regulations in the treatment of his subordinates. For example, President McKinley recently promulgated the rule that "no removal shall be made from any position subject to competitive examination except for just cause and upon written charges filed with the head of the department or other appointing officer, and of which the accused shall have full notice and an opportunity to make defence." The United States Marshal in Indiana appears to have violated this rule. The case should be carried to the President, and Mr. McKinley should be forced to decide whether he meant anything by that order. Here seems to be a chance for the civil-service reformers of Indiana to put in some effective work.

The decision of the Citizens' Union to nominate candidates for the Assembly in all the city districts is the most direct blow which could be aimed at Platt's political business. Quigg was prompt to realize this, for he denounced the proposal as soon as he heard of it as an act of "bitter hostility to the Republican party," showing that the Union "is not a non-partisan municipal movement at all, but simply a conspiracy to smash the Republican party." When Quigg says "Republican party" he always means Platt, and there is not the slightest doubt that if Platt were to lose control of the State Legislature, his power would be "smashed." So long as he can name the Republican candidates for the Legislature and succeed in having enough of them elected to give him a majority, he looks forward with positive pleasure to the election of a Tammany mayor in this city. He can, on the 1st of January, resume business on the old lines at Albany. He can introduce a bill cutting down the mayor's term to two years, or a series of bills putting the government of the city into the hands of State commissions, or bills proposing any changes whatever in the charter that may strike his fancy, and Tammany will be obliged to buy him off with spoils or let the bills pass. The State Legislature is, in fact, the very centre of Platt's power. Through that he rules the State, and because he possesses that he is able to levy his blackmail upon corporations, and thus collect the revenue by means of which he runs his machine. If Mr. Low shall become mayor, and Platt still has control of the Legislature and the Governor, he will be in position to cause endless annoyance to the cause of decent and orderly government in this city. The new charter in no way lessens the old curse of rule of the city from Albany.

The county section of the National Democratic party has succeeded in working its own ruin and disgrace by giving its endorsement to the wretched Tammany ticket, in return for Tammany's nomination of Mr. Scott for Supreme Court Judge. It was able to do this after the party organization for the entire city had given formal approval to the candidacies of Mr. Low, Mr. Fairchild, and Mr. Schumann. Of this performance we have spoken already, when it was proposed, as disreputable. It was described in much more severe language on Thursday night by one of the members of the county organization, Mr. James Byrne, who has for many years been an earnest and valuable worker in it, and who called it a "low, contemptible deal, what every citizen in private life calls it—a base, low, depraved sale and barter of human souls for the purpose of getting one man into office." That it will have much effect upon the election we do not believe. No organization whose only excuse for existence was its profession of hostility to Tammany Hall can go over to Tammany, especially at the moment when it has put a ticket like its present one in the field, and carry many voters with it. The most it can accomplish is its own destruction, and that is not a cause for regret.

We have now four parties in the city, each striving to elect officers for the Greater New York. But the most curious feature of the conflict is that only one of the candidates makes any pretence of wishing to be elected for the sake of the city. All the others wish to be elected for the sake of something else. Croker wishes his candidate to be elected for the sake of "the organization," and "the organization" exists to get hold of places for the Boys. Platt wishes his candidate to be elected for the sake of the Republican party in the nation, and for the perpetuation of his own power over nominations and legislation in the State. George wishes to be elected in behalf of a new system of state taxation, or, as he calls it, "the principles of social economy for which he has long contended." In fact, Low is the only one who even pretends to wish to be elected in order to improve the administration of the city.

George knows perfectly that the mayoral chair is not a chair of political or "social economy," and that he would in it have no more power over state taxation, car-fares, or hours of labor than he has now, but he does not mind this a bit. He thinks his election would help to spread his social economy. We must say for George that we believe that, if he was elected, he would be a better mayor than either Croker's man or Platt's man; that is to say, he would probably appoint to office honest cranks and bummers, who would make terrible mistakes and blunders, but probably steal less and make fewer corrupt contracts than Platt's men or Croker's men. Nothing is more ludicrous in this canvass than the attempt now being made to persuade people that, if elected mayor, Mr. George would do something to their property, and the pretence of some of the rich men who want to help Platt, that they believe it. George's election would show that we have a large ignorant element among us, but, alas, we know this already. What it would reveal, which we do not know, is that we have highly placed Americans like Gen. Tracy, ready to lend their aid in spreading atrocious deceptions and helping to promote atro-

cious follies at the expense of the municipality.

Mr. Low's speech in Brooklyn on Saturday night bristled with good points, but the passage we liked best was the reference to the learned Foraker, who was holding forth in New York the same night on the same subject. It appears that Foraker has been brought on here from Ohio, apparently to tell us how to elect a mayor, and what kind of mayor we ought to have, but Mr. Low hinted delicately that Foraker would like the place himself. This was an *a-priori* inference from the general readiness of Ohio men to fill any places they can get. But Mr. Low alleged with great force that the proper place for the Mayor of New York was his office in the city hall, not Washington or Ohio. It seems to us this must be so. It may be that Foraker knows all about the mayor's office in this city, else why would he come in to tell us about it? but the question is, Could his knowledge be of any use to us if he stayed in Ohio? We think not. There are the same objections to Platt's governing the city from Washington. He is a man of immense administrative ability, but we do not, for our part, believe in non-resident mayors.

A Chicago man who visited Switzerland during the past summer asked ex-President Freye, who was once a citizen of Chicago, how the referendum is working in the mountain republic. He replied that, when a great question is brought forward, the people feel a deep interest in it, go to the polls and vote, and they always vote right; but that, when the matter is of comparatively little consequence, they do not wake up and go to the polls. The Chicago investigator further reports:

> "He told me of one farmer named Bauer who had eccentric ideas of the franchise. Bauer said he was accustomed for a long time always to vote 'no,' but recently he had invariably voted 'yes,' and since then he had had much better luck with his cattle."

We judge that there are a good many farmers in Connecticut who vote on constitutional amendments the same way that Bauer formerly did. On no other theory can the remarkable fact be explained that, while the proposition to require ability to read English as a qualification for the suffrage was carried on Monday week by a vote of 47,005 for and only 4,560 against—91 per cent. affirmative and 9 per cent. negative—the opposition rose to 17 and 22 per cent. in Windham and Tolland Counties, respectively, largely composed of rural towns, while in New Haven and Hartford Counties, with their large cities and many foreigners, the negative ballots constituted only about 6 and 9 per cent. respectively. Moreover, in these latter counties it was the rural districts which showed the strongest opposition, the little "back town" of Marlboro casting 14 negative votes as against 20 affirmative, while the city of Hartford furnished only 51 "no" ballots to 1,151 "yes."

It is evident that the real location of the Cuban war is not in the island itself. The fighting is much fiercer in Madrid than it is in Pinar del Rio or Santiago de Cuba. We have our Gen. Woodford most properly there, though in what must be, for him, the highly difficult rôle of a man "with sealed lips." Hostilities are also beginning to rage at Washington again; but the most critical of all the Cuban struggles are going on in various inland towns and cities of the United States, where our Senators and Representatives are in the thick of the fray. Senator Davis, for example, chairman of the Senate committee on foreign relations, delivered a deadly assault on the Spanish troops on Thursday at St. Paul. So successful was he that he had belligerency recognized, independence achieved, and annexation secured all in one brilliant action. In all seriousness, what is the use of Gen. Woodford or President McKinley breathing peace and friendship when a man in Senator Davis's responsible position talks as he does? He and the other Senators and Representatives who speak freely of what Congress is going to do are the real belligerents. They are the men whom McKinley has most to dread. They will force his hand infallibly, as they are ostentatiously preparing to do if he does not do voluntarily what they want. Nor can the Spaniards be blind to the real power with which they have to deal. They have seen a Senate asserting its supremacy in the conduct of foreign affairs, and a President meekly yielding it, and why should they be deceived by smooth words from the nominal authorities, when they see the real authorities breathing out threatenings and slaughter?

A most damaging review of Lord Salisbury's foreign policy was made by John Morley in his opening speech in Scotland on September 28. It was necessary for him to do little but contrast promise with performance, and to put the facts with his characteristic pungency. Salisbury had lamented that Bismarck was not again in the chair at the European Concert. Well, why did he not take the chair himself? With the exception of the Emperor of Austria, no active public man in Europe had had a longer experience, particularly in foreign affairs, than Lord Salisbury. If he had not behind him, as Bismarck had in 1878, an invincible army, he had the supreme naval power of the world. Why, then, deplore an empty chair when it was only a question of a strong heart to take it? Nor did Mr. Morley omit to adorn his speech with some of those telling phrases of which he is a master, and which stick in the popular mind. Salisbury had talked grandiloquently of the European Areopagus; yes, cried Mr. Morley, referring to the German bondholders in Greece, a fine Areopagus, indeed—a court for the recovery of small debts! The boasted "forward policy" in India—what was it, asked the orator, but a Forward Rake's Progress? They had been assured in 1895 that the retention of Chitral meant "a period of quietude and economy." Let the frontier ablaze tell of the quietude, and the $25,000,000 already spent of the economy! But one of Mr. Morley's finest strokes was reserved for his characterization of the unscrupulous and cruel nature of English rule in some parts of South Africa. After exposing and denouncing what was practically a system of involuntary servitude, he said, "But I shall be told that I am a sentimentalist. So far as I can make out, however, you are a sentimentalist in the minds of these gentlemen if you are not a ruffian." There in a nutshell is the whole gospel of Jingoism, Imperialism, or whatever other elegant names are given to modern piracy and buccaneering.

The little by-play going on between the Emperor William and Prince Bismarck is highly amusing. The monarch showers compliments upon his old Chancellor at every opportunity, aiming to wheedle him into an endorsement of his policy. These the aged statesman accepts with ostentatious thanks, and immediately sets up his organs in the press with fresh stories or rumors that Bismarck is only waiting to see the Emperor's policies collapse. The latest subject of these manœuvres is the big navy on which the Kaiser has set his heart. He invites Bismarck to be present at the launching of the new battleship; alas! the recluse of Friedrichsruh is too feeble to venture on such expeditions. At any rate, he will answer the obsequious telegram which his royal master sends him. So he does, with profuse non-committal. But the next day he has a little launching of his own in the shape of a newspaper interview wherein he says:

> "I never had the slightest fancy for colonial conquests, in the French style, and to go into that policy now is a great mistake. Our commerce should everywhere be aided and protected; but the flag must follow trade, not precede it. For a long time to come the important thing for us is to have a strong and well-equipped army. That was also Moltke's opinion. So let us have no barking dogs or any fantastic plans which can only embroil us with the people whose friendship is most essential to our European position."

This sort of comment, joined with Bismarck's satiric references to the Emperor's ministers, must convince William that Bismarck is not yet ready, as he is reported to have declared that he was not, to be employed for theatrical effect.

THE BERING SEA CORRESPONDENCE.

Undoubtedly the best thing that could happen to us as regards the Bering Sea controversy would be the total disappearance of the seal herd from our territory or jurisdiction, or, better still, from the world. The poorest kind of an inheritance is to fall heir to a lawsuit, and this is what we gained when we took the Pribyloff Islands under our jurisdiction. We had existed one hundred years as an independent nation without a seal herd and had never missed them. If they were all driven off to Japan by the use of the branding iron, of which there is some fear expressed by sealing captains, we should very soon forget that we had any. They would pass out of the public mind and memory like the buffalo herd that covered the Western plains thirty years ago, and we should be rid of our lawsuit at the same time.

We are reminded of our encumbrance afresh by the publication of a Blue Book on this subject containing an answer by the British Colonial Office to the accusations embraced in Secretary Sherman's so-called "shirt-sleeves dispatch." This famous communication found a few defenders who said that the main question was not whether the dispatch was polite, but whether it was true; and every one of these defenders, so far as they fell under our notice, assumed that because it was not polite therefore it must be true—thus reversing the common observation of mankind, that the person who loses his temper in a dispute is usually in the wrong. We shall not say that Mr. Sherman was wrong in substance, as he certainly was in manners, but it may be affirmed that he or those who write letters for him have got something to reply to now which cannot be answered by mere vituperation.

The document before us is too long to be exhaustively treated in a single article, but the principal points may be mentioned. Mr. Sherman's first accusation was that the report of Prof. Thompson, the British expert, was purposely withheld to subserve the political exigencies of the situation. The reply to this charge is that the reasons for the delay of the report had been communicated to the United States Government in a dispatch of the 7th of May. This was but three days before the writing of Mr. Sherman's dispatch, and "those explanations," says the document, "cannot have been before Mr. Sherman when he permitted the insertion of the above-quoted statement in his dispatch." Referring to the substance of the accusation which relates to the depleted condition and probable early extinction of the herd, due to pelagic sealing, it quotes from the final report of Dr. Jordan, the American expert, the opinion, derived from a careful study of all the conditions, that "the fur-seal herd has decreased to about one-fifth of its size in 1872-'74, to somewhat less than one-half of its size in 1890; and that between the seasons of 1895 and 1896 there has been a decrease of about 10 per cent." In his preliminary report, Prof. Jordan estimated the number of breeding females in 1880 at 600,000, and of all kinds at 1,500,000; but, continues the document:

> "He has now apparently carried his comparison further back, and estimates that in 1872-74 the herd was about five times its present size. This would mean that at that period the herd numbered 700,000 breeding females, and 2,200,000 seals of all grades collectively, and her Majesty's Government will await with interest his explanation of the disappearance of 100,000 breeding females and 700,000 seals of all grades in the period between 1872-74 and 1880, when pelagic sealing had not yet begun. Mr. Chamberlain is not aware that it has ever previously been admitted that there was a decrease in the herd between 1872-74 and 1880, and apparently Dr. Jordan himself was not aware of it when he wrote his preliminary report, as on page 17 of that paper he states that 'until 1872, and perhaps a few years after, the herd continued to increase. During the period 1872 to 1878 it doubtless remained practically in a state of equilibrium under the various checks acting upon it, of which the trampling of pups was the chief; the Northwest catch, which remained stationary at about 5,000 during those years, being another element of the check.' Whether the earlier or later views of Dr. Jordan are to be taken as expressing his final opinion, the discrepancy shows the difficulty attending the discussion of the question in consequence of the absence of any really trustworthy data on which comparisons of the size of the herd at different periods can be based, and justifies the action of her Majesty's Government in refusing to be drawn into a discussion of the question until further information has been acquired."

The charge against Great Britain is that pelagic sealing is the cause of the diminution of the herd, but here is the testimony of the American expert to the effect, in substance, that the number of the herd decreased much faster before pelagic sealing began than it has since done.

Another charge in Mr. Sherman's dispatch was that Great Britain had not furnished her due proportion of the patrolling fleet to enforce the regulations of the Paris tribunal. As neither country was required to furnish any vessels for this purpose, this charge would have only an indirect bearing on the question in any case; but, as a matter of fact, the British force detailed for this purpose has consisted of five or six men-of-war, against an equal number of revenue cutters furnished by the United States. The document adds:

> "Her Majesty's Government also send three vessels to patrol the western side of the Pacific to see to the enforcement of the arrangement with Russia, and, though United States pelagic sealers equally engage in the fishery on that side and the United States have a similar arrangement in regard to it, Mr. Chamberlain has never heard of any United States vessel taking any part in the patrol on that side."

Touching the general principle of the freedom of the seas, the document brings to light the fact that in 1832 a United States vessel named the *Harriet* was engaged in catching fur seals on the coast and in the territorial waters of Buenos Ayres, that the vessel was seized by the local authorities for violation of the rights of that country, and that the United States Government landed an armed party at Soledad, liberated the crew and cargo, and declared "that the seal fishery on those coasts was in future to be free to all Americans, and that the capture of any vessel of the United States would be considered an act of piracy." This instance is made to support the remark, by Mr. Chamberlain, that "the United States Government have departed from the noblest traditions of their country, which had earned universal honor by their efforts to vindicate the freedom of the high seas."

These are only a few of the points covered by the document in question, which ends with the following words touching the future intentions of the British Government in reference to this matter:

> "Her Majesty's Government have never argued that the regulations were perfect, but they have maintained that, before they can be revised in a scientific manner, accurate information as to the increase or decrease of the herd must be available, and that such information can only be obtained by accurate observations extending over a sufficient period to enable accidental circumstances to be eliminated; and as soon as that is at hand, they will be ready to enter on a discussion of the question in the impartial and friendly spirit with which they can confidently claim to have acted throughout this controversy."

MUST THE REPUBLICAN PARTY DISBAND?

Gen. Tracy on Saturday night delivered himself of some remarks on the subject of "non-partisanship" which deserve examination. He asserted that the running of an independent ticket on non-partisan lines meant that the Republican party should "disband and disorganize." He then went on to say:

> "In a popular government political parties are a necessity. No government resting upon the suffrages of a free people can have any other government than the government of a political party. [Applause.] That has been the experience of England ever since the Revolution. For more than 200 years England has known no other government than the government of a political party. That is the government, and the only government, that they have had. It is true of this country also for more now than one hundred years. The only government known in the United States is the government of a political party. It is the only government that can be known. It is impossible to govern this country on any other basis. [Applause.]"

But it is not England only that has had parties for 200 years. Every country in the world has had them, some for 2,000 years. The Jews had them in Jerusalem, the Romans in Rome, the Greeks in Constantinople. But parties in all places except American cities divided, and divide, about things they have control over, not about things which they cannot and do not influence. Parties in England, Gen. Tracy must know, divide only about policies which they can shape and carry out. The Lon-

don County Council has two parties bitterly opposed to each other—Radicals and Conservatives—but what they divide on is the making of streets, the erection of buildings, and the wages of laborers, not about the Greco-Turkish situation or the South African affair. There are two fierce parties in the London School Board, the Progressists and Moderates, but they divide about the religious education of the children, not about Irish home rule. There ought to be, or rather are sure to be, parties in every city, but they ought to be practical, not speculative parties; they should be parties which can, if they get a majority, carry out their own ideas. When a party man rises to speak at a city canvass, what he should talk about is street-cleaning or police or schools. He should urge his own views on these subjects against the views of other men. It would seem very absurd to invite the audience to leave him and go somewhere else to hear Quigg on the negro or Platt on the currency. There may be, and probably often are, parties in a prosperous bank or trust company; but they are parties about the affairs of the bank or the company. They divide on discounts, on loans, on dividends, not on the decline of the Senate or civil-service reform; they divide, in short, on the affairs which they can shape, not on affairs which they can only think and feel about. In truth, political parties have always, except in our cities and in insane retreats, existed for the purpose of doing something they think they can *do*, and not for the purpose of "voicing" about something they know they cannot do. This is true of Babylon, Nineveh, Jerusalem, Rome, Constantinople, as well as of England.

If this be so, Gen. Tracy's statement or suggestion that the Republican party in New York must, if they do not win this election, "disband and disorganize," is the kind of statement or suggestion which used to make Charles Lamb examine a man's bumps with a candle. It would follow from this that if I think Mr. Low a fit man to be Mayor, I must, being now a high-tariff man, advocate a low tariff, and that when I next vote for a Congressman, I must vote for a free-trader, though I do not believe in free trade at all. But why should I be so absurd? Why should my views about Mr. Low change my views about silver or free trade? Why am I cut off from voting for a Republican at the next congressional and at the next Presidential election because I think Mr. Low would make a better Mayor than Gen. Tracy? Gen. Tracy does not know; nobody knows. Parties are composed of *voters*, agreeing about things which, if they get a majority, they think they can accomplish or hinder, not about things over which they have no power. A Republican is a Republican, not because he agrees with anybody about the mayoralty, but because he agrees with millions of others in various parts of the country about the things which Congress or the President can do. Why should he not agree with them still, after voting for either Tracy or Low?

The fact is that when Gen. Tracy said that "the Republican party must disband and disorganize" in case Low was elected, he did not mean the vast body of citizens who elected the majority in the present Congress and put Mr. McKinley into the Presidency. He meant the small knot of persons, of more or less shady antecedents, who form the Republican machine of this city, consisting principally of Platt, Quigg, Lauterbach, Van Allen, Gibbs, Gruber, Kerwin, and Murray, and a few others. Not only will they have to "disband and disorganize" in case Low is elected, but to make them "disband and disorganize" is one of the objects of the Low movement.

Nor was Gen. Tracy any more frank about his own share in this business. Had he been frank about it, he would have said something of this kind:

"What I mean by saying that the Republican party will have to 'disband and disorganize' if Low should succeed is, that the small clique, headed by T. C. Platt, who assume to represent the Republican party in this city, will have to abandon their occupation for want of funds, and about half the income of my own firm will be cut off. I am a partner of a son of this Platt, and although he is not a practitioner of very high standing, the power of his father over the Legislature and Governor and some of the judges is so well known that we receive much business from our connection with what is called 'the Old Man.' Nearly all our politico-legal practice comes to us for this reason—both suits, contract and bond-drawing. We do, also, a very nice business in stopping bills or 'jamming them through' when the Legislature is in session. We cannot possibly consent to surrender such a revenue as this without a contest. Should Low be elected, the elder Platt would probably lose control of the Legislature. Not only would he thus be unable to obtain the large sums he now gets from corporations, because he could no longer promise them privileges or immunities, but we should lose the large revenue our firm now receives from our connection with him. This is why you see me here to-night as a candidate for the mayoralty. I have no more expectation of being elected than any one else in this room. I am a candidate for revenue only. I am fighting, as you would fight, for property, and I am therefore naturally opposed to Low and George. But you will understand that all this does not prevent my being, as my learned friend Foraker has just remarked, a man of 'very high character' and 'unswervingly loyal to the Republican party,' and 'a man of justice, probity, and without reproach,' and 'a man of most irreproachable character in both public and private life.' This is why I cling so to the Republican party and hate to have it 'disband.' I have become a candidate, I admit, also, to oblige Mr. Platt; but why should I not? Is there any man to whom I am under greater obligations? Is there any man whom it would be baser for me to desert in the hour of his extremity? No, my friends. The Republican party has been a good party to us. There always has been a Republican party in every country. Civilizations have risen and fallen, but the Republican party has survived them all. It exists and continues to exist because it meets some of the deepest needs of humanity. Man, as the old writer well said, ages ago, cannot live on wind alone. He needs food and clothing, and, since the invention of street-railroads, has needed car-fare. Principles will not fill his stomach. The Republican party has been the first after Tweed's party to recognize these tremendous facts of human history and deal with them."

SPAIN'S DILEMMA.

The practical exhaustion of Spanish resources, after the tremendous exertions of the past two years in attempting to put down the Cuban rebellion, is admitted in Spain. It may not be true that the Bank of Spain has refused to advance $10,000,000 more to the Government, but it is certain that more money can be had, from that source or any other, only with the greatest difficulty and on the most onerous terms. The official organ of the Government lately spoke of the Treasury as "exhausted." Sagasta, before taking office, declared that the financial situation was deplorable, if not desperate; and it has since been given out that a frank statement of the case would soon be made public. It is confessed that the troops in Cuba are six months in arrear in their pay, and there is no money to send to them.

Moreover, one has only to trust Spanish testimony to be convinced that the unparalleled efforts put forth in Cuba have failed in their aim. Gen. Weyler's latest official dispatch asserted that the western end of the island was completely pacified, yet in a week's time he had to report a serious engagement with insurgents in the very province of Havana. As for the eastern section of Cuba, where the rebels are in force, and where they recently captured an important garrison after a set siege of two weeks, the most that the Captain-General could promise was that the rebellion should there be put down "by next March." Meanwhile he confesses to heavy losses through disease. In fact, invalided soldiers are sailing for Spain nearly every week. One ship's load of 600 men recently lost sixty men in the passage

home. Good judges now put the Spanish effective in Cuba at not above 100,000 men.

This is the discouraging situation in Cuba after two years of fierce and exhausting exertion. Never before in the world's history has a nation made such sacrifices and put forth such effort to subdue revolting colonies as has Spain since 1895. A recent official report of the Spanish Minister of War sets forth the astounding figures. Between November, 1895, and May, 1897, no less than 181,738 men, 6,261 officers, and 40 generals have been sent to Cuba. Counting the garrisons already in the island, the total fighting force must have been hard on to 225,000 men. In addition, and during the same period, Spain has had to send 28,000 men to the Philippines. It is safe to say that no nation in modern or in ancient times ever sent across the seas so many of her fighting men in her own ships in the same length of time. It has been a supreme and unequalled display of energy, but it has been fruitless.

There are military experts in Spain who assert that this whole policy of massing a colossal force in Cuba has been one huge mistake. It was playing the insurgents' own game, they say. The announced policy of the rebels was, not to fight, but to exhaust, Spain. There was no regular campaign; no open fighting; no pitched battles. The war was a guerrilla war; the work of the army was largely that of doing garrison and police duty, or of pursuing, in light columns, the fleeing bands who raided here and there, but who never stood up for a square fight on equal terms. In these circumstances, say some Spanish military critics, the enormous dispatch of troops was a blunder. The men could not operate to advantage in such numbers; they were in each other's way, so to speak; they made camp and city congested; and their sustenance was a frightful drain on Spanish resources. The policy but hastened the time for which the insurgents were looking, when Spain, wearied and exhausted, should be ready to think of abandoning Cuba altogether.

While a good deal is to be said for this view, from the purely military standpoint, there were other reasons of a political nature which justified, if they did not compel, the lavish pouring out of men and treasure. It was indispensable that the rebellion be crushed quickly. Cánovas saw, all Spanish statesmen saw, that a prolonged and smouldering insurrection would be fatal to Spanish supremacy in Cuba. In the aroused and sensitive condition of public opinion in the United States, that would have infallibly meant interference by us. But interference by the United States was also from the first a high card of the insurgents. They counted upon that as much as upon tiring Spain out. So the Spanish Government was wise, on the whole, in its resolve to spend every power in making a speedy end of the rebellion. That was the only way to retain Cuba. The pity of it all is that Spain has spent every power, has exhausted herself, and yet has not quickly ended the rebellion. In other words, the insurgent policy has triumphed in both its grand aims: Spain is baffled and breathless; sympathy for Cuban independence has risen to great heights in the United States, and is rising higher every day.

In these altered circumstances it is inevitable that Spain's policy should have altered. It is clear that the new ministry intends to try the plan of political remedy, of placating by reforms and a grant of autonomy, while still making a show of crushing out opposition by force. It is a question if this is not too late—if the change will not mean to the insurgents a final confession of weakness, and cause them to stand more stubbornly than ever for independence. The better opinion seems to be that such will be the case. If so, Sagasta's task will be the difficult one of inducing the Spanish people to submit to the inevitable. He may be aided, or he may be hampered, by the attitude of our own Government. At present, we must confess, a diplomatic collision and a rupture appear the most probable. But whichever way Spain turns, the dilemma that confronts her is most cruel; and no one possessed of the historic imagination can fail to see pathos in the situation to-day of the nation that, three centuries ago, was at the head of Europe and of civilization.

BIOGRAPHY REGAINED.

One of the sources of delight in the Life of Tennyson is the conviction, which strengthens upon the reader as he is led on through its fascinating pages, that, with these volumes, English biography is recovering its sane and sound methods. We have to glance a long way back to realize fully the dislocation and demoralization which fell upon biographical writing a dozen or fifteen years ago. From Southey's Life of Wesley, Stanley's of Arnold, Trevelyan's of Macaulay, it was a sudden and a violent leap to Froude's Carlyle. The shock brought by the latter work to minds trained in the old traditions is well illustrated in a story which Tennyson himself wrote of with approval in a letter to Gladstone. It is as follows:

"I heard of an old lady the other day to whom all the great men of her time had written. When Froude's 'Carlyle' came out, she rushed up to her room, and to an old chest there wherein she kept their letters, and flung them into the fire. 'They were written to me,' she said, 'not to the public!' and she set her chimney on fire, and her children and grandchildren ran in—'The chimney's on fire!' 'Never mind,' she said, and went on burning. I should like to raise an altar to that old lady, and burn incense upon it."

Tennyson did a great deal of similar burning towards the end of his life, if reports may be believed, and his son and biographer tells us that he himself did a great deal more. At any rate, whether by fire or otherwise, the Life of Tennyson has been purified. Not an unsavory scandal lurks in it from cover to cover, not an unexplained insinuation, not a jeer at weakness, not a fling at inferiority or failure. One feels that he has got back to the bracing and clarified atmosphere of the great biographies.

The enormous value of this literary achievement is the more evident when we recall the many recent examples going to show the general searing of the sense of delicacy and reserve in both biographers and readers. Of the biography of Manning it has been sadly said that Mr. Purcell appeared to set out not so much to write the Cardinal's life as to take it. Manning's friends wanted to prosecute his biographer for murder. Nor could we necessarily expect better things of Hallam Tennyson simply because he was writing of his father. Filial obligations have not always prevented biography from becoming a "chronique scandaleuse." Augustus Hare has drawn a picture of his mother with unsparing hand, as Barrie has of his mother with reverent though still indelicate touch. Mr. P. G. Hamerton thought it right in his own autobiography to uncover his father's nakedness in a way that would have seemed brutal even if a stranger had done it.

From all this, as from all malice and innuendo and recrimination and backbiting, the Life of Tennyson is so absolutely free as to make its writing and publication a great event in letters, quite irrespective of its positive merits. It is something to have the record of this long life, in touch as it was with all the great and honored ones of his time, and find in it not one ungenerous line, not one squint suspicion. Any other result would, to be sure, have been peculiarly outrageous in the case of Tennyson. No man valued reserve more than he, none ever writhed or burned more at the crimes of an eaves-dropping and newspaper-ridden age. Once when he thought he was dying, he cried out in a greater agony than that of physical suffering, "Oh that Press will get me now!" His son prints some remarks which he once let drop on the indiscreet and indecent school of biography:

"I hate the blare and blaze of so-called fame. What business has the public to want to know all about Byron's wildnesses? He has given them fine work, and they ought to be satisfied. It is all for the sake of babble. As for the excuse, 'Tôt ou tard tout se sait,' nothing can be falser as far as this world is concerned. The surface of the *tout* may be, but the *tout* never is, correctly known. 'If one knew all, one would pardon all,' is much more likely to be the truth. The worth of a biography depends on whether it is done by one who wholly loves the man whose life he writes, yet loves him with a discriminating love. Few of

these gossiping biographies are the man, more often the writer."

Lord Tennyson's Life of his father would be entitled to the highest praise if it had but escaped adding one more to the list of "gossiping biographies." It has, of course, the solidest claims to admiration for what it gives as well as for what it refuses. It shows that it is not necessary to write in a whispering-gallery or servants' hall in order to produce a biography of surpassing interest. This is not the place to pass a formal judgment upon the Life of Tennyson. But it may be said that his son has given us all we need to show us the growth whether of man or poet, and that one closes the volumes feeling that the man was greater than his poetry—that his poetry was great because it came from a great heart and a rich and wise mind; that, in short, the contents of this biography fulfil the promise and justify the choice of the lines printed on the title-page:

"I have lived my life, and that which I have done
May He within Himself make pure!"

BLACKSTONE.—II.

How is it that Blackstone's 'Commentaries,' whatever the deficiencies of their author, stand apart from and far above all our other legal treatises?

The answer is that Blackstone was an eminent man of letters, and, by virtue of literary genius, favored by the circumstances of his time, produced a treatise on the law of England which at once became and will for ever remain a part of English literature: the 'Commentaries' live by their style.

This reply, however, needs explanation. Style, to ordinary readers, means little more than the command of a copious and appropriate vocabulary; but in truth the possessor of a good style must be endowed with at least three qualities—power of expression, clearness of aim, and literary judgment or tact. Each of these gifts, which are rarely found in combination, belonged to Blackstone. His language, or "style" (in the narrower sense of that word), was universally admired by the educated men of his age; it was certain to be appreciated by a generation trained in the school of Johnson. At times, if tried by the canons of modern taste, it degenerates into pomposity, but on the whole it well deserves the commendation which it has received from good judges. Blackstone's thought is often wanting in precision and is open to the charge of confusion, but his language is always clear. He says what he means to say, and says it on the whole with simplicity, and (what is a fair test of good writing) his expressions rise and fall in accordance with the requirements of the subject-matter. His language is simple and plain enough when he is engaged in explaining legal technicalities, and it rises to dignity, and even to eloquence, when, for example, he is insisting upon the glories of the English Constitution. His style fascinated his hearers, and if for readers of a later age its fascination has vanished, it still retains a certain attractiveness.

Even the best English writers of the nineteenth century are apt to lack clearness of aim, and are unable to place clearly before their eyes the exact object which they seek to attain; they have not made up their minds what is the precise character of the audience whom they intend to address, or what is the precise scope of the work which they hope to produce. This planlessness mars the writings of an author so eloquent as Froude and of a writer so capable and interesting as Mr. Lecky. But the fault which detracts from the merit of even the best literary work of our day is, or rather has been (for in this matter there has of recent years been a great improvement), the special vice of all but a very few of our writers on law. The vast mass of legal treatises are utterly without plan; their writers have generally collected together a vast mass of information, but they have no clear notion what is the class for whose benefit they are writing. At one moment they have in their minds the wants of an ignorant student. At another moment they wish to meet the requirements of practitioners. They have formed, again, no conception of the scheme on which their subject is to be treated. No sane man would ever dream of seriously examining or criticising the arrangement of a book such as Chitty on Contracts, and this for the simple reason that of anything like logical distribution of a subject—such, for example, as is displayed by Sir Frederick Pollock in his admirable work on the Law of Torts—the author had probably no idea whatever. Now from all this vice of planlessness Blackstone is utterly free; his book is addressed to a definite and, from a literary point of view, to an admirably chosen class of persons. He addresses educated gentlemen who, for one reason or another, wish to study the law of England and to understand its principles; these men may be students who wish to go to the bar, they may be magistrates who take part in the administration of justice, they may be members of Parliament, or persons who hope to shine in political life. In any case they are assumed to be an audience who are neither on the one hand practitioners who want to learn the details of their business, nor men who had not acquired the elements of a liberal education. Blackstone writes, in short, for educated gentlemen who desire to become acquainted with the principles of English law. He knows not only who are to be his readers, but also what is his precise design. His book is written on a carefully considered plan. Few persons will nowadays entirely approve his scheme of arrangement, but the scheme is never out of his mind. His intention is to cover in outline the whole field of the Common Law. He distributes his subject into four books, each of which is intended to deal with a separate branch of law. His arrangement is open to very severe criticism from a logical point of view, but for literary purposes it has some strong recommendations. Knowing, as he does, both the persons for whom he is writing and the exact scope and plan of his book, he avoids the faults of books which are, often mistakenly enough, called "practical," and of still more worthless books which aim at being what is termed popular. He makes no attempt to supply the details for which you must properly refer to books on practice, and he does not, on the other hand, aim at meeting the wants of uneducated ignorance. He aims at producing, as he has produced, a book on law which may interest men of education and intelligence.

Neither Blackstone's command of language nor his clearness of aim would have enabled him to succeed in the performance of the task he had set before him, had he not been endowed with the gift of literary judgment or tact. This is the quality in which even excellent writers often fall short. It would be possible to point to one book after another which contains extremely good writing, and which is formed in accordance with a thoroughly sound design, but has never achieved complete success because of the writer's want of tact. This defect may show itself in various ways. It may easily take the form of pedantry. An author who has been at great pains to acquire information finds it all but impossible not to make use of the facts which he has laboriously collected together, and therefore intrudes upon his readers statements which it may have been well worth his while to verify, but which are not necessary for the treatment of the matter which he has in hand, and which do not interest those whom he addresses. Learning is a means, not an end, and the useless display of learning is the vice of the pedant. Want of judgment, again, may well take the shape of an exaggerated desire for completeness. There are books, no doubt, which ought to be in the strictest sense exhaustive, and such works fall short of their end if they do not deal with every part of their topic. But a treatise belonging to this class must, almost of necessity, be written for, as it will assuredly be read only by, experts, and the exhaustive method of treatment is utterly unsuited for literature which is intended to meet the wants of a wide though educated public. Blackstone at any rate has realized to the utmost the worth of the well-worn dictum that the half may be more than the whole. His omissions are one main source of his literary success.

But the want of tact which leads a writer to touch upon every part of his subject may also induce him to treat no one part with fulness. Exhaustiveness may be combined with meagreness; the result is that the reader who is told something about everything is told nothing which is interesting about anything. From this mistake Blackstone is saved by his tact; he does not dread omission, he is also able to indulge in suitable expansion. He knows where to curtail and also where to abound. It is in this point more than any other that Blackstone displays his special genius. In virtue of his tact he has succeeded, as has no English writer before or since his time, in blending the history with the exposition of law. He has avoided at once the dry dogmatism which infects the whole school of systematizers and codifiers, and the antiquarianism which is the bane of authors devoted to the historical method. Not by the use of any logical formula, but by reliance on his native good sense, he perceived exactly the amount of historical information which was needed to explain each rule of law, and never gave his readers either more or less of history than was sufficient to render the law of England intelligible. He always remembered that he was a teacher of law, and neither a legal dogmatist nor a legal antiquarian. Hence, amidst the mass of subjects which form part of the law of England, he selected for special exposition topics which, because they were interesting, have interested and instructed his readers. Among such topics one may specially refer to his

"Introduction to the Law of England," to his account of hereditary right, to his sketch of the feudal system, to his history of the doctrine of the "benefit of clergy," to his account of the action of ejectment—where the solemn description of a portentous series of legal fictions becomes not only interesting but also almost amusing—or to his statement of the growth and nature of "Equity," which, even at the present day, for practical purposes is probably the best, as it is certainly the most readable, account of a matter as to which even lawyers are often a good deal perplexed. But the truth is one might fill a page or more with a list of the interesting disquisitions on different parts of the law which fill up Blackstone's 'Commentaries.' In the art of so dealing with law as to make legal problems of interest to laymen of intelligence, Blackstone is unrivalled, or rather he had no rival till Maine published his 'Ancient Law.'

Blackstone, then, was a consummate master of style, and in virtue of his style produced a law-book of supreme literary merit. It were idle in this matter to compare his writings with most of the standard works on English law. We may say of nearly every law-book produced before the last thirty years (when, under the influence of Maine, lawyers attempted again to write in the spirit of men of letters), that style it had none. It were idle to talk of the style of the Chittys, or the Addisons, or the Archbolds; it would savor of unseemly irony to talk of literary grace or lucidity in connection with Sugden. No doubt to this condemnation there are one or two splendid exceptions. Serjeant Stephen, Kent, and Story had as writers great though different merits. It is noteworthy, by the way, that two of this trio had acquired or practised the gift of exposition in the lecture-room, and these eminent lawyers wrote for lawyers rather than for laymen; they did not, like Blackstone, aim consciously at adding to English literature.

Yet the Commentator's genius as a man of letters would hardly have insured his lasting fame had not the circumstances of his time singularly favored his endeavor to exhibit the law of England in an adequate literary form. English law had, when Blackstone wrote, assumed a fixed and, we may say, coherent shape. The foundations of the Common Law and even of Equity were, in his day, too firmly established to be greatly modified by judicial legislation. Mansfield had done all that a great judge could do to amend the law, and Mansfield's efforts in the direction of legal reform had come at least a century too late; he left no successor. The legislative innovations of Parliament had not begun. To most men the law and the Constitution, though legally capable of change, seemed practically unchangeable. It is just possible that Blackstone's legal apologetics betray, like the theological apologetics of Paley and others, a half-conscious prescience of coming revolution. At any rate the catastrophe was not nigh at hand. More than fifty years, dating from the publication of the 'Commentaries,' elapsed before the period of constant parliamentary alteration or reformation of the law began its course. Blackstone, like Gaius, could contemplate the law which he described as a coherent and immutable body of doctrine. The reformation of the law by means of parliamentary enactment, which, inaugurated under the influence of Bentham, has lasted to the present day, has been the source of infinite benefit to the world. But though it has promoted human happiness, it has been an almost fatal obstacle to the rise of any other author who should repeat in later days the success of Blackstone. The law has become, especially as regards real property, incoherent, and acts of Parliament, whatever their merits, have, while greatly increasing the bulk, ruined the symmetry of the law of England. Were Blackstone to arise from his grave, he could, with all his talents, make nothing, from a literary point of view, of the modern statute-book, which, with its delusive look of clearness, is written in the worst kind of English known to civilized men; and even in Blackstone's time it was well for a writer on law to avoid acts of Parliament. It is instructive to note how deftly and lightly he passes over the Statute of Frauds.

Nor was it only the fixity of the law and the legislative torpidity of Parliament which were favorable to the composition of the 'Commentaries.' It is of almost equal importance that Blackstone lived at a time when the so-called learned world was a reality, when there was an established standard of style, and when men of letters addressed themselves neither to experts nor to that very unsatisfactory class known as general readers. The audience of whom Johnson, Hume, Adam Smith, Gibbon, and Blackstone courted and received the approbation, was the whole body of the educated gentlemen of England. It is no accident that these authors, greatly as they differed from one another, had this characteristic in common, that they were all of them masters of style. It was the Commentator's happy fortune to have lived at a date when the law of England could still be expounded in a satisfactory literary form, and when the world of letters supplied him with the right form of expression. Of this good fortune he availed himself to the very utmost. As regards not so much Blackstone's fame as the permanent influence of his teaching, the happy circumstances on which we have dwelt were balanced by one piece of ill luck: his official successors did not continue his work. One of them wrote a book on law which no one ever reads; another, and he by no means the least distinguished of a very undistinguished body, occupied the Vinerian professorship, and discharged its duties, if at all, by deputy, while he himself held a judgeship in India. Blackstone, because he was followed by no real successors, did not create a body of disciples. Had his place been taken by teachers of half his energy, even though they had not been endowed with his own genius, he would have retained his deserved reputation. His successors, while correcting his errors, either logical or historical, would have worked out the fruitful suggestions to be found throughout the 'Commentaries,' and he himself would have been known, as he ought to have been known, to the world as the founder in England of a great school of law.

PETER THE GREAT.—I.

PARIS, September 21, 1897.

M. Waliszewski is devoted to the history of Russia; his two volumes on Catharine II. of Russia were received with much favor by the public; the first ('Le Roman d'une Impératrice') has already attained the eleventh edition, the companion work ('Autour d'un Trône') the sixth edition. He gives us now a volume, which is even more important and richer in original documents, on Peter the Great. At a moment when the fever of the Russian alliance was at its height, it was rather bold to show us Peter the Great as he really was; the Russian Empire as a land hardly emerging from a barbarous and inorganic state. I confess that the book has produced on my mind almost the effect of a nightmare. Peter appears in it as a sort of monster, as a prodigy, as the embodiment of another and inferior humanity. A modern philosopher has written eloquent pages on the *Uebermensch;* the Slav, as personified by Peter, is a sort of *Untermensch:*

"Peter," says M. Waliszewski, "is Russia itself, its spirit and its flesh, its temper and its genius, its virtues and its vices. With the diversity of his aptitudes, the multiplicity of his efforts, the tumult of his passions, he seems a collective being. . . . The physiognomy of the world which he seems to have drawn out of nothingness may have been modified in some of its features; not so the principle of its existence. There is a force there, immeasurable, which in three centuries has defied all calculation, and which out of the small land of Ivan, a poorly populated steppe, has made the patrimony of the Alexanders and the Nicholases, an empire larger in size and in population than any which Europe, Africa, and Asia have known, than those of Alexander and of Rome, those of the Caliphs, the British Empire, with all its colonies. Twenty millions of square kilometres and a hundred and twenty million men! This force was once called 'Peter the Great.' The name has changed, the character has not."

Peter the Great was born on May 30, 1672. He was the son of Natalie Narishkin, the second wife of Tsar Alexis Mikhailovitch, who died in 1676. The mother and the young child had to leave the Kremlin, and were sent to a village near Moscow. The Tsar Alexis had other children by his first wife; the eldest, Feodor, died in 1682, without posterity. The second was an idiot. The high dignitaries pronounced in favor of Peter, who was five years old. It was a triumph of his mother's family, but it did not last long. The Miloslavski, relations of the first wife, proclaimed her daughter Sophia, who was already twenty-six years old. She had been brought up in the *terem* of the Kremlin, a sort of cloister; the Patriarch and the near relations were the only visitors. "The doctor was admitted only in the case of a grave malady. When he arrived the shutters were closed, and he could feel the pulse only through a piece of linen." The Princesses lived there, slaves of an immutable and Oriental etiquette. "The people only knew their names, which were pronounced in the public prayers. The Princesses knew nothing of life; they were not allowed to marry a subject on account of their rank, nor a foreign prince, on account of their religion."

Notwithstanding many difficulties, Sophia was able to become the instigator of the *coup d'état* which was marked by the revolt of the Strelitzi, and which made Ivan Peter's associate—Ivan the idiot, the brother of Sophia. "The *terem* was certainly under the direct influence of Byzantine ideas, comprising the historical mixture of asceticism and of intrigue which composed the life of the Lower Empire." Sophia found an instrument in Vassili Galitzin, with whom she was in love, but she was the soul of the plot against the Narishkin faction.

The Kremlin was besieged, the Strelitzi began a massacre which lasted three days; at the end of it, Sophia threw off the mask. Ivan was proclaimed second Tsar, a great banquet was served for the soldiers, and Sophia did the honors of it. The red shirts of the Strelitzi were still covered with blood; she helped them to drink. On May 29 she was proclaimed Regent.

Meanwhile, young Peter was a passive victim. At the age of eleven, he did not yet know how to read and write. He came back to the Kremlin only on the days of great functions, to sit on the double throne (which is still to be seen in the Museum of Moscow). The rest of the time he remained at Preobrazhenskoi. He made friends with grooms, with country boys, played at soldiers and sailors with them. There was a constant rivalry between the Kremlin and Preobrazhenskoi. The Regent Sophia and Galitzin were living in an atmosphere of plots and counter-plots. On the historical night of August 7, 1689, Peter was awakened from his sleep by men coming from the Kremlin to tell him that an armed band was on its way to put him to death. He dresses rapidly, jumps on a horse, and takes refuge with some stable-boys in the nearest forest, and afterwards in the monastery of the Troitsa. His friends assemble; the Strelitzi pronounce for Peter; the favorite Galitzin is exiled, and Sophia is sent to a cloister.

Peter is now really the Tsar, but he at first abandons the government to his friends, and feels the desire to complete his very imperfect education abroad, at the schools of the civilized world. He did not execute his project immediately, but spent six years in idle amusements, with his friend Lefort, a Swiss officer of fortune, whose house became the centre of gay companions, the comrades of the Tsar. "Ladies also were seen there, Scotch women with a fine profile, Germans with dreamy eyes, fat Dutchwomen. None of them resembled the recluses of the Muscovite *terems*, inaccessible behind iron grates or veils of silk." A great Muscovite reaction against Jesuits and Protestants had followed the *coup d'état* of 1689. In 1690 Patrick Gordon, who lived in Russia, wrote to a friend in London: "I am still at this court, which costs me much expense and uneasiness. Great rewards have been promised to me, but I have received nothing so far. When the young Tsar takes the government in hand, I don't doubt that I shall receive satisfaction." The young Tsar was in no hurry; he lived in a perpetual orgy of movement and noise, or in trying all sorts of experiments, learning trades, building a fleet on a small lake. He was very impatient to view the sea, something bigger than a lake; he sees it at last at Archangel, and appoints Gordon Admiral, he himself remaining a mere captain of the fleet. His life seems mere caprice, but under the surface there worked a hidden and profound instinct. He resolved to enter into contact with Western civilization; but, in order to gain some prestige before undertaking his journeys in the West, he conducted an expedition against Azov, which he succeeded in taking, and thought he could now show himself to his neighbors. He learned on this expedition all that he had to learn.

Such was the instinctive hatred of Western civilization in Russia that, since Ivan the Terrible, the mere act of visiting foreign lands had seemed high treason. Peter himself did not dare to give his journey an official character; he pretended to travel incognito. He was accompanied by three ambassadors, one of whom was Lefort; the letters to him were to be addressed to "Peter Mikhailof." The seal he took with him represented a young carpenter surrounded with his tools, with this inscription: "My rank is that of a schoolboy, and I have need of masters." Waliszewski gives the most minute details concerning the progress of Peter in Germany, in Holland, and in England. Two hundred and fifty persons formed his suite. Lefort alone had eleven gentlemen, seven pages, fifteen valets, six musicians, four dwarfs. Officially, the ambassadors were to solicit from all the sovereigns of Europe "a renewal of the ancient ties of friendship, with a view to weakening the enemies of the Christian name." These terms imply already the opening of the Eastern question. The ambassadors were bound to deny officially the presence of the young Tsar among them.

Saardam and the house of the carpenter Tsar have become the objects of a sort of pilgrimage; but only since the end of the eighteenth century. "Historically, most of the details consecrated by tradition in relation to the sojourn of Peter in the neighborhood of Amsterdam have no reality. It is not certain that he ever inhabited the house which has been piously preserved to our time. . . . All the houses which border the little canal that is a tributary of the Y resemble each other to a tile."

Voltaire, and his friends after him, have followed Peter hour by hour at Saardam; they have seen him making his bed, preparing his meals, constructing with his own hands the model of a ship, the model of a wind-mill; they have seen him working in the yards, with carpenter's tools in his hand, visiting all the manufacturers of the neighborhood. They have kept him in Saardam, to do all this, for two years. The truth is that he remained there eight days. He struck the minds of the people by his eccentric ways and his costume. The legend was born and has superseded history. Even Napoleon visited the more or less authentic little house at Saardam; Alexander I. set up a marble memorial at this humble cradle of Russia's greatness. At Amsterdam, the burgomaster Nicholas Witsen, who had once visited Russia and written a book upon Tartary, and was a correspondent of Lefort, opened for Peter the great workshops of the East India Company. Peter visited The Hague; his curiosity was insatiable; he entered every factory he met, and would handle the machinery; he studied architecture, printing, anatomy, learned to use every possible instrument; he constructed a frigate, a bed, a Russian bath; he cooked his own food; he learned the art of engraving. "There is evidently in all this," says M. Waliszewski, "more fever than reflection, much caprice, even a little madness. . . . With the universality of his genius, Napoleon never pretended to be a great doctor or to make etchings; he specialized his practical knowledge. However, in acting as he did, Peter . . . was preparing himself admirably for the true work which was waiting for him, and which was to be, not the construction of a ship, of a factory, or of a palace, but the installation of a whole civilization."

In January, 1690, the young Tsar left for England. He had already met William III. at Utrecht and at The Hague. Admiral Mitchell and Lord Caermarthen, a great brandy-drinker, were attached to his person. He lived either in Buckingham Street, in the Strand, or in Norfolk Street—there is some uncertainty which. He visited William at Kensington, had a long conversation with him in the Dutch language, showed himself very attentive to Princess Anne, and was pleased with her. He visited the Mint, the Observatory, the Royal Society. He did not care for pictures, but allowed Kneller to take his portrait, which is kept at Hampton Court and is the best there is of him. He spent most of his time at Deptford, where he lived as a carpenter, smoking his pipe and taking his glass of ale in a tavern which till 1808 kept its name of the Tsar's Tavern. He enlisted, while he was at Deptford, a number of workmen and engineers for Russia, gave concessions, made the plans for a canal between the Caspian Sea and the Black Sea. He spent, in all, three months in England. The legend will have it that, before leaving, he gave William a rough diamond enveloped in a dirty paper.

Correspondence.

THE TAX ON THE ENGLISH LANGUAGE.

To the Editor of The Nation:

Sir: The framers of our tariff have received credit for removing, after some consideration of their own, and more protests from others, the tax upon knowledge which was at one time proposed. They at last allowed to enter the United States free of customs duty "books printed exclusively in a language other than English."

Until now I have not known that section 502 of the Act of July 24, 1897, is so construed as to admit French novels without the payment of duty, but to demand 25 per cent. ad valorem for learned works of which the title and preface are in English. I have before me a book on which duty has just been paid—a concordance to Homer's 'Odyssey,' 419 pages of closely printed Greek, without a single English word. That a title and preface of one page have been prefixed to tell what the book is—a sort of label or tag—is held to except the book from the privileges of books in foreign languages. More reasonable in my opinion would be the taxing of a foreign book if it happened to contain a single English quotation. This decision may interest others than myself.

Another curious instance of the operation of the rule has come to my knowledge. A colleague of mine, a few months ago, allowed one of his smaller scientific works to be translated into the Japanese language, and furnished a brief preface as a greeting to the Japanese reader. When the author received by mail last week a complimentary copy of his work in its Japanese form, the book was held for the payment of customs duties because the *preface* had not been translated, but had been left in English. In this case, of course, the *title* was in Japanese. At last, however, the collector saw the absurdity of the situation, and on the pretext that no one in the country knew the cost of the volume in Japan, he allowed the book to be delivered without payment of duty.

Σ.

[We append the text of the decision of

the Assistant Secretary of the Treasury, dated September 30.—Ed. Nation.]

"In reply to your letter of the 27th instant, I have to state that a book printed in a foreign language with the exception of the title-page and the preface is not exempt from duty, such book not being printed *exclusively* in a language other than English, as prescribed in paragraph 502 of the act of July 24, 1897."

LABORERS AND THEIR FARE.

To the Editor of The Nation:

Sir: My attention has been called this morning for the first time to your reference in the *Nation*, under the date of September 9 of this year, to the second chapter of my book, 'The Workers,' which is appearing in serial form in *Scribner's Magazine*.

I beg leave to express my indebtedness for a most pertinent criticism. I see at once that, from my statements, the very natural inference might be drawn that the skilled laborers who constituted a large part of the company of men with whom I walked to my first day's work as an unskilled laborer, were also of the company of men with whom I worked. This, in point of fact, was not the case. There was much work in progress in and about West Point that summer, and the skilled workmen were employed at their own trades at a daily wage of four dollars ($4.00) for eight hours' work.

In the gang of laborers with which I worked there were men, who claimed to be skilled workmen, who were unable to find work at their trades. I had reason, however, to doubt the truth of this statement in the majority of cases. The four men, besides myself, who boarded with Mrs. Flaherty were skilled workmen, and all but one of these, and he a weaver from the north of Ireland, had work at their trades, and received the wages that I have indicated.

We paid five dollars ($5.00) a week for our board. "Juicy sirloin" was by no means the rule in the matter of meat, but we had meat three times a day, and it was usually excellent. My whole experience in this particular bears out the fact that workingmen in this country fare handsomely. Some of the men who belonged to the gang in which I worked camped out near the post, and did their own cooking. How they fared I had no opportunity of judging.

Allow me to thank you once more for a criticism which shows most plainly a want of criticism in my statements. I shall try to correct the defect in the book form. With regard to the truth of my story, I am glad to be able to assure you that, in my narrative, I have followed facts exactly as I found them.—Yours sincerely,

Walter A. Wyckoff.

Princeton University, October 6, 1897.

SOMETHING FURTHER ABOUT JAMES BLOXHAM.

To the Editor of The Nation:

Sir: It is quite true, as stated in a recent issue of the *Nation* by Mr. Wilbur C. Abbott, under the heading "Some Unpublished Washington Letters," that none of the editors of Washington's Writings have published aught about James Bloxham beyond the letter of George Washington to Arthur Young; but among the treasures in the Department of State can be found the history of this "James Bloxham, Farmer," in a nutshell. The first paper relating to him is entirely in Washington's familiar and strongly characteristic chirography, and sets forth the compensation, duties, privileges, and penalties of the situation James Bloxham was to fill; in other words, it is the *Articles of Agreement* given *verbatim et literatim* below. It contains six examples of a striking feature of the contracts drawn up by Washington: whenever he was compelled to write his own name in the body of a document it was always done in his ordinary handwriting, and was noticeably dissimilar from the same name as written for his signature. The seals opposite the two signatures are small lozenges of writing paper attached to the document by red wafers. The witness, Geo. Washington, was George Augustine Washington, the nephew of and at one time the manager for the General. The text of the Agreement is as follows:

Articles of Agreement entered into this 31st day of May in the year 1786 between George Washington Esqr of the County of Fairfax and Commonwealth of Virginia of the one part, and James Bloxham lately from the Shire of Gloucester in the Kingdom of England, Farmer of the other part Witnesseth, That the said James Bloxham for and in consideration of the Wages, allowances, and priviledges hereinafter mentioned, doth agree with and oblige himself to serve, the said George Washington for the space of one year; to commence the first day of the present Month, in the capacity of a Farmer and Manager of such parts of Husbandry, as shall be committed to his charge; and will, to the utmost of his skill and abilities, order & direct the same (with the approbation of the said George Washington) to the best advantage.—That he will at all times, and upon all occasions, suggest such plans for the improvement of the said Washington's Farms, and the stocks of Horses, Cattle, Sheep, Hogs, &c^a which are on them as to him shall appear most conducive to his interest.—Will keep regular Acct^s of the said Stock—and will strictly observe & follow all such orders and directions as he shall, from time to time receive from his said employer; for this, and for other purposes.—That when thereunto required, he will buy, at the expence of the said Washington, Cattle, or Sheep for feeding, or for Store; and will dispose of the same, or any others, to the best advantage; attending particularly to the care & management of the Stock of every kind, both in Winter & Summer—as well those for the use and benefit of the Farms, and for family consumption, as those which may be fatted for Market.—That he will use his utmost endeavours to encrease, and properly distribute, the Manure on the farms; and also will improve to the best of his judgment, the impliments of husbandry necessary thereto—and will instruct, as occasion may require, and opportunities offer, the labourers therein how to Plow, Sow, Mow, Reap, Thatch, Ditch, Hedge &c^a in the best manner.—And generally, that he will consider the said Washington's interest as his own, and use his true endeavour to promote it accordingly. In consideration whereof the said George Washington doth agree to pay the said James Bloxham Fifty Guineas for his year's Services, to be compleated on the first day of May, 1787; and will allow him the said Bloxham, ten guineas besides, towards defraying the expences of bringing his Wife and family to this Country.—That when they shall have arrived, he will provide him, & them a decent and comfortable House to reside in, by themselves; will lend them two Cows for Milk—a Sow to raise Pigs for their own eating (but not to sell) and give them as much Bran as is sufficient to brew Beer for his family's use.—And moreover, will allow them for the part of the year which will remain after the arrival of his family and leaving his present board, at the rate of Six hundred pounds of Pork or Beef, and Eight hundred pounds of Middling Flour, per annum;—and likewise a piece of ground sufficient for a Garden, and firewood.—The said George Washington also agrees to provide the said James Bloxham with a horse to ride on for the purpose of superintending the business herein required—or, if the said Bloxham shall find his own horse, to allow pasturage, & reasonable feed for him.—Lastly it is agreed between the said George Washington & James Bloxham, that if the said James should not return to England at the expiration of the year for which he now engages, and his conduct shall be such as to merit the approbation of the said George Washington, that then and in those cases, his wages for the next year shall be Sixty Guineas; and the other allowances and priviledges the same as those of the present year. In testimony of all, and each of these Articles and for the full and perfect compliance therewith, the parties to these presents hath interchangeably set their hands and seals, and to the other, doth bind himself in the sum of One hundred pounds Curr^t money of Virginia, the day and year first written.

Signed, Sealed &c^a

in the presence of Geo: Washington — G^o Washington [s.]

James Bloxham [s.]

Turning to Washington's large book of accounts, we are able to glean the name of Bloxham's wife (Mary); the actual length of his service (four years and one month); the day when he set up his household gods in America (June 9, 1787); the fondness of his family for meat and fish; and the date of final settlement of his account (June 1, 1790). The entries in this book are in various hands, as Washington himself or a private secretary attended to this part of the daily routine. Bloxham's account is found in two parts of the book, on page 237 and again on page 303. One notes the punctilious change from "James Bloxham (Farmer)" of the first or "old" account while he was serving Washington in that capacity, to the "Mr. James Bloxham" of the second or "new" account, which runs on for one year and six days after he ceased to attend to the Mount Vernon farms.

Concerning the Col. Fitzgerald of the first account, to whom in November, 1786, Washington paid eleven shillings freight of Bloxham's chest, etc., Washington gives the following interesting item in his diary for 1788:

"*Sunday, November 2d*, M^r George Mason came here to dinner and returned in the Evening—After dinner word was bro^t from Alexandria that the Minister of France was arrived there and intended down here to dinner—Accordingly, a little before Sun setting, he (the Count de Moustiers) his Sister the Marchioness de Breton [Brienne]—the Marquis her Son and M^r du Ponts came in.

"*Monday 3d.* Remained at home all day.—Col^o Fitzgerald & Doct^r Craik came down to dinner—& with a copy of an address (which the Citizens of Alexandria meant to present to the Minister) waited on him to know when he would receive it."

Many interesting items may be gathered from these old account-books, whose entries preserve the names of those with whom Washington had business relations; they also shed much light on the customs and habits of the times, and are models of neatness and accuracy.

Mary Stevens Beall.

Washington, October 4, 1897.

Notes.

We are glad to learn that Dr. Horace Howard Furness has completed another volume of his Variorum Edition of Shakspere's Plays, viz., "A Winter's Tale," which Lippincott will bring out in the course of a few months.

Charles Scribner's Sons will publish on this side of the water a posthumous work of Mrs. Oliphant's, the 'Annals' of the publishing house of William Blackwood & Sons of Edinburgh. They will also have a share in

Messrs. Dent's "Temple Waverley" for the pocket, and will put their imprint on Robert Louis Stevenson's 'St. Ives: The Adventures of a French Prisoner in England.'

Dr. Edward Dowden is the author of 'French Literature,' the volume next to appear in Appletons' "Literature of the World" series.

B. H. Russell's fall announcements include 'The People of Dickens,' a portfolio of photogravures and copper etchings by C. D. Gibson; 'Drawings by Frederic Remington,' illustrating wild life in America; 'The Blackberries,' humorous drawings in color by E. W. Kemble; 'Phil May's Sketchbook'; a portfolio of twelve photogravures by Alfred Stieglitz, 'Picturesque Bits of New York, and Other Studies'; and 'Going to War in Greece,' by Frederick Palmer, with sixty photographic illustrations.

T. Y. Crowell & Co. will issue immediately 'Self-Cultivation in English,' by Prof. George Herbert Palmer of Harvard University.

Ginn & Co. have nearly ready a 'Course in German Composition, Conversation, and Grammar Review,' by Dr. Wilhelm Bernhardt.

William Patton, Philadelphia, is about to publish 'The Graphic Age: a Biographical and Historical Souvenir of the Calligraphic and Typographic Arts.'

'Men in Epigram,' and 'With a Pessimist in Spain,' by Miss Mary F. Nixon, are promised shortly by A. C. McClurg & Co., Chicago.

Dr. A. Rose, 126 East Twenty-ninth Street, New York, solicits subscriptions to a work on 'Christian Greece and Living Greek,' with a plea for Greek as the international language of physicians and scholars in general.

The "Oxford University Press, American Branch," has just been incorporated, Mr. Henry Frowde being the President. The business will be carried on by a staff of American citizens, some of whom are stockholders.

The lapse of ten years might be thought to have detracted somewhat from the value of that coöperative work, 'The American Railway' (Scribners), and its freshness has naturally been impaired. Its reissue, nevertheless, implies a demand for it, and the larger part of this popular presentation, with its numerous excellent pictorial illustrations, has still power to interest and instruct. The same publishers have brought out a uniform edition, in five gayly covered volumes, of Mrs. Burnett's stories of and for children, 'Little Lord Fauntleroy' and the rest, of which it would be superfluous to speak; and have once more cut the cable of Mr. Stockton's 'Rudder Grange,' freighted with Mr. Frost's illustrations. Finally, the elaborate "Outward Bound" edition of Kipling's works is continued with 'The Naulahka,' in which the elder Kipling's relief illustrations show him at his best.

From Macmillan we have the fifth annual issue of the useful 'Handbook of Graduate Courses,' edited at Cambridge, Mass., for the Federation of Graduate Clubs; a revised translation of Zola's 'Lourdes,' in two trim and handy volumes; three more of the Dent translations (among the best, and in manufacture quite the most elegant) from Balzac—his 'Cousin Betty,' 'Seraphita,' and 'The Seamy Side of History'; 'The Rivals,' in the little "Temple Dramatists"; and, above all, one might say, Chapman's 'Odyssey,' in two pocket volumes, in the "Temple Classics."

The 'Life of James Macdonell, Journalist,' by W. Robertson Nicoll, which was reviewed in these columns on its appearance in England in 1890, is now republished in this country by Dodd, Mead & Co. Mr. Macdonell's work as editorial writer for the London *Times* was of a high order, but it is chiefly on account of his character that American journalists may be advised to read his life. They will find in it a more exalted standard than that commonly presented to them, as well as some warnings concerning overwork that should be heeded.

Mr. F. G. Kitton's 'Novels of Charles Dickens' in the "Book-Lover's Library" series, edited by H. B. Wheatley (Armstrong), is a timely contribution to the Dickens revival. In some 250 pages Mr. Kitton sketches Dickens's literary career, and relates his publishing adventures with his novels. On the side of bibliography, much information is given as to the value of early editions which should appeal to book-collectors, while here and there the editor has been able to give us fresh items of personal history furnished by the surviving friends of Dickens. With these exceptions, the substance of the book is derived from Forster's 'Life.'

Henry C. Shelley's 'The Ayrshire Homes and Haunts of Burns' (Putnams) is unequally divided between a brief survey of the poet's territory and extracts from his poems, embellished with local photographs taken by the author; the whole prettily bound.

Prof. Miall's presence, as one of the sectional presidents, at the August meeting of the British Association in Toronto, will no doubt add to the number of readers of his recent book, 'Thirty Years of Teaching: Reprinted, with Additions, from the [London] *Journal of Education*' (Macmillan & Co.). The contents of this very neat little volume are so varied that it is difficult to say just what class of teachers will be most benefited by it. It will probably interest those engaged in scientific work more than others, but it is to be recommended to all—not as a work bearing any great message to the profession, but rather as a help in revising one's own methods and views of educational questions.

'The Gist of Japan,' by Dr. R. B. Peery of the Lutheran American Mission at Saga in Hizen (Fleming H. Revell Co.), is a capital book of accurate information, well illustrated, and full of common sense. In sixteen short and well-constructed chapters, the author, rich in reading of the best authorities and in actual experience, tells of the people and their country and of Christian mission work. The tone is that of a catholic mind, and of a modest and scholarly person who is charitable and cautious. As a nation does not grow in a day, so neither is judgment to be hastily formed or quickly passed upon a people with such marked characteristics as the Japanese. We learn that they control the camphor trade of the world, have a prejudice against cats having tails, are trying to shed all their mythology except that which relates to their Emperor's ancestry; that sheep are curiosities to be seen only in menageries, and that the climate is damp and ozoneless. We also have a luminous discussion of morals and religion by one not swift to be satisfied with his own judgments and very slow to condemn. No other book, not even Dr. Gordon's 'American Missionary in Japan,' discusses so fully, so honestly, and so luminously the missionary work and problems. Certainly all zealous youth and candidates for appointments as converters of the Buddhists ought to read Dr. Peery's chapters. Notwithstanding the author's insight into the difficulties on the surface and in the depths, his tone is one of imperturbable faith in the final victory of Christianity in Japan. We have found no error of importance, but there is no excuse for lack of an index in a work like this.

In a finely printed quarto of nearly 600 pages, the heirs of the late Dr. Benjamin Apthorp Gould have just presented to astronomers the substantial completion of the photographic work undertaken by him twenty-five years ago at the Argentine National Observatory in Cordoba. Although Dr. Gould did not live to see the completion of this task of his inception, still all had been so nearly finished that, with Dr. Chandler's supervision, the whole is now brought forth in entire harmony with the original plan. On Dr. Gould's first going to the southern hemipshere, celestial photography had not yet yielded tangible results in the line of accurate stellar positions, chiefly because the now familiar dry plates were not then available. Much pioneering thus was matter of necessity; and the misfortunes and obstacles that beset his endeavors were most astonishing—not the least of them a broken object-glass, the death of two photographers from pulmonary disease, and of a third from a stroke of lightning. The Argentine National Government has, however, supplied the necessary funds, for preparation and publication, and the finished volume now before us, really monumental in character, gives the accurate positions of nearly 10,000 stars, with a chapter devoted to each of 37 stellar clusters, mostly in the southern celestial hemisphere and invisible to observatories generally in the United States. The conclusion of a significant labor like this, in a field by no means yet overworked, may well induce pride, not only in the astronomers whose patient faithfulness has conducted it through all these years, but in the enlightened officials of a sister republic whose helpful generosity alone has made it possible.

We feel assured that students and younger teachers of French, of both sexes, will be greatly interested in Dr. E. Koschwitz's 'Anleitung zum Studium der französischen Philologie' (Marburg: Elwert; New York: Lemcke & Buechner). The little book is astonishingly practical for one coming from the pen of such a distinguished scholar as Prof. Koschwitz. It is intended for Germans, but there are a hundred hints that will prove useful to students of any nationality, especially those intending to study in foreign countries. The author's desire to be helpful to women students also, and the pains he has taken in gathering information for their benefit, even such as regards boarding-places in French and Swiss cities, expenses, etc., deserve especial recognition.

A monograph on the states of the western Sudan, by Dr. P. C. Meyer, is published as a supplemental number of *Petermann's Mitteilungen*. It is prefaced by a bibliography of the literature of the subject and a chronological list of explorations from the earliest times to 1896. A condensed account of the history, ethnology, commerce, and industries

of each of the twenty separate states or races is given with numerous references to the sources of information. It is accompanied by three maps showing the race and political divisions, and the trade routes. These are so arranged as to indicate the nationality of the traders, as well as the character and direction of their business. The trade route from Lake Chad to Tripoli, for instance, is used by Arabs and Moors to carry north slaves, grain, and native cotton goods, the south-bound caravans bringing salt and European wares. The regular number, eight, of the *Mitteilungen* contains a map with notes showing the boundary between Chili and Argentina in Tierra del Fuego, a description of the river basins of Africa, and a short account of explorations to the west of Lake Tanganyika with a map.

A bibliography of geographical literature for the year 1896 is contained in the September number of the *Annales de Géographie*. The titles of 1,021 works and important articles in periodicals and scientific publications are given under subject-headings with descriptive notes signed by the writers, among whom are Dr. H. R. Mill of London and Prof. W. M. Davis of Harvard University. The list is practically complete for the lesser known parts of Asia and Africa, while for the other countries only works or articles of a scientific character are entered. There are useful indexes of authors and subjects.

Only twenty-six years have elapsed since the railway was built up the Rigi, and to-day Switzerland has forty-six mountain railroads. The most popular of them at present is that up the Wengern Alp, from Interlaken, via Lauterbrunnen or Grindelwald. A few years ago there were only a few small hotels near Wengern; this summer 700 guests jostled each other in the new hotels, while some of the other resorts complained of a lack of tourists. The Wengern Alp owes its present vogue not only to the wonderful view it affords of the Jungfrau snowfields and frequent avalanches, but to the fact that it is the starting-point of the much-discussed Jungfrau railway, the length of which, from the Scheidegg, is conveniently reduced to 6,000 feet. On December 21, 1894, permission to build was granted by the Swiss Bundesrath by a vote of 25 to 3. No time was lost in beginning, and this summer the electric works were visible to all visitors in the Lauterbrunnen valley. The road itself will not be visible, for most of it will be through tunnels, and where it comes to view it will be so small an object on the gigantic sides of the mountain that a good telescope will be needed to find it. The motive power will be electricity, and the tunnelling also will be done with electric power. The total expenses are estimated at $2,000,000.

The railway from Chemulpo to Séoul, or from the chief seaport to the capital of Korea, is now under construction by American engineers, who employ native labor under Japanese and Korean bosses. One cutting is over forty feet deep and several hundred feet long. The bridge over the Han River will have a total length of 2,450 feet; 1,650 feet being the length of the iron trusses, and 800 feet that of the wooden trestling. The road will be twenty-five miles long, and of the standard gauge. The iron and steel work, locomotives, and even the frame of the Séoul station, were made in the United States.

Dr. Dörpfeld reports that the mouth of the new grotto recently discovered by Kabbadias on the northern slope of the Acropolis and east of the grottoes of Apollo and Pan was walled up during the middle ages. This grotto lies immediately below the mediæval rock-cut steps on the Acropolis northwest of the Erechtheion. The bottom of these steps is connected with the grotto below by means of a perpendicular shaft, in which there were never any steps. Accordingly, it seems clear that a wooden ladder must have been used to facilitate ingress and egress. No antique remains were found in the neighborhood of the grotto.

Skias has been conducting excavations on the left bank of the Ilissus in the neighborhood of the Kallirrhoe. About one hundred steps from the spring he discovered the foundations of the celebrated "Ionic temple on the Ilissus," which was seen and drawn by Stuart and Revett in the last century. Thereafter the temple disappeared, and its destruction was so complete that the present ruins would scarcely be regarded as the foundations of a temple but for the drawings of Stuart and Revett, with which they correspond exactly. Dörpfeld regards this as the temple of Artemis Agrotera, which Pausanias mentions immediately after he had crossed the Ilissus, and before he turned towards the Stadium.

—In the current number the *Atlantic Monthly* celebrates its fortieth anniversary, and the editor in a few pages recounts the history of its years. There is not much in what he says that is new, but it is pleasant reading. He stands up manfully for the present as compared with the past, and maintains that (except in poetry) there is no real decline in "the literary work done in the United States to-day." He admits, however, that we have "no single group of men of such genius as the group that contributed to the early numbers." But we must not be too exacting; if every generation produced a group such as Hawthorne, Emerson, Lowell, Longfellow, Holmes, and Whittier, letters would become too common, like air and water. One statement the editor makes which has now been repeated very often, as an explanation of our seeming decadence—that, "as a result of the spread of culture, no man of less than the very highest rank can now hold as prominent a position as a man of the same qualities held when good writers were fewer." This means that there has been a multiplication of, and a widening of the market for, authors of the second or lower ranks so great that no one of these can get the attention he formerly would have got. But does the "spread of culture" produce this result? Has not the spread of culture on the contrary made this the heyday of second-rate authors? and is it not one of the peculiarities of our day that we continually see a second-rate man temporarily elevated to the position of a great light in the literary world, and bowed down to and worshipped and puffed, while the crowd passes his superiors unnoticed by? In the number for October, perhaps the most original article is that on "French Mastery of Style," by F. Brunetière. Both this and Mr. H. D. Sedgwick, jr.'s, notice of D'Annunzio point in a direction which some readers will regard as conservative, others as novel. We do not know of any word for it other than anti-fatalist, or individualist, criticism. There can be little doubt that, ever since the announcement of Taine's celebrated formula, the trend of literary criticism has been to minimize the weight of the individual will as a factor in letters, and to subordinate the character of every writer to the influences of race, epoch, and "milieu" under which he writes. This is all nonsense, says M. Brunetière, and to prove it he takes the French language and style as proof. The fatalist view is that the French language "grew" by some internal law into the wonderful organ of style and expression we know it to be. No, says M. Brunetière, it was made consciously by the French, adapting it to these ends purposely, and changing it from a speech of a different sort with this very object in view. An interesting African article is contributed by Henry M. Stanley, who blows the bellows for the equatorial part of it. Without wishing to speak disrespectfully of the equator, it seems to be still hard to get people to settle on it in any great numbers.

—Among the most entertaining papers in *Scribner's* are those on the "Conduct of Great Businesses." In that magazine for October Mr. J. Lincoln Steffens writes about newspapers, his article being accompanied by illustrations by W. R. Leigh. He insists upon the contrast between the modern newspaper, which he describes as a mere commercial speculation, and the newspaper of an earlier day, in which he thinks editorial opinion played so much more important a part. But it is worth while to remember that the present craze about "news" as the foundation of newspaper prosperity is to a great extent factitious. Three-quarters, if not nine-tenths, of the news of the day is furnished to so many newspapers that there is little or no exclusive property in any one of those which have a right to a share in the supply furnished by the various agencies; so that the reason why one paper is selected by the buyer rather than another is some sympathy with its opinions, or that general tone which is but the reflection of the mind of the person in control. In other words, a paper is bought to be read; and as it is impossible to print without advancing or showing that you hold opinions of some kind, what really floats a newspaper and gives its only lasting hold on its readers is suitability to their minds. It is a consequence of this that some of the most valuable newspaper properties are those which are read by the people who have the best minds—mind being generally found among possessors of property, and possessors of property being those for whom it is best worth while to advertise. No one will advertise brown-stone houses, or grand pianos, or expensive books extensively in a paper with a million circulation, if they know perfectly well that most of the million have no idea where they are going to get their next meal. Mr. Henry Norman contributes an article on "The Wreck of Greece" (illustrated), and shows that part of the disaster was due to not following his advice.

—Naval strategists will be interested in Capt. Mahan's article in *Harper's* on "The Strategic Features of the Gulf of Mexico and the Carribbean Sea"; but for the wayfaring layman the popular scientific article by Henry Smith Williams, M.D., will prove as entertaining as anything in the number. It is on "The Century's Progress in Chemistry," and is one of a series which will, we suppose, be published as a book. Most

people not chemists have heard something of the extraordinary course of inquiry which has led the chemists of our day into fields of investigation recalling the researches of the alchemists, the transmutation of metals, and the quest of the philosopher's stone. When the hero of Locksley Hall, "nourishing a youth sublime with the fairy tales of science," foresaw "the Vision of the world, and all the wonder that would be," he predicted, like most prophets, a good many things that have not happened at all, and failed to foresee most of the wonder that science was to reveal. Certainly in this department Dr. Smith is very cautious in his statements, but his résumé is a wonderful story, and leaves us face to face with the theory that we are on the eve of discovering that "single, unique form of primordial matter" out of which the diverse cosmos has been fabricated.

—In the *Century* Mr. Theodore Roosevelt takes a leaf out of his enemy's book. His "Roll of Honor of the New York Police" (illustrated by Jay Hambidge) is a vindication of the claims of peace to produce victories of energy, daring, discipline, hardihood, and bodily prowess no less remarkable than those of war. It comes very naturally from him as the late head of the New York police force, but his enumeration of the soldier's virtues shows that his Jingo leanings have produced a curious confusion in his mind on the subject of what the Romans called *virtus*. What his examples of police heroism really prove is, that every quality that could make a man count in the world comes out in peaceful occupations, except pugnacity, or the desire for physical conflict as an end in itself. This a good fighting man must have, just as a bulldog, a game-cock, or a prize-fighter must have it. But it is not part of the outfit of a good patrolman. The price we pay for peace (or, as we should say, one of the rewards of peace) is the tempering of this quality, and not, as Mr. Roosevelt says, "a certain softening of national and civil fibre," which, "if carried too far, would be very serious indeed." It is luxury and ease which produces this softening, as we see in the Dude and the *Gigerl*, not peace; and we want no better proof than the facts marshalled in this article. In fact, Mr. Roosevelt, in it, rolls the very altar of the great god Jingo over in the dust. "Wild Animals in a New England Game-Park" is a valuable account, with illustrations, of the Corbin Game Preserve, a vast New Hampshire property, of 26,000 acres, bought up by the late Austin Corbin. "Abandoned farms" formed the bulk of it, and a grotesque sight it must often be to see a buffalo cow chewing her cud in the old apple-orchard, or a wapiti encouraging her young to approach the chain-pump. But the forest is rapidly reappearing, and the traces of the agricultural period will soon vanish. The writer mentions also Mr. W. C. Whitney's park in Berkshire, Mass., and several others in different parts of the country.

—Chief among the foreign guests at the dedication of the Yerkes Observatory of the University of Chicago next week (October 18-22) will be M. Henri Deslandres of Paris, well known for his researches upon the spectra of the sun and stars and as chief of two eclipse expeditions, one to Japan last year and the other to Africa in 1893, when he discovered the rotation of the sun's corona. The principal addresses will be given on the morning of October 21 by Prof. Keeler of Allegheny, on the "Importance of Astrophysical Research, and the Relation of Astrophysics to Other Physical Sciences," and on the afternoon of October 22 by Prof. Newcomb, on "Aspects of Modern Astronomy." The University has provided a special train to convey the Trustees and official guests from Chicago to the Observatory at Williams Bay, Wis., where the dedication exercises are to be held. Following Prof. Keeler's address, Mr. Charles T. Yerkes, the generous donor, will make the presentation, and President Harper the address of acceptance. In the evening of Thursday will occur the banquet to the visiting men of science; and on Friday, a reception to Mr. and Mrs. Yerkes, the visitors, and members of the Observatory staff. Prof. Hale, the able and energetic director of this new institution, has arranged a programme of conferences on physics and astronomy, extending through dedication week, and they will be participated in by Profs. Pickering, Hough, Barnard, Comstock, Stone, Crew, and many others among American scientists, and Prof. Runge of Hanover, Germany, who will review the evidence of oxygen in the sun. On the evenings of Monday, Tuesday, and Wednesday, Profs. Hale, Burnham, and Barnard will give exhibitions of numerous celestial objects with the great forty-inch telescope.

—Much interest is manifested by scientists in the giant "iron-stone" which, after two ineffectual efforts, Mr. Peary has succeeded in removing from the shores of northwestern Greenland to this country. This block of planetary rock (for such it assuredly is, whether it be determined to be meteorite or tellurite) is roughly estimated to weigh 100 tons, and it so completely surpasses in size all other known specimens of its kind as virtually to dwarf them in any scale of comparison. Its abiding-place for probably many centuries, if not for hundreds of thousands of years, has been a locality on the borders of Melville Bay, not many miles east of Cape York; but, despite its proximity to a route almost annually followed by whalers, it had escaped discovery until two years ago, when Mr. Peary located the prize, which had been the object of search and inquiry by almost every expedition which has followed the Smith Sound route since the days of Sir John Ross. In its structural character the mass is described as having the appearance of nickelized steel, an appearance not wholly unlike that of some of the famous Ovifak stones or irons discovered in 1870 by Nordenskjöld on the southern shore of the island of Disko, and concerning the nature of which there has been much scientific and not a little bitter discussion. By their first discoverer these irons were unhesitatingly referred to the class of meteorites, and this view is supported by the composition of metallic iron and nickel, as well as by the exhibition of the well-known Widmannstättian figures on an etched surface. The more special researches of Lawrence Smith and Steenstrup have led to a conclusion very wide of Nordenskjöld's, and to the recognition of a class of bodies, the tellurite, whose origin is assumed to be the deep metalliferous depths of our own planet. The close association of the Ovifak irons with the basalt masses which largely build up the island of Disko, and the occurrence of smaller, even granular, parts exhibiting the supposed distinctive etched figures in the lava mass itself, were to many geologists evidence conclusive of their telluric origin, although up to that time no terrestrial objects of that precise nature had been known. On the other hand, it has been justly contended that the association of these singular bodies with basalts was not necessarily an indication of volcanic (or plutonic) origin, since a meteoric shower, occurring in a region and at a time of lava discharges, must perforce have deposited much of its material in the flowing liquid magma, thence to be subsequently liberated by atmospheric decay or water erosion. It is interesting to note in this connection that the Cape York finds were not obtained from a region of lava discharges, and in so far they distinctly argue in favor of an extra-terrestrial production.

—By the terms of the treaty between Great Britain and Venezuela, the four arbitrators named in it, namely, Chief Justice Fuller and Judge Brewer of the United States, nominated by Venezuela, and Lord Herschell (ex-Lord Chancellor of England), and Sir Henn Collins, a judge of the High Court of Judicature, nominated by Great Britain, have agreed to have as the fifth member of their court Feodor Feodorovitch Martens, the famous international jurist, who will accordingly be President of the Court of Arbitration at its sittings in Paris. Prof. Martens is a Russian by nationality, and is in the prime of manhood. His great works have been a collection of 'Treaties and Conventions' made by Russia with other countries, and a treatise upon international law. He has written also upon the law affecting consuls, and a political study of the relations of Russia and China. It will not be charged against President Martens that he will unduly favor British claims, when it is borne in mind that he is the author of 'La Question Égyptienne et le Droit International,' and of a monograph upon Russia and England in Central Asia. The Court of Arbitration cannot, by the provisions of the Treaty of Washington, meet until the month of November, 1898. Meanwhile, those concerned in getting up the respective cases are actively employed in preparing their statements. The results must throw a flood of light upon the history of Guiana, which has hitherto been involved in almost Cimmerian darkness.

THE PUBLICATIONS OF THE GOETHE SOCIETY.

Both of the annual publications of the Goethe Gesellschaft are now in the hands of its members: the eighteenth volume of the *Jahrbuch*, and the eleventh volume of the *Schriften*. The latter is an interesting innovation. It is a large folio, containing seventy-eight settings of the songs of Goethe, composed by the poet's contemporaries. Dr. Max Friedlaender, one of the leading authorities on the music of the eighteenth century, is the editor of this volume, and he has supplied it with notes of more than usual instructiveness. Prof. Suphan, the indefatigable director of the Goethe-Schiller archives, has written the general introduction. This work adds another telling touch to the picture which, through these annual publications, the society is gradually constructing of Goethe in the midst of his fellow-men and in his relations to the most diverse interests of his time. In February, 1896, the tenth volume of the *Schriften* was

noticed in these columns; it was an album of reproductions from Goethe's own portfolio, including several portraits which he had had made by Schmeller of personal friends and distinguished visitors to Weimar. A collection of the poet's own drawings constituted the third volume, and Prof. Suphan assures us that the treasures of this domestic storehouse are "schier unerschöpflich." Lovers of Goethe may, therefore, look forward to an indefinite number of years, each of which will bring some new item of instruction and some new object of delight out of the poet's home environment.

Goethe's love of music is well known. Musicians as well as poets and artists looked to him for inspiration, approval, and encouragement. His house was the centre to which were attracted the creative spirits in all branches of art, and none was more welcome than the genius which expressed itself in music. In music Goethe found the highest element of art manifested in its highest degree, the demonic. The demonic, in his parlance, is that elusive quality in a work of art which produces a profound emotion, but which is not susceptible of analysis by the reason or the understanding. "Music," he once said, "occupies a place so high that the understanding cannot get at it, and it exerts a moving power that dominates all else; for this power the reason cannot account." This is the demonic in its purest form; but since neither the reason nor the understanding can touch the demonic, an appeal to these faculties cannot injure music, but only add new elements of beauty and interest. Apropos of Rossini's "Moses," Goethe could not comprehend the attitude of mind that could praise the music and condemn the text—how sweet tones could please the ear while the absurdest actions offended the eye. In our own day Goethe would have been chief among the admirers of Wagner, whose demonic control of our emotions is rendered the more absolute by his constant and subtle appeal to the intellectual faculties; but Goethe lived only to see the beginning of the great age of dramatic song-composers.

In this collection of songs by his contemporaries there are six settings of the "Erlkönig," three of them commonplace and unimaginative. One, by Bernhard Klein, a young composer who died in the same year as the poet, shows the true dramatic conception; the deep voice of the fast-riding father alternates with the anxious questionings of the child, while the wooing persuasions of the elfin king are sung in one unvaried tone (an idea suggested by Zelter) to an exquisite accompaniment, culminating in a few quick crashing chords that thrill with the fairy's threat. It is a song fit to stand beside Loewe's fine composition of 1817 and Schubert's immortal work written two years earlier. Indeed, one of the chief features of interest in this publication is the opportunity it affords of comparing different conceptions of the same poem. There are, for instance, five settings of "Das Veilchen," five of "An den Mond," four of "Mignon," and four of the "Heidenröslein," etc. It would be an undertaking well worth his while if Dr. Friedlaender would extend the scope of his comparisons, and include the best settings of Goethe's most famous lyrics composed by men of a later time. Beethoven, Mozart, Schubert, and Berlioz are the great names in the present collection. One of Goethe's youthful poems, "Mit einem gemalten Bande," which was written about the time of Beethoven's birth, was set to music by the latter in 1811, and it is interesting to note that the opening bars contain the world-celebrated theme from the last movement of the ninth symphony, where they reappear eleven years later in the same key, set to the words of Schiller's "Lied an die Freude." There is also an exquisite setting to the lines of Faust, "O schaud're nicht," composed by that versatile child of genius, the friend both of Beethoven and of Goethe, Bettina von Arnim. On the whole, this volume is the most delightful of the entire series.

Incidentally, Prof. Suphan's preface raises the curiously confused question as to the origin of the widely quoted simile which likens architecture to "frozen music." Goethe altered the phrase to "dumb music," saying that a "noble philosopher" (in allusion, doubtless, to Schelling) had called it "petrified music," which after all is the happier phrase. It is evident, however, that Goethe laid no claim to the idea, although Emerson in 'Nature' attributes it to him and to Mme. de Staël. Mme. de Staël did, indeed, quote it, and Henry Crabb Robinson, who correctly assigns it to Schelling, says she considered it in bad taste; but this did not deter her from using a similar figure in 'Corinne': "La vue d'un tel monument est comme une musique continuelle et fixée." Coleridge may have had some dim recollection of the words of Schelling when he called a Gothic church a "petrified religion." Eckermann relates that Goethe, in 1829, found among his papers a loose sheet on which architecture was likened to petrified music; but in the poet's posthumous works the phrase is altered to "dumb music," as Emerson quotes it. Düntzer, finally, in his notes on Eckermann, tells us that Friedrich von Schlegel invented the phrase "frozen music," whereas Schelling had merely said "plastic music." Byron was another of Schelling's contemporaries who was haunted by this bold figure. He thought he had seen it quoted in 'De l'Allemagne,' and in his diary of November 17, 1813, he writes: "Architecture, says this Macaronico Tedescho, reminds me of frozen music. It is somewhere, but where?"

The whole confusion seems to have arisen from the fact that for more than half a century the phrase was only an oral tradition. Schelling was the first to use the figure, and he fully exploited it in his lectures on the "Philosophie der Kunst" which he delivered at Jena in 1802-1803, but which were not published until 1859, five years after the philosopher's death. Schlegel, who was privat-docent at the University of Jena in 1802 and on intimate terms with Schelling, seems to have been the one who chose the attribute "frozen." The word used by Schelling was not "gefrorene," but "erstarrte," "rigid" rather than "frozen." Schelling frequently reverted to this thought: "Architecture," he says, "is a concrete music"; "a beautiful building is nothing but music felt by the eye, a concert of harmonies and harmonic relations subject to the conditions of space instead of those of time." He cites Vitruvius, who declared that every architect should be a musician; and even in the ancient fable of Amphion and the walls of Thebes he finds the underlying conception of the essential connection between architecture and music. It is amusing to see the international interest which this idea of Schelling's excited. "There was much shaking of heads over it," said Goethe.

The *Goethe-Jahrbuch* for 1897 continues the useful career of this literary scrap-book. A fine portrait of the distinguished protectress of the Goethe Gesellschaft, the late Grand Duchess of Weimar, is prefixed to the volume, and there is a brief, modest, but feeling tribute to her gentle and beneficent virtues from the pen of Prof. Erich Schmidt. This able and great-hearted woman possessed the best characteristics of the sturdy race of the House of Orange. To a lofty sense of her public obligations as heiress of the Goethe treasures, and to a wide knowledge of literature, she united a high degree of executive ability and tireless energy; she has won a place among the foremost of those who have labored to spread the serene influence of the German poet.

From the batch of seven letters of Goethe which here appear too late to take their chronological place in the Weimar edition, it is evident that supplementary volumes will be necessary to receive the tardy documents that are constantly coming to light and to render that monumental work complete. There are three letters from the younger Voss which give an amiable glimpse of his father; several from A. W. von Schlegel; a short bit of correspondence between Goethe and Lichtenberg, and a series of dull communications from a youth who was sojourning in Wetzlar in 1778 when the Werther fever was at its height. The latter reveal once more the mad enthusiasm which the unfortunate Werther let loose over Germany, but they possess no real value. The only scrap of information they contain is old: the separation from Lotte at the end of the first part of the story is a poetic fiction, since the scenes among which Werther continues to move Goethe painted, like all the preceding, directly from the region in and about Wetzlar.

To the plain lover of literature whose interest in the dusty accumulations of the "philological method" quickly grows languid, a letter from Pius Wolff to Lilienstern is more likely to appeal. Wolff was an actor at the court theatre of Weimar, and it was at his instigation that Goethe undertook to modify "Romeo and Juliet" for the German stage. Wolff was delighted with the result, and described it in detail to his correspondent. The alteration that excited the most comment was the omission of the reconcilement at the end of the play. It had been observed that after the death of *Juliet* the audience invariably prepared to depart. Accordingly, Goethe ended the drama with *Juliet's* death. With the following lines *Friar Laurence* closes the tomb and the play:

> "This gloomy portal shall here shut you in
> Until I may disclose your hapless fate.
> Blessed is he who loveth without sin,
> For finally the tomb encloseth love and hate."

A certain nobleman in Weimar called Goethe to account for this alteration: "Excuse me," he said, "why have you left out the reconcilement?" "Christian love, my dear sir," replied Goethe simply, "can doubtless supply the reason." But succeeding theatre managers in Germany, failing to apply this test, have adhered to the Shaksperian version.

The annual report of the Society shows the usual prosperous condition. Although the membership has fallen off by seventeen, this in a total enrolment of 2,676 has no significance. The acquisition of the original letters of Goethe to Frau von Stein is

here recorded. They have long been the coveted treasure of the Stein estate at Kochberg, but now, by purchase and formal presentation to the Grand Duchess, they have been permanently incorporated in the archives at Weimar. Another valuable addition to these manuscript collections was made by the wise generosity of Mrs. Ida Freiligrath, the widow of the poet. It consists of the whole extensive correspondence of her husband, including letters from Chamisso, Uhland, Brentano, Immermann, Geibel, Kerner—in short, from all the members of the brilliant Romantic group to which Freiligrath belonged. This is another and important step in the direction which the management is consciously and consistently following, of making the Goethe-Schiller archives a universal safe-deposit vault for all the manuscript treasures of German literature in the eighteenth and nineteenth centuries. The value of such a concentration of literary "sources" to students cannot be overestimated. The year ending with May, 1897, shows a greater advance towards this goal than any previous year since the bequest of the last of the Goethes to the late Grand Duchess called the Society into existence.

SKEAT'S CHAUCERIAN PIECES.

Chaucerian and Other Pieces. Edited, from numerous manuscripts, by the Rev. Walter W. Skeat, Litt. D., etc. Being a Supplement to the Complete Works of Geoffrey Chaucer. Oxford: Clarendon Press; New York: H. Frowde. 1897.

The black-letter editions of Chaucer contain, as everybody knows, a considerable amount of matter not from his pen. Much of this has been dropped by modern editors, but much has been retained, and a number of poems which no competent scholar can for a moment believe to be genuine have, by a kind of tradition, become so closely associated with Chaucer's name that the writers of hand-books and other works of ready reference, as well as some easy-going literary men, still refer to them as his. This is particularly the case with "The Flower and the Leaf," "The Cuckoo and the Nightingale," and "The Court of Love," which, in this regard, seem to bear a charmed life. In his six-volume Oxford Edition (1894), Prof. Skeat included only such works as he regarded as genuine, with the single exception of the "Romaunt of the Rose," only a part of which he ascribes to Chaucer. The interest attaching to some of the spurious pieces is, however, so great, partly from their own merits and partly from their having been so long associated with the works of the poet, that a seventh volume was called for, which should take up the most important portion of this miscellaneous material. Such a volume has now been issued, purchasable separably, but uniform in type and size with the six of the Oxford Edition. The contents are, as we have suggested, of a highly miscellaneous character. In date, they range from the last quarter of the fourteenth century to the last quarter of the fifteenth, or even later; in subject and style, they range from religious polemics in prose to amatory allegory in courtly verse. In one point only they all agree: they include nothing that is Chaucer's except for the numerous passages which their various authors conveyed from his works.

Of the 450 pages of text, 145 are occupied by "The Testament of Love." The literary history of this curious document is extraordinary enough. The author gives us a good deal of information about his life. In his youth, he tells us, he was implicated in certain political plots. He was arrested, but life and liberty were offered him if he would inform against the ringleaders of the conspiracy. He accepted the offer, betrayed his masters, and was pardoned by the king. He complains that this conduct caused him to be much blamed, although his revelations were made, he insists, not from a selfish regard for his own safety, but on the principle that private friendship should not stand against the welfare of the state. Besides, the leaders of the conspiracy did not attempt to help him in his misfortunes: they were using him as a catspaw merely. What more could he have done "unless he wished to be a stinking martyr in a false quarrel"? He had accused no man unjustly. Indeed, he had "proffered his body so largely into proving of those things that Mars should have judged the end" (*i. e.*, he was willing to establish his veracity by wager of battle), but no one accepted his challenge.

All these statements were utilized by Godwin and others in the manufacture of Chaucer biography; for Chaucer long passed for the author of the "Testament," despite the abundant evidence the document itself affords that it was written not by him, but by some warm admirer of his genius. The theory of a Chaucerian authorship for the "Testament" was exploded a good while ago, but it was reserved for Prof. Skeat and Mr. Henry Bradley, Dr. Murray's learned associate in the editorship of the 'New English Dictionary,' to clear up the whole problem. Prof. Skeat made the happy discovery that the initial letters of the various chapters of the work were meant to form an acrostic, which he read as follows: "Margarete of Virtw [virtue], have merci on THSKNVI." He conjectured that THSKNVI contained the name of the unknown author, but he did not succeed in reading the riddle. Meantime Mr. Bradley, working independently, had found that the biographical hints of the "Testament" correspond to known facts in the life of one of Chaucer's contemporaries. He had also observed strange signs of dislocation in book iii. In some instances the beginning and the end of a sentence had nothing to do with each other. Clearly, several leaves of the manuscript used by Thynne, who is our sole authority for the text, had been accidentally shuffled. With admirable patience and skill Mr. Bradley rearranged the folios of this (lost) manuscript so as to reduce the text to coherency. He then read the acrostic discovered by Mr. Skeat, and had the well-deserved satisfaction of finding that the mysterious THSKNVI became THIN VSK, *i. e.*, "thine Usk," the name of that contemporary of Chaucer whose life Mr. Bradley had already found to agree with the autobiographical statements in the "Testament."— Thomas Usk was clerk to John of Northampton, Mayor of London in 1381-'82 and 1382-'83, and betrayed his master in precisely the fashion suggested by the "Testament." Mr. Bradley immediately communicated his brilliant discovery to Prof. Skeat, whose text of the "Testament" was accordingly readjusted by the cancellation of several sheets already struck off. The mystery of "The Testament of Love" is thus happily solved, and a not unimportant chapter is contributed to Middle English literary history. Usk seems to have been a poor creature—he certainly was a vague and confused writer and a good deal of a plagiarist; but the historians of English prose cannot afford to neglect his treatise.

Another piece restored to its author in Mr. Skeat's volume is "The Cuckoo and the Nightingale," one of the best of the pseudo-Chaucerian poems, and modernized, our readers will remember, by Wordsworth. This is ascribed in a hitherto neglected manuscript to "Clanvowe," whom Prof. Skeat, with Dr. Furnivall's assistance, has identified with a Sir Thomas Clanvowe who lived in the time of Richard II. and Henry IV. The mention of the "queen at Woodstock," which has played its rôle in Chaucer biography, is now explained on the theory that the poem "was addressed to Joan of Navarre, Henry IV.'s stepmother, Queen of England from 1403 to 1413, who held [this manor] as part of her dower." There seems to be nothing against Mr. Skeat's identification of the author of this pleasing poem.

Of the other pieces in the volume several are by known authors. Gower is represented by his lines to Henry IV. ("O noble worthy King, Henry the Ferthe"), now christened "The Praise of Peace," and by some Latin verses. Hoccleve furnishes "The Letter of Cupid," his translation of the "Epistre au Dieu d'Amors" of Christine de Pisan, as well as two *ballades*. To Lydgate belong some nine pieces, among them "The Complaint of the Black Knight" and "The Flower of Courtesy." Two or three of these, however, are of somewhat doubtful authorship. Henryson's "Testament of Cresseid"; "La Belle Dame sans Mercy"—Sir Richard Ros's translation from Alain Chartier—and the "Moral Balade" of Henry Scogan, which, though of no literary merit, has a strong personal interest for every reader of Chaucer, are of course included in Mr. Skeat's collection. A stanza called "Prosperity" closes the list of the pieces whose authors are known. This has been lately recognized by Prof. Liddell as part of the prologue to John Walton's Boethius. Besides these, the volume contains—to neglect three or four scraps of no consequence—the very important "Plowman's Tale," generally admitted to be by the author of "Pierce the Plowman's Crede"; "Jack Upland," the vigorous prose attack on the friars, amusingly printed by Thomas Wright as alliterative verse; "The Flower and the Leaf" and "The Assembly of Ladies," both held by Prof. Skeat to be the work of one and the same woman; and "The Court of Love." A considerable number of writers, it will be observed, are represented in this collection of pseudo-Chauceriana. Mr. Skeat makes out fourteen, with the possibility of three or four more.

It will be seen that Mr. Skeat has taken in everything that could reasonably be expected, with one exception—"The Isle of Ladies" (commonly known as "Chaucer's Dream"). This is, in our opinion, an unfortunate omission. Mr. Skeat excuses it by alleging "the inordinate length" of the poem and its accessibility in "the texts by Moxon, Bell, and Morris." As to the length of the "Dream," that is a poor reason for leaving it out. Space could have been made in a variety of ways. One could have spared, for example, the "List of Subscribers," which fills twenty-one whole pages; or, if this list is holy, some of the Lydgate and Hoccleve matter might have been sacrificed. For, though the "Dream" is accessible after a

fashion, it is no more so than several other poems which Mr. Skeat has not thrown out, and no critical text has ever been printed. Besides, it offers several quite particular points of interest. Its connection with the cycle of stories represented by the "Lai d'Eliduc" of Marie de France has long been familiar to scholars, but it has not been pointed out, so far as we know, that the essential part of the poem is the story of a visit to the Other World—an island Paradise of Ladies, quite in the Celtic (Irish) manner. The whole has been worked over into a conventional love-poem in the court style of the fifteenth century. Prof. Brandl of Berlin has a theory that the "Dream" is an allegory on the marriage of Henry V. and the fair Katherine of France—a theory which one would be glad to see discussed. Altogether the omission of this poem from Mr. Skeat's book is very much to be regretted.

In editing the 'Chaucerian Pieces' Mr. Skeat has, of course, followed the method of his Oxford Chaucer. He has based his texts on fresh collations of the printed and manuscript materials, and he provides introduction, glossary, and copious notes. The volume shows the merits and the defects on which we have already commented, at considerable length, in a previous review, and we may therefore, with a clear conscience, spare our readers an enumeration of details. It would be easy to fill many columns of the *Nation* with such minutiæ, but it is fairer, as well as more agreeable, to refrain and to thank Mr. Skeat, as we do most heartily, for one more substantial service to English scholarship.

Political Letters and Speeches of George, Thirteenth Earl of Pembroke and Montgomery. 2 vols. London: Richard Bentley & Son. 1896.

"The man was greater than his work." These words, borrowed from Lord Pembroke's writings, form his best epitaph; but if the rare qualities of his character are what most forcibly strikes students of his writings, Lord Pembroke's work itself was most noteworthy, and his position and influence are deserving of special notice by an American, because they could belong to no one but a high-toned English gentleman, and therefore bring into view a side of English political life well worth attention. The leading traits of Lord Pembroke's character were his sense of justice and his high public spirit. Both of these qualities are apparent in every line which he has left behind him. He was "just" in the two-fold sense of that word: he hated oppression, and, whenever it lay within his power, opposed and checked it; but his justice was something more than the fierce indignation which inspired the satire of Swift no less than the rhetoric of Burke. It was also equity to see things as they are. To allow for the errors of opponents, to try in all matters to get at the truth, to place principles above personalities, was Lord Pembroke's natural impulse, and this was an impulse which he fostered and trained by careful study. These admirable moral traits might exist in a man who, for want of the proper gifts or talents, could hardly make his character tell on others. But Lord Pembroke possessed to a singular degree the endowments which were needed as the complement of his devotion to justice and to reason. His natural grace and courtesy must necessarily have charmed his associates; his clear brain enabled him to discover and bring into relief the essential features of every question which he discussed, and the width of his interests led him to enter into discussion of all the problems which for the last twenty or thirty years have occupied the minds of English statesmen. Add to all this that he was master of a lucid style which was admirably suited for the expression of his own opinions, and for the confutation of the fallacies by which his arguments were opposed.

When one thinks of Lord Pembroke's character and talents, one's wonder is that he did not stand among the first rank of English statesmen, and that his name should be less known to foreigners than the names of men who possess neither a tenth of his worth nor half of his talents. The explanation is, we believe, to be found in the word ill-health. Want of physical strength was with Lord Pembroke, as with other men of rare gifts, the cause of his not coming more decidedly to the front. The man, as we have said, was greater than his work. Yet it would be a grave error to suppose that the result of his labors was insignificant. Over all who knew him, over his friends and his neighbors, he did exercise a profound influence. Nor was it only those with whom he was personally acquainted that he influenced. His powers as a writer gave him ready access to the public press. He was one of those men to whose opinions both the public and leading statesmen paid attention. His voice was the voice of reason, and of reason which could insist upon obtaining a hearing. To think that because Lord Pembroke's name cannot be associated with definite acts of Parliament, or with the carrying through of some great political change, he did not do a work in the world which was well worth doing, is to mistake appearance for reality, and also to misapprehend the conditions of public life in England. The writer or speaker who has kept before the world views like ly to be forgotten—who, for example, has insisted, as did Lord Pembroke, on the vital importance of maintaining the navy at the strength necessary for the defence of England at a time when politicians were more anxious to remit taxes than to make certain that the country was safe against attack—may not have been heard with applause by huge public meetings, or have occupied a high place in any cabinet, but he has rendered a service of infinite worth to the nation. The class of men, moreover, of whom Lord Pembroke was a striking representative, are almost peculiar to England, and exercise there a sort of power which foreign critics neither understand nor for the most part note. The class consists of the body of independent thinkers and writers who take an active part in the political conflicts of their time, and yet, for one reason or another, can hardly be termed politicians. Men of this stamp are sometimes well-known writers and thinkers, such as were Mill, Bagehot, or Greg. They are sometimes gentlemen of weight in their own country, men who write little, but whose words and acts guide and form the opinions of a neighborhood. They are occasionally men, like Lord Pembroke, who combine high station and remarkable intellectual powers both with rare literary gifts and with a practical knowledge of public life. Men of this stamp are often for a time overlooked. They may seem for a moment to be thrown into the background by the practical politicians or the enthusiastic fanatics who court and receive the attention of the public. But in the long run the men of high character and of thoughtful and independent minds—in England, at any rate—get themselves heard, and the conclusions at which they have arrived generally determine the policy of the nation.

He who at any time can discover what is the direction in which the opinions of thoughtful men are veering, will be able to predict with some confidence what is the course which England will ultimately follow. A little more than a century ago the best and most independent men in England had condemned the French Revolution. It was their condemnation which made it certain that English conservatism would steadily oppose the revolutionary enthusiasm of France. In 1830 Eldonian Toryism had been tried and found wanting by the men of fair minds and of high character. Reform from that moment became a certainty. Before 1846, while the conversion of Peel was still a secret or a mystery, the thought and the morality of England had been enlisted on the side of free trade. It was certain that within a very few years some leader would perceive the current of public opinion and deal a death-blow to protection. It is this tacit, though hardly acknowledged, deference for independent opinion which is the saving element of English politics. Men like Lord Pembroke, therefore, exert a power the extent of which cannot be measured, but the reality of which does not admit of doubt; they help in forming the true national judgment; they are the teachers, if not exactly the leaders, of the nation. Their lives may or may not be conspicuous, but their lives are not thrown away, for such teachers insure the ultimate triumph of wisdom and of justice.

Dictionary of American Authors. By Oscar Fay Adams. Boston: Houghton, Mifflin & Co. 1897.

Mr. Adams's book fills a long-felt want. He has condensed the notices of American authors in the 'Dictionary' of Allibone and Kirk, the 'Library of American Literature,' and 'Appletons' Cyclopædia of American Biography'—all voluminous and massive works—into one volume of 444 pages, whose convenient shape will be appreciated by everybody having need of ready reference. He has not only abridged, but occasionally has corrected or supplemented the material used. His criticism is nearly always sound and expressed with epigrammatic brevity; but can it truly be said of Theodore Parker (what is justly not allowed to Henry Ward Beecher) that "since his death his influence has deepened both in America and Europe"? There are, in fact, only three points at which fault can fairly be found—his failure to acknowledge his obligations to his predecessors, his occasional errors, and the want of any apparent principle which governed him in deciding which authors should be taken and which left.

Although the book contains some 8,000 names, the omissions are innumerable, while blunders are not infrequent, though often, no doubt, mere misprints. Such are "Sydney" for Sidney Fisher; "Graydon" for Grayson, under J. M. Bixby; "1793" for 1798 in the notice of J. P. Brace; "Swartout" for Swartwout, under Cozzens; "1850" instead of 1858, as the death-year of H. M. Stephens;

"Arcadia" for Acadia, under Cheney; and "Tulley" for Talley, under Mrs. S. A. Weiss. For some misstatements and blunders, however, the compiler must be held responsible. Such are double entries of the same person, as (p. 30) "Bloomfield-Moore, Clara," and (p. 259) "Moore, Clara"; also (p. 55), "Chaillé-Long, Charles, Md., 1843," and (p. 233) "Long, Charles Chaillé, Md., 1842," with a longer description of his life, etc. J. H. Ingraham's entrance into the ministry is postdated by eight years. The notice of Mrs. L. C. Lillie does not mention her kinship to Mrs. Catherine White, or the fact that her name, for several years, has been Harte, though similar facts are recorded in the case of other writers. The elisions in the name of Mrs. Jamison are unnecessary, as appears from the sketch published in *St. Nicholas*, so that instead of "Celia V—— [Hamilton]" we should have Cécile Viets (Dakin) (Hamilton). The notices of the Virginia Tuckers are inaccurate: Henry St. George is said to have been born in Bermuda, instead of Virginia; Beverley is called Nath. Beverly, and St. George Tucker 2d is likewise provided with a forename (Henry) unknown to the family Bible.

Space fails us to mention more than a few of the omissions. Among them are the silly but immensely popular "Ruth Ashmore," known to the accurate cataloguer as Mrs. Isabel (Sloan) Mallon; Elizabeth Balch, who died in 1890 after writing the supposititious answers of Mérimée's 'Inconnue'; Mrs. Julia Perkins Ballard, author of some admirable children's books, whose death occurred in 1894; Anne H. Brewster, 1818-'92; "Ned Buntline"; Matthew St. Clair Clarke, who wrote a Life of David Crockett here ascribed to the hero of it, as is also another life written by R. P. Smith; Eliza Cushing, who wrote a once valued historical novel called 'Saratoga,' and whose sister, Mrs. Cheney, is duly entered; James De Mille, Mayne Reid, and Charles Sealsfield (the two latter, at least, claimed to be citizens); Miss Trumbull, of the famous Connecticut family, called on her title-pages "Annie Eliot" (J. H. Trumbull's death is not noted); A. K. Fiske; Sarah C. F. Hallowell; Frances A. Humphrey; W. Landon, author of a once famous novel called 'Stanley'; Margaret Lee; J. Loffland, formerly well known as "The Milford Bard"; Mrs. St. Leon Loud, whose poems Poe engaged to edit, and which were published by Ticknor in 1851; James McHenry, author of 'The Wilderness' and other renowned novels; E. S. Maclay; Julia H. Moore, whose fame, as "The Sweet Singer of Michigan," long filled the Western world; Eldridge F. Paige, whose 'Patent Sermons' are still in demand, though their author died thirty-eight years ago; C. C. Shackford, who died in 1891, etc.

The number of works, or their importance, apparently does not enter into consideration in the selection. For example, William T. Davis, author, among other works, of the large and laborious 'Ancient Landmarks of Plymouth,' is not an obscure American, but he and his books are ignored, while we find this precious entry: "Rice, Isaac Leopold. *Bo* [*hemia*], 1850 —. A lawyer of New York city who has written 'What is Music?' " Indeed! Turning up this author in the 'American Catalogue,' we learn that his screed forms No. 140 of the "Humboldt Library" and is issued in paper covers at fifteen cents! We need go no further to show how arbitrary is Mr. Adams's choice; but we must not conceal W. J. Bryan's admission to the Addenda on the strength of his catchpenny 'First Battle,' a review of the campaign of 1896. For Mr. Adams's purpose "America" is not Canada, and hence only immigrants like Prof. Roberts and Bliss Carman are allowed a place. Mr. Goldwin Smith's temporary residence on this side of the border counts for nothing. Present residence, as in the case of Dr. von Holst, is an open-sesame. There is an occasional infelicity in description, as of J. F. Rhodes as "An historian of Boston," where a comma is needed after "historian." Finally, the dates of death are often omitted, or incorrectly given. Barlow's birthyear is given as 1754 instead of 1755.

While recognizing the conscientiousness of Mr. Adams's work, we are obliged to say of it, as of so many works of its class, that it is welcome in spite of its deficiencies.

The Gladwin Manuscripts. With an Introduction and a Sketch of the Conspiracy of Pontiac. By Charles Moore. Lansing: Robert Smith Printing Company. 1897.

Major Gladwin, the defender of Detroit against Pontiac, has suffered in reputation both from Parkman's comparative neglect and, perhaps more, from a phrase which occurs in one of his letters to Amherst. Towards the end of 1763, when the danger was over, he advised a policy of conciliation. Nothing was to be gained by prosecuting a war where the enemy were so difficult to catch. Moreover, says Gladwin, there is a better way of getting rid of them than by retaliatory warfare. "They have lost eighty or ninety of their best warriors, but if your Excellency still intends to punish them further for their barbarities, it may be easily done, without any expense to the Crown, by permitting a free sale of rum, which will destroy them more effectively than fire or sword." The passage just quoted has generally been wrested from its context, and used to exemplify a method of treating the aborigines more shameful than their own treacheries. The fact is that Gladwin only suggests a means to be used in the last resort. At the end of the same sentence he expresses the hope that matters may be otherwise accommodated for the sake of the peltry trade and for the preservation of the Mississippi frontier against barbarous nations more remote than the ones in question.

Though Parkman is inclined to give Gladwin the cold shoulder, and does not even spell his name correctly, it would be unjust to accuse him of neglecting his sources. Only exceptional diligence and good fortune have enabled Mr. Moore to lay hands upon the documents which he has used in preparing his article for *Harper's Magazine*, and which he publishes with an account of their acquisition. The discovery of Gladwin's great-grandchildren under other names and the chances of the auction-room were needed to put him in possession of the information he had long been seeking. With its aid he is able to establish the degree of Gladwin's activity at Detroit and the extent of French complicity in Pontiac's revolt. Leaving the reader to make out from Mr. Moore's interesting preface how he managed to secure his prize, we shall content ourselves with saying a word on each of these two points.

With regard to Gladwin's success in feeding his garrison, keeping open communication with a food depot, and repelling the thousand howling savages without, it is obvious that he stayed the course of the rebellion, which the fall of Sandusky and other forts had rendered formidable. In order, however, to estimate his resourcefulness at its proper value, one must see him behind the palisades after Dalzell's fiasco, which cost the English 159 killed and wounded, against the trifling loss of 20 Indians. Gladwin permitted the sortie only on Dalzell's threat that he would withdraw the relieving force unless permitted to lead an attack. The "battle of Bloody Run" came in the nick of time for Pontiac, and brought him large reinforcements. "Yet never since the siege began," in Mr. Moore's words, "was Major Gladwin more confident of ultimate success."

With regard to the attitude of the French, these new documents prove almost conclusively that Pontiac was more their cat's-paw than the compeller of their unwilling services. The evidence given at Gladwin's inquiries, held during the siege, points straight to their active complicity.

"Mr. Clairmont told Col. Gladwin [May 11, 1764] in the presence of Capt. Grant and Lt. Hay. That the 9th day of May 1763 (being near the Mouth of the River Huron getting timber where was also Mr Massac and many other Frenchmen) at three in the morning some Indians came by there with a Belt inviting all nations of Indians they met to fall upon the English wherever they found them. That they sung the War Song in Mr. Massac's house or Cabbin . . . . and that Mr. Massac sung with them & when he struck his stroke in the song he struck with a little loaf of bread. That one Dunoir and one Campeau was present."

There is much more in this strain.

Altogether Mr. Moore is successful in rehabilitating his hero. Incidentally, he illustrates the improvement of English regular officers in fighting Indian foes. Gladwin had been a member of Braddock's expedition, and was also before Ticonderoga. He must either have possessed a marked aptitude for guerilla warfare, which is very possible, or have learned caution by hard experience. One certainly notes a strong contrast between the ambush of Little Meadows and the siege of Detroit.

Sources for Greek History between the Persian and Peloponnesian Wars. Collected and arranged by G. F. Hill, M.A., of the British Museum. Oxford: Clarendon Press; New York: H. Frowde. 1897.

It is well known that, in this country, historical method has been developed almost exclusively in connection with mediæval and modern history, and that few colleges have as yet made provision for the scientific study of the history of Greece and Rome. Many things are needed, therefore, to bring historical scholarship and teaching in the field of classical history up to the level of its importance. There is need, for instance, of abler and more liberally endowed instruction, of better text-books, and of collections of sources in the original languages and in translations, for the use of students and pupils. Mr. Hill's book helps to supply one of these needs. His work has been done for a period that is highly interesting, both for its political developments and for its still unsolved historical problems. The book treats of eastern and western Greece, of Athens and Sparta and the federative and imperial systems that these two cities repre-

sented, of the external and constitutional history of the Greek States, and of the lives of eminent men. The selections are in the original languages, and are both literary and epigraphic. The work is thus adapted to the needs of scholars and of advanced college students. The sources are arranged topically in chapters, and detailed indices have been added.

The scope of the work is comprehensive, facilitating a broad and thorough study of the political history of the period. The editor has rarely added a note or offered a conjectural reading of his own: his individuality appears only in the selection and arrangement of the material. Thus he has avoided placing himself between student and source. It is his opinion, expressed in the preface, that "the student of [ancient] history is too apt to study it, not in the light of ancient authorities, but in the reflections of modern writers." The study of sources should be emphasized as much for ancient as for modern history. Original research is, indeed, the only basis on which sound historical scholarship can be built. It would be a fatal mistake, however, to ignore the results of modern criticism. The modern historians, though but interpreters of ancient sources, are nevertheless absolutely indispensable. It would be a waste of time to reiterate so trite a truth, were it not that survivals of eighteenth-century methods of writing ancient history are still manifesting themselves in certain quarters. Mr. Hill has left us in doubt as to his position in relation to this matter. Perhaps he would admit that the student must be guided through his book by experienced hands, but would prefer to leave such guidance to the various modern authorities on the period treated. At all events, his work, so far as it goes, has been ably and carefully done. May we hope that it is the beginning of a series of collections of sources that will include all the important epochs of classical history?

Vita Medica: Chapters of Medical Life and Work. By Sir Benjamin Ward Richardson, M.D., LL.D., F.R.S. Longmans. 1897.

Most readers, as they lay down the 'Vita Medica' of Richardson, will say, "Here is a book of five hundred pages with scarcely a dull line." From first to last the record is permeated with an interesting personality—a born doctor, who, like the Great Physician, went about doing good, and that chiefly to the poor, whose needs are greatest and whose helpers are fewest. In describing his own career, he draws to the life English customs in middle-class schools and society, especially in the sphere of provincial practitioners. These things—as it were paper and twine thrown in for nothing—wrap up and diversify the medical narrative, and make it easier for readers to carry.

Beginning with rural practice, Richardson soon gravitated to London as naturally as a planet to the sun. Reaching that metropolitan goal early in the fifties, and in his third decade, he never left it, save for country lectures. We never hear of him beyond the four seas. But his home activities were intense, and they were never interrupted save by one fever of fourteen weeks, caught while on a tour of duty. His writings were voluminous, and in a single periodical filled more than five thousand pages. He did much hospital work, and was laborious, as president, and otherwise, in several associations of his professional brethren. Few men have been inspired with such courage of their convictions and by their convictions. In 1869 and for decades afterward, he stood as a medical advocate of total abstinence. He had been in practice a score of years before he became convinced that alcohol was an enemy to life, both in health and in sickness, and that it was his duty to proclaim his conviction. Nothing so cut him to the heart as the social and professional ostracism, or boycotting, which he encountered.

"I remember," he says, "nothing like the mischief which befell me when I made the first [temperance] sortie. Before then, my lecture-rooms had been filled by medical men, who liked to see new experiments and to listen to what might now be styled 'post-graduate courses.' Afterwards the rooms were simply vacant. From the outside world the sick had sought me, and life was on the crest of the wave. The charm ceased so soon as I declared for the principle of total abstinence" (p. 377).

With many other touching utterances he shows multitudes who had cried Hosanna, eager to crucify. But he survived to serve for twenty years in a total abstinence hospital, and to chronicle a corresponding revolution in medical opinion and practice where he had been maltreated.

The three graces, faith, hope, and charity, abided in Richardson, but of these three the greatest in him was hope. He had much charity for the baffled but well-meant endeavors of the past, more faith in the achievements of the present, and, most of all, hope in the medical future—a hope which rendered him to his last week of life a tireless and sanguine experimentalist. His dealings with anæsthetics give us a typical taste of his quality. He had charity for the drastic James Wardrop, who, "when vaporous inhalation was still unknown, had produced deliquium, or fainting, and thereby insensibility, by bleeding, and then performed operations painlessly" (p. 412). Again, he had faith in gaining the same painless end without bloodshed, and that from the smoke of a puff-ball—the "devil's snuff-box" (p. 162); and much more faith in the chloroform anæsthetic imported from America. This invention he hailed as foreshadowing the abolition of pain. The objection that it often lulled patients into a sleep which knows no waking he saw to be serious, and through life made full proof of chemical compounds and devices which would render anæsthesia as safe as natural sleep. He devised, among other things, the ether-spray apparatus (p. 286), and, though he died without finding what he sought, his hope was unfaltering to the end. "Pain," said he, "will be utterly abolished, and, as a part of an operation, will not be taken into consideration because it will not be called forth" (p. 289).

Richardson's mind was so sensitized in regard to his own line of inventiveness that trifles light as air or shadows photographed themselves upon it, or were there transfigured into potent anodynes. Thus some drops of cologne shot through a tube upon his forehead by a lady with whom he was about to dance gave him the ether-spray invention. Besides being a trained chemist, he was a natural mechanician. Hence, not only were his manipulations skilful from the cutset, but, thanks to witty inventions nobody had thought of before, they grew more and more successful and spectacular. He could not fail to become a favorite lecturer on his specialty. Speaking to popular audiences he more and more eschewed such a professional dialect as is "not understanded of the people." He had early been taught in this line. His first prize was the Fothergillian gold medal for an essay on "Diseases of the Fœtus in utero." This production he carried to a publisher who, as he had no doubt, would be glad to share in the profits of publication. The only reason given for the rejection of his manuscript, without even a reading, was that its title proved to the publisher that its author could not write anything the world would read.

Richardson's quests and experiments were numberless. A partial list of them embraced antiseptics and lethals, the blood, nervous centres, reanimation, and the germ theory. But his chief end was treason against his own profession, for his heart's desire was to make doctors useless through sanitations so perfect and pervasive that disease would be extinguished. His idea of the city Hygeiopolis, analogous to Plato's ideal Republic, he bodied forth in a lecture in Brighton Dome before the Social Science Association. In preparing this discourse by the seaside, he traced a plan of the city of health with his cane in the sand for the amusement of his little daughter. He thus illustrated model sewage, water-supply, ventilation, parks, etc. The night wind blew away the sand sketch, and it had to be renewed in the morning. But, said an American critic, though "the winds blew it away, they blew it all over the world." Nor were these words hyperbolical, for the address took the audience by storm, and all London papers, from *Punch* to the *Times*, as well. It made the fortune of the *Sanitary Review*, and added more to the lecturer's fame than any single effort of his career. Much of what Richardson hoped for, and for which all creation yearns, may be a transcendental reverie. He believed himself on the point of producing, by the operations of the laboratory, milk better than any cow can yield, "because free from any possibility of causing disease." He was inclined to vegetarianism, and held that chemists would soon transmute vegetables into food that would be practically animal in taste and quality and (if they pleased) appearance. More than this, "all races, in his visions, were to be dyed of one color, with their highroads through the skies, and their paths on the floors of the seas." No idealist rises to the height of his ideal, but he rises higher than he could but for soaring on such a pinion, and his failures are often better than other successes.

A History of Pembroke College, Oxford, Anciently Broadgate's Hall. By the Rev. Douglas Macleane. Oxford: Clarendon Press; New York: H. Frowde.

We have here the thirty-third volume issued by the Oxford Historical Society, comprising in its 544 closely printed pages an elaborate history of the foundation and the fabric, with a series of biographical sketches of "its best remembered sons," drawn up, so far as we can see, with care and judgment. A college which can reckon among its alumni Bishop Bonner the Marian persecutor, Beaumont the poet, Camden the antiquary, Pym the parliamentarian, Sir Thomas Browne the author of 'Religio Medici,' the browbeating Chief Justice Scroggs,

Blackstone, with his oppressive spirit of orderliness, and the perfervid Whitefield, not to mention such notable men of science in our own day as Rolleston the physiologist, and Hatch the ecclesiastical historian, has no lack of interest and variety in its traditions; and to all these we have to add the name of Samuel Johnson, "the greatest of the sons of Pembroke." Johnson has conferred on the modern cicerone the inestimable benefits of a good story—the pair of boots thrown down stairs; and a good phrase—"a nest of singing birds."

Most of the matter in the book is necessarily compiled from other and obvious sources, and in the present form can appeal only to Pembroke men. But, like all these Oxford publications, there is much in it to interest the historian of manners, especially of academic manners. A few examples may be taken at random. Early in the seventeenth century a change is noticed in the composition of the undergraduate body owing to the growing practice of sending "nobellmen's sonnes" into France "when they are very yonge" (p. 240 and note). On p. 360 will be found some observations worth considering in defence of the old servitorships, which brought poor men to the universities "from the plough and the shop." Mr. Macleane makes the not unnecessary comment that "there are still servants attached to the colleges, but they are not admitted to lecture-room or chapel." With this may be associated the defence, on p. 445, of the old local endowments: "The earlier founders believed that any lad of average parts who was willing to study might be made into a student. They supplied him with bare necessaries and hedged him round with scholastic discipline. There was no reason, therefore, why their bounty should not be annexed to certain schools, localities, or families." As the present Archbishop of Canterbury remarked when the restrictions were being abolished forty years ago, "the change of manners has deprived us of the check which once restrained idle men from undertaking what was then a laborious life." There are some instructive entries (p. 407) from the day-book of an eighteenth-century Fellow which display a liberality in the purchase of standard books when still an undergraduate which might put to shame many a well-to-do student of to-day. But when he was elected Fellow, at the ripe age of seventeen or eighteen, he seems to have felt a desire for a little mild dissipation, and on that very day he—not bought, he was too canny for that, but—"hired" 'Joseph Andrews' for sixpence. His appetite growing by what it fed on, two months later he "hired" 'Peregrine Pickle' for a shilling! Let us add, in view of much recent talk about Jowett, that a glance may well be given to another reforming head of a college, of a somewhat earlier period, Dr. Jeune, of whom there are here several anecdotes of the fine old crusted Oxford kind (pp. 468-9). The result of recent reforms, however—not, indeed, in Pembroke, but "elsewhere"—has, according to the author, been the conversion of the colleges into "barracks of undergraduates, officered by stranded tutors and adventitious hired chaplains" (p. 459). Mr. Macleane, it should be observed, has "gone down" from Oxford, and so can speak his mind in comfort.

Samuel Sewall and the World he Lived in. By Rev. N. H. Chamberlain. Boston: DeWolfe, Fiske & Co. 1897. Pp. xv, 319.

This volume, the author modestly warns the reader, "does not . . . pretend to original research; it avoids, with intention, the minute exactness of the antiquarian, and it uses for its groupings and pictures of the ancient Puritan life such material, from any quarter whatsoever, as could be verified and made useful"; but it is none the less evident that Mr. Chamberlain's book is the fruit of much labor and care. With Sewall's well-known diary as his guiding thread, and with constant quotation from it, the author sketches many features of the life and character of the New Englanders of the second and third generation, their conceptions of Church and State, their business characteristics, their home life, their courtships, their literature, their relations to the other races with which they were brought in contact. If he has added little that was novel, he has described the traits of the age with which he deals with much clearness of insight and fair-mindedness. The Puritan, as he sees him, was not altogether a hero, a fanatic, or a creature of quaint and amusing habits and surroundings. The Puritan was an emigrant Englishman, facing and solving as best he could the problems of his day, many of which press equally on our own.

Mr. Chamberlain's characterizations and generalizations are often suggestive, as a description of Roger Williams may illustrate:

"No wise man will willingly affront his memory, even when pointing out his weaknesses. The fact is that Roger Williams was made up after a polyglot pattern. He was a sort of Oriental caravan, bearing all sorts of balm, myrrh, and frankincense for delight and use; but he wandered often from the track, brought little bread, though a few pearls of great price; and, to say truth, had not great store of anything to feed the hungry into mastery in the land to which he fared."

For the diary that lies at the basis of the volume, and for Sewall himself, Mr. Chamberlain has high admiration.

"It is very much as this land then was—chaotic, migratory, rough, granite, actual, sincere. The barbaric wilderness, savage, cruel, vast, serves as the background of all his pictures, and not seldom, as an atmosphere, is often blown into them. While the Diary is rough, uncouth, and almost Gothic in its blunt, sometimes even coarse, downrightness, it is always sincere, confidential, and friendly. Sewall puts no gall in his ink, shows no malice, means to be just, with an intention that does not often fail him, and, in short, writes himself down as a strong-bodied, great-souled, honor-loving Puritan; not altogether above his age—no genius, no saint except in intent, but withal as good 'an all-round man' as New England has ever had. It is this man who has written our one great diary."

Indeed, one may question whether Mr. Chamberlain, in his hearty appreciation of Sewall's good qualities, does not pass too kindly a judgment upon the foibles which were no less manifest. Yet an honest diary is an unsparing revealer of character, and few men could unburden themselves as freely as Sewall evidently did in his pages with less ground for serious reproach.

Mr. Chamberlain has fallen into error in the location of two at least of his minor incidents. The deaconess who "sat in a convenient place in the meeting-house with a birch-rod in her hand to awe little children," was not at Plymouth. Bradford, who gives a picturesque description of her in his Dialogue, saw her on the other side of the Atlantic, as one of the officers of the Separatist Church under Johnson and Ainsworth at Amsterdam. Nor was it of "a fishing congregation in Plymouth Colony," but of one in quite the opposite direction from Boston, that Cotton Mather tells the story of the interruption of the preacher who urged fidelity to the religious purpose of the founders by the exclamation from the pews, "Sir, you are mistaken; you think you are preaching to the people at the Bay; our main end was to catch fish."

BOOKS OF THE WEEK.

Ainger, Alfred. Poems of Thomas Hood. 2 vols. Macmillan. $3.
Alden, Mrs. G. R. Overruled. Boston: Lothrop Publishing Co. $1.50.

Windle, Prof. B. C. A. Life in Early Britain. London: Nutt; New York: Putnams. $1.25.
Yechton, Barbara. Derick. Dodd, Mead & Co. $1.50.

HENRY HOLT & CO.'S NEW BOOKS.

BAZIN'S ITALIANS OF TO-DAY.

12mo, $1.25.

A highly "readable" account, first of the people, and incidentally of the country, industries, economics, scenery, literature, and opera.

A POSTHUMOUS BOOK BY H. A. TAINE.

JOURNEYS THROUGH FRANCE.

Being Impressions of the Provinces. With seven illustrations. *Library Edition.* 12mo, $2.50.

"He takes his readers all over France, from Brittany with its Catholic peasantry to the North with its calm Flemish population. . . . The impressions of the great philosopher of the people which he knew better than any of his countrymen."—*London Athenæum.*

☞ List of Library Edition of Taine on application.

IHERING'S EVOLUTION OF THE ARYAN.

8vo, $3.00 *net.*

A study which, while paying due attention to linguistical methods of establishing the Aryan descent, is particularly full in regard to pertinent historical facts and customs. The seven books of the volume are The Aryan Parent Nation, Aryans and Semites, Emigration of the Aryans, The Wandering, The Second Home, Origin of the European Nations. Difference of the European Nations.

GUYAU'S NON-RELIGION OF THE FUTURE.

8vo, $3.00.

Though based on vast learning and exhibiting profound thought, this book is "easy reading." It maintains that religion, so far as it is not an emotion, and so far as it is a mass of truth, is a symbolic accounting for truths discovered by our ancestors, and that this symbolic accounting is disappearing as science more and more occupies the field.

Their New Catalogue of Books in General Literature free on application to the Publishers, 29 West 23d St., New York.

Old and Rare Books.

FIRST EDITIONS, etc., etc., FOR SALE, AN ILLUSTRATED CATALOGUE OF. PART 2. *with Seventy-one Reproductions of Plates, Title-pages,* etc., etc. Works relating to the Civil War and Cromwell, Coaching, Cookery, Costume, Queen Elizabeth, Freemasonry, Gardening. Books chiefly first editions, by Charles Cotton, Abraham Cowley, William Cowper, Daniel Defoe, Charles Dickens, Dr. John Donne, Michael Drayton, John Dryden, Thomas Durfey, John Evelyn, Henry Fielding. FIRST EDITIONS of books illustrated by George and Robert Cruikshank, Richard Doyle, and Harry Furniss, and a large collection of curious Facetiæ. Part 2. 8vo, 74 pages, post free, 1s.
PICKERING & CHATTO, 66 HAYMARKET, LONDON, S. W.

HAKLUYT SOCIETY

(President, SIR CLEMENTS MARKHAM, K.C.B.). Two new vols., containing **THE VOYAGES OF JAMES HALL TO GREENLAND, 1605-12, and of JENS MUNK TO HUDSON'S BAY, 1619-20,** edited by C. C. A. GOSCH, Esq., are now being distributed to members through Mr. Bernard Quaritch.
The annual subscription for America is $5, which may be paid to Messrs. Morton, Bliss & Co., of New York. Lists of works already issued or in preparation may be obtained from
WILLIAM FOSTER, Honorary Secretary, Bordean, Holly Road, Wanstead (England).

JOHN MARMADUKE.

A Romance of the English Invasion of Ireland in 1619. By SAMUEL HARDEN CHURCH, author of "Life of Oliver Cromwell." Third Edition. Illustrated. 12mo, $1.25.

"The author has produced a thoroughly interesting story, abounding in stirring scenes, which force themselves on the attention of his readers, and peopled with a sufficiency of clear-drawn, vivid, lifelike characters, the loveliest of whom, the heroine, Catharine Dillon, is an unforgetable woman."—*N. Y. Mail and Express.*

"'John Marmaduke' is a sound and well-written book, and Mr. Church evidences in it not only, as has been said, elaborate and careful historical research, but much dramatic ability and rare power of characterization."—*New York Times.*

Dr. Jaeger's

SANATORY UNDERWEAR

AS USED BY

Dr. Nansen

on his famous Arctic sledge journey.

"The result of all this experimenting was that I made up my mind to keep to my woollen clothes, which would give free outlet to the perspiration. Johansen followed my example, and on the upper part of our bodies we each had two Jaeger Undershirts next the skin, etc., etc."—"Farthest North," Vol. II., p. 115.

This Applies to You.

Jaeger Underwear allows the skin to breathe freely, at the same time absorbing its exhalations, leaving the body dry and warm. Gives the greatest warmth with the least weight.

NEW AND IMPORTANT BIOGRAPHIES.

"Easily the biography, not only of the year, but of the decade."—THE NEW YORK TIMES.

Alfred, Lord Tennyson.

A MEMOIR. BY HIS SON.

This important work, which is comprised in two volumes of over 500 pages each, contains a large number of hitherto unpublished poems, and many letters written and received by Lord Tennyson.

There are also several chapters of Personal Recollections by friends of the Poet, such as Dr. JOWETT, the DUKE OF ARGYLL, the late EARL OF SELBORNE, Mr. LECKY, Mr. F. T. PALGRAVE, Prof. TYNDALL, Prof. LUSHINGTON, Mr. AUBREY DE VERE, etc. There are also about Twenty full-page Portraits and other Illustrations, engraved after pictures by RICHARD DOYLE, Mrs. ALLINGHAM, SAMUEL LAWRENCE, G. F. WATTS, R.A., etc.

Two Volumes, Medium 8vo.
Cloth. Price, $10.00 net.

The Chicago Tribune.

"No volume of biography has been more eagerly awaited than this, and few, I may say with emphasis, have so entirely fulfilled such high anticipations."
Jeanette L. Gilder.

The New York Herald.

"A biography that deserves to have applied to it his own line, 'In its simplicity sublime.'"

The New York Tribune.

"Two salient points strike the reader of this memoir. One is that it is uniformly fascinating, so rich in anecdote and marginalia as to hold the attention with the power of a novel. In the next place, it has been put together with consummate tact, if not with academic art. . . . It is faultless in its dignity."

From the **Boston Evening Transcript:**

"The chief worth of the book, of course, is its minute and illuminating portrayal of Tennyson himself. Its value is only less for the glimpses it affords of other men of his time. Both make it a biography that is likely to be more than the book of one year, or of two."

The Letters of Elizabeth Barrett Browning.

Edited by

FREDERIC G. KENYON,

With Biographical Additions and Portraits, etc.

Cloth, Two Volumes. Price, $4.00.

The collection of Mrs. Browning's letters in question has been prepared in the conviction that lovers of English literature will be glad to make a closer and more intimate acquaintance with one—or, it may truthfully be said, with two—of the most interesting literary characters of the Victorian age. It is a selection from a large mass of letters, written at all periods in Mrs. Browning's life, which Mr. Browning, after his wife's death, reclaimed from the friends to whom they had been written, or from their representatives. The letters passed into the possession of his son, Mr. R. Barrett Browning, with whose consent they are now published. In this collection are among others letters to Miss Browning (the poet's sister, whose consent has also been freely given to the publication), Mr. H. S. Boyd, Mrs. Martin, Miss Mitford, Mrs. Jameson, Mr. John Kenyon, Mr. Chorley, Miss Blagden, Miss Haworth, and Miss Thomson (Madame Emil Braun).

The duties of the editor have been mainly those of selection and arrangement; but, in order to complete the record, it has been thought well to add connecting links of narrative, which bind the whole together into the unity of a biography.

The Story of Gladstone's Life.

By

JUSTIN McCARTHY, M.P.,

Author of "A History of Our Own Time," etc.

With Portraits, etc.

Cloth, 8vo. Price $5.00.

The long period which Mr. McCarthy has spent as a member of the House of Commons, an eye-witness of the story he now tells, the long nights of research and preparation for, and also the later work of writing his "History of Our Own Times," in which Mr. Gladstone has been so prominent a figure, have fitted Mr. McCarthy as no other man has been prepared to tell the story, which is not only that of a man's life, but of his country's political life, so closely have the two interests been combined for these many years.

It is sixty-four years or more since the handsome young man of splendid physique entered his first Parliament. His first appointment brought him forward beyond the usual lot of a Junior Secretary, for his Chief was in the House of Lords, and much fell to the young man.

His progress was fairly rapid in spite of Parliamentary ups and downs; and of the prophecy of Disraeli that "the young man has no future before him." Yet they were to be the antagonists in a long duel which lasted from 1852 to 1876.

Educational

CALIFORNIA, Belmont. (In the foothills near San Francisco.)

BELMONT SCHOOL for Boys hopes to deserve the confidence of Eastern as well as of Western parents by surrounding its boys with as stimulating an intellectual, spiritual, and physical life as is found in the best Eastern schools, and by offering a home which in beauty of surroundings and fineness of climate for sustained work no Eastern school can hope to equal. It should give to its boys a healthful impulse towards good thinking and good living, and leave with them a heritage of pleasant and helpful memories.

The catalogue, containing views of the school and a record of the colleges and technical schools entered by its graduates, will help to give an idea of its spirit and the work it is doing

SEX WORSHIP.

An Exposition of the Phallic Origin of Religion.

By CLIFFORD HOWARD.

A work of rare and curious information concerning the ancient worship of the procreative powers. Its purpose is to demonstrate that the various religious faiths of the world have had a common origin, and are founded upon this universal primitive form of worship, as practised by the early Egyptians, Hebrews, Assyrians, Hindoos ,Greeks, etc.; that our present theological beliefs have sprung from this source, and that all of our most important church emblems and religious festivals (as the cross, altar and wine, the celebration of Christmas and Easter) were originally of sexual significance, and antedate the Christian era many hundreds of years.

"A remarkable book."—[Allegheny Record.

"Many strange beliefs and stranger customs are touched upon in this work."—[Brooklyn Eagle.

NEW YORK:
27 and 29 W. 23d St.

G. P. Putnam's Sons.

LONDON:
24 Bedford St., Strand.

Astoria:

Or, Anecdotes of an Enterprise Beyond the Rocky Mountains. By WASHINGTON IRVING. *Tacoma Edition*, uniform in general style with the previous holiday editions of Irving's works. Two vols., large 8vo, beautifully printed and bound. Cloth extra, gilt tops, $6.00; three-quarters levant, $12.00.

This edition is printed from entirely new plates, and is by far the most sumptuous presentation of "Astoria" ever issued. It is embellished with borders, printed in colors, specially designed by Margaret Armstrong. The photogravure illustrations have been specially prepared for this edition by the well-known artists R. F. Zogbaum, F. S. Church, C. Harry Eaton, J. C. Beard, and others.

Some Colonial Homesteads

And Their Stories. By MARION HARLAND. With 86 illustrations. 8vo, gilt top, $3.00.

In this volume the author tells the stories of some Colonial Homesteads whose names have become household words. The book is charmingly written, and is embellished by a large number of illustrations, very carefully selected and engraved. Among the homesteads presented are: Brandon, Westover, Shirley, Marshall House, Cliveden (Chew House), Morris House, Van Cortlandt Manor House, Oak Hill (The Home of the Livingstons), Philipse Manor House, Jumel House (Fort Washington), Smith House (Sharon, Conn.), Pierce Homestead, Parson Williams's House, Varina (Pocahontas), Jamestown, and Williamsburg.

Historic New York.

The Half Moon Series. Edited by MAUD WILDER GOODWIN, ALICE CARRINGTON ROYCE, and RUTH PUTNAM. Illustrated. 8vo, gilt top, $2.50.

The volume includes the papers which have appeared under the title of the "Half Moon Series." The book is quaintly illustrated, and affords glimpses of New York in the olden time, which cannot fail to interest those who know the city only in its strenuous modern life.

On Blue Water.

By EDMONDO DE AMICIS, author of "Holland and its People," "Spain and the Spaniards," etc. Translated by J. B. BROWN. With 59 illustrations. Uniform in general style with the illustrated editions of Amicis' works. 8vo, gilt top, $2.25.

The author describes the life on an emigrant ship bound from Genoa to Buenos Ayres. His touch is light, while his observation is close, and the pictures, both of the saloon life and of the teeming emigrant quarters, are graphic. In Amicis' hands the humor and the tragedy lose nothing by his masterly description.

The Venetian Painters of the Renaissance.

By BERNHARD BERENSON, author of "Lorenzo Lotto," etc. New edition, printed in larger form, and containing 24 photogravure reproductions of famous paintings. Large 8vo.

Nippur;

Or, Explorations and Adventures on the Euphrates. The Narrative of the University of Pennsylvania Expedition to Babylonia, in the years 1889-1890. By JOHN PUNNETT PETERS, Ph.D., Sc.D., D.D., Director of the Expedition. Very fully illustrated. Two volumes, sold separately, each 8vo, $2.50.

Vol. I. **The First Campaign.** Vol. II. **The Second Campaign.**

The University of Pennsylvania has accomplished a splendid work, which is to be classed among the most remarkable of modern archæological researches.—*N. Y. Times.*

The Literary History of the American Revolution.

By MOSES COIT TYLER, Professor of American History in Cornell University, and author of "A History of American Literature During the Colonial Time," etc. Two volumes, sold separately. 8vo, each $3.00.

Vol. I.—1763-1776. Vol. II.—1776-1783.

"Prof. Tyler's newest work is rich, stimulating, informing, and delightful. And it is not only fascinating itself, but it is a luminous guide into the whole abundant, varied, and alluring field of our Revolutionary literature: poetry, belles-lettres, biography, history, travel, and crackling controversy."—GEORGE W. CABLE, in *Current Literature.*

Heroes of the Nations Series.

New Issues. Fully illustrated, large 12mo, each cloth, $1.50.

No. 21. **Ulysses S. Grant, and the Period of National Preservation and Reconstruction,** 1822-1885. By Col. WM CONANT CHURCH, author of "Life of Ericsson."

No. 22. **Robert E. Lee, and the Southern Confederacy,** 1807-1870. By HENRY A. WHITE of Washington and Lee University.

Uniform with the above:—

Little Journeys to the Homes of Good Men and Great.

Little Journeys to the Homes of American Authors.

The 3 vols., as a set, in a box, $5.25.

Pratt Portraits.

Sketched in a New England Suburb. By ANNA FULLER. New holiday edition, with 13 illustrations by GEORGE SLOANE. 8vo, gilt top, $2.00.

By the same author:—

A Venetian June and A Literary Courtship.

Holiday edition, with numerous illustrations.

The two vols., as a set, in a box, $2.50

The Ayrshire Homes and Haunts of Burns.

By HENRY C. SHELLEY. With 26 full-page illustrations from photographs by the author, and with portrait in photogravure. 16mo, gilt top, $1.25.

A book of interest to all lovers of Robert Burns and of Scotland. The value of this little work is enhanced by the views of the homes and scenes which are placed by the side of the verses with which Burns has made them immortal.

Chronicles of Tarrytown and Sleepy Hollow.

By EDGAR MAYHEW BACON. With 23 full-page illustrations. 16mo, gilt top, $1.25.

This charming little volume is both a history and a guide-book, and will appeal to all those visitors to this famous old town who wish to take away with them the chronicles which have made a pilgrimage to Tarrytown one of the "sentimental journeys" in this country.

The Cruikshank Fairy Book.

Four Famous Stories. I. **Puss in Boots.** II. **Hop o' My Thumb.** III. **Jack and the Beanstalk.** IV. **Cinderella.** With 40 reproductions of the characteristic designs of George Cruikshank. 8vo, full gilt edges, handsomely stamped cover, $2.00.

John Marmaduke.

A Romance of the English Invasion of Ireland in 1649. By SAMUEL HARDEN CHURCH, author of "Life of Oliver Cromwell." 3d edition. Illustrated. 12mo, $1.25.

"A stirring and captivating story."—*Columbus Dispatch.*

"A thoroughly interesting story abounding in stirring scenes."—*N. Y. Mail and Express.*

Washington Irving's Complete Works.

New Knickerbocker Edition. Forty volumes, printed on vellum deckel-edged paper from new electrotype plates, with photogravure and other illustrations. 16mo, gilt tops. Sold only in sets. Per set, $50.00.

American Ideals

and Other Essays, Social and Political. By THEODORE ROOSEVELT, author of "The Wilderness Hunter," etc. 12mo, gilt top, $1.50.

CONTENTS:—American Ideals—True Americanism—The Manly Virtues and Practical Politics—The College Graduate and Public Life—Phases of State Legislation—Machine Politics in New York City—Six Years of Civil Service Reform—Administering the New York Police Force—The Vice-Presidency and the Campaign of 1896—How Not to Help Our Poorer Brother—The Monroe Doctrine—Washington's Forgotten Maxim—National Life and Character—Social Evolution—The Law of Civilization and Decay.

The Mathematical Psychology

of Gratry and Boole. Translated from the Language of the Higher Calculus into that of Elementary Geometry. By MARY EVEREST BOOLE. 12mo, $1.25.

Notes on New Books, a quarterly Bulletin; list of Autumn Announcements; circulars of the "Story" and "Heroes of the Nations"; list of successful fiction, etc., sent on application.

The Nation.

NEW YORK, THURSDAY, OCTOBER 21, 1897.

The Week.

The extraordinary character of the foreign trade of the United States this season may best be judged by comparing the September export and import statement with that for the same month in other years of heavy exports. In September, 1891, the outward trade in breadstuffs was extremely heavy. Wheat exports in particular ran closely on a level with the "famine month" of September, 1879, and with the current season. Yet in September, 1891, our excess of exports over imports was less by $36,500,000 than it was last month. The nine months ending with September, 1891, showed total net merchandise exports of $10,177,509; the excess of exports up to September's close this year is $157,639,393. For this remarkable showing there is again a double cause: enormous and continuous increase in our exports, and similar slackening in our import trade. It is, moreover, worthy of careful notice that export of manufactures is not slackening at all. In August, for example, shipment of iron and steel goods increased nearly a million dollars over 1896. Meantime the import trade has actually fallen to the lowest autumn level of the present generation. In September there was received in merchandise from abroad $8,400,000 less than even in 1896, when the paralysis of the trade was attracting wide attention. Many of the causes of this extraordinary decrease have no connection with the excessive importations of last summer, but reflect a permanent and not discouraging change in the nature of our industrial situation. But the framers of the Dingley law were either totally ignorant of these changed conditions, or else snapped their fingers at them. With dutiable importations of the entire United States nearly 25 per cent. less last month than they were a year ago, and less by 41 per cent. than they were in September, 1895, the pitiful showing of the federal revenue will astonish nobody.

Mr. Dingley rises to explain, in his paper, the Lewiston *Journal*, about the woful failure of his estimate of $10,000,000 a year from his "personal effects" tax. He now admits that the revenue from that source may not exceed $1,000,000; but his estimate was not at all a failure, and this for two reasons. In the first place, his estimate was "simply a reiteration" of what somebody had told him; so you must catch the other fellow. No responsibility, it is clear, can attach to a chairman of the ways and means committee who simply reiterates what others tell him. That is what he is there for. As a matter of fact, we suppose Mr. Dingley can evade all his predictions and all his taxes in that way. They were not his. He simply prophesied and taxed as he was told to. But he has another defence. His estimate of $10,000,000 was meant to be taken as revenue resulting either "directly or indirectly." There is the sly catch. Mr. Dingley was reckoning in not only what would be actually collected, but what would have been collected if the $40,000,000 of free goods, "mainly luxuries," brought in by returning tourists, had only gone on manfully coming in and had paid duty. This should hereafter figure in the Treasury statements. For example, the deficit up to date is $34,746,000, but it should be added that this does not reckon in the $9,000,000 which is constructively, or "indirectly," in the Treasury through Mr. Dingley's baggage tax.

The Commissioner of Pensions is the latest official at Washington to say that he, too, must have more money. Why not? Mr. McKinley's message urging the Dingley bill specifically demanded "ample" revenues for the sake of increased pensions. To be sure the revenues are not turning out exactly ample; October is evidently in for a $10,000,000 deficit, and the total running behind will be about $45,000,000, apparently, by the time Congress meets; but what difference does that make? We trust that a great party which put down a gigantic rebellion and ran in debt to the tune of $2,500,000,000, is not going to mind a little deficit like that. At any rate, as Commissioner Evans says, the pensions go on piling up, no matter what happens to the revenue. He has spent $3,000,000 more than his predecessor. He would like to cut down the total below $142,000,000 a year, but doesn't see any way to do it unless Congress will legislate to prevent young women from marrying old soldiers and so getting on the pension list for life. The fatal objection to this is, as Mr. Evans sadly points out, that it "would meet with much opposition from the Grand Army men."

The result of the municipal election in Indianapolis last week is full of encouragement to the friends of good government in the Greater New York. A Mayor was to be chosen for two years. The contest was between the incumbent of the office, Thomas Taggart, a Democrat, who was first elected in 1895, and a Republican. Mr. Taggart depended upon his record as chief magistrate. That record was one of efficiency and fidelity to the public interests. Since he became Mayor the streets have been kept cleaner than ever before, and at a greatly reduced expense; the cost of paving has been lowered; the Fire Department has been enlarged and improved; the telephone and telegraph wires have been put under ground; in short, the government of the city has been well administered. The question for the voters was, therefore, simply whether a good Mayor should be given the second term which he had deserved. The result was the reëlection of Mr. Taggart by a plurality of more than 5,000 over the Republican candidate, in a city which last fall gave McKinley 6,000 plurality over Bryan. More than 5,000 voters who supported the Republican for President last November, vindicated their independence by supporting the Democrat for Mayor on Tuesday week.

Gen. Harrison of Indianapolis has had a conversation with the New York *Sun* by way of helping us to elect our Mayor. He is utterly opposed to the election of Mr. Low on municipal issues solely. The reason is that the voters for McKinley "will inquire how the candidates for Mayor of Greater New York stand upon the questions whether public and private debts are to be paid at forty cents on the dollar, and whether the just powers of the courts are to be upheld against the assaults of the mob." They will want to know, further, whether a particular election "is going to scatter or weaken the forces that won those issues of 1896." His theory, doubtless, is that such an inquiry would reveal Low in his true light, as a "repudiationist or a friend of the mob," and it is very good of him to come so far to suggest the putting of these plain questions by the voters. Low ought to be asked, and Gen. Harrison would confer a great kindness on the community by asking him, whether he is "a repudiationist or a friend of the mob or not." If he is not, why does he insist on putting municipal questions in the foreground? Can it be that he is for a gold standard and *also* for a non-partisan mayor? That he not only wants the streets cleaned by a non-partisan force, but *also* is opposed to free silver? That he is in favor of a non-partisan police and *also* opposed to assaults of the mob on the courts? Gen. Harrison rightfully doubts that such intellectual gymnastics are possible in an honest man. One or other of these views is all his own mind can hold. Were he to become a Citizen Unionist, he feels he would incontinently begin to howl for free silver, and were he to advocate non-partisanship in municipal affairs, he would head a mob in attacking the courts. These are serious men-

tal limitations, but they are the mental limitations of a great man.

Croker has driven Mr. Dayton, one of the most powerful men in his organization, into open revolt by his insolent exercise of the nominating power for Tammany. As Mr. Dayton says, no man can get a Tammany nomination who exhibits the "slightest hesitation to execute Croker's despotic orders," and hence no man can get into office through Tammany Hall who is not a "mere shadow of Croker," using his office, not for the people, but for the personal benefit of Croker. The same thing is true of the methods of the other boss. No Republican who as an official has failed to do "what the old man wants" in every instance, or who, as a candidate, is not willing to pledge himself to do it in future, can hope to receive a Republican nomination in this city or State. Moreover, in his assertion of exclusive possession of the nominating power, Platt has gone a step beyond Croker. He not only denies the right of the people to nominate candidates by petition through the Citizens' Union, but he has vainly sought to prevent them from exercising the right to nominate by petition which the ballot law confers upon them. He has filed a formal protest against some 17,500 citizens who have gone about in an orderly and legal way to avail themselves of the right to the nomination of candidates for the municipal and State Legislatures. He is so furious at their audacity and impudence in presuming to desire other candidates than those whom he and Croker have selected for them to support, that he invokes the aid of the courts to put a stop to their proceedings. He thus makes enemies of 500 voters in every one of the thirty-five Assembly districts in which the petitions have been signed. These 17,500 or more voters have signed these petitions under the unjust requirements of the ballot law as "doctored" in Platt's interest by his men in the Legislature. He had the number of petitioners necessary to make independent nominations raised so high in all cases as to amount, in his opinion, to a complete barrier. That such a number has still been found, and found without difficulty, in every district of the city, ought to be a startling warning to him of the condition of the public temper.

While the Platt machine was trying to keep the non-partisan ticket off the official ballot in the Greater New York, it was trying to force upon that ballot the sham nomination of a Populist for Chief Judge of the Court of Appeals, under the name of the "United Democracy," in order to draw off votes from Judge Parker, the candidate of the regular Democrats. Just before midnight of the last day upon which independent State nominations could be filed with the Secretary of State, a bundle of certificates containing 6,000 signatures to the nomination of Charles Frederic Adams by the "United Democracy" for the judgeship was brought into the capitol by Lafayette B. Gleason, the Republican journal clerk of the New York Senate, and John A. Cole, a Republican clerk of the Assembly. Mr. Adams afterward declined the nomination, and the name of Lawrence J. McParlin, a leading Populist, was substituted by the committee charged with the filling of vacancies, as the law allows. The regular Democrats entered protests against the placing of this ticket upon the official ballot on various grounds. The one which will appeal most strongly to the public is the fact that the bulk of the signers to the petitions for the nomination were not members of the shadowy "United Democracy," or Democrats of any sort, but Republicans, and in many cases prominent Republicans. It was conclusively shown that the scheme had been worked up by the Republican State committee, the members of which were perfectly open about their share in the business. Quite aside from this objection to the sincerity of the petitions as really representing the organization for which they purported to stand, there were fatal flaws in the petitions themselves, as that some of the signers were not qualified electors, that others had not sworn that they were residents and electors, and that the necessary number of names in one county had been eked out by plain forgeries. The Secretary of State overruled all these objections, but Justice Herrick of the Supreme Court, whose decision is final, has reversed the determination of the Secretary, and the elaborate scheme of the Platt machine is thus defeated.

Both Croker's and Platt's nominees for the Assembly are declared to be "very bad" this year. But that is only a part of their system of government by blackmail. Platt rakes out of the ooze, as Carlyle said, a set of desperadoes, and sends them to the Legislature, and then he turns to the corporations and says, "Really, the people are electing such a lot of ruffians that your property is not safe for a day unless you pay me money to look out for your interests and beat off these robbers." That is the way Platt is able to figure as "a saviour of society." He first puts a set of brigands in power, and then demands a ransom from the people whose property is endangered by their predatory schemes. Under this system the Legislature must be made visibly worse from year to year in order to keep the corporations and rich men frightened. If they are let off with $50,000 apiece one year, the growing rapacity of the Legislature must justify doubling the assessment the next year. Of course, Gen. Tracy has to be paid more for heading off an attack on property in an assembly of desperate characters than in one of average virtue. So the worse the Legislature is, the bigger the profits of the boss business. Platt is, by nature, such an unpromising-looking, such a mean and unlikely "saviour of society," that he has to make his Legislature very bad indeed in order to get society to believe that he is the man to hire as saviour.

Another outrageous injunction has been issued by the Federal Court in Kansas. Under the law of Kansas, foreign insurance companies may do business in that State on complying with certain formalities. On neglect to pay a loss to any person in Kansas for three months "after final judgment," a foreign company may be prevented from carrying on business. The Metropolitan Life Insurance Company, having a legal defence, refused to pay a claim, whereupon the Kansas Superintendent revoked its license. This was an illegal act, and the federal judge, on being applied to, at once granted an injunction. It is regarded as an outrage by all true Populists, however, for two reasons—first, because they say that to sue the State Superintendent is virtually to sue the State of Kansas, which is unconstitutional, and, second, because Kansas had made all tight and secure by another law requiring that all actions brought against the Superintendent should be brought in the State courts. Both objections have been brushed aside by the federal court, and as to the last, the court cites several decisions to show that even had the company agreed to the provision as a condition of doing business, it would have been of no avail, for no one can "barter away his life, his freedom, or his constitutional rights." That is, the federal judge will protect the foreign insurer even if the wretch waives all his rights and stipulates that Kansas may strip him at will.

This case throws a strong light on some of the causes of "government by injunction," and shows why it is mainly federal. As the State Legislatures have become more and more corrupt, dishonest, and ignorant, their interference with life, liberty, and property has become incessant; in the same way, as their police, sheriffs, etc., have run down, outside the cities, the danger to life, liberty, and property has increased. As their courts have been more and more filled with elective judges, these have become poorer and poorer. The federal judiciary, on the other hand, with its life-tenure and simple administration, and a resistless power behind it, has steadily increased in importance, while at the same time the multiplication of corporations doing business all over the country, and the revolution in transportation which has made nearly all business in some of its forms "inter-

state," has made it more and more possible to extend the federal jurisdiction over questions which were formerly purely local. An improvement in the character of the State governments in the West would no doubt do much to reduce the harvest of federal injunctions; wherever they remain Populist—*i. e.*, anarchical—in character, the foreign devils who do not like being cheated and mobbed and robbed and murdered, will invoke and obtain the aid of a government whose courts and executive are ubiquitous and feared.

The Governor of Arizona is out with the annual plea for the admission of that thinly settled territory as a State, with power in the Senate equal to that of New York or Pennsylvania. He claims that Arizona has as much wealth as the average of the twenty-two States admitted from 1791 to 1876, and estimates its population at 87,500. The former claim is too vague for analysis, but the latter can easily be tested. In 1888 there were cast in Arizona 11,538 votes for delegate to Congress; in 1896, after a much more closely contested canvass, 14,051. This represents a gain of only about 20 per cent. in eight years, and the population in 1890 was but 59,620, of which more than 1,500 were Indians, nearly 3,000 Chinese, and over 3,000 Mexicans. A gain of 20 per cent. would bring the total now up to only about 70,000, from which deduction must be made for Indians, Chinese, and Mexicans. Even that reckless advocate of premature statehood, Senator Platt of Connecticut, will hardly favor giving two seats in the Senate to the few thousand men in Arizona who have the right to vote.

The memorial of the English business men to the Chancellor of the Exchequer, regarding the silver craze, goes far to elucidate all we have been saying for years about the influences which govern English monetary action. We have over and over again pointed out the folly of our strolling bimetallists from this side of the water, in basing their opinions of what England is likely to do on interviews with their own brethren in that country, the professors who work out theories of currency on the blackboard, the embarrassed landlords, and the socialistic reformers, who propose to make the mint give human society a great lift. Nothing has been more diverting during the last ten years than to hear men like Mr. W. C. Whitney and the venerable Hoar of Massachusetts tell you, on their arrival from Europe, about the closeness of England to bimetallism. "Why, sir, when such minds as Mr. Balfour's," etc., etc. The secret of English success is, that "such minds as Mr. Balfour's" have no more influence on currency and business than their opinions on aerial navigation. The men who really control England's currency are the great business merchants of the City, who look after her enormous commercial and shipping interests all over the world, and the great banking-houses which bank for them. The investments of this class, which are immense, and which have made England the great creditor nation of the earth, have all been made on the theory that the pound sterling is as stable as the monarchy. Since the report of the Bullion Committee in 1810, these men have never had the slightest wavering about the things which constitute the value of a coin, and never will have. England, through them and the stable standard of value, is the great trader of the globe. When they speak, they speak with an authority which no Chancellor of the Exchequer ventures to disregard.

The report of the Royal Commission on the West Indian sugar industry is a document which shows how much the English have to learn. The commissioners discovered, what is in fact notorious, that the cane-sugar industry in the West Indies was in a bad way; that it was not the fault but the misfortune of the planters that this was so; that they were simply going down before the competition of the bounty-grown sugar of Europe. As for a remedy, the only thorough-going one ever proposed was a protective or "countervailing" duty on the competing sugar. But the strange insularity of the commissioners led them to argue against this. They thought the British consumer might object to having to pay more for his sugar, not seeing how much more important it is to have the industry than to have the sugar. There was also the doubt whether such duties might not conflict with treaty obligations; they would certainly inconvenience trade (the idea of caring about that!); and when all was said, the countervailing duty might not be permanently effective, and then all the disturbance would have been in vain. Besides, the United States was about to go into the beet-sugar industry on an extensive scale, taxing its own citizens heavily for the purpose, and even if the Europeans could be induced to give up their bounties for sugar, the United States could not. Therefore, weakly said the commissioners, we can only let nature and the progress of invention and of industry take their course. And this with Mr. Dingley's success in getting the better of nature by a tax, right before their eyes!

Lovers of those very treacherous affairs, historical parallels, will be disposed to see in Spain's latest policy of placating Cuba an analogy to the last desperate shift to which Philip II. resorted in order to retain his sovereignty over the Netherlands. After Alba's rule of blood and iron in the Low Countries had failed to break their spirit, he was recalled, as Gen. Weyler is now, and Alexander of Parma was sent in his stead. He was to detach the Catholic nobles from the cause of the rebels, as Capt.-Gen. Blanco is now to draw off the Cuban autonomists from the insurgents. Parma won much immediate success in the new policy of conciliation, only to fail miserably in the end. This does not, of course, prove that Gen. Blanco will meet the same fate, but it does suggest that the same difficulties and dangers beset him. For him to come with an olive branch in one hand and a sword in the other, not as alternatives, but as the contradictory things to be put into play at one and the same time, is enough to make the Cubans look twice at their new Captain-General. They will be justified in asking whether it is peace or the sword.

Russia's predominance in European diplomacy, so evident in all the dragging Turkish negotiations, has almost withdrawn attention from her great projects and successes in the Orient. Some of these are detailed in the *Revue des Deux Mondes* of September 15. First of all is the approaching completion of the trans-Siberian railroad. The engineers now talk of seeing the last kilometre laid in 1898, three years ahead of time. This means, in addition to the vast new territories brought under cultivation and within reach of a market, a direct outlet to the sea. Shut out for the present from Constantinople, diverted from what at one time appeared to be her plan of reaching the sea via Afghanistan and India, Russia now has attained her object on the shores of China. A recent treaty with that country gives her, besides the port of Vladivostok, which is shut by the ice for a part of the year, a harbor in the Bay of Pe-chi-li open all the year round. To it will run direct a branch of the Siberian railroad, and thus the fleet will be in touch with the army and with a base of supplies. In this way, therefore, the object of Russian diplomacy for a hundred years is all but attained. Not yet on the Black Sea (where she will undoubtedly get her outlet some day) or on the Indian Ocean, on the Yellow Sea she has her unobstructed approach to the ocean. She has, besides, valuable trade privileges accorded her in her treaty with China, and is eager to be first in the exploiting of that country. The title of the *Revue* article is, "Who Will Exploit China?" China is, of course, there only to be exploited. As a matter of fact, Russia, France, and England are straining every nerve in the exploiting. Yet our apocalyptic bimetallists utter dire prophecies about "the Yellow Terror"—the invasion of Chinese and Japanese goods. The real Yellow Terror is the fear the Yellow people have of European invaders.

THE DAWN OF COURAGE.

A striking passage in William Everett's speech, at the time of accepting the National Democratic nomination for Governor of Massachusetts, deplored the sordid and shrinking tone of our political manifestoes and appeals. Nowhere did one catch the note of a brave man uttering brave words. We seemed to be a feeble breed of men fallen on feeble times. The encouraging voices, the elevated principles, the heroic stand for a cause, which had marked other political contests, were this year making their absence painfully felt. All was timidity or truckling; and no cry of real leadership and inspiration could be heard in any part of the field.

A common explanation of this dull and plodding level, which few would deny that our political life seems to have reached, is that the questions now engaging public attention are themselves dull and plodding. Who can be heroic about taxation? Who can get into a fine glow over more or less greenbacks in the currency? Who can grow enthusiastic over the flinging out of one boss, or one machine, simply for the purpose of installing another? Give us back great questions of humanity and justice and national good fame, and we shall have again the ennobling oratory and the dauntless leadership of other days. But this explanation does not explain. Taxation is a dry subject, but when it can be shown to involve social and political injustice, its appeal to generous minds is as urgent and irresistible as was that of the anti-slavery cause itself. So of an honest currency, so of municipal reform; they can be made to appear indissolubly linked with national honor and civic self-respect, and so are capable of arousing the loftiest and most flaming political zeal. No, the fault is not in our causes, but in ourselves, if we are political underlings.

A truer explanation, if still inadequate, may be found in the type of policy and of public man which we have come to reckon successful. Our highest political wisdom seems degenerating into mere opportunism. The ablest politicians are those who can maintain themselves in the nicest equilibrium between opposing principles. How can they stride boldly off, bidding the people follow, when their business is to walk a tight-rope with consummate skill? They must be for protection so delicately adjusted as not to interfere with the revenue, though shutting out foreign goods, and yet not allowing baneful domestic monopolies. They must be resolutely for the gold standard, yet with a tender side for international bimetallism and a hand open as day for silver. And their "Americanism" must be swung on a pivot of similar delicacy; they must be just truculent enough towards foreigners to win applause and delegates, but not so much so as to chill the stock markets or dim prosperity. They spend their days and nights in cultivating, like a county-fair acrobat, sureness of step and balance in the most ticklish positions. It is their perpetual bowing to the crowd on either side of their tight-rope which makes many impatient spirits cry out for thoroughgoing and fearless politicians of the old school, even if the school were to be uncompromising Toryism. That in its worst form, says a writer in one of the English reviews, would be preferable to the nerveless, spineless policy, without principle and without courage, which we see party after party and public man after public man adopting.

The strangest part of it is that the people like courage and conviction as much as they ever did. Our race of political trimmers is not reared to meet a popular demand. Democracy still says, as in Hosea Biglow's day, "By time I *du* like a feller that ain't a Feared." Such a man has but to show himself in public life to see the people rise to him. But when it is a case of taking service with a party or under a boss, instead of for the people, the situation is at once altered. A party is timid by nature; where are the votes to come from if anything is said to offend anybody? A boss is a very rabbit for courage. He neither has nor will tolerate outspoken initiative or clear-sighted leadership. Intrigue and bargaining and compromise and head-in-the-sand are his only skill. The touch of his hand upon a politician is paralyzing. Nothing, in fact, makes a party or a boss more speedily take fright than a man of ideas and boldness in speaking them out. Every such man whom, by mistake, they have admitted to their ranks, they make all haste to silence or expel. Then all is walking the tight-rope of non-committal again.

One of the inspiring things about the Low canvass in New York is that it comes as a fresh breath over what has so long been a stagnant fen. Mr. Low's candidacy had its origin in a bold movement. Daring and resolute in its conception, the Citizens' Union has gone towards its goal with a directness and sincerity which of themselves have been a great inspiration, and which, whatever the final result of the election, will long be felt as a revivifying influence. There is a vast stock of unused public spirit in the country. It has not been drawn upon because the people, confused and puzzled by the choice of evils to which the two political machines have shut them up, have not seen how to apply it. A way out has been shown them in the Citizens' Union movement and the Low canvass. Here were directness, courage, principle, after all the years of juggling and trickery. The swift response of the people, not only in New York but all over the country, marks the appearance of a new political force, which is certain in the next few years more and more to trouble the dreams and bring to naught the plottings of the bosses.

RAILROADS AT WASHINGTON.

During the coming winter several railroad questions of the first importance will be decided at Washington. To say nothing of the Nebraska maximum-rate question, which involves the power of States over railroads, the Joint Traffic case will be decided, and at the same time Congress will be once more strongly appealed to to permit "pooling." The question of "pooling" is directly connected with the question involved in the Joint Traffic case, and apparently the whole matter was passed upon in the Trans-Missouri case (U. S. vs. Trans-Missouri Freight Ass'n, 166 U. S., 290) six months ago; but as that case was decided by a bare majority of the Supreme Court, on a point merely of interpretation, the decision seems to be regarded nowhere as a finality.

The point decided in the Trans-Missouri case was that the federal anti-Trust law of 1890, making criminal all contracts in "restraint of trade," applied to interstate contracts between railroads designed to prevent fluctuation in rates, even though such contracts were perfectly reasonable and publicly advantageous, and would, but for the act, have been enforced. This decision was rested by Justice Peckham, who wrote the majority opinion, on the ground that Congress, under its power over interstate commerce, had sovereign jurisdiction over all interstate business, and that the word "reasonable" could not be read into a statute so as to allow reasonable contracts in restraint of trade. Four Judges took the opposite view, and in the courts below the contracts had been sustained. Substantially the same question will come up in the Joint Traffic case, but there are in it other points which will make necessary a reconsideration of the whole subject.

Should Congress give the railroads the right to "pool," or apportion their earnings equitably, so as to prevent ruinous competition (and this involves a modification of the interstate-commerce act which hitherto has been steadily refused), they will escape most of the immediate evil effects of the anti-Trust decision, but it will not relieve them of the legal incubus evoked by Judge Peckham, which can be got rid of now only by the discovery of some means by which the Supreme Court may mitigate the effects of his decision. If some such means cannot be found, then we are face to face with a situation which might easily produce intolerable consequences.

For the anti-Trust decision is the only one ever rendered by the Supreme Court which not merely makes Congress perpetually supreme over an enor-

mous field of human activity, but seems to lay down in advance that its power is beyond the control of the courts. The States have in the "police power" a sovereign right to regulate commerce within State lines, but the courts have always held that it must be reasonably exercised; and this really means that it must be exercised under the supervision of the courts, and that State Legislatures cannot so use it as to impair ordinary contractual rights, which, of course, include the liberty to make reasonable contracts in restraint of trade. The latest legal-tender decisions give Congress the right to debase the currency, but this right has never yet been exercised, and probably never will be. But the field of interstate commerce is, owing to facts which every one knows, the whole field of business itself. With the exception of petty local trade, all business is, or may be, interstate. Every manufacturer, farmer, and merchant carries on more or less interstate business, and if the domain covered by the anti-Trust decision could be made perceptible to the senses, it would be seen that what the Supreme Court has done is to give Congress absolute power over three-quarters of the business of the country, and to declare that as to this business Congress may make any reasonable or innocent act a crime, provided it is in restraint of trade—a phrase so elastic as to mean whatever you please. This is a very terrible power, and has never been asserted before, so far as we know, by any constitutional authority or by any court.

The decision has brought out a great deal of vigorous criticism from the bar, and the discussion, so far as it has proceeded, shows pretty clearly that it is hoped that in the Joint Traffic case the court may be persuaded to take the view that the rule of interpretation laid down by itself in the Trans-Missouri case makes the act which that rule upheld itself unconstitutional. This seems to be the upshot of Mr. Guthrie's widely quoted article on the subject, and of the recent discussion in the American Bar Association. The committee of the latter body which has taken the matter in hand, one of whose members is Mr. Moorfield Storey, emphatically calls attention to the argument that if Judge Peckham's decision be correct, "it must logically follow that the act of July 2, 1890, is unconstitutional, in this, that it violates the fifth amendment of the Constitution of the United States, which declares that no person shall be deprived of life, liberty, or property without due process of law"; the Supreme Court having steadily held that "liberty" includes all reasonable contractual common-law rights.

While it is idle to attempt to predict what the Supreme Court will do, the importance of the matter cannot be exaggerated. To our minds it is inconceivable that the court can go so far as to make the sovereignty of the United States, within the sphere of what three generations of judges, from Marshall down, have uniformly treated as "delegated powers," an absolute tyranny. Such would unquestionably be the effect of the rule or interpretation apparently laid down by the court in the Trans-Missouri case, which actually puts Congress in the position of the Roman Emperor, and substitutes for the test of Reason which courts of justice apply to all law, the "Sic volo, sic jubeo, stet pro ratione voluntas" of the despot.

A GREAT JUDICIAL CAREER.

The retirement of Justice Field from the bench of the United States Supreme Court ends one of the great judicial careers in the history of the nation, and indeed of the English-speaking race. Exceeding by a few months the hitherto unprecedented term of Chief-Justice Marshall, not only does this term stand first of all in point of length, but the third of a century in the court's history which it covers is rivalled in the importance of its decisions only by the other third of a century in which that great jurist interpreted the new Constitution.

Stephen J. Field possessed the qualities which eminently fit a man for the bench, and yet his early career gave little promise that the New York lawyer of thirty-three, who sailed for California as one of the Argonauts in 1849, would in 1897 be retiring from the bench of the Supreme Court after a record of more than thirty-four years' honorable service. As things turned out, however, it was his infection with the gold fever which opened the way for his later career. His knowledge both of laws and of human nature fitted him for something higher than merely heaping up money like a Fair or a Mackay, and the pioneers recognized his qualifications by making him first a member of the California Legislature and afterwards of the State Supreme Court. His prominence in this latter capacity rendered him the one man to be considered for the place when Congress, in the second year of the Lincoln administration, authorized the appointment of another Judge of the United States Supreme Court, who was expected to be taken from the Pacific Coast.

Beginning service at Washington midway in the civil war, Justice Field not only has remained on the bench long enough to see all the issues which grew out of that conflict finally settled (if we except the legal-tender question), but he has himself been one of the chief agencies in this settlement. The retiring Judge, with entirely justifiable feeling, thus characterizes the period and his share in it:

"The war ended in a couple of years, and then came the great period of reconstruction and the last amendments to the federal Constitution. In the effort to reëstablish the nation, to adjust all things to the changed political, social, and economical conditions, questions of far-reaching import were developed—questions of personal liberty, of constitutional right—which, after ofttimes heated discussions before the people and in the halls of Congress, came to us for decision. I do not exaggerate when I say that no more difficult and momentous questions were ever presented to this or any other court. I look back with pride and joy to the fact that I was permitted to take part in the consideration of all those important questions, and that not infrequently I was called upon to express the judgment of this court thereon. And now that those times of angry debate, deep feeling, and judicial decision have passed, it is pleasant to realize that the conclusions announced by this court have been accepted, not simply of necessity, as so prescribed by the fundamental law, but in the main as in themselves both correct and wise."

Justice Field omits to mention what we must consider the greatest of the services which it has fallen to his lot to render in the last third of a century. This was his firm assertion of the unconstitutionality of the legal-tender acts. He concurred with Chief-Justice Chase in the opinion pronounced by the latter for the majority of the court in 1870, that the making of notes or bills of credit a legal tender in payment of pre-existing debts was inconsistent with the spirit of the Constitution, and was, in effect, prohibited by the Constitution; and that, therefore, the legal-tender acts, so far as they applied to debts contracted before their passage, were unconstitutional and unwarranted. When the court in 1871, having meanwhile been enlarged in numbers, reversed its position, he dissented in an opinion upon which he may well be content to commit his reputation to the judgment of posterity.

Justice Field showed that the policy of maintaining a fixed and uniform standard could not be carried out, and that a fixed and uniform metallic standard of value throughout the United States could not be maintained, so long as any other standard was adopted which of itself had no intrinsic value and was for ever fluctuating and uncertain. He admitted that the acts in question had been passed in a great emergency by patriotic men, who were convinced that this policy would increase the ability of the Government to obtain funds and supplies, and thus advance the national cause; but he declared that, sitting as a judicial officer, and bound to compare every law enacted by Congress with the greater law enacted by the people, and being unable to reconcile the measure in question with that fundamental law, he could not hesitate to pronounce it, in his judgment, unconstitutional and void. He added this admirable exposition of loyalty:

"In the discussions which have attended this subject of legal tender, there has been at times what seemed to me to be a covert intimation that opposition to the measure in question was the expression of a spirit not altogether favorable to the cause in the interest of which that measure was adopted.

All such intimations I repel with all the energy I can express. I do not yield to any one in honoring and reverencing the noble and patriotic men who were in the councils of the nation during the terrible struggle with the rebellion. To them belong the greatest of all glories of our history—that of having saved the Union, and that of having emancipated a race. For these results they will be remembered and honored so long as the English language is spoken or read among men. But I do not admit that a blind approval of every measure which they may have thought essential to put down the rebellion is any evidence of loyalty to the country. The only loyalty which I can admit consists in obedience to the Constitution and laws made in pursuance of it. It is only by obedience that affection and reverence can be shown to a superior having a right to command. So thought our great Master, when he said to his disciples: 'If ye love me, keep my commandments.'"

In his letter of farewell to his associates Justice Field recalls the circumstances of his appointment. There had up to that time been no representative of the Pacific Coast in the court. "A new empire had risen in the West, whose laws were those of another country. The land titles were from Spanish and Mexican grants, both of which were often overlaid by the claims of the first settlers. To bring order out of this confusion, Congress passed an act providing for another seat on this bench, with the intention that it should be filled by some one familiar with these conflicting titles and with the mining laws of the coast." As Judge Field had framed the principal of these laws, and was then the Chief Justice of California, the Senators and Representatives of that State, as well as of neighboring Oregon, recommended to Lincoln his selection. In other words, an able man was appointed to the highest tribunal on the ground of demonstrated fitness, and thus was given the opportunity for a great judicial career.

THE REHABILITATION OF THE TURK.

The Sultan has within a fortnight furnished a comic illustration of his contempt for the "Concert of the Powers" by proposing that the new Governor of Crete should be a Turkish subject appointed by himself, and that Turkish troops should assist those of the Powers in restoring order. This is his comment on the promise of autonomy and of the removal of the Turkish troops made over and over again to the Cretans. He has no more idea of conceding them autonomy and withdrawing from the control of their affairs than he had twenty years ago. He looks on his signing of the treaty about Greece as a concession on his part which entitles him to some return in concessions on their part about Crete. He has said as much in a letter. The Greek war and the negotiations which followed it are, in fact, the only really happy conclusion to a foreign complication which has befallen the Turks since they retired from Vienna in 1683. Every other war has ended either in the loss of territory, or in increased privileges for the Christians, or in some sort of humiliation, making the Turks more and more sensible of their dependence on, or subjection to, Christendom.

The reason has been that, when every other conflict was brought to a close, there has been some Power on the scene which refused to the Sultan any place in the family of Christian nations, or offered him, at best, only some sort of protection. At the close of the Greek war in 1827 England and Russia destroyed his fleet, and the French compelled him to get out of Greece. At the close of the Russian war in 1829 the Russians dictated peace to him in Adrianople. At the close of the Crimean war England and France saved him by making him promise more concessions to Christians and general good behavior. At the close of the war of 1877 he bought peace and his capital by surrendering Bosnia, Herzegovina, Cyprus, Servia, and Bulgaria, and agreeing to pay a large sum in damages. On none of these occasions did he escape the position of an humble protégé saved by some powerful friend from utter extinction. It was reserved for Lord Salisbury's ministry to admit the Turk freely to the European "Areopagus," to treat him as an equal, to respect his rights as a conqueror of Christian people, and to insist on their paying him a ransom for not ravaging them, as Solyman the Magnificent might have done. The Turk actually holds Christian territory and Christian people in pawn for a sum of money, with the full assent of Christendom. About his manner of governing these people or in what manner he makes them pay his taxes or assessments in the meantime, while they are in pawn, every other nation refuses to concern itself.

The result is that the present Sultan is now probably in a state of pride and exultation such as none of his predecessors have felt for 200 years. Every one of them, since 1683, has lived in a state of fear of Christendom, of consciousness that he was on his good behavior, and that any European Power with which he got into trouble might extinguish him if he did not get another to help him. He has, in fact, never made a treaty before with a Christian Power, inflicting on it the miseries of conquest such as ransom and Turkish rule, with the sanction, acquiescence, and assistance of other Christian Powers. The thing is unprecedented and unparalleled. Ever since 1453, when he took Constantinople, until now, Christendom has agreed to treat the Turk at first as an infidel to be crusaded against, and then as a barbarian robber, to be watched and guarded against. For two centuries young men from the West went forth to fight the Turks as the grandest duty they owed to their own religion and civilization. For one century, at least, civilized men in the West have quieted their consciences for allowing the Turk to exist in Europe as a political organization, by pretending to shrink from the convulsion that would result from the partition of his territory. Never until now has he been treated as a member of the family of nations, with a right to exist, with pride to be considered, with the privileges and immunities of international law to be inherited.

Yet to this new departure, to the full admission of a ferocious Mussulman barbarian, red-handed from Christian slaughter, to the circle of Christian civilization, the British Premier has freely consented, and five Christian Powers are chuckling over the exploit. The terrible Lord Salisbury, whose advent to office Mr. Curzon naïvely said was hailed with delight in all the British embassies, and who was to give the poor Irish "twenty years of resolute government," is the man who has done it. There remains but one thing to lay this whole transaction bare before the civilized conscience, and that is for the Sultan to refuse to leave either Thessaly or Crete. Who will compel him? Not the desperate Lord Salisbury, not Italy, not Germany, not Russia, not France, for France has vacated her old place as the champion of oppressed nations. He will, or all precedents fail, stay in Thessaly and in Crete until Christian guns are pointed at him and Christian fleets blockade his ports.

When one looks at this transaction in connection with "the forward policy" in India, the disappearance of Mr. Gladstone from the political arena assumes the proportions of an immense public calamity. Whatever his faults, he would have been incapable of the ignoble rôle played by Lord Salisbury. Help for the clergy and the landlords, and vigorous operations against the uneasy tribesmen in the Indian hills, and endless concession to the Turk, seem now to be the whole Tory programme. Gladstone could not have wished a better illustration of what he was to England than what is now going on in Europe and India. They are the gorgeous colors in the sunset of his life. Every one who sees the Turk in Thessaly will sigh in thinking that the old man's "bugle-horn" is for ever silent.

THE PRINCIPAL LIBRARIAN OF THE BRITISH MUSEUM.

LONDON, October 7, 1897.

At the international conference of librarians held in London, in July last, some one observed that "there were Libraries and Libraries." In like manner, it may be said, there are Librarians and Librarians. To go a step further, one might interject that a Librarian may not be a Librarian at all. Such, in fact, is the case of the distinguished official who is charged with the care of that great storehouse of knowledge and art called the British Museum. The name of Prin-

cipal Librarian is, in his case, altogether a misnomer. Director-in-Chief would be a fitter title for a functionary who is responsible for property worth millions sterling, who directs the labors of a staff of experts and highly educated officials, and accounts for the spending of large sums of money. The name of Principal Librarian was given to the office by the Act of Incorporation of 1753, when the institution was only a Library, and the conservative spirit of the British nation is content to let the title continue. But the Principal Librarian is also the secretary to the Trustees, who are the governing body of the British Museum, and in whom is vested the freehold of the premises. At one time the office of secretary was held by an independent officer; but the arrangement did not work, and the two officers were joined together in one official.

In discharging his several functions, the Principal Librarian acts directly under the orders of the Trustees, with whom he is brought into frequent contact at the various meetings of the standing committee, of the sub-committees, and at the annual meeting of the whole body. The Trustees do not appoint the Principal Librarian, but, when the office becomes vacant, they submit two names to the sovereign, who, advised by the Secretary of State for the Home Department, selects one of the persons named and appoints that person by a royal warrant. So identified is the Principal Librarian with the functions of the Trustees that something should be said of that distinguished body. In round numbers there are about fifty Trustees. Of these the larger number consist of the Official Trustees, of whom most are great officers of state, and the remainder are the Presidents of the Royal Society, the Royal College of Physicians, the Society of Antiquaries, and the Royal Academy. The topmost of all are the Archbishop of Canterbury, the Lord High Chancellor, and the Speaker of the House of Commons. By these three Trustees the patronage of filling up offices is exercised, guided to a certain extent by the advice of the Principal Librarian. After the Official Trustees comes the Trustee appointed by the Queen, now the Bishop of Winchester. Then there are the Family Trustees, who represent the families of Sloane, Cotton, Harley, Towneley, the Earls of Elgin (of Elgin Marbles fame) and Knight. Last of all are the Elected Trustees. It is a high distinction to be an Elected Trustee, and the names of these elected members include such well-known persons as the Duke of Argyll, Lord Acton, Sir John Lubbock, the Earl of Rosebery, Sir George Trevelyan, the Earl of Crawford, Sir John Evans (President of the British Association), Mr. John Morley, and Sir William Vernon-Harcourt.

As so large a body would be likely to be unwieldy in its movements, the Trustees, year by year, elect a standing committee of nineteen members of the Trust, for the dispatch of business. This committee meets ten times during the year, and the business for its consideration is so methodically brought before it by the Secretary that an hour is found to be sufficient time for its sitting. Mr. John Morley and Mr. Cavendish Bentinck are among the most frequent attendants, and the Prince of Wales is present at six out of the ten meetings. The senior Trustee present at the time of meeting takes the chair; but the Archbishop of Canterbury, the Lord Chancellor, and the Speaker of the House of Commons, in their order, if present, preside before all others. The Prince of Wales escapes taking the chair by uniformly coming a few minutes late. The standing committee has, for prompt action, resolved itself into sub-committees for buildings, finance, printed books and manuscripts, antiquities, prints and drawings, and for coins and medals.

In the exercise of their authority, the Trustees have, for the guidance of their chief officer, defined his responsibilities. The duties of the principal librarian are laid down, generally, in the "Statutes and Rules for the British Museum," as approved by the Trustees on the 8th of May, 1886. Therein the Principal Librarian is made responsible for the safety of the Museum and of its contents; for the superintendence of the several departments into which the institution is divided, and of their respective officers; and for advising the Trustees upon the reports of officers of the establishment. He is required to grant admission to the Museum to persons of eminence, either for learning or rank, "especially foreigners, desiring to inspect the collections, but not able conveniently to avail themselves of the usual mode of admission." He is to take care that the institution be kept open during the appointed hours, and that proper order be observed by all persons. He is to grant admission to the reading-room, the print-room, and the sculpture galleries, and to afford readers and students all proper facilities. He is responsible for giving effect to the orders of the Trustees, and for the editing and publishing of the guides to the collections. Lastly, the Principal Librarian is required to be in attendance when the Museum shall be visited by the sovereign, or by any members of the royal family, or by royal personages of other countries. The dignified presence and courtly manners of the present Principal, in addition to his other qualifications, render him a very fit person to welcome royalties to the great temple of learning.

The *Statutes and Rules* above mentioned define the duties of the Secretary of the Trustees after the following manner: He is to issue summonses for, and to attend all meetings of, the Trustees held at the Museum, and to take minutes of their proceedings. He is to take charge of all records and other documents connected with the business of the Trust. He is to submit all accounts due from the Trustees and payable from the Parliamentary grant, for approval at each meeting of the standing committee, and to take care that orders for payment are duly made upon the Paymaster-General. He is to conduct the correspondence of the Trustees. Payments on account of the Museum from the Funds account at the Bank of England are to be made by him. To do so, he is authorized to sign checks for payments from the Funds account. Of these payments he is required to keep an exact statement, and to lay it before the standing committee at the close of each financial year. He is required to give security for the due discharge of his office to the amount of £10,000—in his own bond for £5,000, and two sureties in a joint and several bond for £5,000. He is to examine all accounts against the Museum, and to certify to their correctness, and to keep a weekly account of all work done for the Trust, paid otherwise than by fixed salaries, and to certify that it has been authorized and that the charges are accurate. He is to account for the various transactions with books published by the Trustees; is to examine and check the printers' and booksellers' accounts, and receive moneys due from booksellers and others; and he is to keep an account of the stationery received and expended, and make all applications to the Stationery Office.

In the exercise of his functions and responsibilities, as thus defined, the Principal Librarian controls the several Departments into which the institution is divided. All the reports of the keepers pass through him to the Trustees. He accounts for the spending of the sum of £163,000, which is voted annually by Parliament, under the head *British Museum*. This amount includes the sum voted for the National History Museum at South Kensington, the accounting for which is his only connection with that otherwise distinct institution, but which, like the Museum, is also subject to the Trustees. The Principal Librarian advises the Trustees as to purchases for the Museum of works of art, books, manuscripts, and otherwise. He conducts a large correspondence; not merely signing his name to thousands of documents, but writing scores of letters with his own hand; among the latter being beautifully worded letters of thanks for donations to the institution. He supervises all admissions of readers and art-students; fights disagreeable persons; soothes ruffled people's feelings; and redresses all reasonable complaints of the public. The "fighting of disagreeable persons" takes various forms, the most severe of which is in the form of lawsuits. An instance in point is that of the lawyer to whom a reader's ticket was refused, and who took proceedings in court after court to try and compel the Museum authorities to issue a ticket to him. But the judges held that it was within the discretion of the authorities to withhold a ticket when they thought fit; and the result of the long-drawn-out litigation was the passing of an Act of Parliament to prevent vexatious actions being brought against the Principal Librarian.

As regards his own staff, he has to maintain due discipline; to regulate the purchase of acquisitions; criticise the arrangement of the collections; keep an eye upon the catalogues of the various departments; push on the labelling, and enthuse the keepers, if such a need were to be possible. To drive a team of about 350 persons, and to manage about half a million of visitors, year by year, requires business aptitudes which the Principal Librarian must possess. In all circumstances, that official must have the command of his own temper. At times, in the interests of the public, he has to attempt to soften the heart of the Treasury and to wheedle the Chancellor of the Exchequer. Then there is the writing of guide-books; the working of the sales of the publications of the Museum, which brought in last year £1,800; and the settling of donations to libraries and other institutions. As the custodian of a vast pile of buildings, the Principal Librarian has, moreover, to attend to the cleaning, lighting, warming, and general up-keep of the fabric. He must, perforce, imagine himself more or less of an expert in drainage, electricity, fire apparatus, hydraulics, and hydrants. Added to the foregoing, and to other duties "too numerous to be specified," the Principal Librarian has to discharge the ordinary duties of a house-agent, in letting the surrounding property acquired by the nation for the prospective enlargement of the Museum. In this capa-

city the Principal Librarian collects rents amounting, yearly, to the respectable sum of £4,200.

Of course, in the discharge of his multifarious duties, the Principal Librarian is assisted by a staff of very able men, some of them individually of high distinction in their several branches of knowledge. Only men who have taken honors at a university are now allowed to be even enrolled as candidates for employment on the staff of the Museum; and a knowledge of the Greek, Latin, French, and German languages is obligatory. Ask one of the juniors how many languages he is acquainted with. If he tells you half-a-dozen, and you compliment him on his acquirements, he modestly deprecates your thinking much of his attainments while some of his colleagues so far excel him, as he points out. The Principal Librarian's immediate staff consists of the Assistant Secretary, the accountant, three first-class assistants, one second-class assistant, three second-division clerks, two boy copyists, and an attendant. Then comes that great division of the institution, so dear to bookmen, the Department of Printed Books, Maps, Charts, and Plans. Of this branch Dr. Richard Garnett, C.B., himself a walking cyclopædia, is the distinguished head. Under him are three assistant keepers, of whom the senior is Mr. George Fortescue, a most popular official. With them cooperate fourteen assistants of the first class and twenty of the second class. These gentlemen are all scholars of exceptional attainments. The linguistic acquirements of some of them are, to the ordinary student, simply amazing. Mr. Bain, for example, is said to be master of about thirty languages, mostly Slavic. But even he does not come up to a former member of the staff, Mr. Martineau, who is said to have been silent in almost all the languages of the civilized world. Mr. Coote, who has charge of the maps, is a master of cartography. About one hundred attendants of different grades serve with this department, with which are associated the Reading-Room and the Newspaper-Room.

Of the important Department of Manuscripts Mr. Scott is the keeper, having Mr. Warner as assistant keeper. With them are nine assistants, among whom are Mr. de Grey Birch, Mr. Bickley, and Mr. Kenyon. Mr. Bickley presides over the Literary Search Room, where his helpfulness to students is highly appreciated. Mr. Kenyon leaped into fame by his identification of the Aristotle manuscript. Fourteen attendants serve with this branch. The Department of Oriental Printed Books and Manuscripts has Mr. Robert Kennaway Douglas as its keeper, and he has four assistants under him. Five attendants are here. Mr. Sidney Colvin is the well-known keeper of the Department of Prints and Drawings, and he has eleven assistants and two attendants. Of the Department of Egyptian and Assyrian Antiquities, Dr. Budge is the keeper. He has three assistants and six attendants. Mr. Stuart Murray is keeper of the Department of Greek and Roman Antiquities. He has an assistant keeper and three assistants with him, and eight attendants. Mr. Charles Hercules Read is keeper of the Department of British and Mediæval Antiquities and Ethnography. His staff consists of three assistants and seven attendants. Lastly, the Department of Coins and Medals has Mr. Barclay Vincent Head as its keeper and Mr. Grueber as assistant keeper. With them are three assistants and two attendants.

The foregoing make up the establishment proper. Besides these are a large number of employees, ranking under the general heading of "House Attendants, Servants, etc." Among these are twenty commissionaires, seven gate-keepers and watchmen, thirty-two laborers and window-cleaners. Twenty-six policemen are stationed on the premises, under an inspector and two sergeants. There is a staff for warming and ventilating the building, another staff for electric lighting, and a staff of masons. In all there are between 350 and 360 persons subject to the control of the Principal Librarian, and for whose correct discharge of their duties he is directly responsible.

The office of Principal Librarian is not only held, but filled, by Sir Edward Maunde Thompson, K.C.B. A Rugby boy and an Oxford man, and a barrister-at-law of the Middle Temple to boot, Sir Edward administers his great department of the state with high efficiency. Appointed at a comparatively early age, he is still in the prime of a vigorous manhood, intellectual and physical. A scholar, distinguished by his successes in palæography, he is also a thorough man of business. Having worked his way up from the starting-point of an assistant, he has risen, grade by grade, to the headship of the Museum, and most fittingly does that honorable office become hm. As a chief who will not allow undue laxity of any sort, he is regarded by some as unduly strict, but, as a most constant visitor to the Reading Room of the Museum observed, though he and others had wished that another of the staff had been appointed to succeed Mr. Bond, the previous Principal, they could not but agree that Sir Edward was a very fit person for the appointment. "Write to him in a businesslike way when you feel aggrieved, and he will always give you satisfaction. He is a real man of business," said the person referred to.

That vigorous man, Sir Antonio Panizzi, left his name "writ large" upon the Museum. The Reading-Room of itself is a monument to the genius of that illustrious Italian exile. When Panizzi retired on his well-earned pension, he was succeeded by Mr. Winter Jones. The latter, it is thought by some, had hardly a fair chance of distinguishing himself. He was still overshadowed by the powerful personality of Panizzi, who, living hard by in Bloomsbury Square, still exercised his influence with the Trustees. Mr. Gladstone himself is said to have at times walked round to Bloomsbury Square, after a meeting of the Trustees, to have a chat with Panizzi. To Mr. Winter Jones succeeded Mr. Bond, a man spoken of to this day with affectionate regard, on account of his charming personality. He left his mark upon the institution by extending the hours for use of the Reading-Room and by starting the printing of the catalogue of books. Before his time the Reading-Room was closed at four P. M. in winter and at six P. M. in summer. Mr. Bond extended the hours to eight P. M. both summer and winter. He was enabled to make this change through the introduction of the electric light, to the inventors of which, as well as to Mr. Bond, students owe gratitude for lengthening the hours for research.

To Mr. Bond succeeded Sir Edward Thompson, for whom his predecessors had left little scope for adding to the advantages which the nation derives from its splendid institution. Sir Edward maintains these advantages, and, where practicable, adds to them. During his administration the Museum has been opened to the public on Sundays. By the exercise of tact and address, with which he is abundantly provided, Sir Edward has managed to get the three principal Trustees to forego, in the interest of the institution, a bit of their patronage. The attendants form a considerable number of the staff. It was usual, heretofore, for these subordinate officers to be recruited from the ranks of the butlers and other dependents of the Archbishop of Canterbury, the Lord Chancellor, and the Speaker of the House of Commons, and of their friends and relations. But by good management on the part of Sir Edward those great officers of state have allowed the Principal Librarian to employ a number of lads on probation. After these youths have served some years, and have proved their fitness, they are appointed to vacancies arising in the ranks of the attendants. It must be said for the attendants of the old régime, however, that, taken as a body, a more obliging and polite body of men could not be found.

Sir Edward has taken, also, an active part in advising the Trustees to acquire such valuable additions as the Malcom collection of prints and the Nelson papers. But his tenure of office is likely to be especially identified with his skilful management of the purchase of a considerable area adjoining the Museum premises. The buildings at present occupied by the Museum cover an area of seven and a half acres of land. Sir Edward learned that, in a few years, the leases would fall in of the land covering five and a half acres, which completes the block of houses in that part of London on which the Museum stands. He brought the matter before the Trustees, and urged the acquisition by the nation of the land and buildings in question. Negotiations followed with the Government and with the late Duke of Bedford, who, according to his cousin, Mr. George Russell, had a sort of idea that he should have been in the poor-house but for his "owning some lodging-houses in Bloomsbury." The Duke was willing to sell, but he died before completing the sale. The present Duke also fell into the arrangement, and, for £200,000, the five and a half acres, with the buildings thereon, became the property of the nation. The Museum has now a reserve of space for expansion. When fully extended, the institution will occupy thirteen acres of land in the centre of London. Meanwhile, the recently purchased premises are let out, on short leases, for seven, fourteen, and twenty-one years, and will be taken over gradually, as the needs of the Museum require. From the premises so acquired the nation is at present drawing an annual rental of £4,200.

It cannot but be interesting to Americans to know that the gentleman who adorns the eminent office of Principal Librarian of the British Museum is a native of the New World. Sir Edward Maunde Thompson was born in Jamaica.

PETER THE GREAT.—II.

PARIS, October 4, 1897.

We left Peter the Great on his way from England to Vienna. The Emperor Leopold was determined to respect the incognito of "Peter Mikhailof." Peter wished to ob-

tain the alliance of Austria against the Turks, but Austria, at that moment, was for peace at any price. The diplomatic object of the visit was not attained. Very grave news reached Peter from Russia; once more the Strelitzi had revolted. Peter, who was on the point of going to Venice, left at once for Cracow; there he learned that the rebellion had come to an end. He stopped for four days at Rawa, with King August II.

This interview has an historical importance. August and Peter were drawn towards each other by their personal tastes; August, tall, handsome, a hard drinker, a great sportsman, pleased Peter. "After four days spent in banqueting without interruption, they divided between themselves the spoils of Sweden and exchanged arms and uniforms." There was no positive plan of alliance or of war fixed—the two friends had too much to do at home first; but they prepared the alliance which was afterwards formed against Charles XII. King Augustus had to pacify Poland, and Peter had to establish a new régime in his empire. On his return from his first journey to Europe, the young Tsar showed himself to his subjects in the Polish costume, a costume of the Occident. A few days afterwards, at a banquet given by Gen. Sheïn, he took a pair of scissors and amused himself by cutting the beards of the guests. It was not a mere pleasantry; a few days later a ukase ordered the cutting of beards.

Peter had determined in his mind, on seeing Occidental troops, to suppress the Strelitzi. These were the ancient Muscovite army, already superseded by the new militia, which had taken Azov. "From his childhood Peter had always found the Strelitzi in his way: they had massacred his parents, his friends; they had protected against him the power of a usurper; now they had, when parleying with Sheïn before the mutiny which he had quelled, violently assailed Lefort and the other foreigners about him. He had had enough of it, and determined to extirpate the germ of perpetual revolts. . . . He was not content with the knout, or even with a few hangings. The thing must be done on a grand scale, after his own measure." An inquisition was instituted, and fourteen chambers of torture set to work in the village of Preobrazhenskoi. The details are too horrible to be told. The examination bore chiefly on the part taken by the Tsarevna and her sisters in fomenting the mutiny. Nothing was proved. The want of real evidence only exasperated the young Tsar; he had been a witness of the interrogatories and of the tortures. On the 30th of September he sent two hundred men to the field of execution.

"Five were beheaded on the way, before the house of the Tsar, at Preobrazhenskoi, Peter playing himself the part of executioner. The fact is attested by a number of witnesses, adopted by the opinion of contemporaries, and admitted by most historians. . . . And Peter was not satisfied to use the axe himself; he insisted that his suite should do the same. Galitzin was awkward and hurt his victims terribly; Menshikoff and Romodanovski were more adroit. Only the foreigners, Lefort and Blomberg, Colonel of the Preobrazhenskoi Regiment, refused to assist in the detestable work. On the Red Square of Moscow, where the condemned were taken two by two on sledges, with lighted tapers in their hands, they were laid down in lines of fifty along a tree-trunk which served for a block. On the 11th of October there were 144 fresh executions; 205 on the 12th; 141 on the 13th; 109 on the 17th; 65 on the 18th; 106 on the 19th. Two hundred Strelitzi were hanged before the windows of Sophia. . . . She herself was shut up in a convent."

The Strelitzi militia was condemned. The work of extermination continued. The legend of the Red Square, with its bloody memories, blends with older legends, for the Red Square is a holy place; it is situated at one of the entrances to the Kremlin. "The first relics and images brought to Moscow were deposited there, and there, in solemn circumstances, were still celebrated the ceremonies of the Russian Church; there the Patriarch gave his benediction to the faithful; there were read the most important ukases."

It is very difficult to follow Peter the Great in M. Waliszewski's book. The account which I have just given of the massacre of the Strelitzi appears only in the second part of the volume, after many events which are posterior. The author has unfortunately adopted what is called the analytic method, instead of keeping the chronological order which, in history, seems the only acceptable one. His systematic classification deprives his conscientious work of dramatic interest. All his various topics would have been blended, by a more skilful hand, in the biography of Peter the Great. We should then have better witnessed the development of Peter's work, of his ideas, of his plans, of his ambitions. It is much to be hoped that the analytic method introduced in literature by Taine, and which has its merits in a purely critical work, should not be applied to history. We wish our heroes to be alive, and we don't like to see them cut, so to speak, in pieces.

The chapter on the Tsarevitch Alexis contains much new matter, or at least matter which is new to our Western literature. The great Frederick said of Peter that he worked upon his people as the acid works on iron; it may be said that he worked in the same way on his family. The Tsarevitch Alexis was chosen by the Old Russians, the enemies of the new Western civilization, as a representative and an instrument. The Old Muscovites could not bring themselves to consider Peter as a true Russian, born of a Russian father and of a Russian mother; they thought he was a supposititious child, a German. Some believed him to be the Antichrist. The popes were the leaders of a secret and permanent opposition. "Our fathers and brothers," said one, "are beardless; our altars are abandoned; our most sacred laws are violated; we live under the tyranny of foreigners." The Tsarevitch Alexis had in him something of the spirit of the Old Russians. He was born on the 10th of February, 1690. His father married him in 1711 to Charlotte of Wolfenbüttel. Almost unconsciously, from his ardent orthodoxy, hostile to all new ideas, he became the chief of a party of opposition. He refused to serve in the army; he would not tolerate any tutors or learn anything; he would not make a campaign, and his father finally threatened to put him in a convent. Alexis took flight; he went to Vienna, to Naples, with a page, who was a Finnish woman, his mistress, a coarse and vulgar peasant girl, who had acquired almost absolute power over him.

After a long negotiation between the Emperor and the Tsar, Alexis was delivered over to his father. On the 31st of January, 1718, Peter saw his son again in Moscow. Alexis had to appear in the Kremlin, without his sword, before an assembly of high dignitaries, presided over by his father. He fell on his knees, wept, implored pardon; he had to renounce all his rights to the throne and to recognize as his heir his younger brother, Peter; he gave the names of all his accomplices. It was not enough; the revelations made by his mistress, who was arrested, were made the pretext for a new trial. This time Alexis was accused of high treason and was tortured; he died before the end of the trial. How did he die? According to the official version, he had a stroke of apoplexy. M. Waliszewski believes in a violent death, and attributes the death of the unfortunate Prince to successive applications of the knout for several days.

"Peter," he says, "killed his own son. There is no possible justification for it. I will not accept the argument of political necessity invoked by the defence. A single fact is the answer to this argument: Peter would not have this son for his heir, but to whom did he leave his heritage? To the unknown. Catherine picked up the crown in a court intrigue. For half a century Russia was given up to adventurers and to chance. This was the result for which the great man put his torturers to work. But he was a great man, and made Russia great; herein is his only excuse."

Correspondence.

THE SLAUGHTER OF THE SEALS.

To the Editor of The Nation:

Sir: In an editorial in your issue of September 30 occurs the following statement:

"No later than last year, when our Government was reproaching the British for pelagic sealing, with its danger of exterminating the herds, we allowed the killing of 30,000 seals on the islands, which cannot but be regarded, experts say, as an 'exhaustive slaughter.' "

This remark is very misleading. The killing on the islands is and always has been limited strictly to the superfluous young males. No females are allowed to be killed for any purpose. The polygamous habit of the fur seal renders twenty-nine thirtieths of the males superfluous. The partial suspension of this killing of males during the modus-vivendi of 1892-'93 has overstocked the islands with idle adult bulls, who, in their efforts to gain harems, kill females and trample pups to death. The killing of males as practised by the Government has only a beneficial effect on the herd.

The complaint against pelagic sealing is based upon the fact that it involves the slaughter of females as well as males. Seventy-five to eighty per cent. of the pelagic catch consists of females. These when taken in the spring off the Northwest Coast are heavy with pup; when taken in Bering Sea they are both pregnant and nursing. Not only, therefore, are the adult-breeding females killed, but their unborn and dependent offspring die with them. It is this wasteful and destructive method of slaughter which is exterminating the herd, and the contention of the United States, directed as it is against such slaughter, is wholly justified by the facts.—Very truly yours,

George A. Clark,
Secretary of Fur Seal Commission.

Palo Alto, Cal., Oct. 7, 1897.

WEBSTER ON ANNEXATION.

To the Editor of The Nation:

Sir: In looking forward to the question of annexation, soon to be met and answered

in the upper branch of Congress, it may not be without interest to look back to the counsel on the same subject given sixty years ago by one of the master minds of the Senate.

In a speech delivered at Niblo's Saloon in New York on March 15, 1837, Daniel Webster adverted to one of "the principal subjects of interest" of that time, namely, "the delicate question" whether or not Texas should be annexed. The analogy between the situation of that young nation, as described by him, and the newly made government of Hawaii, is close and striking. Our government had recognized the "independence of the Province" of Texas; "a very few people in a very short time" had "established a government for themselves against the authority of the parent State," which government there was "little probability . . . of the parent State being able to overturn"; the government was, "in form, a copy of our own"; its constitution was "substantially after the great American model."

Such being the likeness between the two cases, let us note Mr. Webster's advice: "I see objections, I think insurmountable objections, to the annexation of Texas to the United States. When the Constitution was formed, it is not probable that either its framers or the people ever looked to the admission of any States into the Union except such as then already existed, and such as should be formed out of Territories then already belonging to the United States." The orator then goes on to distinguish the annexation of Texas from that of Louisiana and Florida, and shows how, in the case of Louisiana, the protection and preservation of commerce on the Mississippi necessitated the control of its outlet to the sea, and how "a similar policy . . . led to the acquisition of Florida." But "the object" of acquiring the latter two States "certainly was not mere extension of territory. Other great political interests were connected with it." "Now," says Mr. Webster, "no such necessity, no such policy, requires the annexation of Texas. The accession of Texas to our territory is not necessary to the full and complete enjoyment of all which we already possess . . . We ought, I think, for numerous and powerful reasons, to be content with our present boundaries." After stating at length the specific objection of the prospective extension of slavery, Mr. Webster concludes: "I see, therefore, no political necessity for the annexation of Texas to the Union; no advantages to be derived from it; and objections to it of a strong and, in my judgment, decisive character."

If this was the attitude of this statesman's mind towards the acquisition of contiguous territory, then, in order to picture the extent of his contemptuous and overwhelming denunciation of the present proposition, there is needed nothing less than the imagination of annexationist Foster, which is capable of conceiving of the benefits to result from annexing an assortment of 100,000 Japanese, Chinese, Portuguese, and native and half-breed Hawaiians, and attempting to govern them and to keep the hands of other nations off of them at a distance of 2,000 miles from our Pacific Coast and 5,000 miles from our seat of government. S. R. T.

Lake Forest, Ill., October 9, 1897.

THE RUSSIAN CENSORSHIP.

To the Editor of The Nation:

Sir: M. A. Leroy-Beaulieu, in the preface to the English edition of his great work on Russia, says that the book is prohibited in the country he describes. This preface is published also in the volume of 'Études Russes et Européennes' printed in May, 1897. The following facts may be of interest to your readers: Visitors to the recent International Medical Congress in Moscow were given copies of the second edition (1897) of a 'Guide du Voyageur à Moscou, par A. et F. Tastevin,' published in Moscow and bearing the usual note of permission by the "censure" dated July 26, 1897. In this the reader is advised to consult, among others, the work which M. Leroy-Beaulieu says is interdicted. It may be thought that the reference is intended for those living outside of Russia, but the writer met several Russians who knew the book and denied the prohibition. There are several copies of the work in the Imperial Library in St. Petersburg, and the librarian assured me that he knew of no prohibition of the reading of 'L'Empire des Tsars et les Russes.'—Yours truly, G. Dock.

Ann Arbor, Mich., October 12, 1897.

Notes.

Macmillan Co. announce 'Select Documents Illustrative of the History of the United States, 1776-1861,' edited, with notes, by William MacDonald, Professor of History and Political Economy at Bowdoin College. The documents number ninety in all, given in full or in significant extracts, and attended by a select bibliography. They have also in a forward state 'Essays on the Civil War and Reconstruction, and Kindred Topics,' by William A. Dunning, Professor of History at Columbia University, and 'Yankee Ships and Sailors: Tales of 1812,' by James Barnes, with illustrations.

Henry Holt & Co. will bring out at once 'The Evolution of the Idea of God: An Inquiry into the Origins of Religion.'

T. Y. Crowell & Co. will add to their "What is Worth While Series" an address by Mrs. Alice Freeman Palmer, entitled 'Why Go to College?'

'The Lovers' Shakspere,' a compilation by Chloe Blakeman Jones, and 'A Group of French Critics,' by Mary Fisher, are to be issued by A. C. McClurg & Co., Chicago.

The first of the calendar books, intimating a new year, to reach us, possess a marked originality, but appeal to quite different tastes. Mr. Francis H. Allen's 'Nature's Diary' (Houghton, Mifflin & Co.) is a dainty volume of which the chief aim is to note the approximate dates of the coming of birds and flowers (about Boston, according to the compiler's observation, but doubtless for a larger area). But this is accompanied by pertinent extracts from Thoreau, Burroughs, and other apostles of outdoor study, and by some charming half-tones of landscape, flora, and wild fauna. The design has been extremely well executed, and the blanks under each date allow the owner of the book to enter the natural appearances for himself.

Very different is Mr. John Osborne Austin's 'Roger Williams Calendar' (Providence, R. I.: The Author), dedicated "to all who grant 'permission of differing consciences.'" It carries a brief extract from Williams's writings for every day in the year, and is ingeniously contrived in the fore and after portions to give an outline of the apostle's life on both sides of the water. The burden of the middle portion is soul liberty. Incidentally it is made clear wherein Williams differed from the Quakers as to the domain of civil authority. Much of this matter is pithy, and one thinks of Franklin when he reads (November 18), "I fear the event of the justest war." Under April 11 we meet with the proverbial quotation "that God could have made, but God never did make, a better berry [than the strawberry]." The use of nautical imagery and illustration is noticeable, and is hardly revealed in Mr. Austin's analytic index of topics. The host of Roger Williams's posterity (among whom the compiler himself may, perhaps, be reckoned) will find here a pious memorial.

It is but a few months since we reviewed at some length Messrs. Blashfield and Hopkins's four-volume edition of Vasari's 'Lives of the Painters.' The publishers, Messrs. Scribner, have now issued a welcome popular edition from the same plates, but omitting the photogravures. This omission need not be too greatly regretted, as the originals were, if only from their scale, of uneven excellence, according to the subject, and the purchaser of this cheaper set can enjoy the pleasure of acquiring examples to suit his taste. It is, as we said last March, with all its shortcomings, the best English edition in existence.

Mr. G. Barnett Smith's account of American colonization ('The Romance of Colonization: The United States,' Dodd, Mead & Co.), is neither a remarkably learned nor a remarkably accurate piece of work. At the same time it chronicles the chief voyages and discoveries with clearness, adding thereto the sweet sauce of rhetoric. Copious quotation is a prominent feature of the book, and is, indeed, carried so far that Mr. Smith appears in the guise of an editor almost more than in that of an author.

Prof. Stephenson's 'Syllabus of Lectures on European History' (The Inland Publishing Co.) is a better performance than, after a perusal of the preface, one would expect it to be. "Dreaming of brown eyes that flashed with subtle, changeful meaning" verges much too closely on the poetical for the context in which it occurs, and when one turns the page the following sentence gives rise to some apprehension: "No one should ever attempt the serious study of history without some great Historical Atlas like Sprooner's [*sic*] at his elbow." Numerous orthographical antics also appear in the body of the text. However, if one does not lay undue stress on minor slips, he will find a good deal to commend. The headings show care in analysis, and the bibliographical hints ought to help many students whose knowledge of history is still in the undergraduate stage.

Birmingham is fortunate in possessing in the dean of the medical faculty of Mason College a public-spirited scholar of wide intellectual interests. Dr. Windle has recently been giving a course of public lectures on 'Life in Early Britain,' out of which he has made a little book that will serve as an excellent popular introduction to pre-Norman archæology (Putnams). There is nothing original in it: the author relies on a few leading authorities, like Sir John Evans, Prof. Boyd Dawkins, and Dr. Beddoes for the pre-historic portion, Prof. Rhys for the Celts, Wright and Gomme for Roman antiquities, Seebohm for the Anglo-Saxons; and he quotes freely from them, often two or three pages at a

time. But it will be convenient to a good many people to have things thus brought together. Mr. Windle writes in an interesting way and with an enthusiasm that ought to be contagious; and the book contains a large number of really useful illustrations.

A task for which intelligent women possessed of leisure are especially qualified has been performed by Mrs. Susan Whitney Dimock in 'Births, Marriages, Baptisms and Deaths from the Records of the Town and Churches in Coventry, Conn., 1711-1844' (New York: The Baker & Taylor Co.). Though printed for private distribution among societies and libraries, it will doubtless attract not a few would-be purchasers in this period of ancestral piety in research. Coventry was the birthplace of Nathan Hale, but the family name does not figure very largely in these records. Mrs. Dimock has achieved her laudable main object, "that they may be preserved from the further ravages of time." The book is handsomely printed, and the several divisions are summed up in an index.

The third edition of Prof. Albert H. Chester's 'Catalogue of Minerals, with their Chemical Composition and Synonyms' has just been issued by John Wiley & Sons. The catalogue is alphabetical, and includes all the names of species and varieties which had been determined up to the date of publication.

The growth of Berlin, no less remarkable than that of any American city, is amply described in two volumes entitled 'Berlin und seine Eisenbahnen 1846 bis 1896,' issued by order of the Minister of Public Works. The city was founded in 1225. Four centuries later it had only 6,000 inhabitants. In 1712 it had 61,000; in 1804 it had 180,000; in 1845, 322,626. In 1861 the half-million mark was reached, and in 1877 the million mark, while in 1889 the number was 1,528,712. Immigration had much to do with this rapid increase; in 1885 only 42 per cent. of the population were born Berliners. Within the last few years the increase in the city proper has perceptibly declined, owing to the tendency of the inhabitants to make use of bettered transportation facilities for living in suburbs, most of which are not yet incorporated as parts of the capital. Thus, while the city has gained only 98,341 souls during the last five years (as against 263,507 during the preceding five years), the suburbs gained 166,081 as against 104,961 in the preceding quinquennium. Notwithstanding this centrifugal tendency, the population still is more crowded than in any other large German city, the number of persons to a hectare being 745, while in Breslau it is 443, Dresden 318, Cologne 305, Munich 248, etc. Yet there has been an improvement, for between 1840 and 1893 the number of inhabitants was quintupled, and that of buildings (larger buildings, too) septupled. Property is worth twelve times what it was in 1840. State and municipal taxes have nearly doubled since 1872.

The Old South Historical Society of Boston has for its latest sheaf of "Old South Leaflets" such as were edited to illustrate the current course of summer lectures on the anti-slavery struggle. They range from a skilful exemplification of the contents of the first number of the *Liberator* to the first Lincoln and Douglas debate, taking in Theodore Parker, Whittier, Mrs. Stowe, Sumner, and John Brown by the way. The season now opening will embrace monthly lectures on the Legacy of Slavery, but without inclusion of the evils that have flowed from the civil war in the effect of power on the dominant party, the increase of the public debt, the barter of patriotism, the currency manias, etc., etc. A bibliography for the purposes of study is already being circulated with the programme.

We learn from the *Periodical* (which is always an attractive piece of printing) that the Long Vacation in the English universities had its origin in the occasional removal (commencing in the fifteenth century) of the entire collegiate body to some other place during the summer time on account of the prevalence of the plague and the insanitary condition of the town. In 1555 leave of absence for a month was given in August to the majority of Fellows of Magdalen College on account, not of the pestilence, but of the scarcity of corn in Oxford, and in 1584 it was one of the complaints against President Humphrey for misgovernment that lectures in the vacation were read only *pro forma* and without general knowledge of those in college. At length leave of absence came to be granted "ex more," but until within the last twelve or fifteen years the form of asking for it (and paying a small fine for it) still lingered.

The British Navy League have arranged with the proprietors of the London *Times* for 50,000 copies of a reproduction, in facsimile, of the issue of the *Times* in 1805 that contained the details of the battle of Trafalgar. These copies are to be put into circulation on Trafalgar Day, the 21st of October, when the Nelson column, in Trafalgar Square, will again be decorated. Mr. Wilson, editor of the *Journal* of the Navy League, and Admiral Lord Charles Beresford are writing, in coöperation, a popular Life of Nelson.

La Diplomatie (Paris, 50 Boulevard Haussmann), in its tenth number, appears quite settled in its grooves. Its correspondence continues large, and it is well abreast of the time in its portraits and sketches of men of the day. In the present number we may mention those of the King and Queen of Siam; of the Prince Napoleon who figured in the late Russian army manœuvres for President Faure; of M. Alfred Rambaud, Minister of Public Instruction; and of M. Joseph Antoine Bouvard, director of the construction of the Exposition of 1900. A former Minister of Commerce has some remarks on the international dissensions aroused by "le Bill Dingley." The drama and the exchange form part of the miscellany.

It is being urged from various sides, and with increasing force, that the solution of the whole secondary-school question in Germany may ere long be found in the organization of the so-called Reform-Gymnasia with a common basis *(gemeinsamer Unterbau)*, deferring the study of Latin to the last six years of the course. Twenty-one of these institutions have thus far been opened in the various states of the empire. The first class to graduate will be, four years hence, that of the Goethe Gymnasium at Frankfort. Dr. Treutlein, director of the Reform-Gymnasium at Karlsruhe, reports, after repeated visits to the Frankfort school, that the pupils in Ober-Tertia, after two years' work in Latin, with ten recitations weekly, have fully caught up with those of other gymnasia who commenced the language three years earlier. It is interesting in this connection to note from a report by Dr. Lange to the Association for School Reform (see *Pädagogisches Archiv*, August, 1897), that the number of pupils in Prussian secondary schools pursuing courses without Latin has risen in eleven years from 12,800 to 42,452, while in the same period the number of pupils in Latin has fallen from 120,000 to 114,000.

A paper on the first stages in the development of the Pedipalps has been presented to the Paris Academy of Sciences by Mlle. Sophie Pereyaslawzewa. In a nation which can grapple with such proper names as this, science ought to present little difficulty even to its women.

The Canadian regulations governing placer mining along the Yukon River and its tributaries in the Northwest Territories, as well as the new Canadian tariff, are printed in the Consular Reports for October. There is also an appeal by our Minister to Siam, Mr. J. Barrett, for the establishment of an Asiatic Commercial Museum at San Francisco to further American business interests in eastern Asia as the Philadelphia Commercial Museum does in South America and Africa.

—The new edition of Spenser's 'Faerie Queene,' published in two volumes by Messrs. Dent & Co. (New York: Macmillan), is a splendid setting of that "most precious jewel of their coronet" which Gibbon bade the Spencers rate above the trophies of Marlborough. Spenser is emphatically a poets' poet. Like Milton, he has had "fit audience, though few." But he is even less read by the general public than is Milton, for obvious reasons. The general reader does not take kindly to long poems, and the unwieldy twelve books of the 'Faerie Queene' are but a fragment of what their author had in mind to write. To arouse our interest in his characters the poet must himself be interested. Spenser's countless knights and ladies, rescuing and oppressed, drop out of the poet's mind and out of the poem with an ease that damps our curiosity as to their bewildered careers. His fluctuating purpose might well be noted by those literary leaders of a forlorn hope who, like Andrew Lang, refuse to admit, with the German critics, that inconsistencies of plot and looseness of development are arguments against the unity of authorship of the Homeric poems. Yet another cause of Spenser's unpopularity lies in the fact that the 'Faerie Queene' ranges on ideal heights and in breathless bowers that ordinary humanity dreams not of and is profoundly bored to contemplate; for allegory, with the immortal exception of the 'Pilgrim's Progress,' has never failed to weary the ordinary mind. So it is that the 'Faerie Queene' ranks among those masterpieces of literature which there are few to praise and very few to read. The edition before us, with its sumptuous cover and hand-made paper, makes a direct appeal to the book-fancier. Its general get-up suggests, and was doubtless inspired by, the productions of the Kelmscott Press. Mr. Fairfax Muckley, the illustrator, belongs to the small band of disciples of Burne-Jones and Morris known in England as the "Birmingham School," whose services in one or two cases William Morris enlisted for his Kelmscott editions. If we compare this edition of the 'Faerie Queene' with the Kelmscott Chaucer illustrated by Burne-Jones, or the 'Shepheard's Calender' with Gaskin's designs, we see how strong has been the influence of Burne-Jones on the work of the

two younger artists. This is especially true of Mr. Muckley's flat, decorative, full-page designs and borders, with their heavy masses of black and white and their strict conventionality. We miss the beautiful "golden type" of Morris's press in Messrs. Dent's edition, where the type used seems too thin and poor for the heavy black of the illustrations and the decorative lettering. Prof. Hales of Kings College, London, has written a short and sympathetic introduction to the poem. The text and glossary are those of Dr. R. Morris.

—A new edition of the translation of Shakspere by Mr. Bikélas is certainly a healthy sign of revival at Athens—a sign that the Greeks have not lost their interest in the things of the spirit that endure and must finally prevail. We hear of no demand for Shakspere in Constantinople. Mr. Bikélas here proves that there is no language in Europe better fitted to cope with the heights and the difficulties of Shakspere than the modern Greek; and this is because, while it has behind it a great tradition, it is still a language in the making, fluid and capable of new coinage and picturesque phrases. It can still draw upon the unequalled resources of the ancient literature for the making of new words, even though the freedom and daring of the Aeschylean and Sophoclean syntax—a match for any flight of Shaksperian usage—have vanished. Yet how vital and close to the modern speech are these great pioneers in the drama, is shown by the frequent illustrative quotations and parallel passages with which Mr. Bikélas has enriched his notes. But the language, as he uses it, is not fast bound to the chains of a literary tradition. It is nourished and revived by the fresh springs of the popular speech, those vital sources which Solomos and Calvos and Tertsetis have drawn upon, and which the coming Greek poets will surely more and more avail themselves of. As to the form of his work, the translator has adopted the popular narrative and ballad metre which long custom had familiarized to the ears of his countrymen. At first blush it seems impossible to match Shakspere's subtly modulated line with a measure which counts and moves like the English "A captain bold of Halifax, who lived in country quarters." This is a rhythm that, even in the ancient Greek comedy, had vulgar and trivial associations. But the modern ballad-makers have rescued it from such associations, and have rendered it capable of eloquence and of fiery enthusiasm. There is something very dramatic in the abrupt apostrophes and transitions of the best Klepthic ballads; and to the modern Greek their rhythm is associated with the highest gamut of emotion, with notes of poignant pathos and passion, of triumph and despair. There is another propriety in the choice of this line. It may seem too long to render our blank verse of five accents; but the Greek is so polysyllabic that the fifteen-syllable line by no means gives the translator too much elbow-room. *Lear's* "jester," or fool, spreads in Greek to Gelotopoios.

—As a rule Mr. Bikélas follows the original, line for line, with great freedom and naturalness, and with best success in passages of sustained declamation, as in the soliloquies of *Romeo* or *Macbeth*, and in the passionate harangues of *Shylock*. He is not even dismayed by *Mercutio's* Queen Mab (who became a Nereid and a Magissa), though he does confess his sense of relief when the difficult *Mercutio* has received his *passado*, and is buried and done with, quoting with feeling Dryden's remark that Shakspere was obliged to get rid of him in self-defence. The Greek hesitates to follow such thronging imagery as—

"Beauty's ensign yet is crimson on thy lips and on thy cheeks,
And death's pale flag is not advanced there."

It turns pale beside the concentrated power and picturesque suggestiveness of—

"What! will the line stretch out to the crack of doom?"

It does not venture after *Lear's* "Rumble thy belly-full"—a piece of syntax which Aeschylus might have dared, but which no literary language in Europe could attempt. On the other hand, the modern Greek has a honeyed store of diminutives which can match the tenderness of *Macduff's* "What, all my pretty chickens!" and the endearments of *Juliet's* nurse. For the nurse's prattle and the clownish drollery of *Launcelot Gobbo*, Bikélas draws frankly on his countrymen's vernacular, and proves it beyond cavil of the classical purist a most expressive vehicle for comedy. The translations include the following plays, published at Athens: "Romeo and Juliet," "Othello," "King Lear," "Macbeth," "Hamlet," "The Merchant of Venice." They may be particularly commended, for obvious reasons, to English students of the modern Greek.

—Volume viii. of the 'Jesuit Relations' (Cleveland: Burrows Brothers Company) has a more diversified table of contents than any of its predecessors. The number of missions, at first very small, increased with some rapidity towards 1635, and when, in August of that year, Le Jeune sent home his annual report from Notre Dame des Anges, the names of fourteen other fathers were appended to it. The relation of 1636 begins with a strong witness to the interest then taken in New France by political and religious circles at home. The King is well disposed; the Cardinal has sustained and animated the enterprise; the Duc d'Enghien, eldest son of the Prince de Condé, has written with his own hand; the Marquis de Gamache, the chief financial support of the mission, shows no sign of flagging zeal. So far as the French Government and aristocracy are concerned everything is supplied or promised. Full of hope, Le Jeune exclaims: "Dieu soit loüé! tout le ciel de nostre chere Patrie nous promet de favorables influences." Not least among the auspicious tokens was the wish of pious ladies like Mme. de Combalet to found hospitals in New France, and the determination of many orders of nuns to establish themselves at Quebec. Le Jeune hears that at Montmartre the sisters take turns day and night praying for the missionaries' success: "Les Carmelites sont toutes en feu; les Ursulines remplies de zele; les Religieuses de la Visitation n'ont point de paroles assez significatives pour temoigner leur ardeur. Celles de Nostre Dome conjurent qu'on leur donne part aux souffrances qu'il faut subir parmy ces Peuples; & les Hospitalieres crient qu'on les passe dés l'année prochaine." One of these orders, the Ursuline, maintains itself in French Canada to-day, with all the outward signs of prosperity. In the mission field the prospect was less disheartening than it had often been before. Champlain had established a new settlement at Three Rivers, where Le Jeune was free to extend the labors of his band. He had been there in person and was charmed with the situation. He is restrained from describing its beauties only by fear of being accounted tedious. Altogether, his mood is optimistic. Julien Perrault reports good progress from Cape Breton, where he has found the natives willing to paint the cross on chest, arms, and legs, even without being asked to do so. They are also decent, and not thievish. Finally, Brébeuf, having conducted a fairly large band of fathers and lay Frenchmen to the Huron country, writes fully of the settlement at Ihonatiria. Many had been their hardships at the portages in ascending the river and dire the diseases which they found ravaging the natives. But over against discomfort and danger was the solace that the people had welcomed back their "Echom" and had given aid in building a house, or what passed for one there. The baptism of many was being delayed only till fit religious instruction might be given. Everything considered, the years 1634-'36 were a time of special encouragement to the Jesuits; one of the few bright spots in the history of their efforts to convert the North American Indian.

—A little pamphlet bearing the title 'An Egyptian Alphabet for the Egyptian People' has recently been issued from the Landi Press, Florence. Its object is to advocate the general use for Egyptian Arabic of the alphabet elaborated and used by the late Spitta Bey in his 'Grammatik des arabischen Vulgärdialectes von Aegypten.' To that book, published in 1880, the Arabist needs no introduction, and for the non-Arabist it may be enough to say that it was the first, and remains easily the best, careful and detailed study of a modern Arabic dialect. It was the dream and hope of Spitta's far too short life that this alphabet, developed by him from the Roman, might come to be used generally in Egypt, and that for the literature in the modern dialect which is bound to grow up if there is again to be any living Egyptian literature, it might push aside the over-complicated and yet hopelessly insufficient alphabet of classical Arabic. He adapted his alphabet strictly to the needs of modern Egyptian. It will not render the classical language, nor even any of the other modern dialects; but, for the Egyptian people, there can be no doubt that its general adoption would be an almost unmixed blessing. As a single instance, the plays and verses of Mohammad Osmān Galāl would be far more generally intelligible to his fellow-countrymen, and for the Western student the elaborate transliterations and comments of Vollers, Socin, and Sobernheim would be unnecessary. As it is, the reading of them, both for the native and for the foreigner, is two-thirds reading and one-third guessing from the context. A poet of the people, he yet fails to reach the people. The pamphlet explains the alphabet in detail, gives illustrative readings—sentences, verses, stories—a sketch of Spitta's life and some polemic (somewhat bitter in places) against other systems. A number of separate cards and leaflets are evidently intended to spread popularly a knowledge of the alphabet. There is no space here to consider it in detail; only it must be said, in spite of the authority of the brothers Grimm, that some arrangement for capitals is essential. To this almost forlorn hope all good

luck should be wished. Kipling's Sergeant Whatisname is putting stiffening into Pharaoh; can he also put into him a decent alphabet?

GOVERNOR GREENHALGE.

The Life and Work of Frederic Thomas Greenhalge, Governor of Massachusetts. By James Ernest Nesmith. Boston: Roberts Bros. 1897.

The memoir of the late Gov. Greenhalge is not too long for his family and the circle of his intimate friends, but is much too bulky and unweeded for the public who might have been attracted and enlightened by a condensed and pithy narrative. His career had its typical and instructive features that deserve modest commemoration. He belonged to a type of public servants which on the whole ought to prevail and multiply. He came of a sturdy English stock which did not despise culture and the amenities of life. He inherited from his father a strong character and a genuine love for books, for nature, and for art. At school and at Harvard College, he nourished a native passion for literature and oratory which was eagerly shared by his brilliant companions, and which is not always replaced by the most painstaking compulsory instruction. In vain sometimes does the professor of rhetoric lead unwilling colts to drink at the Pierian spring.

At the time when he was growing up, our legislation was still influenced by debate, and debating-clubs had an immense vogue in our colleges chiefly because the debater's talent was considered a short cut to political advancement. The study of economics, of jurisprudence, of social and political history was not generally thought a necessary equipment of the legislator, and was certainly not systematically included in Greenhalge's outfit. But his rhetorical preparation was not a mere gift of the gab; it was based on an ardent study of the great English orators, a wide and intelligent reading of English literature and of history. To this were added the education and experience of a lawyer. These gifts and talents he never for a moment applied to office-seeking as a livelihood, or to ferreting his way to political advancement. Though he quite early nourished vague aspirations and ambitions for public life and service, he had not the least tincture of the pertinacious spirit of the political weasel.

His career is, in fact, when one has followed it through the windings of Mr. Nesmith's discursive pages, an impressive homily on the artificial perplexities that beset good government just now—the hindrances that stand in the way of securing good servants for the nation, the superfluous labors that are laid on their shoulders, the slender rewards that befall a life wasted before its time by the friction and inertia of the political machine. The machine spares only those who grind with it; it is fatal to all but the toughest of those who dare to block its wheels.

Greenhalge was not made of porcelain—far from it; he possessed a robust constitution, unspoiled by dissipation, and wholesome tastes and habits. But he had nerves and sentiment, a grain of poetic susceptibility, a taste for quiet and solitude, for nature, and the society of his family and his books. He had, moreover, convictions and independence. But his tastes and his convictions alike were wofully crossed by his ambitions. He was disgusted with the life which he saw in Washington, the struggle, the venality, the baseness of office-seekers, whose ideas and methods he describes in a characteristic article published in the *North American Review*.

"I miss my calm summer life," he writes to his wife from Washington. "We shall have a grand row over the Silver bill, which came from the crazy Senate yesterday. Our only hope is to stave it off until we can get a reasonable bill. I am sick of all the small and large jealousies of this life. The most trivial things are seized upon, to exalt one man and to lower another; but I think my conscience is clear of envy, hatred, or malice to anybody. I am planning for nothing. I am not a politician. My life here seems aimless. I am compelled to go through a deal of routine work—offices, patronage, influence, favors, documents, information; and I am told that this is the true business of life and real greatness. I am a dreamer, an unpractical man, because I do not wallow in the slough of personal gain and swap favors with office-seekers. The meanness of men has no limit. I find no real pride, no self-respect—but fawning, threatening, lying, where offices are in question."

His honest spirit was equally offended by the claptrap of politics. He was an Edmunds delegate in 1884 to the convention that nominated Blaine. Of this again he writes:

"A pandemonium without the least necessity. . . . All for show and humbug. . . . Of all ridiculous performances the 'demonstrations' for Blaine and Arthur were entitled to the palm—grown-up men acting like lunatics, carrying about a helmet, a 'floral tribute' to Blaine, and men and women and boys screeching in a maniacal manner during the progress. And these are the kind of people who are to name the chief magistrate! God save the Republic!"

These intimate letters admit us behind the scenes, and reveal a man who has no stomach for the company he is obliged to keep. He asks himself occasionally whether the game is worth the candle; and these are questions which a man must not ask too often when he is in the midst of the struggle—they tend to paralyze his action. Yet in action and on the stage, Greenhalge showed himself prompt, able, and courageous. "As to harmony," he said as Mayor of Lowell to his first Board of Aldermen, "I don't care a straw for a man who, having convictions, is afraid to express them." He took the very same tone in the House of Representatives many years afterward as chairman of the committee on civil service, when both Democrats and Republicans showed a desire to defeat the Civil-Service bill in a roundabout way by withholding the necessary appropriations:

"For God's sake, let us have some men in this republic who have the courage of their convictions. I respect even the utterances of ex-President Cleveland; they show courage, whether these utterances are in favor of free trade, in favor of civil-service reform, or against free coinage. If a majority of either side of this house desire to wipe this law from the statute-book, let it be done in a manly fashion, and let those who do it take the responsibility. The people care nothing about parliamentary practice. We are here after things of substance, not after matters of form."

There is a genuineness in these expressions which is substantiated by certain well-known facts in Gov. Greenhalge's history. The best known of these was his behavior when he encountered the Swift mob of riotous workmen, who entered the State House clamoring for improvised employment. His courage, good sense, and right feeling on that occasion won him high opinions, and were based on fixed convictions as to the perils of socialism. This was no sudden outbreak: *Nemo repente integerrimus fuit.* The same courage and conscience were shown in his veto of the Soldiers' Preference bill, in his contempt for the opposition of the A. P. A., and perhaps still more strongly in an incident less widely known. This was the case of certain officials of the Old Colony Railway, who, while attempting by force to prevent a grade crossing, had contributed to a street riot, and were sentenced to a term in the House of Correction. They were men of respectability, one of them the Governor's personal friend. The pressure for a pardon was extreme, and it was recommended by the Council; but the petition was refused by the Governor in a message replete with good law, with sound and dispassionate argument and conscientious firmness—a lesson that Massachusetts might well commend to those Governors of States who use their official position to incite to manslaughter and lynch-law.

With such traits and such a record, it is worth while to observe how Mr. Greenhalge was treated by the "machine" of his adopted city. As to this point, we quote the striking statement of Judge Lawton, which we believe to be absolutely correct, and based on an intimate knowledge of the facts and the parties concerned:

"At this time the hostility to him of the Lowell management became apparent. If it ever ceased, it did not cease for a quarter of a century. Admitted to be the most brilliant young man in Lowell, it was at least twenty years before he was permitted to represent a larger constituency than that of Lowell. The captains of tens in the ward in which he lived long opposed his selection as a Representative to the General Court of Massachusetts. . . . Greenhalge they all 'admired,' but they feared he was not 'practical.' The real objection was that he was absolutely independent of everybody's control, and they wished nobody to be in any position of power whom they could not command and be sure that he would obey."

There is just one more touch we should add to this sketch of the life and trials of the servant of democracy. As Governor, Mr. Greenhalge had engagements to speak every day of the year, Sundays included. If Puritanic sentiment relieved him from speaking on Sunday, it imposed double duty on week days to make up the tale. About sixty of these occasions were official; but the rest were balls, banquets, fairs, what-not—all the hand-shaking functions which a sovereign democracy imposes on its official "slave of the lamp." "On all these occasions," to quote Mr. Nesmith, "he spoke with unfailing eloquence"—a frothy eloquence, occasionally, that chronicled small beer; yet, for a man who was always on tap, the quality of his brew was sound and wholesome. He had a knack of speaking, and was pursued by the Nemesis which in our country avenges such a gift.

The portrait which Mr. Nesmith has buried under a sepulchral mound of vagrant disquisition, is really valuable because it points a moral. Here, on the whole, was the sort of man whom any government should try to ensnare into its service—able, honorable, disinterested, possessed of a certain fineness of fibre and sentiment which is apt to go with a sensitive conscience. In spite of a sound constitution, good habits, and good

health, he was lost to his family, his friends, and the State ten or twenty years before his due time. These years were wasted mainly by the friction of opposition to the "machine," by the pressure and demands of office-seekers, by the wear and tear of superfluous functions, and doubtless also by the fume and fret of forced companionship with men who wield the muck-rake. It is quite true that *noblesse oblige*. It is right enough that public men should spend their lives for the State, should carry loads up hill, and, if need be, die in harness. But it is not necessary that they should wear checks and carry sacks of chaff. In his native country, as things are now, we venture to say, Mr. Greenhalge might have become a member of Parliament or the Governor of a province; but in England he could probably have lived to serve his country twenty years longer because his forces would have been in every way economized. He need have wasted no time on office-seekers in a country which has had for half a century the tradition of a civil-service system; he need not have wasted strength on "machines," because the English people, as a rule, govern themselves without the intervention of invisible and irresponsible "rings" to paralyze the will of their voters; and, finally, he would have worked in the company of men of his own kind, because, in the main, England still maintains a habit and policy of attracting her choicest and ablest minds to the service of the state.

HOMMEL'S APPEAL TO THE MONUMENTS.

The Ancient Hebrew Tradition as Illustrated by the Monuments: A Protest against the Modern School of Old Testament Criticism. By Dr. Fritz Hommel, Professor of Semitic Languages at the University of Munich. Translated from the German by Edmund McClure, M.A., and Leonard Crosslé. London: Society for Promoting Christian Knowledge; New York: E. & J. B. Young & Co. 1897. Pp. xvi, 350.

Some apology is needed for a long review of this book. Intrinsically it does not deserve it. It is especially addressed to "theologians" "who understand Hebrew" (p. 97), and to them it might safely be left without comment. But it has the general reader as well very much in mind, and has been loudly heralded. Its publication is a movement in the campaign which archæology is in these days unwisely made to undertake against Biblical criticism. It seems to be meant seriously, and the situation perhaps makes it worth while to take it so.

Doubtless the testimony of the monuments should command respect. Its value is real and great. But monumental evidence needs to be understood, weighed, and applied, and the process is difficult. Results are to be reached cautiously and by degrees—not by hasty dashes. Fact is to be distinguished from conjecture, probability from possibility, the reasonable from the absurd. Rigid proof, and that alone, is to be admitted as a ground of confident assertion. Sobriety, calm nerves, and a disciplined mind are essential. In these respects the book before us is singularly deficient. On the other hand, it is not too much to ask that Orientalists who deal with Biblical questions should have some training in Biblical exegesis and criticism. But Hommel's attempts at independent interpretation of the Old Testament are wild in the extreme. His exegetical and critical powers are untrained. Under such conditions success is impossible.

The main purpose of the book is to show, by an appeal to the monuments, the accuracy of the Hebrew records, the substantial Mosaic authorship of the Pentateuch, and, specifically, the early date of the Priestly document. It is written with great confidence and superiority of tone, not to say superciliousness. Much is no doubt accounted for by the zeal of a new convert. Hommel himself speaks of being "in 1890 still under the spell of Wellhausen" (p. 308). Yet, though thus explicable, it is not excusable. A man in late middle life, who so recently held opposite views, has hardly the right to be contemptuous toward those who still hold them. But, leaving manner aside, it might be thought that he is a stronger witness because he has himself been thus convinced. This would be a fair inference if he were, in general, a scholar of stable opinions. He is, on the contrary, a man of very fickle opinions. His views change frequently within the compass of a single book. So in the present one. Thus, "achlamah" (name of a jewel) is on p. 204 a pure Arabic tribal name; on pp. 281, 291, it is the Egyptian *eknuôme*. "Assyria" (Hos. ix, 3) is the well-known empire on p. 11, but "the land of Shur" on p. 263. On p. 287 the final recension of Judges and of the Jehovistic narrative was made in the time of the northern kingdom; on p. 307 "it is not at all impossible" that this occurred in the time of the judges. "Gaza" and "'Ibr naharân" are "interchangeable terms" on p. 251, but on p. 323 an opinion of Glaser is quoted with approval according to which Gaza "is certainly not identical with 'Ibr Naharân." On p. 195 we read that *ebir-nâri* "the (far) bank of the river" means "probably the Jordan"; on p. 254 ff. we learn that the river is the Euphrates, and that the phrase denotes Mesopotamia, although it "may, at a pinch, have come to be equivalent to . . . the country on the other side of the Jordan," while on p. 323 (again under Glaser's influence) we are informed that it is "*nowhere* used of Mesopotamia, but always of the *western* bank of the Euphrates" (italics not ours).

These illustrations could be multiplied from Hommel's writings. It is evident that such changeableness deprives the author of the title of a steadfast witness. It is to be explained from another fact, likewise derogatory to any high claims for his book, viz., that he seems to have no conception of what constitutes proof, and hence has no security for any opinion. In illustration of this defect of the power of deduction and of induction we may take the interpretation of *Samsu* in certain Babylonian names as = *sumu-su* = *Shumu-shu* = Arab. *sumu-hu*, "his name" (pp. 101 f.); or his jaunty affirmation that the language of the Aramæans "was undoubtedly, in Jacob's time, merely a dialect of Arabic. What we now call Aramaic," he says, "did not come into existence till a much later date." Further, in dealing with Gen. xiv., Hommel rashly ventures to affirm on the basis of a (misunderstood) passage in one of the Tel el-Amarna letters, and of Heb. vii., 3 (!), that v. 18 originally ended with the words, "and had not inherited the kingdom from his father and his mother" (p. 157)! He also believes "that there are ample grounds for assuming" that "Melchisedek" and "Salem" should be read for "the King of Sodom" in vv. 17, 21, and that the words "And Abram said to the King of Sodom" should be omitted at the beginning of v. 22, as

"inconsistent with the general sense. In the invocation of El, 'Elyôn is only rightly intelligible when placed in the mouth of Melchisedek. That Melchisedek should have desired possession of the prisoners is no more than we should expect; for after the death of the King of Sodom and Gomorrah he must naturally have regarded himself as master of the Jordan. Moreover, it is quite possible that some of his own people may have been included among the prisoners rescued by Abraham, etc., etc."

This is puerile. Again, in the course of an argument relating to "Ashur" as = "Shur," he perpetrates the following:

"In dealing with Deut. xxviii. 68 (on p. 11), I have already had occasion to point out that Hosea ix., 3, is merely a quotation from this passage. When, however, Hosea, after giving the words of Deuteronomy, viz., 'But Ephraim shall return to Egypt,' adds, 'and they shall eat unclean food in Ashur [Assyria],' it seems extremely probable—in view of the facts brought forward in the present chapter—that this supplementary clause formed part of the original text of Deuteronomy [!], and was only omitted later owing to its having been confounded with Assyria. The principles of parallelism require that the Ashur in question—even though Hosea may have understood it as equivalent to Assyria—should be some region in the immediate vicinity of Egypt, and there is of course no other locality which complies with this condition except the land of Shur," etc. (p. 263).

And with stuff like this it is proposed to overthrow modern criticism!

For his main thesis he relies much on the view that in Abraham's time there was a large Arabian element in Babylonia and a dynasty of Arabian origin on the throne. This shown, he accounts for Abraham's monotheism as an inheritance from Arabia, and explains alleged resemblances between proper names in the Priestly document and those of ancient Arabia by bringing the Priestly document back to a time when Arabian influence was still felt. He thinks that the Hebrews still spoke an Arabic dialect when they entered Canaan, what we know as Hebrew having been adopted by them from the conquered Canaanites. Hence he infers, again, that certain Arabian peculiarities in the documents show that they were originally written before the conquest.

With regard to the "Arabian" dynasty, it may be said that the appearance of some of the names makes an Arabian origin not improbable; nothing is gained by attempting to force reluctant names into this category, as Hommel does. Neither is it improbable that the Hebrew migration actually set out from Babylonia. If we accept the historic personality of Abraham, and the narratives concerning him in Gen. xi. and xiv., we must agree that the migration started during the time assigned to the "Arabian dynasty." But it is a long step from this to the positions that Abraham drew his monotheism from Arabian sources, and that Old Testament personal names resembling old Arabian names prove the high antiquity of the documents containing them. Arabists must determine how far Hommel is justified in regarding *Ilu* as so nearly exclusive a divine element in old Arabian names. It is probable that he exaggerates here. But its presence in the names does not prove Arabian monotheism, any more than *ilu* in Babylonian prayers and hymns proves Babylonian

monotheism. It may be only a characteristic way of denoting one or another god. In view of the fact that the Arabians who used the names were demonstrably and avowedly polytheistic, such an explanation is at least quite as probable as the view that these names point back to an earlier monotheistic age. Besides, we are not at all sure of the very ancient date of the inscriptions which contain them. An age beyond 1000 B. C. is not claimed by Hommel for the Sabæan inscriptions, and these are therefore too late to tell us anything about the times of Abraham or of Moses. The Minæan inscriptions are usually thought to be somewhat later; Glaser, followed (changeably) by Hommel, thinks them earlier. "I now confidently believe," Hommel says, "that the South Arabian kingdom of the Minæan dynasty must, at the very latest, have flourished in the period between Solomon and Moses." But we can build nothing on this "confident belief" unsupported by evidence. Even if the inscriptions be early, however, and even if the proper names point back to monotheism, they prove nothing concerning the date of the Priestly document. For (1) the tradition and habit of such name-formation might be persistent for centuries, as Hommel's theory requires him to suppose it was in Arabia itself, so that the occurrence of like formations does not prove like antiquity of documents; in fact, the same name-formation does actually occur in different epochs of the different Semitic peoples, as is well illustrated by Gray in his book, 'Studies in Hebrew Proper Names,' of which Hommel speaks so slightingly in his preface; (2) the name-formations of the Priestly document resemble in various respects those of admittedly late documents, such as Chronicles, Ezra, and Nehemiah, as Gray also convincingly shows.

The supposition that the Hebrews spoke an Arabic dialect before the conquest of Canaan may or may not be true. We know very little that bears on the question. Certainly it is not proved by Hommel's argument. The points on which he depends are (1) the evidence of proper names again, which contain some stems not found in our Hebrew, but found in Arabic; (2) "Many other peculiarities of their language" (p. 274)—the only instance he gives is *man-hû* (Ex. xvi. 15); and (3) the use of the letter *He* (*h*) to denote the lengthening of a vowel, which Hommel claims—not without challenge—to be peculiar to the Minæan, Moabite, and Hebrew, indicating, he thinks, an employment by Moabites and Hebrews of the Minæan script. But, as to (1), our ancient Hebrew literature is too limited for us to say that stems not found in it did not exist in Hebrew, and there is always the possibility of borrowing. (2.) An isolated peculiarity is no safe evidence. (3.) Mordtmann, who challenges the statement that the Minæan *He* in the cases referred to is a mere graphic sign, is entitled by character and services to at least as much consideration as Hommel is! Such being the status of the evidence, it is plain that it does not permit us "to assume confidently that a . . . not inconsiderable portion of the tradition incorporated in Genesis had already been reduced to writing [in the Minæan script] in the time of Moses" (p. 275), or sympathize in the "satisfaction" felt by the priests and prophets "at having been able to transfer faithfully, by paraphrase or translation, the holy traditions into the lately cultivated speech and newly adopted characters of Canaan" (p. 304).

There are many other particulars which might be noticed. The book abounds in archæological and Biblical statements. There is a chapter on "Abraham and Khammurabi," which discusses Gen. xiv. at some length, and contains interesting details—not quite new, but freshly elaborated—in regard to probable identifications of the Eastern Kings of that narrative. Khammurabi, Eri-Aku, Kudur-laghamar, and Tudkhulu may very well be their native names, and in their incursion and temporary dominion on Canaanitish soil there is nothing difficult to believe. Positive evidence outside of the Bible for the particular campaign described in Gen. xiv. does not exist. The Tel el-Amarna tablets give ground to infer long-continued Babylonian influence in Canaan, and prove that Jerusalem was a stronghold in the fifteenth century B. C.; but the attempt to torture out of them direct evidence for Melchisedek and his religion is vain. Hommel's hypothesis as to the original form of the latter part of the chapter is flimsy and foolish enough. No one can disprove the assertion that Gen. xiv. is based on a cuneiform original, but it is useless to claim that this is proved by the considerations which Hommel has adduced.

Hommel thinks that Arabian (Minæan) influence once extended over the territory of Moab and of Southern Palestine. This is far from impossible, but we know too little about the matter as yet to warrant the author's confidence. It does not increase our readiness to believe it, to find him on one page (76) arguing that the native name should be read *Ma'ân*, rather than *Ma'în*, because that form explains the local names *Ma'ân* (near Petra) and *Ma'ôn* (twice, in Palestine), and then on another page (271) arguing from the existence of these names to the fact of Minæan influence in the territory where they are found. Moses's obligations to Arabia for the furniture and ceremonial of worship are still more conjectural. The combined evidence of exegesis, literary phenomena, and historical criticism is not to be overturned by guesses like those which meet us here. On p. 280 the author calls attention to a resemblance between the breast-ornament of the Egyptian chief priest and the high priest's breast-plate of Exod. xxviii. Granting the resemblance, however, an isolated phenomenon of this kind admits of various explanations; the most distinctive feature of the breastplate—the Urim and Thummim—is at the best mysterious to us, and of unknown age, and the date of the Priestly document, a very different matter, remains unaffected.

We need not go through the book examining all its proposals. Enough has been given to justify the opinion expressed at the outset. Whatever of solid fact or sound opinion it contains is enwrapped with conjecture and fancy, vitiated by false argument and extravagant claims, or distorted by appeals to prejudice. It is therefore not a good book—not fitted to advance the truth.

As to the translation it is necessary to speak with great plainness. It is one of the worst translations known to us. Its badness consists, not in the slavish following of the foreign idiom—there are many less readable translations—but in unfaithfulness to the original. Not a small class of instances is due to carelessness or ignorance, but these, although depriving the translators' work of any claim to accuracy, are of slight consequence when compared with their conscious and reckless perversions of a text already, one would suppose, reckless enough. Whether such as the next-following belong to this category is perhaps doubtful: "Wenn wirklich Fetischismus und Ahnencult die Anfänge der israelitischen Religion gewesen wären, so würden diese Anfänge in einer prähistorischen Zeit liegen, in welche die Forschung höchstens durch Sprachvergleichung zurückzudringen vermöchte" (G. 291), becomes, with entire and misleading change of emphasis, "Had the beginnings of the Israelite religion really been a mixture of Fetichism and ancestor-worship, these beginnings would have left their impress upon the language and could have been detected by the method of comparative philology" (E. 290). "Während ich noch im Jahre 1890, unter dem Banne Wellhausens mich befindend," etc. (G. 309), is rendered "while in 1890 . . . I brought myself under the displeasure of Wellhausen," etc. (E. 308); this is perhaps merely a gross blunder. More suspicious is this: "Und auch das von Mose berichtete wäre dann in ganz anderem, viel glaubwürdigerem Lichte erschienen" (G. 163), where "von" is shown by the context to be the equivalent of "über," "concerning," but E. 161 gives the phrase "the account drawn up by Moses."

No doubt whatever can attach to the intention of the following misrenderings: "Was zuerst die biblische Chronologie anlangt, so ist es ja richtig, dass dieselbe von David und der Richterzeit an rückwärts nicht den Grad von Sicherheit beanspruchen kann, den man für eine exacte Geschichtsforschung zu verlangen berechtigt ist" (G. 126); by rendering "Sicherheit" "definiteness," and "berechtigt" "inclined" (E. 125), the original sense is perverted in the conservative interest. "Die keine Zeile von Mose . . . als echt gelten lassen" (G. 166); here E. 165, translating "echt" by "genuine," substitutes "the Pentateuch" for "Mose." G. 277 says " . . . machte man das in der semitischen Eigennamenbildung ganz unerklärt dastehende Ab-raham daraus [*i. e.*, out of Abram], und schob Gen. 17, 5 als Deutung dieser Umnennung ein"; of this E. 275 makes "the name was changed into its present form, Abraham, a word which it is *absolutely impossible to explain by any ascertained principle* of Semitic name-formation, and the passage in Gen. xvii. 5 *seems* an interpolation intended to account for the alteration" (italics ours). "Hätten wir über die Richterzeit und die Königsperiode vollständigere und ausführlichere Ueberlieferungen (wie sie, allerdings in ausgeschmückter Form, vielleicht noch dem von den Büchern der Chronika citirten 'Midrasch zum Buch der Könige' teilweis zu Grunde lagen)" (G. 289), becomes in the latter part (E. 288), "such as that which *probably* furnished part of the material, . . . though there *the facts* may have been presented in a more imaginative guise." In G. 308 we read, "höchstens einige mythologisirende Züge in der sogenannten jahvistischen Quelle . . . mögen auf Rechnung Kanaanäischer Beeinflussung zu setzen sein"; but in E. 307, "*seemingly* mythological traces—*the* so-called *anthropomorphisms*—in the Jehovistic source . . . may at most have been owing to Canaanite influences" (italics ours). Worse yet, G. 290, "Die volkstümliche Ueberlieferung stellt gegenüber der priesterlichen gar

oft eine Vergröberung dar, und hat einen Zug zur Romantik und zu sagenhafter Ausschmückung." This sentence seemed dangerous to the translators, and is omitted entirely; it should precede the words "these two opposing principles" (E. 289). G. 200, "Zuerst erklärte man die Namen der Könige für frei erfunden . . . statt dankbar das Zeugniss der Tradition angunehmen, dass es derartige Könige zu Abraham's Zeit gab . . . Die Denkmäler mussten erst kommen," etc: but E. 199, "*the critics*, instead of thankfully accepting the testimony of tradition which declares that such kings *did* exist in Abraham's time, . . . *had ignominiously to withdraw their false conclusions in presence* of the monuments," etc.; the italicized words (except *did*, whose italics are from Tr.) have absolutely no equivalent in the original.

The translators, we remark, are especially fond of substituting "critics," and "higher critics"—both with and without quotation marks—for more abstract and colorless words, thus giving the dog a bad name in the very act of hanging him. So (besides the above) G. 28=E. 28, G. 29=E. 29, and so, notably, with other perversions for the sake of pungency, G. viii., "Die Denkmäler reden eine zu deutliche Sprache, und schon jetzt höre ich den Flügelschlag einer neuen Zeit, in der man über die Aufstellungen der sogenannten modernen Pentateuchkritik als über einen veralteten Irrtum zur Tagesordnung übergehen wird,"=E. viii., "The monuments speak with no faltering tongue, and already I seem to see signs of the approach of a new era in which men will be able to *brush aside* the *cobweb theories* of the so-called *'higher critics'* of the Pentateuch, and, leaving such old-fashioned errors behind them, *attain to a clearer perception of the real facts*" (!—italics ours). What it is difficult not to call a bare-faced falsification occurs in the rendering of "Oder endlich, da ja doch die Begrüssung und Segnung durch Melkisedek den eigentlichen Zweck der Erzählung des ganzen Kapitels bildete" (G. 191), by, "Or, as a last *hypothesis—if* the real object of the whole narrative in this chapter was to furnish a peg on which to hang [!] Melchisedek's salutation and blessing," E. 190; (italics ours). After instances like these, one hardly notices such depravities of rendering as "by the evidence of the Biblical tradition" (E. 235), for "aus der hebräischen Tradition" (G. 237); "not only from the account which we glean from contemporary inscriptions" (E. 190), for "sowol mit dem, was wir aus den gleichzeitigen Inschriften wissen" (G. 192); "that the author of the Epistle to the Hebrews must have been familiar with *a version in which* verse 18 contained a supplementary clause," etc. (E. 152; italics ours), for "dass der Verfasser des Hebräer-briefes zu Vers 18 noch einen Zusatz . . . gekannt haben muss" (G. 153); "What is there left of Moses beyond a *mere empty* unsubstantial shadow" (E. 286; italics ours), for "was bleibt von Mose übrig als ein wesenloser Schatten" (G. 287). The purpose of all these changes is obvious enough.

Now these details are not trivial. They are very serious indeed. They show a lack of scrupulous regard for truth, and constitute an imposition on English readers. This book is issued simultaneously in German and English. We are entitled to suppose that the English reproduces the German. Any editing of the German to suit the prejudice of English people is excluded by the announcement. Nor does the author's preface to the English edition, nor the translator's note, intimate that any changes have been made. The matter becomes worse when we remember that the English publishing-house is the best-known religious publication society in the world, and that the leading translator is the Secretary of the Society. A member of the same family translated Maspero's 'Struggle of the Nations,' and unfaithfulness has been proved in that case also. It is, therefore, not a question of a single book, but of a habit, and the society which encourages, or even permits, such lack of fidelity is itself brought to the bar of judgment.

Two things, then, this book has established—both of them melancholy, but both important to be known. The first is, that Hommel's work has, for the future, no claim upon serious students of the Bible and of ancient history; and the second, that translations made under the auspices of the Society for Promoting Christian Knowledge must henceforth be regarded with suspicion.

British Deer and their Horns. By John Giulle Millais, F.Z.S. With 185 text and full-page illustrations, mostly by the Author; also, ten electrogravures and a colored frontispiece by the Author and Sidney Steele, and a series of Drawings by Sir Edwin Landseer which were formerly on the walls of Ardverikie. London: Henry Sotheran & Co.; New York: Dodd, Mead & Co. 1897.

This elaborate and beautiful work is addressed to "Experienced Sportsmen and Naturalists," and it has the charm which could come only from the author's skill and knowledge of the two kindred sciences. The naturalist is likely to ignore (or never acquire, if he be not also a sportsman) the experience in the habits and disposition of animals which cannot be gained unless he sees them under the thousand varying aspects of wild life, and learns from necessity the nice adaptations of structural conditions and habits to their numerous requirements in their struggle for existence. Mr. Millais has, in addition to his knowledge and love of nature and sport, a fine artistic sense and facility in depicting animal life, and these qualifications, added to his unusual opportunities for the study of his subject, make him eminently fit for his task.

Of the eleven different kinds of extinct British deer mentioned in the first chapter, the most interesting and perhaps the most numerous, especially in Ireland, was the Megaceros, or the Gigantic Irish Deer. Hundreds of heads of this magnificent animal and a few perfect skeletons are in existence. Mr. Williams of Dublin, who has been most successful in recovering the buried heads and horns of this great deer, uses for the purpose a probing iron about sixty feet in length; and the man who does the probing through the strata of peat, gravel, and clay to the lacustrine shell marl, where the horns are mostly found, is enabled from long practice to tell by the ring of the metal exactly the kind of substance with which the rod comes in contact. The megaceros has been confounded, by reason of its palmated horns, with the American moose, but, as Mr. Millais shows by a reconstructed one on p. 5, it was an entirely different and a much larger animal. The head of a megaceros, with a great number of exact measurements, is given on p. 8, showing a span from between both outside tips in a straight line of 9 feet 5 inches, which is much greater than that of any moose head.

To the red deer (*Cervus elaphus*), the most important existing British type, are devoted five of the succeeding chapters. The great differences between the park and wild deer in the form and size of the antlers, as well as in weights, are thoroughly discussed from the data contained in the numerous and continuous records of the chase and the great collections of horns which adorn many a hall and castle in Britain. The very strong superficial resemblance between some of the best stag-heads in Mr. Millais's book and those of the American wapiti will at once strike those familiar with the latter animal. The heads reproduced on pp. 126 and 131 are especially like those of the wapiti; the span of the larger one being 39¼ inches, length of right antler 39 inches, circumference between brow and bay 7¼ inches. A large wapiti head would have a length of antler of 50 to 55 inches, a span of 42 to 45 inches, and a girth of 10 to 12 inches. Palmated horns and horns with cups are becoming much rarer now than formerly among Scotch deer, and the size of the stags is decreasing. Mr. Millais mentions clean weights of something above 400 pounds, though weights of 300 pounds, with antlers bearing more than fourteen tines, at the present day would be thought very good. How much, therefore, the race must have degenerated in the last 200 years is shown in an article by Mr. Baillie-Grohman in the *Century* for July, 1897, entitled "Sports of the Seventeenth Century," in which he tells of stags killed by John George I., Elector of Saxony, weighing over 850 pounds, and that he shot 4,139 stags which scaled above 450 pounds each. The excellent picture, in this article, of the great banqueting hall of the Castle of Moritzburg shows 71 pairs of stag horns, not one of which carries fewer than twenty-four tines. On p. 88 of this book under notice the largest of these heads is shown. In 1693 a stag of twenty-six points, weighing 850 pounds, was shot by Princess Frederika of Saxe-Eisenach, and the head, with that of another nearly as large killed by Duchess Magdalen of Saxony in 1650, are in the Moritzburg collection. Many of these large horns are cupped and palmated, showing that such forms were not at all uncommon in those days. It is impossible even to mention great numbers of notable British heads specified by Mr. Millais, but all goes to show that the stag is steadily deteriorating both in weight and in the size of his horns, and the historic great heads are becoming more and more precious as time goes on.

From the sportsman's point of view Mr. Millais's book is of great interest and fully justifies his addressing it to experts. The "Field Notes and Stalking Yarns" are very much above the usual level of such recountals, owing to the charm of their narration and the interspersed observations, which would occur to none but a keen and loving student of all living nature. Of course the opportunities for minute investigation of red deer in Britain are unexcelled. The animal, since the Conquest, has been the object of a kind of protection almost sacred in its form; and at the present time, outside of the hundreds of parks with their thousands of deer, there is in Scotland alone above 2,000,000 acres devoted to their

maintenance, and about 5,000 stags are annually killed.

The chapters on fallow and roe deer are quite as good in their way as those on their more important cousin, but lack of space forbids going into their merits.

The illustrations, it is not too much to say, are far superior to any yet collected since Scrope's 'Art of Deerstalking' was published, and far more exhaustive than those of that great work. They are mostly by the author, and could be better only if they all were. Perhaps the most taking of these are the simple sketches of deer which, in their animation and lifelikeness, remind one of the admirable work of the late Charles St. John on the same subject. Those of "Stags Sparring" and "Stags Fighting," pp. 30 and 38, though not better than many others, are good examples of what animal drawing should be; and most interesting, though not more so than the accompanying text, is that entitled "Various British Animals Swimming, and their Positions in the Water," p. 44. It might be thought that the act of swimming would be substantially alike with all four-footed animals, while in fact it varies quite as much as their ways of travelling on land. No superficial observer would have noticed and illustrated this. The drawings by Sir Edwin Landseer are familiar from the reproduction of their subjects, and perhaps for that reason yield in specific interest to many of the other illustrations. Those in the chapter on roe deer cannot be too highly commended as a whole, and there are none that the most captious critic would want to exclude, though he might say a word of detraction of the frontispiece, which hardly needs the statement beneath it to make one think it was "made in Germany." The electrogravures are excellent in their subjects, and very fine in execution, and any one interested in British deer from the realistic or sentimental standpoint cannot do better than to buy (or, if he cannot afford this, to borrow) and enjoy Mr. Millais's beautiful volume.

Recollections of Aubrey de Vere. Edward Arnold. 1897.

At the outset our reminiscent poet distinguishes between "recollections" and an autobiography, and justly claims that what he has written makes good his title, it being less about himself than about other people. At the same time, his own doings and achievements are not allowed to wither in the shade. The chapters on his childhood and youth are interesting more as a picture of Irish life in general than for any of his own experiences or traits; but there are bits of vivid color here and there. The difference between his father and grandfather was very much like that between Frances Power Cobbe's relations of the same degree. Indeed, we find ourselves comparing Miss Cobbe's book with this at many different points. Grandfather de Vere had a history that could match the incidents of Miss Edgeworth's 'Castle Rackrent' and 'The Absentee.' In a London auction-room he bought at haphazard an island in the Bristol Channel, paid for it by breeding rabbits on it, and retired to it whenever he was on bad terms with both the English and the Irish government, for it paid neither tax nor tithe, acknowledged neither King nor Parliament, nor any law of state or church. He lost a fortune by cards and then renounced them. He raised two companies of militia and gave a captain's commission to his son, a boy of five summers. This boy grew up to be the father of the present Aubrey de Vere, whose tender reverence for him is one of the most delightful features of his book. Like his son, he was a poet, and according to his son a good one, the opinion of competent judges being quoted to that effect, and the fact that, after twenty-eight years of absolute neglect, his "Mary Tudor," a drama, got some recognition.

In the "Youth" chapter there are valuable descriptions of Gerald Griffin and Sir Rowan Hamilton, with both of whom young De Vere was intimate. Some of the best stories are those which describe the course of justice—if it was justice—in the Irish courts. For O'Connell, De Vere has only praise, while conceding that both of the great parties in England wished Ireland well without any sympathetic understanding of her social and political condition. The beginnings of young De Vere's poetry were nearly simultaneous with those of Tennyson and Browning (he was born in 1814). Like Tennyson, he began by admiring Byron, and contracted "the Byronic sulk" which Wordsworth exorcised. He and his father used to read Keats, Shelley, and Landor by night to the music of an æolian harp. In one of these poetic raptures the boy took to a boat and floated all night long upon a lake, letting the wind and tide have their way with him. This looks as if the Byronic self-consciousness had outlasted "the Byronic sulk."

One chapter, "Old Times and New," describes a coaching drive which was full of incident and adventure, without being at all remarkable for the time of its occurrence. A sister's marriage in 1835 to Robert O'Brien suggests a history of the O'Brien family, which is proudly vaunted as descending from Brian the Great, King of all Ireland. Whether all the O'Briens draw their blood from this old King, we are not told. One of them, of his father's generation, was a distinct survival of the Irish chief. Another, Stafford O'Brien, did good service in the Crimea, especially among the cholera-stricken French, who seem to have had much the same name for Englishmen that Joan of Arc had and her people, for they called him "Ce cher Monsieur 'Damn me.'"

The chapter of Swiss travel is not sufficiently different from the run of such descriptions to require special comment, but the Irish traveller who thought the Alps did not compare with the mountains of Wicklow was beyond doubt a true patriot. In the Chamouni Valley he had counted only four mountains in three days, and in Wicklow he had counted eight in three hours. Going to England in 1841, De Vere had the fun —for it was fun—of travelling with O'Connell, of whose boisterous good nature we get an excellent account. One incident of this journey was a visit to Wordsworth, whose appreciation of the English mountains as compared with the Alps was not excelled by the Irishman's comparative appreciation of the mountains of Wicklow. Very precious to young De Vere was Wordsworth's praise of his father's sonnets as the best of the age. "I need not remind you," he added, "that in making such a remark one does not mean to institute anything in the way of a comparison between one's self and another writer." That was saving his own preëminence as by fire. Again, travelling on the Continent, De Vere had Henry Taylor for his companion, and he confirms all the good that we have heard of the author of "Philip Van Artevelde." In Froude's edition of Carlyle's 'Reminiscences,' Taylor appears as "a man of morbid vivacity in every sense of the word." It should have read "a man of marked veracity," and so he appears in these pages, yet not without much vivacity and the utmost kindliness.

The great Irish famine has a chapter to itself, in which a plea is put in for the Irish gentleman as not entirely recreant to his solemn trust; but that absenteeism was a frequent and appalling scandal De Vere does not deny. The reader will wish that he were more explicit and had told us what the "unproductive labor" was, and the "reproductive labor" in which the starving population were engaged under Government control.

Cardinal Newman and Cardinal Manning have each a chapter to themselves, yet little is added to the abundant knowledge of these men that we already have. We read of Newman as gliding into a room "with a gracious address that might have belonged to a youthful ascetic of the Middle Ages or a graceful and high-bred lady of our own days." At their first meeting Mr. de Vere was not a Roman Catholic, but he became one further on. Milnes wrote a reply to 'Tract 90.' Some one remarking to Whewell that he didn't know that Milnes had opinions on the subject, Whewell answered, "He has none, but he took a fancy to write a philosophic essay on the subject of the day; so he wrote what he thought a philosophic mind like Thirlwall's might think." Newman's change from Oxford to Dublin University was æsthetically a change of infinite diameters, and the picture of him carving meat for thirty hungry boys is one not soon to be forgotten. Newman's idea that of twenty definitions of infallibility several might be correct is of a piece with his general vagueness, so different from William George Ward's sharp definition. Woolner's compliment to Newman's bust was a striking one, and by no means flattering to busts that he had made of Newman's most distinguished contemporaries. "When I turn from Newman's head to theirs," he said, "they look *like vegetables*." There is no attempt to adjust the differences of Newman and Manning. Mr. de Vere's opinion of the latter is very different from Newman's and does not agree with that of Manning's great biography by Mr. Purcell. It is not Mr. de Vere's fashion to admire the celebrated people of his church by halves. At the end of his chapter on Manning, he reproduces a sonnet on him which for depth of bathos cannot be excelled. Nothing will satisfy him but to represent the Cardinal as a St. Thomas Aquinas and a Dante rolled into one. Carlyle's advice to Mr. de Vere to remain in the English Church because its face was "turned in the right direction," either was grimmest irony, or makes us wonder whether he was speaking truthfully when he was talking in this fashion, or when he was setting forth the "Exodus from Houndsditch" as the one thing needful.

Cabot's Discovery of North America. By G. E. Weare. Philadelphia: J. B. Lippincott Co. 1897.

Among Mr. Weare's illustrations is a view

of Brandon Hill, with a part of ancient Bristol in the foreground. Although embedded in the text, it deserves to be made the frontispiece, for the author's purpose in writing so extensively as he does about the Cabots is not primarily to denounce Sebastian, or even to vindicate John, but to magnify the famous west-country seaport. He has already dealt with minor points in the archæology of Bristol. He now attacks the largest game which a Somersetshire antiquarian can start. Viewed purely from the standpoint of sport, the Cabot question, with its numerous and baffling difficulties, is indeed a noble quarry. Yet behind the obscurities arising from contemporary silence and contemporary lies, one fact is sure, viz., that John Cabot sailed from Bristol in May, 1497. He was supported by Bristol enterprise, and the expedition which disclosed a continent is fitly taken by Mr. Weare as the central episode of the local history. Macaulay's lively sketch of Bristol in his third chapter shows that the town was still great at the end of the seventeenth century. For over two hundred years it reaped direct benefit from the new fields of commerce which it was the first to open up.

In considering the value of the services which the Cabots and Bristol rendered to the cause of American discovery, one must dwell on a series of moot points. Among them the most notable are the circumstances under which the first voyage was made; the precise landfall; the achievements of Sebastian; and, finally, his moral character. The main outlines can be traced with tolerable certainty. Many interesting details for which there is some authority will probably continue to remain doubtful because the said authority is not good enough. An adventurous citizen of Venice, with head crammed full of Marco Polo's Cipango, Toscanelli's charts, and the success of Columbus, secures sanction of the English crown and aid in the second English seaport, finds land somewhere between Labrador and Halifax, returns, is a seven days' wonder, is partially rewarded, and then, after a second voyage, drops out of sight. Of his three sons authentically mentioned, one becomes a skilful navigator and an inveterate wirepuller. In a voluminous correspondence he ignores his father or appropriates his discoveries. After wearing the mantle of an undeserved respect for above three hundred years, and especially for the forty years succeeding the appearance of Biddle's monograph, he is at length stripped bare as Duessa. It is a long drop from a place beside Columbus and Magellan to the rank which Sebastian Cabot now holds.

Mr. Weare by no means confines himself to the broad features at which we have just glanced. He begins with that Egyptian expedition to the "unknown Balsam Land of Punt," which is described in the inscription at Deir-al-Bahari, and ambles along down to the Cabots via Plato, Ignatius Donnelly, Strabo, the early mediæval Orientalists, and the Island of the Seven Cities. The chief fault we find with him is that of extreme garrulity. What he has to say about his avowed subject might easily be compressed into one-half the number of pages which the present volume contains. He has already before him in the field Dr. Winsor, Mr. Harrisse, and Dr. S. E. Dawson, all of whom write with full knowledge of the recent and determining evidence that has been drawn from Spanish and Italian archives. A comparative study of the testimony in the case, by itself, is needed much more than a general account of attempts to reach the Indies by sailing west, biographical sketches of Gasparo Contarini, Richard Hakluyt, etc. We refer, of course, to the matter with which Mr. Weare embroiders his main theme. He has collected the wherewithal to supply a very neat essay, but leaves one to spend a good deal of time in exploring digressions before one reaches what one is after.

Assuming that the reader is in no particular hurry, he will find himself Mr. Weare's debtor in the end. Besides being a first-hand authority wherever Bristol is concerned, he has prepared a useful anthology of the sources relating to the Cabots. One of his special contentions is that the ship in which John Cabot sailed when he sighted land was the *Mathew*. His authority is a chronicle once in the possession of the Fust family, and destroyed by fire in 1860. Fortunately, one of its owners had caused a collation of entries to be made with Barrett's and Seyer's Histories of Bristol, "with a view to the extraction from the Chronicle of all the entries which were yet unpublished, or which contained information supplemental to any matter or event already published in either of those histories." Mr. Harrisse impugns the authenticity of the original chronicle, and conjectures that it was one of Chatterton's forgeries. It is obvious that the phrase "the land of America was found by the Merchants of Bristow in a shippe of Bristowe, called the *Mathew*," could not have been used in 1497. On the other hand, a forger would have avoided so elementary a slip. We mention the difference of opinion between Mr. Weare and Mr. Harrisse because the former's last word has been reprinted from *Notes and Queries* and put in circulation. At least Mr. Harrisse makes a bad guess in connecting Chatterton and the Fust family without express evidence. Mr. Weare catches him here much as Dr. Dawson catches him on the landfall question. Mr. Harrisse's opinion is in favor of Cape Chidley, because of the multitude of cod thereabouts. Cabot landed on the 24th of June, and the cod do not reach Cape Chidley till or later than the middle of August!

While we have found it necessary to dwell on Mr. Weare's circuitous manner of reaching his goal, we should like to commend the thoroughness of research and breadth of outlook to which his prolixity is probably due. The subject involves treatment of many minute questions, hair-splitting even, and we are not sorry to find that one who must have been sorely tempted to emphasize its Bristolian aspects should be able to pass from the antiquarian's level to the higher ground of historical disquisition.

The Blazon of Episcopacy. By Rev. W. K. Riland Bedford. Second Edition. Oxford: Clarendon Press; New York: H. Frowde. 1897. 4to, pp. 274.

To an American reader this handsome volume is simply inexplicable. It contains a chronological list of all the archbishops and bishops of the Episcopal Church in England and Wales, and of their predecessors in these sees in Catholic times. There are added engraved coats-of-arms, apocryphal and real, of these prelates, an ordinary of the arms, and an index. Omitting the early coats, assigned later to persons who lived before the use of coat-armor, this record would seem to prove that no bishop has been appointed outside of the class of the gentry. In other words, it would show that while soldiers, sailors, lawyers, and statesmen in England have risen from the ranks, the higher clergy has constituted a body of strictly high-class Brahmins. Of course this cannot be true, for great ability has forced plebeians through the path of scholarships, tutorships, fellowships, and other ways into high ecclesiastic preferment. Thackeray is a sufficient authority for his sketch of a university snob—Crump, President of St. Boniface, who narrowly escaped the bench of bishops: "When the allied monarchs came down, and were made Doctors of the University, a breakfast was given at St. Boniface; on which occasion Crump allowed the Emperor Alexander to walk before him, but took the *pas* himself of the King of Prussia and Prince Blücher." "He does not disguise his own origin, but brags of it with considerable self-gratulation. 'I was a charity-boy,' says he; 'see what I am now; the greatest Greek scholar of the greatest College of the greatest University of the greatest Empire in the world.'" Yet if Crump became a bishop, we presume his coat-of-arms would have been issued in order to take its place in the 'Blazon of Episcopacy.' It seems, indeed, strange that such worldly gewgaws should be so exclusively affected by clergymen.

Mr. Bedford's book was first issued in 1858, and this sumptuous edition proves that it meets some need. It shows a great outlay of time and work, and from an heraldic point is entirely satisfactory. It will be, for example, of service in identifying the founders of churches and tombs, and will gratify many clergymen who take a languid interest in archæology. But we can hardly expect to see in the next edition a section devoted to the arms of the bishops of the Episcopal Church in the United States, unless the Church of England shall relent. In which case, doubtless, Garter will supply the necessary shields from the date of Bishop Seabury, as authentic and satisfactory as those of their English brethren.

BOOKS OF THE WEEK.

Abbott, C. C. The Hermit of Nottingham. Philadelphia: J. B. Lippincott Co. $1.25.
Aitken, G. A. Sheridan's The Critic. [Temple Dramatists.] London: Dent; New York: Macmillan. 45c.
Alexander, Mrs. Barbara, Lady's Maid and Peeress. Philadelphia: J. B. Lippincott Co.
Allen, Grant. The Evolution of the Idea of God. Henry Holt & Co. $3.
Baldwin, Prof. J. M. Social and Ethical Interpretations in Mental Development. Macmillan. $2.60.
Balfour, M. C. The Fall of the Sparrow. Putnams. $1.
Bangs, J. K. Paste Jewels. Harpers. $1.
Barnard, J. H. The Naval Militiaman's Guide. D. Van Nostrand Co. $1.25.
Benning, Howe. The Benhurst Club; or, The Doings of Some Girls. Boston: The Pilgrim Press. $1.25.
Besant, Sir W., and Pollock, W. The Charm, and Other Drawing-Room Plays. F. A. Stokes Co. $1.
Besant, Sir Walter. A Fountain Sealed. F. A. Stokes Co. $1.50.
Bétis, Victor, and Swan, Howard. First Facts and Sentences in French. Scribners. 65c.
Bickford, L. H., and Powell, R. S. Phyllis in Bohemia. Chicago: H. S. Stone & Co.
Brown, Kate Z. The Plant Baby and its Friends. Boston: Silver, Burdett & Co. 48c.
Bruce, Rev. A. B. The Providential Order of the World. Scribners. $2.
Clark, Imogen. Will Shakespeare's Little Lad. Scribners. $1.50.
Clinton, H. L. Celebrated Trials. Harpers. $2.50.
Coleridge, M. E. The King with Two Faces. Edward Arnold. $1.50.
Coppens, Rev. Charles. Moral Principles and Medical Practice. Benziger Bros. $1.50.
Crane, Elizabeth G. Berquin: A Drama. Scribners. $1.
Curtis, G. W. Ars Recte Vivendi. Harpers. $1.25.
Dale, Darley. Chloe. London: Bliss, Sands & Co.
Deland, Ellen Douglas. Alan Ransford. Harpers. $1.50.
Elliot, D. G. The Gallinaceous Game Birds of North America. Francis P. Harper. $2 50.

Embree, C. F. For the Love of Tonita, and Other Tales of the Mesas. Chicago: H. S. Stone & Co.
Eyre, J. J. Doctor Mendini's Hygienic Guide to Rome. London: The Scientific Press.
Fitz-Gerald, S. J. A. Stories of Famous Songs. London: Nimmo; Philadelphia: J. B. Lippincott Co. $2.
Flammarion, Camille. Urania. F. T. Neely. 50c.
Front, W. H. The Knights of the Round Table. Scribners. $1.50.
Gage, A. P. Physical Experiments: A Manual and Note-Book. Boston: Ginn & Co.
Gardner, Alice. Rome the Middle of the World. Edward Arnold. $1.25.
Geikie, Sir Archibald. The Founders of Geology. Macmillan.
Gilder, Miss Jeanette L. Taken by Siege. Scribners. $1.25.
Gladden, Washington. The Relations of Art and Morality. W. B. Ketcham. 50c.
Gosch, C. C. A. Danish Arctic Expeditions, 1605 to 1620. 2 vols. London: The Hakluyt Society.
Greene, Sarah P. McL. Stuart and Bamboo. Harpers. $1.50.
Harris, Linnie S. The Young Capitalist. Boston: The Pilgrim Press. $1.25.
Harrison, Benjamin. This Country of Ours. Scribners. $1.50.
Hart, Mrs. Ernest. Picturesque Burma. London: Dent; Philadelphia: J. B. Lippincott Co. $7.50.
Hatton, Joseph. The Dagger and the Cross. R. F. Fenno & Co. $1.25.
Herrick, Robert. Literary Love-Letters, and Other Stories. Scribners. 75c.
Higginson, Ella. A Forest Orchid, and Other Stories. Macmillan. $1.50.
Holbrook, Florence. 'Round the Year in Myth and Song. American Book Co. 60c.
Holden, Prof. E. S. Memorials of William Cranch Bond, and of his Son, George Phillips Bond. San Francisco: C. A. Murdock & Co.; New York: Lemcke & Buechner.
Hornibrook, Isabel. Camp and Trail: A Story of the Maine Woods. Boston: Lothrop Publishing Co. $1.50.
Humphreys, Mary Gay. Catherine Schuyler. [Women of Colonial and Revolutionary Times.] Scribners. $1.25.
Hutchinson, T. Wordsworth's Poems in Two Volumes. [1807 edition.] London: David Nutt.
Ihering, Prof. Rudolph von. The Evolution of the Aryan. Henry Holt & Co.
James, H. R. Boethius's Consolation of Philosophy. Translated into English Prose and Verse. London: Elliot Stock.
Kent, C. W. Shakespere Note-Book. Boston: Ginn & Co. 70c.
King, Capt. Charles. An Army Wife. F. T. Neely. 50c.

HENRY HOLT & CO., N. Y.

HAVE JUST PUBLISHED:

THE EVOLUTION OF THE IDEA OF GOD.

An Inquiry into the Origins of Religion. By GRANT ALLEN, Author of "Physiological Æsthetics," "The Color Sense," Etc. 8vo. $3.

"This work contains, I believe, the first extended effort that has yet been made to trace the genesis of the belief in a God from its earliest origin in the mind of primitive man, up to its fullest development in advanced and etherealized Christian theology."—*From the Preface.*

THE ITALIANS OF TO-DAY.

By RENÉ BAZIN. 12mo. $1.25.

An eminently "readable" book, written vigorously and picturesquely. It is said to touch upon the vital questions of modern Italian life with gravity and insight. It treats, among other things, of Elections, Agriculture, Excessive Taxation, Building Speculation, the Unification of Italy, Universities, Literature, Brigands, etc.

A POSTHUMOUS BOOK BY H. A. TAINE.

JOURNEYS THROUGH FRANCE.

Being Impressions of the Provinces. With seven illustrations. *Library Edition.* 12mo, $2.50.

"The impressions of the great philosopher of the people which he knew better than any of his countrymen."—*London Athenæum.*

THE NON-RELIGION OF THE FUTURE

A sociological study. By M. GUYAN. 8vo. $3.

THE EVOLUTION OF THE ARYAN.

By RUDOLPH VON IHERING. 8vo. $3, *net.*

A COURSE OF HOME READINGS.

The Chautauqua Reading Circle offers a definite plan and helps busy people to make the acquaintance of good books. The course of **HOME READINGS** this year will be found one of great attractiveness to busy men and women who want to enlarge their general intellectual horizon and get a clear idea of the great facts of history, while they are also keeping up to the times in the modern sense.

CHAUTAUQUA { Its Extent. Its Popularity.

When you remember that Chautauqua is now 23 years old, that it has gone into every State, has enrolled over **a quarter of a million** members in almost every city, town, and village, that it keeps in successful operation a great variety of courses of home reading, that it conducts the largest and most complete summer school in the world, and that nearly 60 Chautauqua Summer Assemblies are held in 31 different States, attracting every year over half a million people—you get some idea of its strength, its scope and its influence. Send for illustrated booklet to JOHN H. VINCENT, Chancellor of Chautauqua, 26 Genessee St., Buffalo, N. Y.

NOW READY.

The Principles of Chemistry.

By D. MENDELÉEF. Translated from the Russian (Sixth Edition) by GEORGE KAMENSKY, A.R.S.M. of the Imperial Mint, St. Petersburg, and Edited by T. A. LAWSON, B.Sc., Ph.D., Fellow of the Institute of Chemistry. With 96 Diagrams and Illustrations. 2 vols. 8vo, $10.00.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing here. Special collections formed, and fuller information supplied than from any other house. Books, both old and new, and relating to any subject, can readily be supplied, at very moderate prices.

Agents for Clubs, Libraries, and all private collectors.

187 PICCADILLY, LONDON, W.

Dr. Jaeger's SANATORY UNDERWEAR

AS USED BY

Dr. Nansen

on his famous Arctic sledge journey.

"The result of all this experimenting was that I made up my mind to keep to my woollen clothes, which would give free outlet to the perspiration. Johansen followed my example, and on the upper part of our bodies we each had two Jaeger Undershirts next the skin, etc., etc."—"Farthest North," Vol. II., p. 115.

This Applies to You.

Jaeger Underwear allows the skin to breathe freely, at the same time absorbing its exhalations, leaving the body dry and warm. Gives the greatest warmth with the least weight.

NEW AND FORTHCOMING BOOKS

Specimens of the Pre-Shaksperean Drama.

With an Introduction, Notes, and a Glossary. By JOHN M. MANLY, Professor of the English Language in Brown University. In three volumes. Vol. I. nearly ready. *Athenæum Press Series.*

Selections from Malory's Morte Darthur.

Edited, with Introduction, Notes, and Glossary; by WILLIAM E. MEAD, Professor of the English Language, Wesleyan University, Middletown, Conn. *Athenæum Press Series.*

Poems of William Wordsworth.

Chosen and Edited, with Introduction and Notes, by EDWARD DOWDEN, Professor of English Literature in the University of Dublin, Clark Lecturer in English Literature, Trinity College, Cambridge. 522 pages. *Athenæum Press Series.*

School Edition of Homer's Odyssey,

Edited, with Introduction, Commentary, and Vocabulary, by B. PERRIN and T. D. SEYMOUR, Professors of Greek in Yale University.

Eight Books, with Vocabulary. Square 12mo. Half morocco. 351 pages. For introduction, $1.50.

Four Books, with Vocabulary. Square 12mo. Half morocco. 248 pages. For introduction, $1.25.

A Practical Physiology.

A Text-Book for High School, Academy, and Normal School Classes. By ALBERT F. BLAISDELL, M.D., author of "Blaisdell's Series of Physiologies." Fully illustrated. 448 pages. For introduction, $1.20.

Elements of Chemistry.

By R. P. WILLIAMS, in charge of the Chemical Department of the English High School, Boston. 412 pages. For introduction, $1.10,

Cicero: Selected Letters.

Edited, with Introduction and Notes, by FRANK F. ABBOTT, Professor of Latin in the University of Chicago. *College Latin Series.*

Shakespeare Note-Book.

Designed for Advanced Courses in Colleges and Universities, for Shakespeare Clubs, and Critical Readers. By CHARLES W. KENT, Professor of English Literature in the University of Virginia. Flexible boards. Quarto. For introduction, 60 cents.

Physical Experiments.

A Manual and Note Book by ALFRED P. GAGE, author of "Principles of Physics," etc. Boards. 97 pages. For introduction, 35 cents.

Outlines of the History of Classical Philology.

Department of Special Publication. By ALFRED GUDEMAN, Associate Professor of Classical Philology, University of Pennsylvania. Third Edition. Revised. 81 pages. For introduction, $1.00.

An Introductory Course in Quantitative Chemical Analysis.

By PERCY N. EVANS, Associate Professor of Chemistry in Purdue University, La Fayette, Indiana. 83 pages. For introduction, 50 cents.

The Study of Mediæval History by the Library Method.

By M. S. GETCHELL, Teacher of History in the English High School, Somerville, Mass, 73 pages. For introduction, 50 cents.

Stories of Insect Life.

By CLARENCE M. WEED, Professor of Zoölogy and Entomology in the New Hampshire College of Agriculture and the Mechanic Arts. Boards. 54 pages. For introduction, 25 cents.

The Nation.

NEW YORK, THURSDAY, OCTOBER 28, 1897.

The Week.

President McKinley may thank his stars that England rejected his free-silver proposals. If they had been accepted and reported to Congress, we should have seen a financial panic worse than that of 1893, and should have been face to face with an unparalleled political betrayal—nothing less than that of the chief of the party opposed to free silver at 16 to 1 doing his best to force free silver upon us at 15½ to 1. The very proposals which Senator Wolcott made in the name of the Government of the United States constitute a political scandal. When he told Lord Salisbury, as he did according to the official account of the conference, that "the American envoys had accepted the ratio of 15½ to 1," did he speak with President McKinley's authority? If he did not, there should be an instant disclaimer from Washington. If he did, we hope to hear no more of the opposition of the Administration to "Bryanism." Mr. McKinley has out-Bryaned Bryan. Moreover, there was not a word in Senator Wolcott's proposals looking to the maintenance of the gold standard; not a word about keeping silver up to a parity with gold; all was in the interest of free coinage of silver, pure and simple, and the gold standard might go hang. If Congress does not inquire into this scandal and demand the full correspondence and the text of Senator Wolcott's instructions, it will be recreant to its duty. Meanwhile, the firmness of the Indian Government, and the vigorous protests of English bankers and merchants, have saved not only England from the folly of her rulers, but the United States as well from the folly of their Government.

Platt is determined to connect the President with his fight against good government if it can possibly be done. He seems to have put great pressure on Gen. Butterworth, of the borough of Ohio, to get aid from him in this direction, for the General said in his speech in Brooklyn on Monday week: "On the evening of the 2d of November a telegraph message will be anxiously awaited at the White House. President McKinley said to me night before last, 'Ben, you know how earnestly I feel in regard to the triumph of the Republican party in Greater New York.'" That puts the President in the most attractive light before the machine workers, for what could be more winning than this picture of him laying his hand upon the General's shoulder and calling him "Ben"? And what a glorious triumph it will be for the "Republican party in Greater New York" if, in consequence of Platt's exertions, the effort to give it honest government shall be defeated and the city turned over to Tammany Hall for four years! The picture of a President of the United States yearning for a triumph of this sort is one of the most extraordinary ever laid before the country.

Secretary Cornelius N. Bliss presided last week at a Platt-Tracy ratification meeting in this city. The only object of that meeting was to persuade Republican citizens that they should throw away their votes upon Gen. Tracy, rather than give them to Mr. Low, because it is of more importance to save the "Republican organization" from humiliation than it is to save the city from Tammany rule. If Gen. Tracy were out of the field, there would not be a shadow of a doubt of Mr. Low's election. He remains in the field because Platt keeps him there, and Platt's excuse for keeping him there is that the Citizens' Union refused to coöperate with him in the selection of its candidate. Mr. Bliss said in January, 1896, that Platt was a politician "who deliberately acts so as to make it impossible for self-respecting men to be allied with him even for a good purpose." Is not that the exact position which the Citizens' Union took when it refused to confer with Platt? Mr. Bliss said also in January, 1896, that Platt's machine was based on an enrolment unprecedentedly "rotten," that it could not "command the confidence of the Republican party nor of the public," that it was "fraudulent and illegal," that "honest Republicans cannot support it, nor is there any basis on which they can cooperate with the men who have secured control of it by means of frauds which they refuse to undo." Mr. Platt and the organization which Mr. Bliss is now defending and supporting are precisely what they were in 1896. There has been no change whatever, except for the worse.

The distinction between "the organization" and the party, which Platt is making so clear in this city, has been brought home to the people of Pennsylvania more plainly than ever before by the President's gift of the consulate at Matanzas, Cuba, to State Senator Saylor. The Republicans of the Keystone State by an overwhelming majority are honest and respectable citizens, who want only honest and respectable men sent to represent this nation abroad; Senator Saylor was shown, a few months ago, to have been engaged in a disgraceful attempt to collect hundreds of dollars from the State Treasury to which he had no claim. The facts in the case were notorious, for Gov. Hastings set them forth in a message vetoing the theft. The scandal was so gross that the Quay machine shrank from the idea of nominating the swindler for a second term, because it feared that such a course would lose the party the county from which he comes. Self-respecting members of the Republican party throughout the State supposed that Saylor's political career was ended, and only regretted that he could not be sent to prison for his crime. "The organization," however, regarded Senator Saylor's attempt to swindle his fellow-citizens, not as an offence which should disqualify him for any place in the public service, but only as a reason why he should be given an office in which he would represent the United States in a foreign country. Quay, Penrose, and the rest asked President McKinley to give him such a place. As soon as this impudent scheme was broached, Mr. McKinley was advised of Saylor's disgraceful record by members of the Republican party not belonging to "the organization"—prominent citizens of Philadelphia, who are reputable business men. "The organization," however, was not at all disturbed by this protest from the ranks of the party, and its composure was justified by the result.

Chattanooga, Tenn., had a city election about the same time with Indianapolis, and the voters decided it in the same way—on the merits of the candidates, and without reference to their attitude on national issues. It happened in Chattanooga, as in Indianapolis, that the successful Democratic candidate was a silver man, but it was a mere chance, as was the fact that for the past six years the Tennessee city has had Democratic mayors who were "gold-bugs," although a majority of the voters are Republicans in national politics. The explanation of the silver man's success in Chattanooga was the fact that he had the cordial support of all Democrats and of many Republicans, on his merits as a candidate. In like manner the Silver Democrat who ran for reëlection in Indianapolis was supported by the Gold Democrats, on the ground that "the National Democratic party believes that national questions should have no place in any city election"; and that, while they emphatically repudiated and denounced the free-silver declaration in the platform on which Mayor Taggart was running, yet, "believing that his administration has been, in its main features, satisfactory and successful, and feeling that

his views on the financial question are not of the least importance, we are glad to endorse his candidacy and to pledge our earnest efforts to secure his re-election." Are the intelligent voters of this metropolis more gullible than those of Indianapolis or Chattanooga?

The question as to dismissals from the classified civil service without cause has worked out in the right way. The courts have very properly held that no rule can deprive an official of his legal right to remove a subordinate. It would be ruinous to discipline if any subordinate might at any time run to a court to make complaint that he was not being treated as he thought he ought to be. At the same time it is essential to the establishment of the merit system that the subordinate shall in some way be assured protection from the danger of removal without cause. This desirable result is accomplished by the decision of the Administration that each member of the cabinet shall issue regulations requiring that removals shall be made only for just cause and upon written charges, which the accused shall be allowed to answer. These regulations have not the legal force of law, but they will have all the moral power of the most vigorous statute if the head of each department requires them to be observed. Secretary Gage, for example, can make it clear at once that any internal-revenue collector who removes subordinates without cause will be removed himself, and there will never be another case of the same sort. Public opinion will render it impossible for a collector, postmaster, or other superior to make improper removals without an exposure which will involve the carrying of the offender's case to Washington, and each member of the cabinet is now going on record in a way which commits him to taking the proper action against the offender.

The one salient fact about the Union Pacific business is that the reorganization committee undertake now to pay $8,000,000 more than they had agreed to, in order to get possession of the road. In other words, instead of a compromise, by which a part of the Government's legal claim was to be sacrificed, the whole Government lien is to be paid off. This is to be done to avoid delays, the committee say, and to prevent the whole subject from being again made a football of by Congress. But we think they ought to explain more clearly how they suddenly find themselves able to pay $8,000,000 more than the sum they had fixed upon as the utmost limit. Is it improving business that has made the road more valuable? But should not shrewd men have foreseen that business would improve? We are aware that the Union Pacific Government directors and the officials of two administrations had advised accepting the syndicate's offer as the best obtainable; but it now appears that it was not the best obtainable by $8,000,000. This, we say, ought to be explained. Such transactions unexplained do more to promote Bryanism and Socialism than all the books and speeches together.

The lynching of five men at once by a mob in Indiana, a few weeks ago, was so extraordinary a performance for a long-settled State that any fresh light which may be cast upon it is welcome. The *Independent* publishes a valuable article from the Rev. Dr. D. W. Fisher, President of Hanover College, who has lived for nearly twenty years in an adjoining county and within about forty miles of the recent terrible slaughter. The region is in a somewhat stagnant condition, without being specially backward in what is commonly called civilization, while the population consists of the descendants of desirable settlers from the East and of "poor whites" who migrated thither from Kentucky, Virginia, and North Carolina. The people had been long terrorized by a gang of thieves and outlaws, who had been guilty, not only of robbery of all grades, but also of shocking brutality, one of their more recent barbarities having been the roasting of an old couple on a hot stove, to make them reveal the whereabouts of their money. There was a well-grounded conviction that any one who appeared in court to testify against one of this gang, did so at the peril of property or of life, and the result was that people had lost confidence in the courts as a means of relief. At the same time they remembered that on the line of one of the railways running through this locality, and not very far from it, a similar gang had been lynched years ago, and that the community had since been free from such a combination of criminals.

There seems no reason to expect that any punishment will ever be inflicted upon those responsible for this wholesale lynching. Every leading newspaper of Indiana has spoken out boldly in denunciation of the outrage, and a very large minority of the people, including not a few in the region of the crime, are of the same mind, in Dr. Fisher's opinion, while the Governor is doing all in his power to secure the arrest and punishment of the perpetrators. "But," he adds, "if a vote were polled on the basis of universal suffrage, my observation leads me to think that the majority would either be silent, or without reflection say to the mob, 'Well done.'" He is also of the opinion that the same would be true in a large part of the United States under similar circumstances. It is, therefore, highly improbable that a grand jury can be empanelled that will bring in an indictment of the lynchers, or that, if an indictment is found, conviction is possible.

The big-navy mania is again afflicting many great minds. Emperor William wants the Reichstag to vote him a fleet at least as large as that of France; he really ought to have one as large as those of France and Russia combined. But by the time he had it built, they would have doubled theirs. Meanwhile, England's announced policy is to have a navy equal to any two that could be brought against it. So there would be more building of ships necessary all round. It is this perception of the growing of the problem on your hands while you are solving it that stays even the impetuosity of Mr. Roosevelt. He wants a big navy, but when pressed as to figures takes refuge in vagueness. Should we have a navy as large as England's? "Well, I would not say that." As large as that of France or Russia? "No, I would not even say that at present." No such modesty, however, deters the naval contractor, Mr. Cramp, who recently expressed his ideas in the *North American*. He would have the American navy equal to any afloat, and the more contracts that are offered his firm, the higher will his patriotism rise.

Mr. George M. Pullman, whose sudden death was announced last week, was something more than a "captain of industry." In the latter capacity he had no superior in this country. The business enterprise that is associated with his name and is due to his initiative, is one of the largest that have ever been organized under a single head, and one of the most useful. He revolutionized the methods of railway travel, not because he was an inventor merely, but because he was a man of wide mental reach. The town of Pullman was founded by him, not as a benevolent undertaking, but as a business scheme purely. Mr. Pullman's idea was that by providing superior houses and accommodations for wage-workers, at the price usually paid for an inferior sort, he could command a superior class of workmen, and probably exert an educating and uplifting influence at the same time. The place was to be first of all a paying one, for if it were not such it could not last. Its success required that control of the buildings should reside in the company, since otherwise the sanitary and other regulations for sober and wholesome ways could not be maintained. These were considered by many persons as restrictions on liberty. All such were free to live outside the town. While this notable experiment was proceeding, the Debs strike took place. It did not grow out of the previous re-

duction of wages, or as a consequence of the hard times. It came a year later, when some outside person or committee demanded a restoration of the old rates before any restoration of business had taken place. Mr. Pullman said that the company was even then building cars at a loss, and that the demand for a restoration of wages would necessitate a still greater loss, and if granted would soon end in closing the works. Mr. Debs, an outsider, then took the matter in charge, and ordered a strike in the Pullman works, and afterwards a series of strikes on all Western railways that hauled Pullman cars. The results are too recent to need recapitulation. One of the incidents was a demand by Debs and other outside persons that Mr. Pullman should submit to arbitration the question whether he could afford to pay the increased wages, which he promptly declined to do, saying it was useless to submit the question to arbitration, unless he intended to abide by an adverse award (if it should be given), which was financially impossible. In this he was clearly in the right, and his firmness was worthy of all praise. The present prosperity of the town of Pullman and of its laboring population is due to his firmness and sagacity then.

As bearing upon the great strike of the English engineers, the editor of the London *Iron and Coal Trades Review*, Mr. J. S. Jeans, published a remarkable letter in the London *Times* arguing that Great Britain can no longer compete with the United States in the production of either pig iron or finished steel. His point was, of course, that the engineers could not afford to demand too much of a trade which was bound in any event to decline. But for readers on this side of the Atlantic the following is the notable part of his letter:

"I know a good deal of the conditions in Great Britain. I thought I had ascertained something of the conditions in the United States, as the result of several visits to that country, and of having had large and perhaps unexcelled opportunities of seeing the progress there made in manufacturing industry. But I confess I was totally unprepared for the figures which large American manufacturers have placed before me as to the cost of production at their numerous and colossal establishments. I cannot, of course, submit these figures to your readers, nor is it necessary in this connection, even if it were expedient, to refer to the details of particular firms. Those who are really concerned to know the truth can convince themselves without much difficulty of the superior economic situation enjoyed by the United States. The cost of producing Bessemer pig iron in the most favorable circumstances is now in that country 10s. to 15s. per ton less than the corresponding cost in Great Britain. The difference in the cost of producing a ton of steel is at least as much, and in the majority of cases is likely to be a good deal more. I know of cases where the labor-cost on a ton of billets and rails is 25 to 35 per cent. less than the lowest labor-cost I have ever heard of in this country, although the rate of wages paid in America is materially higher. Quite a number of iron-works in this country pay from 15s. to 17s. 6d. per ton for their coke, which in the neighborhood of Pittsburgh is delivered at works for 5s. to 6s. per ton."

In view of these facts, which the success of American firms in outbidding English manufacturers on contracts for steel rails in India and Japan amply confirms, what are we to say of the iron and steel schedules of the "fairest" and most "scientific" tariff ever framed? American pig iron is cheaper by from $2.50 to $3.75 a ton than English, yet the fair and scientific Dingley writes down a protection of $4 a ton for the American article. With steel rails made in this country at from 25 to 35 per cent. less cost than in England, they had to be protected by Dingley at $7 a ton, or their manufacture would cease. What is the real reason for duties so demonstrably needless? We may get light from the action of the glass-manufacturers. They got their needless duties out of Dingley, and then, in spite of the appeals and warnings of the *Tribune*, formed a Trust, at once advanced the price of glass five per cent., and say it will be increased another five in November. That is the only remaining reason for a whole line of Dingley duties—they are put on, not to protect the manufacturer against competitors whom he is actually beating in foreign markets, but to enable him to enter into a Trust and exact a higher price from the American consumer than the foreign consumer has to pay for the same article. This may be fair and this may be scientific, but if so, it is only because it is a fair and scientific way of cheating.

The Spanish complication is evidently entering upon another stage, though as to what it is to be, the contradictory dispatches leave us in the usual uncertainty. According to one "trustworthy" telegram, Sagasta has accepted our mediation; according to another, equally trustworthy, he has resented its very proffer, and has replied that "Spain will not admit the right of any foreign Power to interfere in any of her affairs." We must say we think the latter answer is the one most likely to have been given, however carefully the language may have been guarded. At Washington they still say that there is no reason for Spain to have taken offence at Mr. McKinley's communication, it was so "friendly." But it is not manner that counts in these things; what was the substance of Gen. Woodford's note to the Spanish Government? If it intimated our right to interfere in Cuba, in the remotest degree, it could not have been received by Spain as a friendly note. No polite phrases could obscure the fact that it was, in effect, an affront to Spanish sovereignty. Mr. McKinley may be anxious to have it appear, in case of trouble, that it was Spain, not he, that was in the wrong. That is only natural; but the account will have to be made up on the basis of what was said, not of the polite manner of saying it.

The repression of free speech in Germany goes on unsparingly. Herr Liebknecht has just been sentenced to four months' imprisonment for having said, two years ago: "Under the protection of the highest authority in the state, insults are now being hurled at Social Democracy; under the protection of the highest authority the gauntlet is thrown down before the party, a challenge to battle for life or death." He denied, on trial, having intended any insult to the Emperor, but the upright judge held that, whatever the intention of the speech, it was addressed to an audience that might misinterpret it, and therefore to jail Herr Liebknecht must go for *lèse-majesté*. That is to say, an old gentleman above seventy, representing the political party which casts more votes than any other in Germany, is sentenced for a political address which in England or France or the United States, or even in Spain or Italy, would have passed almost without notice. This is tantamount to saying that members of the German Parliament, as well as the German press and the universities, must say nothing about politics that can possibly give the Emperor displeasure. A great empire is thus condemned to the strictest silence. This cannot go on.

The impudence of the Sultan in his letter to the Powers, urging them to hurry up and accept his plans for the government of Crete, fully appears only when we remember what the plan was which the Powers had announced as their own. This was explained by Mr. Curzon in the House of Commons on July 19 last. First, the Powers had agreed to "the appointment of a European Governor" for Crete. The Sultan now notifies them that he is going to appoint a Turkish Governor. Next, said Mr. Curzon, there was to be a local gendarmerie, and the Turkish troops were to be withdrawn. Not at all, says the Sultan, the troops are to stay to keep order. The next of the "principles," which, according to Lord Salisbury's mouthpiece, had been "acquiesced in without exception by all the Powers," was the issue of a loan to meet the expenses of the new régime and the convocation of a Cretan General Assembly. The Porte agrees to the loan—the Powers may loan it as much money as they please; but the rest of their "principles" are treated with contempt. The Sultan evidently means to rule Crete according to his own fancy, and to pay no attention at all, unless forced to, to the solemn "bases" of the Powers. Residents in the island, as well as the foreign forces there, have no illusions on this point. M. Gustave Larroumet, writing to the *Figaro* from Canea, reports the universal opinion of Europeans—sailors, soldiers, and diplomats—to be that "the Turks do not mean to leave."

THE GRAVITY OF THE RESULT.

The London *Spectator* says "the [New York] election has a deep interest also for the whole civilized world," as well as the American people. "Modern civilization is essentially a city civilization, and if the democratic principle cannot solve the problem of city life, it is doomed." We believe that this very idea is, at this moment, clearly or obscurely, consciously or unconsciously, at the bottom of most of the excitement we are now witnessing in this city. People are slowly beginning to comprehend that we are playing a far deeper and more serious game than the mere election of a Mayor, even of a Mayor as powerful as that of Greater New York. We are, in fact, witnessing the first real attempt of democracy to deal with its city question, and, considering the way the world is going, this attempt is of immense interest to every country in Christendom. If we succeed, it is a great event for every country as well as ours. If we fail—if, after the case has been laid before the public in the plainest way, we return to the old régime—if a majority says that it prefers the old régime, that Croker and Platt and all the bosses are good enough for it, we do not hesitate to say that the news will be received all over the world with consternation, as a veritable catastrophe for free government. It will stimulate everywhere the growing trend towards Cæsarism. The well-governed cities of the world thus far have not been democratically governed. The question whether democracy *can* govern a city is still unsettled. We are working out the experiment for the benefit of mankind. What Longfellow said of the Union is in a measure true of the Low movement in this city at this moment:

> "Humanity with all its fears,
> With all the hopes of future years,
> Is hanging breathless on thy fate."

The fact is, we have reached the parting of the ways. Our cities, in spite of ourselves, in spite of the secret dread of the country districts, have grown at an enormous pace. The inhabitants of every country are doing what ours are doing, pouring into the places in which population is largest and most concentrated, where most enjoyment of life is to be had, most society, most amusement, readiest employment, and easiest locomotion. The movement is as irresistible as the tides. It has modern science and invention, in every field, behind it. Through it the modern world is a new world, such as the ancients never dreamed of. The face of the country is not greatly changed since Cato's time. There may be more and better cultivation, but "the happy autumn fields" still wear the brown and draw the tears of two thousand years ago. The cities are a new feature in our landscape, as different in size, and in arrangement, from the ancient world as can well be imagined, and their government is rendered tenfold more difficult than that of the ancient cities, in that it receives no help from religion, or superstition, or ancient tradition. We have to get these heterogeneous masses to make themselves comfortable and healthy solely by appeals to their reason. We have no gods of Rome to invoke. Our arguments have to be pure business and utilitarianism.

But, until within a very few years, we had never recognized that the cities and democracy together had come upon us in a furious torrent, for which we had not made the slightest preparation, and that if channels, and locks, and wharves were not provided for both, they would ruin us. We were first startled into consciousness of the situation by the Tweed frauds, but our alarm lasted only about two years. We relapsed into indolent indifference, and the crisis continued to gain in gravity, until at last, instead of one boss like Tweed, we found ourselves under the dominion of two, who not only governed us by turns, but had also subjugated the country as well as the city. To stop where we are would be one of the most tremendous failures of history. The gradual destruction of popular government would go on, and it would be found before long that the cities had become simply places from which bosses drew money for the destruction of public liberty. It is the growing perception of this fact that has led to the Low movement, and has caused the world to fix its eyes on us, as men who are really fighting one of the great battles of civilization, such as Charles Martel won at Tours over the Saracens.

Should Low win, it will put an end to the boss system of government in city affairs. It will put an end to the boss system of nomination, which is at present ruining American public life by the exclusion of everybody who does not satisfy one ignorant and corrupt man. It will introduce a new system of nomination, which will stimulate popular interest in politics by the large number of persons whom it calls on to take part in the choice of candidates. Though last, not least, it will open a new era in American cities, by the recognition of the fact that their affairs are business, not politics; that people's lives and health and the education of their children are to the masses the main interest of government. It will show, in short, for the first time, that a city can be well governed by universal suffrage. The importance of this to democracy can hardly be overrated. It is no wonder the world is watching anxiously for the result.

A COUNSEL OF PERFECTION.

Henry George has more than once threatened Croker with the penitentiary if he ever gets the power to put him in it. We are not sure that his threat did not also cover Platt, for Platt's offences against the community are of precisely the same character. He gets his money in much the same way, but instead of spending it in personal indulgence, as Croker does, he allows a certain portion to be diverted to his sons' firms, so as to be ostensibly pocketed by the young men. But, whatever the words he used, George's threat feels like a breath of fresh air passing through a close room. Nothing else we have heard in this canvass sounds so like an assurance that we have a man among us whose sense of proportion and of right and wrong has not been dulled by long use, and who has managed to retain his share of the old American civic courage. The putting of Platt and Croker in jail ought to be the final cause of the present conflict. It will be well to elect Low, but the work will not be complete as long as these two tremendous criminals stalk abroad. This is the ultimate end which every man now supporting Low ought to have in view. It was the great object of such reformers as Samuel J. Tilden and Charles O'Conor in 1870. They sought, it is true, to overthrow the Tweed régime, but they never rested until they had the whole Tweed gang in custody or had put them to flight. That is the way to reform such abuses as we are contending with. The way to talk about the malefactors who have carried them on is the way Henry George talks; and the intentions he holds with regard to them are those which we should all cherish. We do not assert they are capable of execution. Doubtless it will prove only a counsel of perfection to say that both these men ought to be at hard labor in the penitentiary; but counsels of perfection, at all events, are good for the soul.

Consider what has happened. We give a cheat of one small district six years in the penitentiary. These two men have stolen every district in the State, and the city as well. They have actually appropriated the two branches of the Legislature and made them and every prominent public officer the subservient instruments of their will. Platt has actually stolen the governorship and given it to an accomplice. He has through his agents imposed a charter on the city, in the teeth of the remonstrances of every instrument of expression the city possesses, and has employed in the drafting of it a partner of his son's and a strongly suspected ex-mayor of Croker's. To accomplish all this, he has extorted in very large sums money properly belonging to widows and orphans and innocent third parties, fraudulently surrendered to him by cowardly officers of corporations. They both have done, in short, by intrigue what Louis Napoleon did in Paris in 1851 by force of arms. But there were Frenchmen who gave

the crime and the criminal their right name, and Frenchmen who refused to live under them; and the régime thus set up had to be maintained by martial law. We have sat for ten years under ours, timidly and meekly, peaceably and, at most, cynically. We have been content to use Platt even when it suited our purposes. He was thoroughly exposed in 1896, before the election, by the Committee of Thirty, but, far from being repudiated or pursued criminally, he was gladly protected, so that he might help elect McKinley and protect us against Bryan! This one incident alone, even if it had not been followed by the awful spectacle of 1897, when this one man ordered his own return to the United States Senate, by a venal and silent Legislature, with only a handful of journals outside this city protesting, ought to make us blush in the dark. Compared to this, what are McKane's crimes? What were poor Maynard's? Why, mere bagatelles.

The fact is, disguise it as we may, the patient attitude of the men of this State and city during the last ten years towards these two criminals might well, as the poet says, make "the pale young mother" fear to "boast a man is born." Anything to equal our supineness while our political system was being altered, and our government was being stolen from us by a foreign ruffian and a common American cheat, is not to be found in history. We say deliberately, and challenge contradiction, that there is no other case on record where men submitted to the modifications made in their political system over a series of years, such as have been made in ours, by these two men, without making some attempt at resistance, without some attempt to put the law in force, or, failing the law, to try the sword. It is altogether an exceptional as well as a shameful record.

We are, therefore, thankful to Henry George for reminding us that it is not politics but crime we are dealing with, and it is not the ballot so much as the jailer that we need. We hear it said that we cannot get at Croker and Platt legally because they are not in office. But what difference does this make? What does this show except that our laws are defective? When we see what they have done and are doing with impunity, we learn that a new form of crime has been started among us, which calls for fresh legislation and prompt punishment. When we found that two men could ruin our government and levy blackmail without exposing themselves to indictment, our duty was to make their conduct indictable, not to sit down and cry, or lament over the degeneracy of the age. It was not possible, of course, to get the necessary legislation passed by Platt's Legislature; but it was our duty as American citizens to get a Legislature that was not Platt's and never rest till we got it. What has become of the Americans who fought through the civil war, and drove Tweed into the penitentiary and Connolly into exile? We hear on every side that we are prosperous, but what kind of prosperity is it which the slaves of two "bunco-steerers" enjoy?

THE SPOILSMEN AND THE INDIAN AGENCIES.

Rumors are afloat, too definite in form to be ignored with safety, to the effect that a group has been organized in Congress, headed by Senator Elkins, to press upon the national Administration the dismissal of several of the army officers now detailed as acting agents in the Indian service, and substitute civilians for them. Everybody knows what this means. It is a trick to recover some of the spoils of which recent advances in civil-service reform have stripped the party in power, and thus to replenish the campaign bribery-chest.

The law on this subject is so explicit that the humblest intelligence can grasp it. Every order issued from Washington to an army officer, detailing him to an Indian agency, cites the statute by title and date as proof of the President's authority. It requires, in the plainest of plain English, that, whenever practicable, army officers shall be employed as agents. Repeated efforts have been made by spoilsmen in Congress to procure its repeal, but thus far without avail. Successive administrations have evaded it as far as they dared, however, and the temper of the present Administration is still an uncertain quantity. The Elkins contingent will first try to "work" the President and Secretary Bliss without resort to any change of law. If they fail in that, their next effort will be to insert a repeal clause in the Indian appropriation bill, either boldly, by an appeal to the worst instincts of the Western Congressmen, or by the same underhand methods as were employed in the case of the notorious section 22 in the Dingley tariff act.

The control of two agencies especially appears to be a matter of concern to the spoils gang just now. One of these is the Kiowa and Comanche agency, with headquarters at Anadarko, Oklahoma; the other is the Pine Ridge agency in South Dakota. Major F. D. Baldwin, the acting agent for the Kiowas and Comanches, has, in the face of many drawbacks, accomplished a great deal for the civilization of these Indians. He has given the progressive elements among them a fresh impulse in life. With his aid they have built houses and planted farms and laid up money; and their latest notable act was the offer of a handsome sum toward the endowment of a school for the better education of their children. But an agent with advanced ideas of this sort—one who regards the Indian as a man, and not as an automaton to be played with, or a dog to have bones thrown to him from the table of the good-natured Caucasian—must necessarily fall under the displeasure of the sordid element in both races. On nearly every reservation there are factions, and the war between them has all the exaggerated bitterness which marks the family feud wherever we find it. Among the Kiowas and Comanches there is such a division, and the reactionary faction has made an alliance with a licensed trader who has been in the habit, under former agents, of "running things" on the reservation, politically, financially, and otherwise. The paid attorneys and spokesmen for this thrifty merchant have kept Major Baldwin in trouble at Washington for the last year, and one of them has boasted that they would induce the present Administration to oust him, even though they failed with its predecessor. The programme is to substitute for him a Republican politician from Maryland who was an agent during President Harrison's term, and whose record may be summed up by saying that the best thing he ever did for his Indians was to bid them good-by.

The other army officer whose head the spoilsmen demand is Major William H. Clapp, whose work at Pine Ridge has been, though in a somewhat different field, along the same lines as Major Baldwin's at Anadarko. The Pine Ridge Indians are Sioux, and the Sioux are in some respects the most difficult of Indians to deal with. They are suspicious, stiff-necked, and very proud of the warlike traditions of their nation. These traits are sometimes so much in evidence as to overshadow those sturdy virtues which inhere in them as Northern Indians, indifferent to the rigors of a trying climate and hardened to privations and fatigue. Firmness, tact, and infinite patience are the qualities needed in an agent who has the management of such a people. Major Clapp has succeeded notably in getting on with them, and after years of service as their agent enjoys the confidence of the best men in the tribe. The prime source of the movement against him is not a faction within the reservation, but a gang of white cattlemen outside. Ever since he has had charge at Pine Ridge these fellows have given him trouble. They graze their cattle on the borders of the reservation, and the animals, of course, wander across the line and crop the pastures belonging to the Indians. In one instance, not long ago, an inspection of some eighty miles of the Northern border showed that the trespassing herds had denuded a strip varying from ten to thirty miles in width along this whole line—in other words, a tract of perhaps 1,600 square miles. This, let it be noted, was not through

the ignorance or inadvertence of the cattlemen, but with their full knowledge. It is as much a part of the business of the ordinary frontiersman to feed his stock on Indian grass as to save expense in any other way.

By his activity for the suppression of these poaching practices, Major Clapp has made himself a target for the assaults of the cattlemen. They have had him "investigated" on one contemptible charge or another; and when he once carried their aggressions into court and was on the eve of punishing them, they contrived, through the same politicians at Washington who are now proposing to administer Secretary Bliss's office for him, to have the prosecutions suddenly stopped. If Mr. Bliss allows these people to use him, he will not be able to plead ignorance as an excuse for the scandals which will smirch his administration. The official records of his own office contain all the evidence necessary to protect him from the wiles of the conspirators. If he needs outside assistance he knows where he can get it, for there are as many honest men ready to aid him in defending the Indians as there are rogues bent on robbing them. If he will scan the list of South Dakota politicians who are pressing the claims of the chief civilian candidate for Major Clapp's place, he will find that the most prominent of them are shareholders in, or attorneys for, cattle companies which would profit by the substitution of a friendly and easy-going agent for one who is hostile and fearless.

The appointment of the present Secretary of the Interior was hailed by many honest citizens everywhere as a promise of good conduct for a great department of the government. So far, Mr. Bliss has shown more interest in the political bearings of his work, at Washington and elsewhere, than in any other phase of it. The cases of the Indian agencies we have mentioned, however, present to him a clear issue of decency versus degradation, apart entirely from any political aspect; and such charity as the public may have been disposed to extend to some of his earlier shortcomings, in view of his inexperience in dealing with large public affairs, will be promptly withdrawn if, with his eyes wide open, he surrenders any more of his important trust into the hands of the spoilers.

THE BIMETALLIC FIASCO.

Lord Salisbury, being very humorous, might enjoy a laugh at his own expense upon reading the reply of the Indian Government to the bimetallic proposals. It has been the contention of the bimetallists that we need a stable par of exchange between gold-using and silver-using countries, and especially between England and India. This has been Mr. Arthur Balfour's shibboleth from the start, and Lord Salisbury has been so overmastered by it that, even in his final reply to the Wolcott commission, he repeated his hope that some other proposals might be advanced having that end in view. And now the Indian Government tells him that they have achieved their desideratum by stopping the coinage of silver, and that the bimetallic scheme, if adopted, would accomplish what? The rate of exchange would rise 100 per cent. at one bound, and trade and industry throughout the Indian empire would be convulsed. This would happen if the aims of the bimetallists were gained. The first of these aims is to make silver and gold exchange with each other at the ratio of 15½ to 1. At the present time they exchange at the metallic ratio of say 36 to 1. The pecuniary affairs of the Indian Government and people have adjusted themselves to the present status. Whether it be a desirable one *per se* or not, society is now embedded in it and accustomed to it. The present status has come about slowly during a quarter of a century. The proposal now is to undo it suddenly by artificial means, making every rupee worth double what it is now, and compelling every debtor to pay double what he owes. The changed relations of buyers and sellers, of employers and employees, of debtors and creditors would be immense and instantaneous—that is, if the desires of the bimetallists should be realized. If they should not be realized, something else would happen; nobody knows what. They might be half realized, in which case the rise of exchange would be only 50 per cent.

What next? The Indian Government believes that the rise in value of the rupee under free coinage could not be maintained. The ratio of gold to silver must, after the first spurt, be determined by their respective costs of production. So a reverse movement would begin. Speculators would carry the rate of exchange up in the first instance and down in the second. At present the rupee sells in the market at 16d. English, which is 6 or 7d. above its bullion value. When free coinage was stopped, the rupee ceased to follow the fluctuations of silver. It was slightly affected by them at first, but, as time passed, the influence of the metal became less and less. By and by the law of supply and demand became supreme over the rupee, and since the quantity cannot be increased, its value as coin has risen above its value as bullion to the point originally aimed at by the Government, viz., 16d. In other words, the par of exchange between England and India, which Mr. Balfour and the Manchester spinners have been so long waiting for, has been actually secured. (This fact was shown clearly by Lord Farrer in the *Times* weeks ago.) This boon has been gained by stopping the free coinage of silver. That act cut the ligament which made the value of the rupee the same as that of the bullion contained in it. To restore the ligament, says the Indian Government, would be to drag the value of the rupee down to that of silver after the first upward spurt. It would fall back not to 16d. merely, but to 9d., and this would involve fresh taxation to the amount of many millions to meet the Government's sterling obligations. The rupee would first be shot up to two shillings and then down to 9d., to be followed by endless variations in the future, and all this by way of steadying the par of exchange.

The lecture read by the Indian financiers to the home Government is very droll, but not less amusing is the haste with which the French politicians are running to cover. They were mortally afraid that England would join in a new conference, and do or say something which would compel them to show their hand. No power could have brought France in the last resort to the silver standard or the double standard, no matter how many nations might have joined in the folly, but the present Ministry might have been upset. The present Ministry depends on the agricultural interest chiefly, which has about the same proportion of blockheads that has been observed in Germany and the United States—people who believe that silver demonetization depresses the price of wheat, people who have their own "crime of 1873" to muddle with. Hence the Ministry must go as far as possible in the direction of bimetallism to satisfy the peasant farmers, but not far enough to overturn the standard of value and lose the gold piled up in the Bank of France. The French newspapers, having no fear of peasant farmers before their eyes, say frankly that they have escaped a great danger and they are extremely glad. Instead of feeling irritation against England for her refusal to join in another international "big talk," they are thankful to her for getting them out of a bad scrape.

The business interests of the United States are under similar obligations. The Wolcott commission represented politics only, and only a small part of that. The real silverites, the party of Bryan, had no share in it. A new international conference would have been a damper on them while it lasted. In the improbable event of reaching a bimetallic agreement they would have been out of a job entirely. Their occupation would have been gone as completely as Othello's, and in any event they would have been hushed to silence for a time. They had looked at the Wolcott commission askance from the beginning, because "there was nothing in it for them." The only party, or faction, that had any real interest in it was the small moiety of Republicans who

have been playing with silver and depreciated currencies of one kind and another for twenty or thirty years. They were pretty well weeded out in the campaign of last year, but there are some left, and President McKinley is one of them. They, too, ought to be grateful to England for letting them out of a bad scrape, since a new failure in a new international conference, coming on the eve of a new Presidential election, would have been a powerful weapon in the hands of the Bryanites.

JUSTIN WINSOR.

The death of Justin Winsor removes another of the pioneers in the remarkable work of library development of the past quarter-century. The chronology of his life is simple. He was born January 2, 1831, studied a while at Harvard with the class of 1853, but soon went to the University of Heidelberg because the Harvard of those days could not, he thought, furnish him the education which he desired. In 1868, however, Harvard gave him the degree of bachelor of arts. In the same year he was, on Mr. Jewett's death, chosen librarian of the Boston Public Library, of which he had been a trustee for one year. This office he held for ten years, and then accepted the librarianship of Harvard College, which he had held for twenty years at the time of his death. He was President for the first ten years of the American Library Association, and has been President of the American Historical Society and Secretary and Vice-President of the Massachusetts Historical Society.

As President of the American Library Association, Mr. Winsor was the official head of his profession in the United States. By his position as head of the greatest library on the continent (for at that time the Library of Congress was not so large as the Boston Public), and by the way in which he administered it, he became the best-known librarian in the country. This position was owing, however, much more to his forceful personality and great executive ability than to any special originality in library economy. He had the born organizer's eye for the choice of his subordinates, with the power of impressing himself upon them and an inexhaustible supply of energy to make the machine go. Of a conservative temperament, he was not much in favor of innovations in library methods. He carried the library on substantially on the lines of his predecessors, but he developed the efficiency of their ideas to the utmost. He took a library of (in round numbers) 150,000 volumes, with a circulation of 175,000 volumes a year and an organization which, to say the least, creaked a little; he left, after ten years, a library of 310,000 volumes, circulating 1,140,000 volumes a year, and running so smoothly that for a long time after he resigned the charge it was not perceived that there was no librarian, though his provisional successors, men eminent in their several ways, were not especially fitted for librarianship either by nature or by training. But the library, though successfully managed internally, ceased almost at once to be of any account in the library world.

Though conservative, Mr. Winsor was by no means a librarian of the old school. He cared more for the diffusion of knowledge than for the piling up of books—less, in technical library language, for acquisition than for use. Under his management the issue of books at the Boston Public Library far outran anything that had been known before, though of late years many libraries have equalled it and some have surpassed it. It was thought by some that this great circulation was built up by methods of doubtful expediency, that many books of the feeblest character and others of the most sensational kind had been put upon the shelves to attract the lower classes of readers, who, of course, are the most numerous, so that the great number of books issued only meant so much more unprofitable reading. This is not the place to discuss whether libraries supported by public taxation have a right to refuse to get any class of literature which a large number of their clients demand, nor the other question whether the so-called "trashy" literature is not the best that many feeble minds (who certainly should be provided with some reading) can enjoy, nor the third question, whether "trash" leads its readers up to better books. However that may be, the supply of cheap fiction was largely diminished by his successors, and a certain number of books that had been objected to on moral grounds were removed from the shelves; the circulation fell off considerably.

When the City Councilmen of Boston showed how little they appreciated Mr. Winsor's services by assenting to the Mayor's remark that the first man met on the street would make as good a librarian, President Eliot profited by their blindness to secure for Harvard College a librarian who would be in sympathy with the new methods of teaching that were coming to the front in the college. Mr. Winsor had gone away twenty-five years before because he perceived the inadequacy of the old system. Of course he heartily sympathized with the new one, which necessarily made the library the centre of all study. All his arrangements were made to increase its efficiency in this line. Before assuming his new office he headed, as president, a delegation of the American Library Association who went to London to assist at the birth of the Library Association of the United Kingdom. He presided at several sessions, and much astonished the meeting by the Reedian promptness with which he suppressed superfluous talk—Englishmen in that, as in some other matters, having much more freedom than Americans.

The appointment to Harvard College Library, while it withdrew him to a considerable extent from active participation in library progress, gave him the opportunity to appear before the world in a new character. A company of gentlemen undertook, under his guidance, to write the history of Boston in a series of essays. The work, admirably planned and thoroughly done, had the usual defects of conjoint authorship, but the editorship was something very unusual. Never before in this country had such a wealth of bibliographical learning been lavished on all the details of a subject. Competent writers, after weeks of special study of their topics, found that the editor could add pages of references from his memory or his notes. It was said that the editor's footnotes were the best part of some of the essays; or, as one expressed it, the cream of the work was at the bottom. This success led to a similar undertaking, the ten large volumes of the 'Narrative and Critical History of America,' in which there is the same ample supply of bibliographical information. The whole literature of the subject—books, manuscripts, engravings, maps, in public libraries or in private hands—was drawn upon, and, where desirable, the relative value of authorities was weighed either in notes or in the critical essay appended to each chapter. The work is too heavy in two senses to be popular, but it will long be the most consulted by the scholar of all upon its subject. Mr. Winsor's historical works were the fruit of constant, assiduous, intense labor. He neglected no pains to make them thorough; but, as he was practical, he did not defer publication in the hope of an unattainable perfection. The list of titles of his books and pamphlets is too long to be given here.

If his death had happened ten years ago, he would have been equally missed by historians and librarians, but, as was natural, in proportion as his historical activity increased, his interest in general library affairs diminished, and, though his historical labors may not have lessened his care for his own library, they left him little time to attend to what was going on outside. But this present year, at the unanimous desire of the leaders in the Association, he consented to be their president for the second International Library Congress in London, where he displayed an interest and a strength which made his sudden decease a double shock to his companions.

No doubt he will be longer and better known as a bibliographer and historian than as a librarian, for the reputation of a librarian is almost as fleeting as the more widely extended fame of an actor or a singer. Unless he leaves behind him a building, like Panizzi's British Museum Reading-Room, he must rely for his chance of remembrance upon some unusual accomplishment, as Magliabecchi's knowledge of languages, or upon eminence in some other pursuit than librarianship.

THE FRICTION IN THE PITTSBURGH COAL FIELD.

PITTSBURGH, October 20, 1897.

In this district there are about 150 mines, with a capacity of about 30,000,000 tons of coal per annum, and about 25,000 miners, while there is demand for only about 15,000,000 tons of coal and about 12,000 miners. The large profits formerly obtained in the coal industry led to the rapid increase of production, often through the schemes of the speculative promoter. Many farmers and others have been willing to lease their underlying coal for a certain sum per ton, to be paid as royalty as the coal is mined. It has therefore been easy for the operator with little capital to force his way into the market, and the facilities for borrowing money have enabled him to remain in competition with capital directly invested. The increase in the number of miners is largely due to the high tide of immigration of the preceding decade.

In the fierce competition the selling price of coal has been so reduced that it is difficult for an operator to obtain the revenue barely necessary to keep his mine in operation. He is continually struggling in the markets for business and besieging the railroads for lower freight rates. Bitter has

become the hatred between operator and operator, and direful has been the effect upon the miners' wage. Every subterfuge has been used to obtain an advantage in the markets, and rebate or other stealthy device of one railway is met by stealthy device of another until neither operator nor railway knows what rate of freight is accorded other operators by other railways.

The wage for mining has been reduced to the point of bare subsistence, and through trickery and oppression many operators have still further ground the miners down. Exorbitant rents are exacted for houses which the operators own; exorbitant prices are exacted for goods obtained under compulsion in company stores, and more miners than are needed are employed that there may be increased sales at the stores. False scales and dishonest screens credit the miner with but three-fourths or one-half of the coal which he has dug. When the miners are thus robbed, the expense for digging is a matter of vague estimate; the selling price of coal falls below what would be the cost of production if the price for digging were an actual price.

The prevalence of these practices was proved by sworn testimony at an investigation of the committee of the Legislature of Pennsylvania, held in Pittsburgh in the spring of this year, and the tenacity of their root is marked by the rancor with which rival operators have persecuted the company which long ago abolished its stores, and affords abundant facility for any one to ascertain that it pays for every pound of coal that is dug, as weighed by accurate scales and measured by honest screens.

The majority of the miners are now Frenchmen, Italians, Poles, Hungarians, and others of the Slavic races, and in some of the mines negroes are employed in large numbers. The various characteristics of this mixture of races, the inherited superstitions which are deepened by the darkness and solitude in which the miners work, have made their government difficult for the operators, and the workings of the miners' unions and their officers have disclosed the lack of balance necessarily coming from a constituency of such diverse elements, so little guided by reason. Agitators who play upon the passions and the prejudices of the miners are chosen to the official positions, and then, when facts compel less radical counsel, are overthrown, often after the suspicion (which frequently is well-founded) that they have played into the hands of operators for a pecuniary consideration. The miners, when at work, are loath to part with the pittance for dues to the union, from which they then apparently derive no benefit, and when idle have not even the pittance. The officers of the unions, if not supported by the miners, must derive their support from other sources.

Operators who use machines that do part of the work of mining, pay for digging coal at certain percentages of the price paid for pick mining, and these percentages have been so low that at a comparatively high price for pick mining the cost of producing machine-mined coal is much less than the cost of producing pick-mined coal. The operators who adhere to the use of picks are, therefore, compelled to pay a low mining price, that the advantage obtained by the use of machines may not be greater than is warranted by the increased productiveness and intrinsic advantage of the machines. It is, therefore, to the interest of the machine operators to aid in maintaining as high a rate for pick mining as practicable, and operators who rob their miners through company stores, false weights, and dishonest screens have greater gain through such thefts at a high than at a low mining price. Therefore, these operators work in collusion with the officers of the miners' unions that they may retain the low percentages, which increase the advantage that would naturally be obtained by the use of machines; the company that has no stores, pays at honest weights, and does not use machines, being the especial object of their attack.

The capacity for overproduction has made ferocious the conflicts between these warring elements. The result is chaos in the industry. For years the profit of the operator has been naught, and in many cases abject poverty the reward of the miner. Even at a low mining price he often has but two or three days of work a week and is allowed to load but one or two pit wagons a day. During the winter of 1896-'7, the destitution of the miners became so great that public charity and the aid of the county homes for the poor were solicited in their behalf. The committee of the Legislature of Pennsylvania, after a personal investigation, strongly corroborated the reports of their destitution, but said that at the mines where there were no company stores, where miners were paid by accurate scales and honest screens, their condition was as prosperous and the miners as contented as could be expected under the general depression of the industry. Notwithstanding these facts, which the miners' leaders themselves have admitted time and again, these same miners' leaders, at the instigation of rival operators, send hordes of strikers and bands of music to the mines where it is conceded that honest practices prevail, to induce the miners to strike, insisting that their employers pay on an honest basis the same price per ton for digging coal as other operators whom they know to cheat their men, and from whom they have time and again received money for one purpose and another. And this in spite of a growing sentiment which the Pittsburgh *Dispatch* voices in the editorial statement that "Certainly it would be more appropriate to fight against the operators who try to continue the old abuses than to keep it up against one who refuses to do anything of the sort."

It is undoubtedly the case that general relief will come only when a number of the mines are forced out of business and a number of the miners seek employment at other kinds of work. It is impossible for 150 mines to thrive when seventy-five are sufficient, and for 25,000 miners to make a living when there is work but for 12,000. In the past year or two several of the companies have failed, insolvency in cases revealing the grossest mismanagement and misappropriation of funds. It may be that a beneficent result could be hastened by the combination of a limited number of the mines which, by location and management, are best adapted to supply the markets. Such a combination, to market the largest quantities of coal, and thereby do business upon the large scale which in these times alone is profitable, would be obliged to make the selling price of coal so low as to hold its own in competitive markets with the mines of other districts, and so low as to drive other mines in the same district out of the market. To this end it would have to be sufficiently powerful to secure the lowest rates of freight from the different railways; it would be obliged to adhere to the strictest economy in all the details of operation, to accord honest treatment to its miners, and, that they might make living wages even at a low mining price, to give them steady employment during the entire year.

If there were similar combinations of mines in different districts, instead of the clashing of individual operators which works not only to their individual injury, but also to the injury of the district as a whole, it would be possible to adjust competitive markets between different districts in a manner that would afford the greatest satisfaction to the consumer, the operator, the miner, and the railway. The most valuable fuel known to man, the supply of which is nowhere inexhaustible, would be conserved instead of being squandered. M. A. C.

TOKENS OF WOE AND THE PELASGI.

MILFORD SURREY, ENGLAND,
October 8, 1897.

The letter of Prof. Sterrett in *Nation* No. 1682, on the researches of Mr. Ridgeway into Mycenæan art, reminds me that, more than ten years ago, I submitted to the American Archæological Institute a paper on the so-called Pelasgic remains, in which I took substantially the same position as that now taken by Mr. Ridgeway, that the early civilization of Greece and Italy was due to the Pelasgi, and, following the lines of the monuments recognized by the ancients as "Pelasgic," I attempted to show the line of their migrations. The paper was, by the kindness of Prof. Norton, put in type, but, I suppose, owing to the reluctance of the committee to be in any way identified with the theory that the Pelasgi were a reality, as a once existing distinct stock, and that anything could be made known concerning them, it was never published. I believe I was considered by the scholars who then directed the line of study of the Institute, as a wild theorist who had got the *tic* of the Pelasgi and must be shunned.

In the researches which led me to the conclusions expressed in that paper I had, under competent advice, avoided collating my results before their completion with the literary evidence on the same subject, so that, if a real harmony existed, the demonstration would be more complete. Prof. Max Müller, to whom I owed that advice, may perhaps remember the incident. The conclusions to which my study had led me were in brief, that the Pelasgi at a very early date had moved round the Adriatic, from the lower Balkans, into Italy by the upper road, and, the valley of the Po being then probably still under water, they made their first settlement south of the Apennines in Tuscany, and especially in that volcanic and fertile district from the Arno down to the Abruzzi, with their principal centre in Umbria and the Sabines. The capital, if such a thing existed, was Alatri, and near by, at Cesi, I later discovered what I consider their first recognizable stronghold and the first advance from cave-dwelling as a fortifiable civic position; that site showing both cave-residence and the earliest form of Pelasgic wall-building. This district, embracing the

country as far as Monte Cassino, the Volscian country (Segni, Norba, etc.) as far as Monte Circeo (the Campagna di Roma not being, in all probability, then inhabitable), with the region of the upper Abruzzi, with Alatri, Arpino, Spoleto, Cesi, Atina, Sora, extending as far north as the valley of the Arno (Cortona being one of the latest surviving centres), was Pelasgic; and the enormous vigor of the civilization of that region may be conceived from the fact that, in the province of Rome alone, there are the remains of about 400 cities fortified in the Pelasgic manner, of which by far the greatest number are of the so-called first, or rude, style of "Cyclopean." *There* was the first great Pelasgian empire, and from there they extended their power down through the fertile regions of what is now the Terra di Lavoro, through the Basilicata, Apulia, Calabria, and over into Sicily, where one of the most splendid remaining ruins exists at Cefalù (Cephaloedium). The remains in the latter regions are marked as late by the style, which is the third, or more complete and finished in execution, showing advanced art and wealth as well as leisure.

That the migration between Italy and Greece was from Italy is indicated by the fact that ruins similar to those in Italy appear on the eastern shore of the Adriatic, where the shores are visible one from the other, and do not appear north of there on the Albanian side, as would have been the case if the migration had been from the Peloponnesus northward, and by the style of those which occur (Apollonia, Dodona, etc.)—none being of the rudest type. Moreover, they follow the coast down to the Peloponnesus, where was established another powerful seat marked by Mycenæ and its port Tiryns, Argos (later), Nauplia, and the few other remains in the peninsula. Thence the current moves eastward by two streams, the most important being sea-borne by the islands Cerigotto, Cerigo, to Crete and thence by Santorin and other islands of the Ægean to Asia Minor; the other going by the Thessalian shores to meet the first on the shores of the Black Sea.

The enormous importance of the remains which still existed when I first went to Crete, and which have since been almost entirely destroyed by the modern Cretans for building material, indicate that, after the seat of power in central Italy, the most important was Crete, and here the Pelasgic race and religion met those of Asia Minor, and in the ruins of Gnossus, which I was the first to record, in a report to the American Institute about 1882-4 (having no record by me, I cannot state the year precisely), I discovered the Cretan script which Mr. Evans has since investigated in so thorough and interesting a manner. Among these "mason-marks" were some which were recognized by the Academy of Inscriptions at Paris as proto-Assyrian, indicating the affinity of the civilization known as that of "Minos" to the early Asiatic. The excavation of the ruin at Gnossus which gave so promising an indication of discovery, had been arranged with the proprietor of the land, but was secretly opposed by the Governor-General on account of the omission, as I afterward learned, of the customary backsheesh, and one has still to confirm or disprove my then published conjecture that it was the remains of what had given rise to the tradition of the Labyrinth.

The Pelasgi disappeared from Italy owing, I conceive, rather to the absorption in the other races, the Siculi, the Umbri, and the establishment of a composite race, which we now speak of as the Italic, and which, later still, was invaded, and partially conquered, by the Etruscans on the north and the Greeks on the south of a line running from the vicinity of Civita Vecchia across the peninsula to that of Ancona; the Greek sphere being centred in the valley of the Tiber, the Etruscan in that of the Arno. All these conclusions I have since more or less established by the collation of the monumental evidence with the traditions, as I hope ere long to have the leisure to show. The identity of the Italic with the Peloponnesiac civilization may be seen by a careful comparison of the remains of Arpino (Latin Arpinum) with those of the older parts of Mycenæ, the same kind of stone being used in precisely the same way, viz., splitting, hammering, and trituration to finish (Hesiod tells us that Mycenæ was built with the stone-hammer and the plumb-line); for in neither case is there the least evidence of the possession of any appliances for the cutting of the stone, and all through the extent of the Italian ruins there is no chisel-work to be found until we reach the constructions traditionally assigned to the Etruscans, and which appear in both the Latin and Etruscan country, having evidently been imported by the great immigrations subsequent to the Trojan war.

Now as to the antiquity of these primitive constructions, there is some curious evidence in the ruins of Mycenæ. These are of two widely separated epochs, the earliest being visible most demonstrably in the older royal tomb and in the conglomerate wall, especially in the postern gate. If my readers will examine the interior of the tomb, they will find that the conglomerate, which is the stone of construction, shows here and there nodules or fragments of a hard stone, either the opaque carnelian of the Etruscan (?) gems, or corundum, the protruding surface of which is polished like a precious stone, evidently by the attrition of the finishing process of preparing the stone for its place. The comparison of the surrounding material shows an erosion of the limestone component of the conglomerate to a depth of about a line. This is the effect of weather-wear, and as the interior of the tomb has always been protected from the elements in a great measure, the time required to produce this erosion must be reckoned by tens of centuries. If this seems an extravagant estimate, I beg the student to examine the traces left, at the doorway, of a later restoration of the façade. There are the bases of two pilasters of a different material, the limestone of the adjacent hills. This was never employed in the early construction, because the workers had no means either of quarrying or cutting it. They could split the conglomerate into blocks of any size with the stone-hammer by a method still in use in the region about Arpino, where the same stone is found, with tolerable accuracy, while the limestone could be brought into determinate shapes only by methods which had not then been known by them, but which were brought into use, according to tradition, in the seventh century B. C., by the use of the "stone-saw." Where in the earlier work at Mycenæ, as throughout the walls of the Italian cities, Arpino, Alatri, Circeo, Segni, etc., etc., the limestone is used, it is always polygonal and hammered, as is also the case in the remains of Crete, where I do not remember ever having found the conglomerate; certainly the stone-saw never occurs.

Now the restorations in the great tomb at Mycenæ are worked by the stone-saw, as are the important parts of the second tomb, known as "Madame Schliemann's tomb," and the lion relief over the great gate of the city, a later addition to the gate. There is one detail in the pilasters of the former tomb to which I must call particular attention as of the highest technical and chronological importance. This is the way in which the mouldings of the pilasters are cut—by a vertical and a horizontal cut of the stone-saw, at the approximate intersection of which there is left a small portion of stone which has been broken out, and the fracture still protrudes (or did when I last saw it), showing that even then there was no means of chiselling out this breakage to finish the work. The contrast may easily be seen and estimated in the doorway itself, the lintels being of the old split and triturated conglomerate, while the later work shows the saw and the fracture of the limestone, which fracture seems quite fresh. The relative antiquity of the two kinds of work may be estimated by the evidence of the action of the elements, which in the interior has been very great and not less outside, though I could not find the nodules of *pietra dura* on the lintels to gauge it by, while the weather seems to have had no effect on the new work, as the crystallization of the limestone is not effaced and the lines made by the stone-saw are visible. Contemporaneously with the stone-saw the tube-drill seems to have come in, and their action is so nearly identical that we can have no great difficulty in admitting that they were introduced (probably from Egypt) about the same time, a time indicated by the lion relief, which shows not only the stone-saw and the tube-drill, but the trituration in the removal of the material between the drill-holes. The face of one of the lintels shows a late cutting of the stone-saw apparently for the free movement of the gate. The little gate above, a postern, is of the old work, and the capstone is held on the lintels by a tenon and mortice, rudely broken out. The lion relief is assigned by all the best archæological authorities to about the seventh or eighth century, which coincides approximately with the epoch assigned by Greek tradition for the introduction of the stone-saw. Wherever, therefore, we find the trace of that implement, we may reasonably conclude that the work is not earlier than the eighth century, to which we must assign the remains of the palace of Tiryns and the second great tomb at Mycenæ, while any cut stone must be given a still later date, for it is clear by these eighth-century remains that the art of cutting stone and the possession of the stone-chisel antedate the latest work now visible at Mycenæ. In corroboration of this conclusion is the result of all the researches I have been able to make among the Greek cities, viz., that on no ruins of an earlier date than the seventh century (*circa*) has the chisel been employed. In Italy it does not appear until the later changes, and then always on the comparatively soft tufa, which is easily cut by a bronze tool, nor in examining the stones or searching the hills from which the stone

was taken can any indication of quarrying be found, except in the same tufa, which occurs in Crete, where the method of quarrying is clear.

The examination of the interior of the great tomb at Mycenæ will satisfy any student that the time required for the erosion of the stone on the inner surfaces of the masonry, of which no indication is shown in the eighth-century work outside, must be estimated at very many centuries, which must have intervened between the early and the late Mycenæ—a measure which we can indicate only in geologic terms. And as to the source of this art, which, for want of any determination, we call by the appellation of "Mycenæan," I believe we must refer it to Crete, where, indeed, Greek tradition places the origin of Greek civilization; but I have no doubt that it was Pelasgic, and dates from a time when the Pelasgi not only were a distinctly recognized race, but were the rulers of the Ægean and all the lands on it. Mr. Ridgeway has anticipated me in the collation of the authorities on the existence of the Pelasgi as a race, which I had intended to add to the study of the monuments, and I am glad to divide with him the obloquy of recognizing the Pelasgi. W. J. STILLMAN.

Correspondence.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 14 the reviewer of my 'Dictionary of American Authors,' while very properly calling attention to several annoying errors and misprints in my pages, makes two or three statements against which I feel inclined to urge a mild protest.

(1.) He says that the name of Sydney Fisher is wrongly entered, and that the correct spelling is Sidney. Now he may be right, but I should like to state in my defence that I followed the spelling of the name as given on the title-page of Mr. Fisher's 'Pennsylvania: Colony and Commonwealth,' the spelling on Mr. Fisher's letterhead, and also that of Mr. Fisher's own signature appended to his letter addressed to me.

(2.) That the date of Joel Barlow's birth should be 1755, not 1754. In this matter I followed Barlow's latest biographer, Charles Burr Todd, not to mention other authorities.

(3.) That the date of death of James Hammond Trumbull is not given. That eminent writer died in August, 1897, and my book had already been printed and bound some three weeks when Mr. Trumbull's death occurred.

(4.) That dates of death are often omitted. This is quite true, I presume, in a number of instances. I can only say that I made all reasonable effort in correspondence, the searching of necrology lists, college class memorials, etc., to ascertain such facts, and that whenever a date of that kind was obtained that appeared to be trustworthy, it was inserted. In several instances, although I felt almost convinced that the particular writer was not living, I was obliged to leave the matter unsettled because diligent inquiry failed to reveal the date of his demise. I need hardly add that I shall be very glad to be informed of errors and omissions readers may find in my Dictionary, in order to rectify them so far as possible in another edition.—Very truly yours,

OSCAR FAY ADAMS.

THE HERMITAGE, BOSTON, October 18, 1897.

[We will, not by way of extenuation in the matter of the younger Fisher, offer the name of Mr. Sidney George Fisher, author of 'The Trial of the Constitution' (1862), as worthy of insertion in a new edition.—ED. NATION.]

A PROPHET OF THE UNIVERSITY OF CALIFORNIA.

TO THE EDITOR OF THE NATION:

SIR: The article in a recent number of *Harper's Weekly*, descriptive of the new and astonishing movement on foot at the University of California, whereby its buildings and grounds are to be made to surpass anything thus far attempted, in beauty and convenience, reminds one of a commencement address delivered at Berkeley in June, 1881, by the late Bishop E. O. Haven. In his remarks he distinctly alluded to a future for the State and its University which has been largely realized for the former and seems about to be for the latter. He had been largely instrumental in laying the foundation for Michigan's future, and had done scarcely less for two other large universities, and therefore saw with a trained eye the possibilities that lay in the then budding university. His public remarks, however, were less definite than his private conversations. In them he expressed a belief that the time was not far distant when the University of California might easily outstrip any other of like kind. Indeed, had it not been for his age, this conviction would probably have led him to listen to proposals made him at one time to undertake its upbuilding. His words in the address mentioned were:

"I hope for a noble development of all the educational institutions of our Pacific Coast. And among them all, none has a grander opportunity than this University of California. Here on this beautiful bay, with the great arms of the State on the right and on the left, and the continent behind it, and already strongly founded, I trust it will be conspicuous among its associates, the leader of leaders, the mother of well-trained intellects and hearts, and worthy of honorable mention among the renowned universities of the leading nations of the world." X.

MORE DISENCHANTMENT.

TO THE EDITOR OF THE NATION:

SIR: The Enchanted Mesa was "disenchanted" so soon as the nearest telegraph office was reached, and for so long as Mr. Hodge forbore to climb. But since the fateful 3d of September, several weeks of criticism have been endured in silence before Prof. William Libbey gives to the Associated Press his carefully prepared defence. This foregoing of haste cannot but be reckoned a distinct gain in scientific methods.

Yet Prof. Libbey's defence does not defend. It is concerned entirely with what he understands that Mr. Hodge's friends have said, and with the perseverance of Prof. Libbey as an authority on New Mexican ethnology. It tells us what Pueblo pottery, cairns, and habitation are, and what they indicate, and it increases very seriously the responsibilities of the author. Says Prof. Libbey:

"I picked up some fragments which resembled ancient pottery, but could not convince myself that they were. I took them to Mr. Pearce [the reporter who went up with him], and he agreed with me that they were not pottery."

I do not care to characterize this astounding admission, except by saying that not for a second can Pûeblo pottery, no matter how old, be mistaken for anything but pottery—by any one, that is, who has learned the rudiments of New Mexican ethnology.

In the Princeton *Press* (August 21) and elsewhere, Prof. Libbey decided that the now famous—and always unmistakable—"cairn" was "the result of erosion." Now that Mr. Vroman's eloquent photographs are in evidence, Prof. Libbey admits its human origin, but asserts confidently that this monument "is possibly the best proof of a mere visit. Primitive peoples are not given to building cairns in their back yards." If Prof. Libbey shall ever become familiar with the Pueblo towns—even with Acoma, where his brief visit seems to have been in vain—he will find many of these cairns. Some are built for adult Indian reasons; some because Indians have children, even as they had in the days of Katzímo. To explore really the one labyrinthine rock of Acoma requires many times more days than Prof. Libbey has given to all the 300 miles square of New Mexico.

Prof. Libbey admits now that he "found fragments of pottery at various points around the base of the mesa, but did not deem the fact important enough to mention." The talus against the cliff, at the point which has received the largest drainage from above, is 224 feet high; but it seems never to have occurred to Prof. Libbey—even after he had found the summit so eroded and so stripped that most of its trees are dead or dying—that this talus came from somewhere. I have axe-heads, arrow-heads, and potsherds (among the latter some of far-reaching significance) which I prised out of that talus a dozen years ago, and artifects are abundant there still. The only theory on which the matter could be deemed too insignificant to mention would be that the talus had *washed up* from the plain—just as his cairn of erosion must have been *eroded up!*

The insinuation that the Indians (who came up after Mr. Hodge) "salted the claim," is not to be discussed; and I can only hope that Prof. Libbey already regrets having made it. Any knowledge either of Indians or of Mr. Hodge's work places this unfortunate hint where it belongs in science, without reference to its ethics.

His life-line was still in place, and Prof. Libbey desires us to remember that he could have scaled the cliff again in the morning if he had deemed it worth while. It is remembered.

Six weeks after Prof. Libbey, Mr. Hodge climbed the mesa modestly and unheralded, in 135 minutes, with tooth and toenail and a 36-foot ladder—as against four days and a life-saving outfit and boatswain's chair. Five minutes after reaching the top, he found pottery, and before leaving found more pottery, axe-heads, and other artifects—not to mention a certain monument. He went up over the prehistoric trail, at several points of which the erosion-rounded steps carved in the living rock are so plain that they can be positively identified in a good photograph.

It was, perhaps, prophetic that Prof. Libbey looked at this gorge up which his Nemesis was to come, and photographed it, and published the half-tone with his facetious article in *Harper's Weekly*.

Princeton, if I mistake not, was the home office from which the official organ of the Archæologic Institute of America devoted some years to the researches of Bandelier in the Southwest. This coincidence gives a poignant humor to sheep before the Conquest, Acoma as the home of Montezuma, and twoscore like (if perhaps minor) novelties in Prof. Libbey's science; while doubtless nothing could add to the point of material things looked at but not seen.

After all this, and much more, in kind, than your patience may be taxed with, Prof. Libbey concludes: "The main question is, Was the mesa ever inhabited? I think I am warranted in answering in the negative." The "main question" has been settled by Mr. Hodge. CHARLES F. LUMMIS.

LOS ANGELES, CAL.

Notes.

Further announcements by G. P. Putnam's Sons are 'The Life and Letters of Thomas Kilby Smith, Brevet Major-General U. S. V.,' by his son, Walter George Smith; 'A Note-Book in Northern Spain,' by Archer M. Huntington; 'Islands of the Southern Seas,' by Michael Myers Shoemaker; the second volume of Dr. Peters's 'Nippur'; 'On Blue Water'—from Genoa to Buenos Aires—by Edmondo De Amicis; 'Reminiscences of an Old Westchester Homestead,' by Charles Pryer; 'The Habitant, and Other French Canadian Poems,' by William Henry Drummond; 'Anarchism: A Criticism and a History,' by E. V. Zenker; 'Mathematical Psychology,' by Mrs. George Boole; and the sixtieth edition of Burke's 'Peerage.'

'Garden-Making,' by Prof. L. H. Bailey of Cornell, will be issued during the present season by Macmillan Co.

'Thoughts and Theories of Life and Education,' by Bishop Spalding of Peoria, is in the press of A. C. McClurg & Co., Chicago.

Henry Holt & Co. have added to their list of Taine's works his 'Journeys through France: Being Impressions of the Provinces,' with a few not remarkable illustrations. Our readers have already been acquainted with the social and political interest of this diary.

Browning's 'Ring and the Book' has been freshly issued by T. Y. Crowell & Co., edited with an introduction and a fair show of footnotes by Charlotte Porter and Helen A. Clarke, editor of *Poet-Lore*, a Browning organ. An etched portrait of the poet serves as frontispiece.

From Edward Arnold we receive a popular edition of Slatin Pasha's 'Fire and Sword in the Sudan,' of which the sequel is now being enacted in the British approach to Khartum. The illustrations are retained.

A new mode of advertising the already well known appears in a series of ten volumes of 'John L. Stoddard's Lectures' publicly delivered with the aid of the lantern for a period of eighteen years (Belford, Middlebrook & Co.). The first volume, covering Norway, Switzerland, Athens, and Venice, bears out the author's assertion that the illustrations, of a high quality like the lantern slides, outnumber the latter, and is to be recommended as a picture-book. The text is of the familiar type of superficial cramming, cheap rhetoric, and flat humor too often associated with one of the most important agencies for popularizing sound and useful knowledge.

In an attractive volume, published by Macmillan Co., Mr. A. G. Bradley has collected a number of 'Sketches from Old Virginia' contributed to various English magazines in past years. It is perhaps inevitable that a book made after this fashion should contain more or less repetition. The author's ideas on the subject of Virginian scenery, negro characteristics, quail shooting, and the abominable roads that disgrace the Old Dominion, recur in several chapters; and the peculiarities of the Colonel in one sketch are suspiciously like those of the Judge in a second or the Doctor in a third. Then, again, the critical reader may properly object to the use of *latitude* for *altitude* or of *partook in* for *partook of* as being unlooked-for results of Mr. Bradley's early training on the classic banks of the Kennet. But these are small matters and take but little from the real value of the book as a picture of Virginian life during the period after the war, and before that recrudescence of fashionable life at the Springs which has made that section of the country familiar to so many New Yorkers in recent years. Such travellers will duly appreciate Mr. Bradley's word-pictures of mountain scenery—"the air full of the noise of falling waters, the scent of cedars and hemlocks, and the steady moan of mountain winds sweeping softly over many miles of leaves"; the sportsman will enjoy his account of the first introduction of fly-fishing to the notice of the rude mountaineers of the Blue Ridge; and the general reader will find that sort of fascination that belongs to all genuine descriptions of places and people.

The widow of the late Sir John Hawley Glover has prepared a memoir of her husband, which will shortly be published by Smith, Elder & Co., London. Its main interest for readers on this side of the water lies in the fact that Sir John Glover was Governor of Newfoundland and of the West Indian Colony of the Leeward Islands, successively; but the subject of the memoir achieved distinction mainly by his success in carrying out the Volta expedition against Ashantee, in 1873.

Dr. Emil Reich, whom British newspapers have announced as having been engaged by the Attorney-General of England to instruct the law officers upon certain points of international law, as these have been applied to questions which have arisen in the cases of arbitration that have been submitted by several of the South American republics, is not unknown in the United States. Some years ago he delivered before the University of Cincinnati a course of lectures upon "The Origin and Development of the Main Institutions of Mankind." These were afterwards published with the title, 'History of Civilization' (Cincinnati, 1887). In 1890 Dr. Reich delivered, at the University of Oxford, a course of lectures dealing mainly with Roman law. These also were published as a continuation of the series already delivered. They form part of a scheme of the author's for compiling a Comparative History of the Western Nations. He has just written a 'Handbook of Hungarian Literature,' for Jarrold & Sons, London. The master of seven languages, possessed of great intellectual power, with any amount of work in him, Dr. Reich's friends see in him a coming man. He is a Hungarian by birth and a jurist of Vienna by profession. He is but forty years old.

Mr. Rawson Gardiner, in his 'History of the Commonwealth and Protectorate' (1651-1654), makes a clean sweep of the tradition that Admiral Tromp hoisted a broom at the masthead of his ship, in token of his intention to sweep the English off the seas. It is true that Professor Laughton of the Royal Naval College had expressed his disbelief in the story in his article upon Admiral Blake in the 'Dictionary of National Biography,' but Mr. Gardiner in cold blood omits the incident from his text, and then in a footnote entirely discredits it, while in the index to the volume he cruelly characterizes it as a "fiction." Mr. Gardiner, by the way, has undertaken to edit for the Navy Records Society, London, the State papers (Dutch as well as English) relating to the "Dutch Wars" in Cromwell's time.

At the opening session of the Royal Colonial Institute, London, on the 2d of November, a paper upon "The Railway System of South Africa" will be read by Sir David Tennant, Agent General for the Cape Colony.

The London School of Economics and Political Science pursues its useful course of instruction for those wishing to qualify themselves in the art of deciphering ancient charters and other manuscripts, and as to the diplomatics of such old writings as are required to be transcribed, cited, or edited by historical students. At the same time the students are informed as to the distribution and classification of the chief collections of English historical manuscripts. During the Michaelmas term, lectures will be given upon elementary palæography and diplomatics, chiefly of English manuscripts and records from the twelfth to the seventeenth century, by Mr. Hubert Hall, F.S.A., of the Public Record Office. In the same term there will be a demonstration of the system of palæography by practical work by advanced students. In November Sir Edward Maunde Thompson, Principal Librarian of the British Museum, will give a lecture. American students may like to know that the School of Economics and Political Science is at 10 Adelphi Terrace, London, W. C. The director is Mr. W. S. Hewins, M.A.

What may be called the empire movement still goes on apace in England. Among various evidences of the fact is the programme for Sunday afternoon free lectures on the British Empire, for the current season. The first list issued shows that provision has been made for a lecture for each Sunday from the 3d of October to the 12th of December, at the South Place Institute, Finsbury, in the heart of the City of London. The object is to instruct the workingmen in their heritage in the empire. "All seats free. No collection." The papers provided are "Our Colonial Empire," by W. Herbert Jones; "West Africa," by Miss Mary Kingsley, daughter of Henry, and niece of Charles Kingsley, and herself now famous as a traveller; "Cyprus," by Professor Patrick Geddes; "Islands of the Pacific," by a former High Commissioner of the Western Pacific, Lord Stanmore, uncle of the Governor-General of Canada. As the Hon. Arthur Gordon, Lord Stanmore was many years ago Governor of New Brunswick, before the Canadian Dominion was formed. "British New

Guinea" will be treated of by Mr. Hatton Richards, and the Australian colony of "Victoria" by Mr. Jerome Dyer. The Rev. Walter K. Firminger will describe "Zanzibar"; Mr. Basil Home Thomson, son of a former Archbishop of York, and himself an ex-Prime Minister in the Southern Seas, will talk of "Fiji," while "Malta" will be spoken of by Mr. Claude Lyon. Many of the lectures are illustrated by lantern pictures and by maps, etc., lent by the Colonial and Imperial Institutes. Much trouble is taken by the promoters to get men who really know their subjects to give lectures.

An account of the archæological expedition to Iceland conducted by Lieut. Daniel Bruun, recently published by the *Berlingske Tidende* of Copenhagen, shows some interesting results. Lieut. Bruun, accompanied by the Icelandic archæologist, Brynjolfr Jónsson, left Reykjavik the latter part of July and first examined the ruins of a number of dwellings east of Hvitaa, the existence of which was already known. The examinations in Norrland to the eastward proved that this district had been inhabited much farther inland than had before been supposed. About fifty ruined farms were found, one of them being on the lava plain to the north of Vatna Jökull. It is believed that the present desolation of these districts is due to the disappearance of the birch forests and the consequent sand-storms. The expedition returned to the capital on September 6.

Hardly anything is more interesting about our savage ancestors than the fact that they not infrequently practised trepanning. Dr. R. Munro devotes a chapter to this subject in his recent book on 'Prehistoric Problems.' The large number of skulls that have been met with exhibiting artificial openings shows that the operation must have been found to be beneficial, and so does the fact that the pieces of a skull cut out were worn as amulets. The trepanning was performed by scraping the head with a piece of flint more frequently than by cutting out the bone, and it is supposed that in most cases the object of the operation was to alleviate some mental disorder of an epileptiform character. That the operation was performed while the patient was alive is proved by the fact that healing has occurred on the cut edges of the bone, but sometimes it is apparent that the patient did not survive the operation, or perhaps died from the illness which the trepanning was intended to cure.

From the *Chronique des Arts* we learn that the great museum of the Hermitage, at St. Petersburg, is to be closed for one year, owing to the extensive restorations which are to be made upon the building. Intending travellers to Russia will do well to bear this fact in mind.

A welcome annual visitor reappears in 'Meyer's Historisch-Geographischer Kalender for 1898' (Leipzig: Bibliographisches Institut; New York: Lemcke & Buechner). It is a pad of octavo leaves of which each contains one or more illustrations, with text pertinent to the day of the year—notices of historic events, of festivals, etc. The views are of landscape for its geologic or picturesque interest, of towns and cities, with portraits of celebrities, autographs, etc. Merian's various 'Topographiæ' have been again freely drawn upon, but a large proportion of the cuts are from photographs. An index furnishes a key to all. The only objection to this calendar is that one hesitates to strip it to pieces. It is worth putting on the shelf like a book.

The department of French of Harvard University will give three performances of Racine's "Athalie" in Sanders Theatre on the evenings of Monday, Wednesday, and Friday, December 6, 8, and 10. The play has been selected as the most perfect example of the French classical tragedy of the seventeenth century, and will be given with Mendelssohn's music—the vocal part by one of the leading societies of Boston, and the orchestral part by members of the Boston Symphony Orchestra. The cast, which will include students, graduates, and instructors of Harvard University and Radcliffe College, assisted by ladies in Boston and Cambridge, will be very large.

We print in another place our tribute to the late Justin Winsor, librarian of Harvard University, but we must add here that he was a constant contributor, as reviewer or as foreign correspondent, to these columns, from which he can ill be spared. Though incessantly and indefatigably engaged, no call upon him went unhonored. Conscientious all his writing was, but his style marked the too rapid worker, and in its want of lightness testified to the irrepressible conflict between the bibliographical and the literary habit. He had planned a series of letters to this journal on occasion of the late International Congress of Librarians, but his engrossing duties and the endless hospitality of the British public no doubt prevented his intention from being carried out.

—Mr. Joel Chandler Harris's 'Aaron in the Wildwoods' (Houghton, Mifflin & Co.) is not a sequel to 'The Story of Aaron,' but a picking-up of dropped threads. Both the full understanding and the full enjoyment of it depend upon that and other recent volumes in the same cycle, in which the author has attempted an adumbration of slavery as it was, for youthful minds. As a whole, the new volume is at once less artistic and pathetic than its predecessors, yet adds something to the picture. A passage (p. 196) which explains amateur slave-catching by the "vigor of youth seeking an outlet" and regarding it "merely in the nature of a frolic for them to ride half the night patrolling, and sit out the other half watching for Aaron [the swamp fugitive]," sheds light on one of the causes of the perpetuity of lynching. On the other hand, children will be perplexed by the revival of the old plea in extenuation for slavery that God was using its tender mercies for the civilization of the victims of the African slave trade. And, again per contra, we see here the beginning of a Southern Lincoln legend, which boldly proclaims the liberator "the greatest American of our time." Mr. Harris's art is conspicuous in his personification of the Swamp. In this he invites comparison with Kipling and the Jungle, and if his style must be pronounced inferior, his poetic feeling will stand the test, while a certain tenderness finds no parallel in the more renowned and prolific story-teller.

—Abyssinia has been so much in evidence of late that M. Vignéras's entertaining 'Une Mission Française en Abyssinie' (Paris: A. Colin & Cie.) is very timely. The embassy of which he was the secretary went early in the year to Adis Abeba, the present capital of Menelik, its chief object probably being to arrange for the building of a railroad from Jibutil to Harar. Upon this, however, he does not touch, but confines himself to a description of the incidents of the journey, the receptions at the court, and to his general impressions of the land and the people. From the conditions prevailing in the two provinces visited, Harar and Shoa, Abyssinia has not yet emerged from a state of semi-barbarism. There are no roads, and consequently there is little commercial intercourse with the coast. Industries, in the European sense of the word, are unknown, and the medium of exchanges is a bar of salt, though the Maria Theresa dollar is used somewhat, and Menelik is endeavoring to introduce a fractional silver currency. A large part of Shoa, at least, is being turned into a desert by the wasteful destruction of its forests. Menelik has changed his capital four times since his accession in 1889 because of the exhaustion of the wood in its neighborhood, and Adis Abeba will be abandoned in its turn at no distant time. Of the Negus the author writes in almost extravagant terms, not only as "a successful general, a wise statesman, and a remarkable ruler," but as a man intelligent in matters of science and art, as well as possessing considerable mechanical skill. With other writers he dwells upon the courage and discipline of the Abyssinians and their strong national feeling, but his statement that slavery "does not exist" among them is directly contrary to the testimony of Dr. Donaldson Smith, who gives numerous instances of slaveholding and slave-raiding by Abyssinians. The illustrations consist of sixty reproductions of the author's photographs of scenes characteristic of the land and its inhabitants.

—Teachers and students of French have long desired a good pronouncing dictionary of that language. There have been, to be sure, various books that purported to represent the pronunciation of the whole or some large part of the French vocabulary; but their transcriptions were clumsy and frequently unintelligible, and the scientific attainments of their authors were not such as to command unlimited confidence. On the other hand, the excellent 'Dictionnaire de la Langue Française,' by Hatzfeld, Darmesteter, and Thomas, which gives a plain and trustworthy notation of every word, is large, somewhat expensive, and still unfinished. A real want is, therefore, supplied by the new 'Dictionnaire Phonétique de la Langue Française,' by H. Michaelis and P. Passy, published by Carl Meyer in Hanover. We have here a work that is reliable, clearly printed, cheap, and complete in 330 moderate-sized pages. Critics will note with pleasure that Passy, in those cases in which his own usage has been generally condemned as vulgar or peculiar, has inserted alternative pronunciations: for instance, *mais*, *mes*, *les*, *des*, etc., are given both with the close and with the open sound of *e*. For "aspirate *h*," however, one cannot help wishing he had gone a little further, and left altogether unrecorded the decidedly provincial practice of sounding it. Many phoneticians, too, will object to the preference given to "lingual *r*." After the vocabulary we find an extremely concise statement of the main facts of French phonetics, followed by a most useful and interesting "list of the principal classes of divergences of pronunciation." As a frontispiece we have one of the best cuts yet published of the human vocal organs. The no-

tation used is that of the Association Phonétique; it serves its purpose very well. In the general make-up of the book there are only three things that impress the examiner unfavorably. Firstly, the vocabulary does not include proper names; we have, perhaps, no right to expect that it should, but a pronouncing dictionary of French proper names is sorely needed. Secondly, in groups of cognate words, the first part of each vocable, except the head of the series, is replaced by a dash; this practice will probably sometimes cause the practical user of the volume a slight inconvenience, for which the intended etymological lesson may seem but scanty compensation. In the third place, the figured pronunciation stands, in each case, before the accepted spelling, so that the alphabetical arrangement of the words is not the usual one, but that of the phonetic transcriptions; it follows that in order to find a word, one must either know how it is pronounced or be willing to hunt for it in several places. Although this scheme is doubtless the best one for pupils who are following the "new method," and has the additional advantage of emphasizing the importance of the spoken language, the wisdom of adopting such a plan must seem questionable to most of us; for surely at least nine-tenths of those who buy this dictionary will use it only as a guide to pronunciation.

—M. Gribovski is a young Russian writer who, some months before the death of Verlaine, came to Paris to visit the poet. He was provided with a letter of introduction, but did not know Verlaine's address, which he found at last, after explorations which began at the Café Procope and led him through a long series of lodging-houses before they were crowned with success. In the *Revue Hebdomadaire* of September 26 M. Gribovski tells his story, which gives an interesting glimpse at the last days of the author of 'Sagesse.' Verlaine received his visitor kindly, and talked to him with freedom. After some words about the literature of the day, in which Verlaine spoke with contempt of the Décadents, the stream of talk shifted towards politics. Gribovski had heard that Verlaine was more or less engaged with the Commune, and put two or three questions to him thereupon, but the poet gave no direct answer. "Terrible days they were!" he said. "France drew blood from her own heart. You have seen the skeleton of the Cour des Comptes. The Government has kept those ruins to show how insane Paris can be. Yes, I saw the Commune. I have seen many things in my life; but now I am only a poor poet, well content with the Government, which has never done me any harm. . . . Personally I have no leaning towards politics; that is a business I leave to others. . . . One of my friends who was compromised in the Commune fell into the hands of some good folk who saved him from trial and exile. Now he is bewailing his fate and groaning: 'Why didn't I go to the Isle of Pines? To-day I should be a deputy or a minister.' That gentleman has a vocation for politics. For my part I am contented with my lot." Here is another amusing bit of Verlaine's talk: "The other day a poor devil of a workman came to see me and said, 'Well, M. Verlaine, we've got to have a revolution.' 'What has got into you?' I said. 'Why, the newspapers say that the President wears white gaiters. The President of the workingmen's republic in white gaiters; it is indecent!' I explained to the poor man that Félix Faure could not avoid wearing white gaiters when he received General Dragomiroff; if he did, it might touch the prestige of our great country, for General Dragomiroff might think that she would not let her President have white gaiters. But I did not convince him and he went away saying, 'That makes no difference. It wouldn't be a bad thing to have a revolution, and you ought to write about it. The bourgeois are beginning to hold their noses too high.' "

TWELVE YEARS IN TURKEY.

Impressions of Turkey during Twelve Years' Wandering. By W. M. Ramsay, D.C.L., LL.D. London: Hodder & Stoughton; New York: G. P. Putnam's Sons. 1897.

This little book of somewhat less than 300 pages is on the whole the best work on the Eastern question which has yet appeared, probably because Prof. Ramsay is so thoroughly acquainted with Asia Minor and the people who inhabit it. It is often said, and in the main correctly, that the strength of Turkey lies in Asia Minor, and it is precisely with Asia Minor, the home of the Turk, that Prof. Ramsay is familiar.

He commences in a very concrete manner by leading us to various Turkish villages, and giving us glimpses of the lives of the people, their habits, their mode of thought, their poverty, and their ignorance. Then we are taken on a specimen trip in Phrygia of twenty days' duration. All of this is delightful reading and full of interest, both to the archæologist (for Prof. Ramsay travelled as an archæologist), and also to the general reader, and is a very clever method of making us adopt for ourselves certain conclusions which he reached by the observations we are thus made to repeat. By the time we have finished these chapters we have concluded that the population of Asia Minor is far from homogeneous—it is in fact heterogeneous, even in its Mohammedan parts. We have also reached the conclusion that the Turks, although the most good-natured, kindly, and honest of the various peoples who constitute the population of Asia Minor, are the stupidest and the least progressive of all. Wherever a Turk seems to be particularly efficient we have been able to trace his efficiency to the fact that he is not by origin a Turk, but belongs to some other race which has adopted Mohammedanism. As for progress and skill, we have found out that they are confined to the Christians. Almost all trade is in their hands. The muleteers and the camel-drivers may be Turks, but the owners of the goods they carry are Christians; and if a Turk lives in anything better built than a hut, it is found to have been constructed by a Christian. Wherever skilled labor is required it is Christians who must perform it. "Only in certain districts where some manufacture has been produced from time immemorial, do you find Turks engaged in it, but the careful observer will entertain no doubt that they are only the older population Mohammedanized." We have also learned that the Government is curiously distinct from the people whom it governs—that it is, in fact, a mere agent of extortion in its relation to the common people, and that it is precisely these Turks, whom we think of as the dominant race in Asia Minor, who are, on the whole, the most oppressed by the Government, because they are the most stupid, the poorest, and the least ingenious in evading oppression; and so the Turkish villagers hate and fear the officials, while at the same time they have a vast reverence for and loyalty to the Padishah, that is, the Sultan. But, in spite of their stupidity, Ramsay finds the Turkish peasants the most pleasant class with whom to deal, and their honesty and solidity he regards as desirable qualities to be amalgamated with the brilliant faculties of the Greeks, the race which has the future of Asia Minor in its hands.

After having thus dealt with Asia Minor in the concrete, as it were, and introduced us to the people in their homes, the author sums up certain of his results in a chapter on the Mohammedan races of Asia Minor—the Turks and Turkmen, the Yuruks and Avshahrs, the Circassians, Bulgarians, and other recent refugees; the Kurds, with whom his experiences were peculiarly unfavorable; the Tatars, the Ansarieh, Yezidi, etc. Next he discusses the past and present in Asiatic Turkey, that we may see that the present conditions are no mere accident, but that there is and always has been a conflict in Asia Minor between East and West. The Greek contended with Oriental influences and pushed them backward, and under his rule the country took on at least a veneer of western civilization. Rome pursued the work of Greece in a more vigorous and far-reaching manner. It organized an empire which did much towards amalgamating the various peoples of Asia Minor into one. The Christian church was a still more efficient agent in the unification and civilization of the country; but neither of these great agencies succeeded fully in their work. Under the weak Byzantine empire came a reaction. As eastern tribes and nations poured into Asia Minor, the old Oriental tendencies made themselves felt once more, until at last the Orient replaced the Occident at Constantinople, and the Byzantine empire itself became an Oriental despotism, to which in time the Turks fell heir.

Ramsay's discussion of this process of the disintegration of Occidental civilization in Asia Minor is most interesting and suggestive. He points out that it was due, not to conquest in the sense in which we ordinarily use the term, but to the gradual overrunning of the country by nomad populations from the East, who separated and isolated the cities, rendering communication between them impossible; until, left each to itself, they began to retrograde, and finally the whole country fell back into a condition of Oriental barbarism. Now the tide is setting the other way, and "the steady, inexorable, irresistible spread of European, and mainly of Greek, influence in the western parts of Asia Minor is by far the most striking fact in modern Turkey." It is against this inexorable, irresistible spread of European influence that the present Sultan, Abd-ul-Hamid, has set himself to wage a fight so desperate that Ramsay compares him with Mithridates marshalling the hosts of the Orient to resist the invasion of Occidental Rome. To do this, to resist the invasion of Europe, he has undertaken to arouse Mohammedan fanaticism, and systematically to stir up every prejudice among the Mohammedan populations of his empire. The agents from Mecca who go through the country towns to make arrangements for the sacred pilgrimages, are no longer ignorant men, but highly trained and efficient propagandists, and Ramsay says

that the impressions made on himself and on better observers have been that the

"directors and preachers of the faith in Turkey have been engaged for a good many years in preparing the Mohammedan revival; the means whereby Turkish power is restored is always the same—massacre—and the preparation consists in preaching that it is a virtue and a merit before heaven to slay and spoil the infidels."

"Will the Sultan's policy be successful? Will the revival of Mohammedanism be permanent in Asia Minor? So far as the centre and west is concerned, it cannot be. The Moslems are dying out there. Even where the Greeks have not begun to settle, the Turks are diminishing in numbers owing to conscription, misgovernment, and moral causes on which I will not enter because I have avoided studying or observing them. . . . In the eastern regions it may be different for a time. . . . The Mohammedan revival has been far more carefully propagated in these lands, and for the moment it is successful by the usual Turkish method. . . . The Armenians will in all probability be exterminated, except the remnant that escapes to other lands. There can be little doubt that about 200,000 of them have actually been put to death by the Turks, and I believe that fully four times as many have either died of starvation and hardship, or have so suffered from the unspeakable brutality to which they have been subjected that they can never again be self-respecting men and women" (p. 156).

As the result of this historic study we are told that the present "situation in Turkey is not simply an uneasy balance between two opposing forces," but that "Orientalism is ebbing and dying in the country." The efforts which in their rivalry with one another the great Powers are making to sustain Turkey are futile. The almost superhuman struggle of the present Sultan to stem the inflowing tide of Western thought and Western progress is useless; and it is comforting to think that, in spite of Armenian and Cretan massacres, in spite of the apparent defeat of Christianity and civilization in the recent Greek war, Turkey is doomed to speedy downfall.

Having considered the races of Asia Minor and their characteristics and the past and present of Asiatic Turkey, Prof. Ramsay proceeds to discuss somewhat more in detail the evils existing in the present administration of the country, and the mistaken policy towards that country pursued by the English Government. He has already, in a previous chapter, suggested that in choosing officials to manage their Eastern policy both of the great English parties seem to select them "because of their skill in misrepresenting, or their power of misunderstanding, Turkish affairs." He finds it difficult to determine whether the Conservatives or the Liberals have been the worst bunglers in their management of the Eastern question. He finds no difference, so far as selfishness goes, between the English policy and that of Germany or Russia, and to him it seems that the wisest plan for England is to join hands with Russia. The policy latterly pursued by the English Government has been one admirably calculated to drive Germany and Russia together, and to lead all the Powers to resist English attempts to reform Turkey, because those attempts appear to be nothing else than an effort on the part of the English to obtain for themselves all that they possibly can. He is particularly severe on Lord Salisbury, feeling that no rational policy can be pursued in the East "till Lord Salisbury has given place to a successor"; and on Mr. Goschen, whom he "holds more responsible than any other single individual" for the abandonment by the English of the system of trained military consuls in Turkey, and indirectly for the Armenian massacres. It was the policy of England which inspired the Armenians with those hopes which finally led to the massacre by the Turks, England abandoning them to their fate.

One chapter is devoted to that unfortunate people. Like most who have come in contact with them, Ramsay does not find the Armenians in their present condition a particularly attractive race. They are timid and cowardly, cringing, and ready to submit to almost everything, but this is an inevitable result of the oppression and slavery which they have undergone for centuries. The idea which has been fostered by the Turkish Government, that they are a set of unruly and turbulent conspirators, is, as he points out, simply ridiculous. It is only in the neighborhood of Zeitun that they seem to have any spirit left. But although they are now so servile and abject, Prof. Ramsay, in common with some other recent scholars, holds that they are identical in origin with the unruly Kurds, their traditional enemies and oppressors. "The Kurd is just a Mohammedan Armenian, and the Armenian is a Kurd passed through centuries of Christianity."

A most appreciative chapter is devoted to the American missionaries and their converts. Prof. Ramsay went to Turkey with a prejudice against the work of these men. He was driven by what he saw and observed to the conclusion that the work of the American missionaries in Turkey has been the strongest and the most beneficent influence for civilization in that country. It has been "zealously opposed and almost arrested by the present Sultan, with the support of the six European Powers." In the preface to the American edition, Prof. Ramsay exposes the absurdity of the statements made by American officials in 1895-96, that the missionaries have forced themselves into Turkey against the will of the Government, and have no legal rights and no claim to protection. He points out that they were supported and encouraged by three Sultans, and that "they stand on a firm basis of treaties, special enactments, and concessions." It is the present Sultan only who, in endeavoring to drive out all Western influences, has determined to compass the expulsion of the missionaries from the country and the destruction of their work.

Were we to make any criticism of this admirable book, it would be that Prof. Ramsay has pushed his theories of racial peculiarities and characteristics too far and accounts for too much by means of them. Are there no differences of character between individuals or even communities of the same race? Because Turks in general are stupid and unprogressive, does it follow that every individual Turk, or even every village of Turks, must be the same? Are there no other influences than those of heredity? The most striking instance of this inclination of Prof. Ramsay's to ascribe everything to race occurs in his discussion of the character of the present Sultan. According to him, Abdul-Hamid is not a Turk but an Armenian, and it is the nationality of his mother which has made itself felt in his character and his peculiar order of ability.

But this is, after all, a minor fault, and almost a virtue driven to excess. He who wishes to understand the Eastern question in its latest phases cannot find a better and more trustworthy guide than Prof. Ramsay's 'Impressions of Turkey.'

A PRINCESS'S TRANSLATION.

The Mirror of the Sinful Soul: A Prose Translation from the French of a Poem by Queen Margaret of Navarre, made in 1544 by the Princess (afterwards Queen) Elizabeth, then eleven years of age. Reproduced in facsimile, with portrait, for the Royal Society of Literature of the United Kingdom, and edited, with an Introduction and Notes, by Percy W. Ames, F.S.A., Librarian and Secretary, R.S.L. London: Asher & Co. 1897.

The above long title tells much, but not all, about the curious little volume it denotes. The poem by Queen Margaret (Marguerite d'Angoulême) here translated by the little Princess Elizabeth was published in 1531 (Margaret was then thirty-nine years old), and was her first publication. It is a religious poem of nearly fifteen hundred lines in rhymed decasyllables, which she entitled (following in the footsteps of more than one predecessor) "Le Miroir de l'ame pecheresse." The copy here beautifully facsimiled of the Princess Elizabeth's translation was made by herself, in a wonderfully admirable child's hand, and presented by her, in a cover apparently embroidered by herself, to her stepmother, Katharine Parr. This lady had shown her kindness. The little princess had had the misfortune to fall into disgrace with her father, and was banished from the court for a year. But she learned that the Queen always spoke of her, and kindly, when she wrote to the King (who was for a time at Boulogne), and Elizabeth sent her a letter of thanks (now in the Bodleian), one of the earliest of Elizabeth's letters, and, rather oddly, written in Italian. A few months afterward she sent this translation as a New Year's gift to the Queen. It was printed four years later, but the printed volume is very rare.

Elizabeth, in her manuscript, does not mention Margaret's name, yet there was a connecting link between the woman-author and the child-translator. Anne Boleyn went to France in 1515 in the train of Mary Tudor on the occasion of Mary's marriage to Louis XII., and during the ten years she remained there it is said she for a time belonged to the court of Margaret herself, then the Duchesse d'Alençon. It is therefore not unlikely that Elizabeth's copy of "Le Miroir" came to her from her mother, always a lover of all things French, and, to continue surmises, it may have been a wedding gift from Margaret to her sometime acquaintance. The second edition of "Le Miroir" appeared at the moment of Anne's marriage. It is curious that Elizabeth not only does not herself mention Margaret, even in her prefatory letter to Queen Katharine, but omits the name where it occurs at the close of the poem almost as a signature:

"Ne puis faillir à rendre la louenge
De tant de biens, qu'avoir je ne merite,
Qu'il luy plaist faire à moy sa Marguerite."

"Wich pleaseth hym to geue me," Elizabeth translates, recognizing, probably, that there was an untranslatable play on the word Marguerite.

The contemporary accounts of Elizabeth attribute to her, even in early youth, love

of study and quickness of apprehension. She knew, she writes the Queen,

"that pusilanimite and ydlenes are most repugnante vnto a reasonable creature: and that (as the philosopher sayeth) euen as an instrument of yron or of other metayle waxeth soone rusty, onles it be continualy occupied, euen so shalle the witte of a man, or woman, waxe dull, and vnapte to do or vnderstand anything pfittely, onles it be alwayes occupied vpon some maner of study. Wiche thinges consydered, hath moued so small a portion as god hath lente me to proue what i could do. And therefore haue i (as for a seye [an assay or essay] or beginning, following the right notable saying of the proverbe aforesayd) translated this lytell boke out of frenche rhyme, in to englishe prose ioyning ye sentences together as well as the capacitie of my symple witte, and small lerning coulde extende themselues."

Even if she had some assistance in her work, it has unmistakable indications of the "symple witte and small lerning" of a child, which make only the more apparent her remarkable precocity of intelligence. The youthfulness of this "eminent hand" is betrayed chiefly by passages of quaint literalness that are quite incomprehensible without the original; but there was little occasion for her saying: "I knowe yt as for my parte (as well spirituall as manuall) there is nothinge done as it shulde be." The examination of this translation with the original is a very interesting study of language (as Florio's translation of Montaigne), for Elizabeth writes the "Elizabethan" tongue, as the passage just quoted shows, completely different in "moral" character from sixteenth-century French. There is a sort of delicate maidenly shyness and graceful awkwardness about the native diction of the matron Margaret, a rich maturity and noble vigor in the language that was the national inheritance of the child Elizabeth. A few extracts, but they must be lengthy ones, will show this more vividly than remarks about it can do. The poem is, as it was entitled when the translation was printed, "A Godly Medytacyon of the Christen sowle concerninge a love towards God and hys Christe." It is one of the least interesting of Margaret's compositions, and one can but pity the little girl who, day after day, worked away so carefully at its mystical unintelligibleness. The prologue opens thus:

" Si vous lisez cette œuvre toute entiere
Arrestez vous, sans plus, à la matiere,
En excusant la rhythme et le langage,
Voyant que c'est d'une femme l'ouvrage,
Qui n'a en soy science, ne sçavoir,
Fors un desir, que chacun puisse voir
Que fait le don de Dieu le Createur,
Quand il luy plaist justifier un cœur."

"If thou doest rede thys whole worke, beholde rather the matter, and excuse the speche, consydering it is the worke of a woman: wiche hath in her neyther science or knowledge, but a desyre that eche one might se, what the gifte of god doth when it pleaseth hym to iustifie the harte of a man."

The conception of the direct communication of the soul with "God and his Christ" without the intervention of the Virgin or the Saints, which is dwelt upon in this "meditation," caused the University of the Sorbonne to condemn the book as heretical; and the study of these pages may have done something to confirm Elizabeth's Protestantism. The following lines are characteristic of the tone:

"Il n'attend pas qu'humblement je le prie,
Ne que voyant mon enfer à lui crie:
Par son Esprit fait un gemissement
Dans mon cœur, grand inenarrablement;
Et postulant le don, dont le sçavoir
Est incongnu à mon foible povoir.
Et lors soudain cest ignoré souspir
Me va causant un tout nouveau desir
En me monstrant le bien que j'ay perdu
Par mon peché, lequel bien m'•st rendu
Et redonné par sa grace et bonté
Qui tout peché a vaincu et domté."

"He doth not tary tyll i humbly do praye hym, or that (seynge my hell and damnacion) i do cry upon hym; ffor with hys spirite, he doth make a waillinge withyn my hart greater than i, or any man can declare, which asketh the gifte whereof ye virtue is unknowen to my lytell power. And this, the same unknowen sighe, doth bringe me a newe desyre, showinge the good that i haue loste by my sinne, wiche is giuen me againe, through his grace and bontie, wich hath overcomed all synnes."

The poem is full of references to passages in the Bible, and it is interesting to note the English rendering of these, before the King James version:

" Mais quand ce doux et gracieux prier
Ne me servoit, lors vous veniez crier:
Venez à moy, vous tous qui par labeur
Estes lassez et chargez de douleur:
Je suis celuy qui vous accepteray,
Et de mon pain refectionneray."

"But, when thou sawest that thys switte and graciouse speking did me no good, than thou begannest to cry: Come vnto me all ye wich are werey with laboure; I am i that shall receyue, and feed you with my bread."

And then the poor Soul utters what might indeed sound like heresy:

"Las, tous ces motz ne voulois escouter;
Mais encores je venois à douter
Si c'estoit vous, ou si, par adventure
Ce n'estoit rien qu'une simple escriture."

"Alas I wolde not harke vnto all these words; ffor i doubted whether it were thou, or els a symple writtinge, that so sayd."

" Enfer est donc par luy du tout destruit,
Peché vaincu, qui tant ha eu de bruyt.
Goulu Enfer, où est vostre defense?
Vilain peché, où est vostre puissance?
O Mort! où est icy vostre victoire,
Vostre aiguillon, dont tant est de memoire?
En nous cuydant donner mort, donnez vie,
Et le rebours faites de vostre envie.
Et vous, Peché, qui à damnation
Voulez tirer tous, sans remission,
Vous nous servez d'esperon et d'eschelle
Pour atteindre Jerusalem la belle."

"Than is hell and synne ouercomed by hym. O gloutō hell, where is thy defence? Thou villayne synne, where is thy power? O death, where is thy stinge and victory, wich are so muche spoken of? In stedde of death, thou geuest vs life, and so doest thou contrary vnto thy wille. And also, thou sinne, which wolde drawe euery body vnto damnacion, thou doest serue vs of a ladder, for to reshe vnto the goodly citie of Iherusalem."

One more quotation, showing the author almost at her best (in this poem) and the translator almost at her worst, we should like to make, beginning with the line, "Las, qu'est cecy? jettant en hault ma veüe," but space forbids. The facsimile of this manuscript is beautifully executed, and makes a charming volume adorned with the pretty and carefully chosen portrait of the girl-princess. A book-lover cannot but be grateful for such a book, even though it be, like this, a mere curiosity. A yet stronger gratitude would be excited if so much money, time, and labor as has been generously spent on this volume were given to a similar delightful reproduction of some work in itself more intrinsically valuable.

A Passing World. By Bessie Rayner Belloc. London: Ward & Downey. 1897.

One is not usually considered to be on safe ground when he ventures an allusion to a lady's age, and even though Mme. Belloc herself reminds us that she is now numbered among the veterans, it may appear ungracious to dwell upon the fact. We mention it only because we find it necessary to do so in attempting to criticise the volume of biographical essays which she sends abroad under the rather regretful title of 'A Passing World.' Dr. Holmes was impressed, on the occasion of his last visit to London, with the existence there of a unique feminine type, the well-preserved and entertaining woman who has for three or four generations been on close terms of familiarity with her leading contemporaries. When once her ganglia have been pleasantly affected by tea of a certain strength, she unfolds her personal or traditional knowledge of the world, even unto Horace Walpole, past whom social memory seems not to run. We should feel tempted to class Mme. Belloc among these hardy perennials if there were a little more trace of political association in her reminiscences. Those, at least, of the intimacies which she sees fit to describe are of a literary or an ecclesiastical character. Already well known, through a famous autobiography, as the close friend of George Eliot, she shows us that Rogers, Browning, and Rossetti were also of her circle. A political dash alone is needed to create the feeling that she has been in the thick of London ever since the Queen's accession.

The keynote of Mme. Belloc's recollections is universal benevolence. She tells us that she has repeatedly been taxed with failing to say all she might have said about her acquaintance. She deals with "a generation of writers of whom very many were close personal friends. . . . Nobody, unless utterly devoid of observation, can pass from youth to age without knowing the secrets of many lives and the inner histories of many households." But the task of revealing the seamy side of life Mme. Belloc leaves to the writer of fiction. "We have ample records in imaginative literature of every kind of iniquity. Let these suffice. But of our own people, of those with whom we lived and loved, and to whom we owe, through their writings, such a debt of gratitude for much of the present happiness of our daily lives, surely it is better to observe rigorously the old-fashioned rule, *De mortuis nil nisi bonum.*" This commendable purpose is kept in view throughout. Mme. Belloc, while disclaiming gossip, does not fail, as many with equally fair professions have done, into innuendo.

Good conversation often enough makes tame reading. We think that the contents of Mme. Belloc's memoirs conveyed orally could not fail to charm any one who might be permitted to hear her discuss men and subjects freely. In cold print the spell of the living word is lost, and occasionally one finds it hard to resist the idea that a flood of words is outrunning the staple of the argument. Her references to dead and living are almost always laudatory, and, apart from throwing here and there a side light, she leaves her distinguished friends pretty much where they were in our estimation and knowledge when we cut the leaves of her book. The opening chapter, from which the volume takes its title, is a potpourri of reminiscences, written for the purpose, one gathers, of showing that the literary leaders of the early Victorian era form a galaxy unequalled for splendor "since Alfred learnt his letters at his mother's knee." An exception is made in favor of "the one Apparition of William Shakespeare," but the rest of the Elizabethans are deemed unworthy of notice.

Judging from her ten other papers, Mme. Belloc's dominant interests are Anglo-Saxon

unity and Roman Catholicism. She shows a considerable range of reading in American history, and is keen to secure relations of permanent friendship. "It is not only that we have a common heritage in 'Piers Plowman,' or Queen Elizabeth, about whose good or bad deeds there is as much divergence in any American district as there is in any London parish, but that we are like Siamese twins, inextricably and, as some would think, fatally connected by a broad band of living flesh on which are inscribed the newest editions of Lecky and Spencer, Ruskin and Browning, Swinburne and Christina Rossetti." While convinced that Mme. Belloc's judgment on this point is excellent, we cannot commend it when applied to the candid solution of our local problems. She allows the United States one safe course, and one only—that which leads to Rome. *Extra ecclesiam nulla salus* has ordinarily been confined to theology. Mme. Belloc would give it a far wider extension. "I regard it as certain that the one influence which can prevent the people of the United States from pursuing a path of hopeless divergence in language, custom, and the infinitely more important realm of morals away from the standards painfully wrought out in Europe during nineteen centuries, is that of Catholicism." Mme. Belloc is certainly more at home in dealing with Augusta Theodosia Drane and recent English Catholicism than in devising schemes for the welding of American populations. Among her discursive papers those which have given us the most pleasure are the sketches of Dr. Parr, the great Grecian, and of Dr. Ulysse Trélat, director of the Salpêtrière, whose 'La Folie Lucide' gave Zola the hint of his Rougon-Macquart series. Both are delineations of character rather than biographical abstracts, and both are excellent.

Mme. Belloc writes with much information, graciousness, and impersonality. If she anywhere falls short of expectation, it is in the specific gravity of her subject-matter; not that her topics are too light, but that her treatment of them is slightly under weight. We may note, in conclusion, that her proof-reader has made more slips than one expects to find in company with such beautiful type and paper.

A Concordance to the Greek Testament: According to the Texts of Westcott and Hort, Tischendorf, and the English Revisers. Edited by Rev. W. F. Moulton, M.A., D.D., and Rev. A. S. Geden, M.A. Charles Scribner's Sons. Quarto. Pp. xii, 1037.

This work is one of the incidental results of Textual Criticism of the New Testament. Thorough students of the Greek Testament have virtually abandoned the use of the *Textus Receptus*, so called, which for two hundred and fifty years held sway, and have substituted the modern critical editions of Tischendorf and Westcott and Hort. This reversion to the older text, found in the newer editions, has diminished the value of some of the standard helps to study. The Greek Concordance of Bruder, a work of monumental accuracy and patience, fails to meet the present requirements. The handy Greek-English Concordance of Hudson recognized the various readings accepted by Tischendorf, and, with the careful editing of Dr. Ezra Abbot, became the favorite with those who were aware of its existence and excellence. But to make it convenient in size, the editors gave only references, not citations, and noted only the peculiar uses of the more common particles.

Prof. Moulton and Mr. Geden have adapted the general method of Bruder to the modern critical text. As might be expected, that of Westcott and Hort is accepted as the standard, but no reading adopted by Tischendorf (eighth edition) or by the English Revisers has been ignored. The American Revisers differ from the English in regard to about thirty readings, and this Concordance does not refer to these variations, a few of them quite important (*e. g.*, Acts 20:28). But nearly all of these appear either in Tischendorf or in Westcott and Hort, so that this defect can easily be remedied by those using the work. The editors have assumed, and with good reason, that the judgment of the Revisers coincided with that of modern editors in many cases (not affecting the English rendering) where the Revisers have made no record of their decision. Marginal readings, given by the critical editors or recognized in the Revised Version, have in all cases found a place in the Concordance, and a few appear "for which Tischendorf expressed a preference subsequent to the publication of his eighth edition" (preface, p. vii). Accordingly, the work covers the established results of recent textual criticism.

The labor of preparing the volume, immense in its details, has been chiefly performed by Mr. Geden, for Prof. Moulton was prevented by serious illness (as he carefully explains in the preface) from doing even the share in revising the work that he had intended. In citing passages good judgment has been exercised as to the limits of the citation, a matter of no small difficulty. The editor rightly determined that it was better to include too much than too little. Some abbreviations have been employed in citing the text; and under the head of the more familiar particles there are given series of references, not citations. But a classification, intelligible and exhaustive, is usually made in these cases. By means of signs attached to the words, at the head of the citations, an indication is afforded of the lexical peculiarities of New Testament Greek, as compared with classical and Septuagint usage. By "classical" is meant, according to the editors' divisions, the usage of Greek writers earlier than the Christian era. The Hebrew text is appended to all citations that are directly quoted from the Old Testament by the New Testament writer.

A work of this character is of little value if the editing and proof-reading have not been exceptionally accurate. There is every evidence that special pains have been taken to secure such accuracy in this Concordance. Errors will doubtless be discovered. Nearly three pages, at the close of the volume, are devoted to those noticed after the body of the work was printed, and Mr. Geden will receive notice of many more from those who use the Concordance. But the book is exceptionally accurate. The Greek type is clear; the columns are wide; the matter is not unnecessarily crowded. The size of the volume is not greater than that of most important lexicons. The editors and publishers alike are to be congratulated on the results of their efforts, and New Testament scholars will gladly welcome this addition to the standard books of reference for their department of study.

The Land of the Dollar. By G. W. Steevens. Dodd, Mead & Co. 1897.

When a writer pays us such a handsome compliment as to declare that "the age of chivalry is not gone; until America it never came," we feel him to be entitled to criticise us with the utmost freedom. Every true American would much rather be complimented on his treatment of women than on anything else in the world, save, perhaps, his courage in battle, and Mr. Steevens "lays it on" pretty thick, for he thinks that all true Americans will toil and slave and "kill themselves at forty, that their women may live in luxury and become socially and intellectually superior to themselves." This they do, too, "without even an idea that there is any self-sacrifice in it" (p. 314). On the next page he stretches the limit of life for the male American to "fifty or so," but beyond that he will not go. "Virtually there are no old in America at all," though, strangely enough, even the American woman, spoiled by chivalry, "is old at thirty." At what age she dies is not stated.

Mr. Steevens was here last year during the Presidential campaign, and his book consists of letters written originally for a newspaper. His trip he calls a "Scamper through the States," and his letters reflect the impressions of a scampering and slightly incoherent well-wisher. When he reports things that he actually heard or saw, he is at his best. Chapter xviii., descriptive of what he saw in Wisconsin, has some very good touches, especially the discovery of a type new to him—that of a man, in this instance an old man, who does nothing "in particular," is "generally at home," and, when this is not the case, "works some at moving houses." The prevailing economical opinions are very neatly hit off. "They do not believe that protection will raise the prices of the manufactured articles they buy, looking to competition to keep them down. When you point out that with free trade competition would keep them down lower still, they agree with you, but continue to believe in protection" (p. 161). On the subject of Anglophobia, he puts what he noticed in an original way: "His worst fault is that he dislikes us. But that—though it sound a paradox—is because he respects us. . . . They resent the existence of a nation they are bound to respect."

These are favorable specimens of Mr. Steevens's powers; his overheard American talk also is sometimes good, as, for instance, the dialogue on the race problem between a profane Northern drummer and a Southernized Canadian. The drummer says that "in a hotel up North" he went into the dining-room,

> "and there was a nigger head-waiter, sir. Yes, sir—a nigger, ordering white girls about; I tell you that made me tired. Then this nigger head-waiter came and showed me to a table with three niggers! When I was paying my bill to go to another hotel the clerk said, 'Why do you object to sit with the colored gentlemen?' 'I didn't see any gentlemen,' says I; 'I saw three buck niggers, if that's what you mean.' 'Oh,' he says, 'that race problem will never be solved.' 'Yes,' I says, 'but it is solved in the South. It adjusts itself. Treat them as servants—that's all they're fit for—and if one gets fresh shoot him.' 'Quite right,' said the Canadian." (P. 101.)

One thing Mr. Steevens heard in Ohio which he thinks reflects the "dubious side" of democracy: "If Bill McKinley gets in, he ought to do something for Canton." He seems to

think that Bryan is a demagogue of a high order, and superior as an orator to McKinley, who, he says, was "not interesting," though "he pointed out with great force that Portage County was the finest in the States." A shrewd observation is that "no democrat" (he might have said no man) "likes to vote a blank negative" (p. 173). The Jingo view of the New Navy is amusingly propounded (p. 141). The Jingoes, it seems, hold that as the present pensions of $140,000,000 a year "fall in," we shall be able to build "a dozen battleships a year without taking a cent out of anybody's pocket." And that means, he thoughtfully adds, "the naval supremacy of the world."

A Korean-English Dictionary. By James S. Gale. Yokohama: Kelly & Walsh. 1897.

In the making of a lexicon of the Korean language we behold a process much like that which has resulted in the Webster or Century Dictionary, except that the evolution has been one of years instead of centuries. Coming into the once forbidden land and attempting to master the written language as well as the colloquial, we find the first (French) missionaries annotating, collecting, classifying, with no native guide or model, just as did the first makers of Anglo-Saxon glossaries in mediæval times. In Korea, the scholars devoting themselves wholly to "learning," that is, Chinese, neglected both the vernacular and the marvellously simple *en-mun* or alphabet.

Mr. Gale's great work is a quarto of 1,160 pages, containing about 45,000 words and nearly 12,000 Chinese characters. Its thoroughness and accuracy are remarkable, but further it is a real triumph of keenness and perseverance in the pursuit of words as they fly "winged" from the lips of "the best speakers in the capital" (Séoul). Note-book in hand, Mr. Gale pursued his task during six years, often absenting himself for months from all men of the Western world. The result is a credit to American scholarship. His predecessors in this line of achievement are first the authors of the Korean-French Dictionary, prepared under the supervision of Père Robert, now the honored senior member of the French mission in Korea. Mr. James Scott of the British consular service followed with a Korean-English vocabulary. The Rev. Horace Underwood of the American Presbyterian Mission prepared a Korean-English and English-Korean dictionary in two volumes, in which Mr. Gale had a hand, and which was reviewed in these columns. Now, Mr. Gale, having read the novels and what might be called the "street literature," has given a view of the language and a storehouse of the coinage of thought which excels in richness, by some 7,000 distinct words, the French dictionary of the year 1880. No pretension is made to its being an "unabridged" dictionary, which at this stage of knowledge and the organization of it is an impossibility. It is believed that there are 50,000 words in the Korean vocabulary, a number which might be increased to millions if the manifold forms of the verbs were added. The average number of grammatical forms to a verb is 300, and one-fifth of the whole vocabulary is "either a verb or capable of verb-form."

It would be ungracious to criticise this scholarly work for its omissions, yet it would have gained vastly if, in addition to mere definition and the Chinese equivalent and Korean variations of form, there could have been, in the case of the more important words, several full sentences showing their use in literary combinations. The English or Romanized form of the word is not given, which is also a drawback for those who might wish merely to consult the lexicon. Valuable appendices contain the *en-mun* or native script equivalents for the imperial names and time-periods of China and Japan, and other apparatus necessary to show the expression in Korea's wonderfully true, simple, and efficient alphabet of the more cumbrous Chinese forms used in the countries on either side of "the little outpost state." Typographically, the work is remarkable for elegance and accuracy, as coming from the press of the Yokohama Bunsha, the whole having been wrought by Japanese workmen.

Historical Memorials of Ely Cathedral. In two lectures delivered in Cambridge in the summer of 1896 by Charles William Stubbs, D.D., Dean of Ely. I., The Shrine of S. Audrey. II., Alan de Walsingham. London: J. M. Dent & Co.; New York: Charles Scribner's Sons. 1897.

This little volume is not the first instance of a book in which the notes and appendices are more valuable than the text, but it is one more such instance. The text consists, as the title-page announces, of two lectures, which are, naturally, conversational, sentimental, sociable, chatty, and extremely ecclesiastical. On the other hand, the notes and addenda contain an unusual amount of valuable matter for reference. In the first place there are forty pages of "Chronological Annals of Ely from the foundation of the Monastery to its dissolution," namely, from 563 to 1539 A. D. This is drawn up in the form of a table with ten parallel columns, showing the chronological events, the authorities for the dates, the succession of kings of England and abbots or bishops of Ely, the architectural features of the monastery and its church, etc. This is full and detailed, and shows all the signs of having been thoroughly well done. Contemporary events on the Continent are sparingly introduced, but, as it seems, with great judgment. Thus, the introduction of the words, "Coming of the Friars," between 1216 and 1219, and of the name "Simon de Montfort," between 1229 and 1241, mark important cases of close connection between the Continent and central England; and the date of Dante's birth and death and of the Brunelleschi dome at Florence are memoranda of important intellectual triumphs contemporaneous with epochs in the history of the Ely buildings. The Black Death and the Peasant Revolt give explanation enough of the absence of architectural achievements during those terrible times. In the last page of the table comes mention of those events which heralded the fall of the monastery and the taking of the great church as a cathedral—such events, namely, as Erasmus's 'Praise of Folly' in 1506, More's 'Utopia' in 1516, and Tyndale's Translation of the Bible in 1525.

Following this table we have a very useful plan of the Cathedral and of the ancient monastery buildings, so far as their foundations and substructures have been traced. References from 1 to 74 explain these, and carry explanation enough to the student, who will also consult the chronological annals, of the historical development of the buildings. The notes to Lecture I. occupy as many pages as the lecture itself and are in finer print. The first incident in these is the analysis of the famous old lines which tell how the monks sang at Ely as Knut rowed by, and how the king told his *cnites* to row nearer the land that they might hear the monks sing. The lines have been given in the text both in intelligible modern English and in a facsimile of the original monkish script. But in the notes Dr. Skeat, the first living authority on such matters, analyzes these four lines in the most complete fashion, and gives a highly amusing series of transcripts as follows: (1) a literal transcript of the text, which he pronounces the work of a Norman monk who had not half learned English; (2) a corrected transcript in the true spelling of the period, or, in other words, a schoolmaster's correction of the stupid boy's bad orthography; and (3) the same words in the correct spelling of Knut's own time, in which time, certainly, these words were never sung. The last-named form of the quatrain certainly resembles English as little as any piece of Teutonic writing can. Finally, Skeat, with his accustomed minute interest in things of this kind, gives the "pronunciation in modern English spelling" of the corrected transcript. That is to say, No. 4 explains, to him who will follow the accentuation and the scansion carefully, the exact sound of the four lines as a twelfth-century scholar would have read them.

This entertaining piece of antiquarianism is succeeded by notes on the Draining of the Fens, on the Ely Manuscript, "Liber Eliensis" itself, of which more copies than one exist (the contents of the third book of this same historical manuscript running to 127 sections), and, finally, a long account of St. Audrey, that is to say, St. Etheldreda, and of the sculptures illustrating her life and the legends about her which exist in the church.

The notes of the second lecture are nearly as full as those of the first, and these are devoted mainly to the monastery rolls and the accounts of expense, not of the buildings alone, but also of the daily life of the monks and their masters. In the course of this discussion there occurs an interesting note on the ancient bells, their position in the wooden tower at the crossing of the nave and transept, and the probable position of the ringer during the fourteenth century. There is also an account of the sculptured heads of the persons famous in the Cathedral's history.

The lectures themselves are entitled "The Shrine of St. Awdrey" and "Alan de Walsingham." They are accordingly devoted, the first to the Cathedral, once the Abbey Church, and especially to St. Awdrey's connection with it, and the second, to the man who was sacrist of the Cathedral from 1321 to 1341 and thereafter prior and bishop-elect—Alan de Walsingham, to whom is accredited the building of the celebrated Octagon. This remarkable structure occupies what is known as the Crossing, that is to say, the meeting-place of the four arms of a cruciform church. At Ely, an attempt has been made to produce the semblance of a cupola carried on pendentives; and as the plan could hardly be carried out in stone, the whole was executed in oak in a semblance of Gothic vaulting. This unique per-

formance, a thing almost inconceivable to those who have studied the spirit of the Gothic architects, deserves all the inquiry and remark which has been bestowed upon it. Whether the conclusions are favorable and the student agrees with Dean Stubbs in thinking this an extremely important piece of mediæval building, or whether he thinks it the worst blot on the record of Gothic architecture in England, is another matter, depending entirely on the point of view. Is construction, and design resulting therefrom, the important thing, or is a copied design, carried out in material foreign to the construction, as in wood at Ely or in plaster at Chicago, equally worthy of admiration? That question will never be finally settled, and the advocates of the second theory are having it their own way at present, in this country, at least.

The illustrations include three valuable photogravures and a couple of half-tone prints, as well as a number of drawings by Miss H. M. James (reproduced in line-cut) which express the architectural forms unusually well. They are made, evidently, by a person who has felt an interest in building considered as building and not as a piece of sentimental ecclesiology. It is, of course, not to be expected that the mediæval sculpture should be adequately rendered by any such processes.

HENRY HOLT & CO., 29 W. 23d St., New York.

Dr. Jaeger's

SANATORY UNDERWEAR

AS USED BY

Dr. Nansen

on his famous Arctic sledge journey.

"The result of all this experimenting was that I made up my mind to keep to my woollen clothes, which would give free outlet to the perspiration. Johansen followed my example, and on the upper part of our bodies we each had two Jaeger Undershirts next the skin, etc., etc."—"Farthest North," Vol. II., p. 115

This Applies to You.

Jaeger Underwear allows the skin to breathe freely, at the same time absorbing its exhalations, leaving the body dry and warm. Gives the greatest warmth with the least weight.

APPLETON'S

Popular Science Monthly.

NOVEMBER, 1897.

Semon's Scientific Researches in Australia. Prof. E. P. Evans. Illustrated.

An account of Dr. Semon's exhaustive study of the natural history of this strangely isolated continent, of especial interest because of the occurrence there of living specimens of mammals, birds, fishes, and reptiles, which are found elsewhere only as fossils.

The British Association at Toronto. Prof. D. S. Martin.

A general account of this important event, including descriptions of the personalities of some of the many illustrious men who attended, and a comparison of the tone of this gathering of scientists and that of our own scientific association.

Principles of Taxation.—The Existing Methods of Taxation. Hon. David A. Wells.

Consists mainly of a consideration of the history and present status of the taxation of personal property, showing the way in which it encourages crime, and in the end defeats its own purpose.

Archæology and the Antiquity of Man. Sir J. Evans, President B. A. A. S. for 1897-'98.

His address at the Toronto meeting of the British Association for the Advancement of Science. A strong presentation of the claims of archæology as an exact science, and a brief inquiry into the antiquity of man on the earth.

An Experiment in Citizen Training. Winifred Buck.

A description of what is known as "Junior Good Government Club," No. 1, which has now been in existence about four years, and offers some instructive results for the social economist.

Other articles: The Racial Geography of Europe—X, Germany; Expert Testimony in the Bering-Sea Controversy; Burs and Beggar's Ticks; Natural and Artificial Perfumes; Sketch of Carl Vogt (with portrait).

Editor's Table; Scientific Literature; Fragments of Science; Notes.

50 cents a number; $5.00 a year.

THREE NEW BOOKS!

A GIFT BOOK FOR AMATEUR PHOTOGRAPHERS.

Sunlight and Shadow.

Edited by W. I. Lincoln Adams. Illustrated by more than 100 exquisite Half Tones from Original Photographs from Nature. 4to, cloth, decorated, full gilt, in a box, $2.50.

The season's most useful and beautiful book for those who use cameras. To aid the reader to advance in pictorial photography, the foremost artists treat the following subjects: **The Choice of Subject, Landscape Without Figures, Landscape With Figures, Foregrounds, The Sky, Outdoor Portraits and Groups, The Hand Camera, Instantaneous Photography, Winter Photography, Marines, Photography at Night, Lighting in Portraiture, Photographing Children, Art in Grouping.** The abundant illustrations are very beautiful examples of the perfection which has been reached in making and printing from half-tone plates.

A Colonial Witch.

Being a Study of the Black Art in the Colony of Connecticut.

By Frank Samuel Child, author of "An Old New England Town," "The Colonial Parson of New England," etc. 12mo, cloth, gilt top, $1.25.

The author is a ripe scholar in colonial history, and has given special attention to the psychology of the witchcraft delusion. His treatment of the theme takes the form of a well sustained and fascinating narrative. Mr. Child has made large use of town and court records, private journals and public documents in the historic setting of the narrative.

Fabius, the Roman.

Or, HOW THE CHURCH BECAME MILITANT.

By Rev. Dr. E. Fitch Burr. 12mo, cloth, decorated, gilt top, $1.50.

This stirring story of the Roman Empire tells vividly how the Christians under Fabius's leadership escaped the oppression and cruelty of Maxentius, and obtained civil and religious liberty under Constantine. A thread of love and adventure runs through the quick and exciting action of the story.

At all Booksellers, or sent, postpaid, on receipt of the price.

NEW BOOKS.

Some Colonial Homesteads

And Their Stories. By Marion Harland. With 86 Illustrations. 8vo, gilt top, $3.00.

In this volume the author tells the stories of some Colonial Homesteads, whose names have become household words. The book is charmingly written, and is embellished by a large number of illustrations very carefully selected and engraved. Among the homesteads presented are: Brandon, Westover, Shirley, Marshall House, Cliveden (Chew House), Morris House, Van Cortlandt Manor House, Oak Hill (the home of the Livingstons), Philipse Manor House, Jumel House (Fort Washington), Smith House (Sharon, Conn.), Pierce Homestead, Parson Williams's House, Varina (Pocahontas), Jamestown, and Williamsburgh.

Reminiscences of an Old Westchester Homestead.

By Charles Pryer, Member N. Y. Historical Society, Fellow N. Y. Geographical Society, etc. 12mo, gilt top, $1.25.

To the lover of ghost stories and local legends this little volume makes irresistible appeal. It is an entertaining book, and will add a charm to many Westchester scenes.

Modern English Prose Writers.

By Frank Preston Stearns, author of "Concord and Appledore," "The Midsummer Italian Art," etc. 8vo.

Elementary Jane.

By Richard Pryce. No. 26 in the Hudson Library. 12mo, $1.00; paper, 50 cents.

The Colloquy.

Conversation about the Order of Things and Final Good, Held in the Chapel of the Blessed St. John. Summarized in Verse. By Josiah Augustus Seitz. 8vo, gilt top, $1.75.

The Poem of the Cid.

The National Epic of Spain. Edited, with Notes, by Archer M. Huntington. In three super-royal octavo volumes, printed on hand made paper, containing numerous photogravure Illustrations, and bound in vellum. Vol. I. is devoted to the facsimile of the original text, this being followed line by line and page for page; Vol. II. contains Notes and Variants; Vol. III. consists of a careful and as nearly as possible literal translation. The edition is limited to 100 sets, the first volume of which is now ready. Price per volume to subscribers, $25.00 *net.*

A Young Scholar's Letters.

Being a Memoir of Byron Caldwell Smith. Edited by D. O. Kellogg. With Portrait. 8vo, $1.75.

"The letters are a revelation."—[Chap Book.

"A spirit of purity and fire."—[Providence Journal.

"High ideals and penetrating intelligence."—[Indianapolis Journal.

"We are reminded of Amiel."—[Boston Literary World.

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 4, 1897.

The Week.

The reaction throughout the country against Republicanism, as represented by the McKinley Administration and the tariff legislation passed at the extra session of Congress, proved overwhelming on Tuesday. The tide which transformed a plurality of 268,469 for McKinley in this State last year into one of about 60,000 for the Democratic candidate for the Court of Appeals bench this year, swept on into Ohio, where it almost, if not quite, wiped out the Republican plurality on the State ticket and rendered the Legislature almost a tie, as against 110 Republicans and 28 Democrats in the last body; while Iowa, which gave McKinley more than 65,000 plurality last year, and has always gone Republican in State elections except on the prohibition issue, was saved by a narrow margin. McKinleyism in the White House and Dingleyism in Congress combined are proving even more disastrous to the Republican party than McKinleyism in Congress seven years ago.

Platt has "saved his organization" at the most stupendous price ever paid by a political leader. He has turned over Greater New York, with its enormous patronage and $75,000,000 of annual expenditure, to the Democratic party for four years; he has lost the State irrevocably, converting a plurality of 268,000 for McKinley and one of 212,000 for Black, into a Democratic plurality of 60,000. He has nearly if not quite lost control of the Assembly, and hence of the Legislature. What prospect is there, in view of these results, that the Republicans can elect a Governor next year, or can carry the State for a Republican candidate for the Presidency in 1900? Greater New York, with its 3,500,000 of people and its 567,000 voters, will henceforth be the most tremendous Democratic stronghold this or any other State has ever seen. To secure this invaluable Democratic advantage, the Republican boss "jammed" the new charter through the Legislature, and then "jammed" the enlarged city into the possession of Tammany Hall by running Tracy for Mayor—"to save the organization." Was ever a great political party in the hands of a more extraordinary "leader" than this? And what a triumph for that leader that he should be able to get 100,000 Republicans to help him carry his policy into execution.

The new Municipal Assembly will be an overwhelmingly Tammany body in both branches. There will be only a handful of Republicans in either house, so that, as an element of the new city government, this local legislature will work harmoniously with the other branches of Croker's administration. The character of the Tammany membership is about as poor as could be imagined, falling quite uniformly to the level of our worst Boards of Tammany Aldermen. Fortunately this new body has very little real power, but it has, nevertheless, large confusing powers in many directions, and opportunities for general jobbery which are not likely to be neglected. If it were composed of the most intelligent elements of our population, this local legislature would be at best a virtually useless body, but it would be harmless. As it is, time alone will show how great a capacity for mischief may be lurking within it.

The bigger the Greater New York, and the more difficult of organization, the more comic the way the charter was passed. It was passed as never before was passed the organic law of a civilized community. We predicted incessantly, while it was under consideration, that there would happen, at the first election, exactly what has happened—the passage of this new municipality, with its roads and parks to make, its bridges and tunnels to build, its streets to asphalt, its municipal buildings to erect on an enormous scale, and its $75,000,000 of revenue to administer, into the hands of Tammany. The calm with which Platt and his men seemed to contemplate this last spring, satisfied us, and most other intelligent observers, that he had some sort of understanding with the other side, and that it was a matter of indifference to him personally which side won, if he once got the charter to work. What we did not anticipate was that he would find it so easy to rally to his aid 100,000 Republicans in this city and a man of Gen. Tracy's standing to obey his orders and serve his purposes. Most of these Republicans are undoubtedly honest men, but the extent to which their devotion to "the party" carries them, and the readiness of Gen. Tracy to sacrifice the good name of an honorable career for an "influential" practice at the bar, are things for which we certainly were not prepared. The novelty of such phenomena in human experience naturally justifies the belief held by many that they are not wholly due to human agencies.

Mr. Low's final address to the voters, like all of his campaign utterances, was a model of its kind. We have never had in any campaign, city, State, or national, a candidate who has confined himself in all his speeches and addresses so completely to the matter in hand as Mr. Low has. The simple issue of free and honest government by the people has been the subject upon which he has dwelt to the exclusion of all others. In his final appeal this was the only subject pressed upon the voters' attention. Speaking of the Citizens' Union, he said:

> "(1.) It stands for local self-government, for a government of the city by the people of the city, and in the interests of the city. It opposes the government of the city by the machine of any party.
>
> "(2.) It stands for the right of the people to nominate their own candidates, as well as to vote for them. It opposes the dictation by one man, through his party machine, of nominations for public office, irrespective of the popular wish.
>
> "(3.) It stands for the responsibility of public officers to the people, and it opposes the claim of the machines to use the government of the city in their own interests."

No man was appealed to on the ground of partisanship, but all citizens were asked to give their support to candidates who were pledged only to supply the city with good government. In order to see what an advance this kind of final appeal is, we have only to contrast it with that which Gen. Tracy put out, addressed to the partisan prejudices of Republicans, begging them to stand by their party first of all, and to do their utmost to get possession of the city for the Republican party; Tracy being fully aware that every Republican who listened to him and followed his advice would be giving his vote in favor of turning the city over to Croker for four years.

In a public speech last week Mr. John Brooks Leavitt made certain charges against T. C. Platt in connection with the New York Life Insurance Company, which the cashier of that company promptly denied. The latter admitted, however, the payment of "$30,000 or more," not to Mr. Platt, but to, or on account of, the late John F. Smyth, then State Superintendent of Insurance, in connection with an examination of the assets of that and other insurance companies. The cashier thinks that in all probability this is the origin of Mr. Leavitt's story. We think that it is more easily traceable to the passage of the bill by the Legislature, some years ago, by which the life-insurance companies were relieved of the payment of about $750,000 in back taxes which was decided by the Court of Appeals to be due to the State. The late Gen. B. H. Bristow resigned his position as trustee of the New York Life Insurance Company because he could not get any satisfactory explanation from the late President Beers of a payment of $30,000 or more from the company's trea-

sury about that time. So he informed some of his friends. We do not affirm that this money went to Albany, nor do we think that Mr. Beers put it in his own pocket, nor do we imagine that it disappeared by magical conjuration. We are well convinced, however, that its disappearance is typical of many similar payments made before and since by corporations in this city to secure what they call "protection," which keep party bosses in power and enable them to buy members of the Legislature and to hurry the republic to destruction by corrupting the instrumentalities of government.

The funeral of Henry George was a striking demonstration of the popular attachment that has grown up in this community towards a man of high purpose, single-mindedness, and devotion to what he conceived to be his duty. As one of the speakers said, Henry George might have filled important offices, he might have made money, he might have achieved most of the things that are accounted success in this world. He had all the qualifications that make up the equipment of the successful politician—all except one. He could not crook the pregnant hinges of the knee that thrift might follow fawning. It was impossible for him to deliver any other message than the one he did deliver. As another speaker at the funeral said, the people there assembled were in part those who accepted Mr. George's teachings, in part those who accepted some of his teachings and rejected others, and in part those who accepted none but rejected all of them. Yet the whole vast assemblage within the hall and the vaster one without were drawn together by profound respect for a gifted man who followed his convictions and turned not to the right hand or to the left, who carried no muck-rake to draw place or profit to himself, but held fast to the truth as he understood it, leaving results to the ordering of Providence.

So much of Mr. George's life and work was given to the single-tax theory and the land question that scant attention has been drawn to other labors which, to our mind, were more important. He was a friend of peace. When the fighting element of the community was so stirred by President Cleveland's Venezuelan message, the voice of Henry George was among the first and most potent to rebuke it. When, at a later period, the arbitration treaty with England became a public issue, he gave it the warmest welcome. He hated war with a holy hatred, and he hated the preparations for war, because he believed that, in our case, if not everywhere, they tended to bring on war. He believed that the burdens of war, both in blood and treasure, fall mainly on the working classes, and this was an additional reason for his detestation of it. Here again he delivered his message because he could not do otherwise. He was a free-trader out-and-out. He knew that protection was a tax on labor, that what was given to one by that system was taken from another, that there was no law, and could be none, to compel the beneficiaries of the tariff to divide with their operatives, still less to divide with other people; and hence that the system was part delusion and part fraud. And so he spoke and wrote, producing one book that is among the best ever written in English on that subject. In all that it fell to Henry George to do there was a scrupulous morality and fidelity to the interests of his fellows.

Mr. Dingley's deficit for October was only $9,300,000, and November leads off handsomely with a shortage of $530,000 for the first day. These deficits, be it remembered, occur in the face of expenditures visibly "held up." Mr. Gage, that is to say, very properly exercises his discretion in the matter of certain payments which are authorized, but not strictly compulsory at a fixed date. The bill will have to be settled in the end, but it is comforting to hold it back until the promised surplus revenue is in hand. But that Dingley millennium will have to hurry up; one third the fiscal year is gone, and the deficit is $38,000,000.

Secretary Gage's "plan" for reforming the currency has met with little but an eloquent silence. This may be due in part to the absorption of the public in pending elections. But we fear a deeper reason is the despairing feeling of the business community that Congress will be indisposed to touch the currency with the tip of a finger, and that the Administration has not the stomach for a fight on the subject. Mr. Gage is, of course, committed, and will no doubt make a strong and urgent report; but what will the President do? It is generally agreed that, as at present minded, he will make only a perfunctory recommendation—something like Mr. Harrison's allusion in his message to Secretary Windom's report: "Here is the report of the Secretary of the Treasury, which I hope you will read carefully and try to understand; Heaven knows, I don't understand it!" But Mr. McKinley has a better reason for faltering zeal in the cause of currency reform. As he explained last March, the first thing was to raise a sufficient revenue; after that would come currency reform. Now as a matter of fact he is not within $38,000,000 of sufficient revenue; so how can he be consistently asked to go on with currency reform? But we hardly look to see him put this argument in a message to Congress.

News comes from Honolulu that the dispute with Japan over immigration is all but settled. It is also stated that the Japanese Minister to the United States, now on leave of absence in Tokio, will be replaced at Washington by another envoy. This is to be a rebuke to Minister Hoshi for taking so high a tone with Secretary Sherman about Japan's interest in our annexation of Hawaii. But this, we must think, is a very mistaken view for annexationists to hold. If everything is such plain sailing now, if nobody objects in the slightest degree to our taking the islands, it at once becomes doubtful if we want them. The general feeling in the country is that it is probably a highly foolish thing to annex Hawaii; but, if anybody says we mustn't, we'll do it though it were twice as foolish. So we think a better theory of the Japanese Minister's recall would be that he had fallen under displeasure for having assured Secretary Sherman that Japan had no idea of annexing the islands herself. That was a fearful blunder; everybody knows that Japan wants the islands; therefore, we must have them. Annexation strategy seems to be flagging.

The form of autonomy which Spain is now prepared to grant Cuba is but vaguely outlined as yet in the accounts of it given to the press. But there is no reason to suppose that it allows any such measure of home rule as Canada, for example, enjoys. Either by power lodged in the Governor-General, or by a veto reserved to the Spanish Cortes, a sure check on local control will be retained by the Spanish Government. Moreover, it is to be remembered that autonomy, even if freely granted and frankly accepted, would not solve the whole problem, which is so largely one of finance. Cuba, even if her industries were not ruined, could not bear the crushing burden of taxation which would be sure to be laid upon her after the war. Discontent and the outbreak of another rebellion would be almost certain to follow. But the great trouble with any scheme of autonomy is that it comes too late to satisfy either the Cubans or the American Congress. The insurgents take the offer of home rule as a confession of weakness, and say it will merely make them redouble their efforts to secure independence, which is now more than ever their goal. And it is difficult to believe that Congress can be kept from some kind of pro-Cuban vote early in December. In its temper lies Mr. McKinley's real perplexity. But until Congress meets, it is promised that he shall do nothing.

The English bimetallists are not at all discouraged by the bursting of the Wolcott bubble. They issue an address pointing out the great victory they have

won by having "attention called" so prominently to the subject of international bimetallism. This is like Paddy's consolation when the pig crashed through the window and got away; at any rate he knew the size of the cratur now. Yes, attention has been called to international bimetallism; also ridicule and contempt. All the world sees it lying dead in Downing Street. But, as the English Bimetallic League says, the slaughter has attracted great "attention," and the funeral will be attended by many mourners. Chief among these should be the "brainy" Balfour. The idea, said one of his admirers just the day before the fatal blow was struck—the idea of Balfour's staying in a cabinet which would do bimetallism to death! But there he stays just like a less divine being. Perhaps it is only to make his mourning official. No one doubts that it is heartfelt.

While earnest protests are raised against the further immigration of "cheap labor" from Europe, it is noteworthy that recourse must constantly be had to such labor, even in a State like Massachusetts, where the movement for restriction has been very strong. Many pieces of "State road" are being made in different parts of Massachusetts; and even in rural towns, where foreigners are almost unknown, it has often been necessary to employ Italians sent thither from the large cities. The same thing is true even of the smaller cities. A new street-railroad is being constructed in North Adams, and when the company began work, it brought in a gang of Italians. The Central Labor Union at once raised a "howl" about the injustice thus done the poor workingmen of the city, whereupon the company explained that it had imported the outsiders only because it could not find the men that it needed in the city. A firm which has the contract for a job of street paving has had the same difficulty, and it has actually been compelled to advertise in the local papers in order to get a sufficient force. The employers say that there is not a man idle in the city who wants to work, though there are not a few who are idle but will not work.

The utter breakdown of prohibition in New Hampshire is now confessed, even by its most earnest advocates. Testimony to the fact which is of the highest importance was furnished at the convention of Baptists in Manchester a fortnight ago. The whole subject of temperance was discussed at length, and the result was the adoption of resolutions which declare that "we view with consternation the influence of the saloon in our State, and regard it as a nuisance which ought to be suppressed"; and that "we note with great sorrow the open violations of the prohibitory law in our cities and towns with the evident permission of our commissioners, mayors, and police officials." Nobody attempted to deny that this statement as to the wholesale violation of the law was entirely true, and if it is true, it would seem as though the most ardent prohibitionists must soon see the folly of keeping on the statute-book a law which cannot be enforced, and which results in "free rum."

The killing of a promising young Georgian, who was a student at the State University, as the result of a game of football at Atlanta on Saturday, has led to the announcement by the Chancellor that no more playing of the game will be allowed in that institution. The announcement commands general approval in the State, and many members of the Legislature favor the passage of a law to the same effect applying to all. A similar prohibition of the game by the principal of a high school in Milwaukee, because of the serious injuries suffered by several members of the eleven in a recent game, is to be noted, together with an admirable deliverance on the subject from Mr. Charles Quarles, President of the Milwaukee School Board, who favors action by the board that will make this prohibition general. It is refreshing to find an educational authority who appreciates that boys are "presumably sent to school for mental training," and who is not deceived by the cant about physical training into favoring a game which has a "hospital list" as an invariable accompaniment in every institution where it is played. So, too, it is encouraging to hear the president of a school board laying down the sound but now generally forgotten principle, that the authorities in charge of an educational institution "have no business to countenance, and so encourage, dangerous sports."

There is nothing like agreement among the authorities as to what constitutes "slugging" in football, or as to what extent slugging on the part of university students should be condemned. This is not to be wondered at. It will be remembered that a Yale professor three years ago, in a book on the science, held that "personal encounters of some sort seem absolutely necessary to the education of young men, especially men of the strongest character." At what point does a "personal encounter" between players of rival teams cease to be "roughness," which is held by experts to be as permissible as it is necessary, and become "slugging," for which President Harper of the University of Chicago has announced that the offender "will be dropped from the team and University at one and the same time"? This is just now a burning question in Syracuse and Colgate Universities. In a recent game between elevens representing these institutions it is alleged that "Syracuse players intentionally 'tackled' Colgate men who did not have the ball, contrary to the rules of the game, and seemed to slug as if trained in the ring instead of on the gridiron"; that "the Syracuse fullback, while being forced back with the ball by Colgate men, lost his self-control and deliberately punched one of the Colgate men in the eye"; that "naturally Colgate men retaliated"; and that finally "the players all lost self-control and some of the spectators tried to quiet them." It is further affirmed that "Syracuse men were heard to speak laudingly of players who slugged, and in condemnation of the action of President Harper of Chicago in reference to such actions."

The London *Economist*, commenting on the rumor that Lord Salisbury had resigned, advises him to give up one of his offices, that of Foreign Secretary, on the ground that, whether true or false, there is a strong popular impression that in that office he has failed. On the other hand, it advises him to keep the Premiership, on the ground that he has great mental powers and high rank and is a favorite of the Tory party. The truth is that Lord Salisbury, like Mr. Balfour and many others, owes his reputation for all sorts of ability, simply to his being an anti-Home-Ruler. Previous to Gladstone's attempt at Irish home rule, and especially after the Berlin treaty fiasco, there was no general impression of his ability whatever. His meek succumbing to Disraeli, whom he hated and despised, his clumsy device of a secret understanding with the Russian Minister, and then astounding denial of its existence, and the whole hodgepodge called "peace with honor," gave the country the idea of want both of capacity and of good faith, and made Mr. Goschen's declaration that he was not prepared "to give Lord Salisbury a blank check" in foreign affairs, seem a very good *reductio ad absurdum*. When Gladstone took office in 1886, Lord Salisbury had, in the public eye, failed or was incompetent, and Mr. Balfour, though sixteen years in the House of Commons, had never been heard of. Lord Salisbury has never said or written anything to give an impression of mental power. He has published nothing, and made no sort of literary display, except smart and cynical articles in the *Saturday Review*. Both he and Mr. Balfour, to say the blunt truth, owe all their eminence to the wild alarm excited in England by the Home Rule bill, and to their social position. They rode into power and fame on the crest of this wave, and they have been found out in two years, Lord Salisbury by his diplomatic failure and Mr. Balfour by his bimetallism.

THE ROOT OF THE MATTER.

Nothing more dramatic has occurred in our political history than the reappearance in the canvass of Henry George, after many years of seclusion and apparent failure, to reaffirm his doctrines and resuscitate his fame by an early and sudden death. Never was it more true than of him, that, being dead, he yet speaketh; for we do not believe it is an exaggeration to say that his death has given twice the force to his words they would have had had he lived. For we may fairly conclude that had he lived he would have been defeated at the polls, and his peculiar doctrines would again have shared his political eclipse. But he took himself at once out of the category of preachers of hopeless opinions by his vigorous attack on the root of our city evils. Most other orators treated Croker's and Platt's badness as the cause of our woes. He said: "The trouble lies deeper. These men do only what all bosses have done, levy blackmail on people whom they can attack through venal legislatures. If I am elected, you need not expect me to reform our taxation or reduce car fares. These things are beyond my powers, I know, but you may count on my bringing these rogues to justice. This I can do and will do." This talk rang through the city like a trumpet call, and stirred up the masses as no other speaking had done, and then came his death, impressing people like a heroic sacrifice for the public good. Considering everything, the speculation which followed on the effect of his death on the canvass was droll, if anything connected with such a tragedy could be droll, for Croker and Platt both maintained that those whom he had roused would at once go over to the causes which he hated and to the men whom he denounced.

Mr. George's stern and energetic presentation of Platt and Croker as criminals to be punished was in a certain sense a new idea. Most of our other orators had given it the go-by, and treated "Mr." Platt and "Mr." Croker simply as over-ambitious political opponents, who merited nothing more than defeat at the polls. George shook the handcuffs and striped jackets before their eyes, and pointed them out to his followers as double-dyed criminals, whose condign punishment he would, if elected, consider his first and most solemn duty. The moral law, for the first time in city politics, we may say, spoke through him to the masses. There was no mincing, no allowances, no courtesy, no compliments or qualification, such as have been showered on some other city thieves and reprobates; nothing but the Ten Commandments in their naked majesty. For this we honor his memory.

The *causa causans*, as the philosophers say, of Platt and Croker both, is the corporations which supply them with money. Could we stop corporation contributions, these two men would sink into utter insignificance. They owe *all* their importance to the money they are able to dispense. How they spend it and where they get it is well known, and has been frequently pointed out. No one, not even Quigg or Lauterbach, pretends that, if Platt had not this money, his doings and sayings would have the slightest importance. He has none of the qualities of a popular leader. He is not eloquent, or witty, or wise, or magnetic. Low cunning he has in abundance, but even a band of thieves would not enlist under him on this account. His appearance simply as a candidate for command would set a band of brigands in a roar. He is what he is simply because he holds the bag. Take the bag from him, and an enthusiastic canvass against him would become supremely ridiculous.

It is to be observed, in confirmation of all this, that whichever boss is able to command the city money, as a rule, also commands the Legislature. The Legislature goes with the city much as a Waterbury watch goes with a suit of ready-made clothing, or a chromo with a year's subscription. The corporations give money to both bosses, but they always give most to the one which has won the last city election. It was the general impression that Platt had shared in the victory of Strong—that is, that it was to him the credit of the Strong victory would accrue—that enabled him to get together such a collection of venal cattle as made him Senator over Mr. Choate. The legislators obey the "Old Man" for precisely the same reason for which the porter obeys him at No. 49 Broadway. They know they would lose their places if they did not obey him. When Tammany won the city, Croker stepped into the boss-ship at Albany without the smallest question in any quarter. He soon had the Legislature, and his Sulzer, and the usual gang of mercenaries ready to pass laws without discussion, on telegraphic orders, almost as a matter of course, and all because he then carried the bag, not because he was an orator, or statesman, or influential in any good or moral sense.

Now, where did the bag come from? It came from the corporations. No bag, no boss. Could we stop the bag, we might still have bosses, but they would be bosses like Daniel Webster, or Silas Wright, or William H. Seward, or Low, or Hewitt, who would be followed and obeyed because they were loved and admired, or were considered wise counsellors, or had become great party leaders through force of eloquence or political skill. Therefore, we say unhesitatingly that unless a victory at the polls were soon followed by fresh legislation making the payment of money by corporations to *any one*, for political purposes, a penal offence, entailing a few years of stern penitentiary, and making the payment of money to candidates for the Legislature *by any one*, or its receipt by any one, also a penitentiary offence, we should have the boss back again in a very short time. The great aggregations of money known as "corporations" are a new thing in the modern world. The extravagant use of money in elections is also a comparatively new thing in America. Both of them were unknown to the men who in our constitutions laid the foundation of our polity. Neither of them has been adequately dealt with, or dealt with at all in our legislation. There has, therefore, grown up rapidly that curious creation of mixed bribery and blackmail known as "the boss." He must be dealt with by law speedily if he is not to ruin our government, and the corporations must be expelled from politics if they are not to rule us wholly through a new form of government, which would be the meanest and basest contrivance devised by man since he began to live in society.

EX-MINISTER TAYLOR ON CUBA.

Mr. Hannis Taylor, our Minister to Spain under President Cleveland, publishes in the *North American Review* for November an article on the Cuban question which is important in both source and substance. It might be thought indelicate for Mr. Taylor to write about Spain as he does soon after leaving Madrid. He himself seems to feel that his article is open to the suspicion of being thought undiplomatic, but excuses his writing it on the ground of its being his "duty to lay before my countrymen my humble testimony on the whole subject." We never were, in this country, great sticklers for diplomatic propriety, and Mr. Taylor need fear little censure on that score—especially when he comes forward not as an idle gossip, but as a slave of duty. For the rest, it must be said that his high standing as man and scholar, and his opportunity for studying Spanish politics at first hand for four years, lend him an authority in the matter in question to which few can pretend.

Mr. Taylor's analysis of the causes of the Cuban rebellion agrees with that made by intelligent Spaniards. It is a rebellion based on economic reasons and inflamed by misgovernment. The prosperity of Cuba depends upon two great staple products—sugar and tobacco—and these have been at the mercy of foreign tariffs and the benighted legislation of the Spanish Cortes. It is not necessary to go over the details. The present revolution started, it is confessed by Spaniards, in industrial discontent and misery, and its aim is primarily to secure commercial independence; political independence is subordinate, but goes with it.

This is a familiar story, but the point to which Mr. Taylor speaks with peculiar weight is the ability of Spanish states-

men either to grasp the real problem of Cuban government or to solve it. Here he is emphatically despondent, but not more so, we believe, than the facts warrant. As he says, the idea of colonial autonomy, in the English sense, of local control of local affairs, is an idea which has never yet got lodgment in a Spanish head. The Government now talks about granting Cuba home rule, but really does not mean it, because it does not even understand what home rule is. Nor do the Spanish people as a whole, who would think of a Cuban Parliament, with the powers, say, of the Canadian Parliament, as equivalent only to surrendered Spanish sovereignty. Mr. Taylor says, and doubtless with truth, that Spaniards would rather lose the island by force of arms than make it a grant of liberal self-government. The displacement of Gen. Weyler by Gen. Blanco will make no real difference. Reforms and an extension of local government may be promised; but any form of autonomy conceded by Spain would be hollow because neither Spanish Government nor people understand what autonomy really means. If it were granted in name, it would be only in the way in which the Bourbons granted the Charter—not that they had the least idea of living up to it, or thinking that anybody would suppose they would.

So far Mr. Taylor on the causes of the rebellion and the impotence of the Spanish Government to heal the Cuban sore. In these matters he writes as one with authority. What he says of the duty of the United States, what he advises Congress to do, what he predicts as the result of his advice if it is taken —all these things must be accepted for what they are worth. Yet it cannot be denied that they will be apt to have great weight with the country and with Congress. What Mr. Taylor hopes to see is, he says:

"The prompt adoption by Congress, upon its reassembling, of a joint resolution, embodying three clear and definite propositions: The first, asserting our right and duty, not only to ourselves, but to humanity, by virtue of the universally recognized doctrine of intervention, as well as by virtue of the Monroe Doctrine, to put an end to the dreadful conflict so long raging in Cuba, because it involves not only the constant disturbance of our internal peace, but also the destruction of great commercial and property interests of our citizens; the second, asserting that, after enduring patiently all such evils incident to fifteen years of war in Cuba out of the last twenty-nine, the Government of the United States has offered in vain its friendly offices as peacemaker to Spain, in hope of aiding her, without offence to her susceptibilities, in bringing to a close a strife so destructive to the material interests of both countries; the third, declaring that the Government of the United States, in view of Spain's refusal to accept such friendly and respectful mediation, has now resolved to exercise upon its own responsibility its entire moral influence, to the end that the war in Cuba may be brought to a speedy close, provided Spain fails to accomplish that result in a reasonable time, to be clearly indicated."

Mr. Taylor thinks that the passage of such a resolution could not be "justly regarded" by Spain as a *casus belli;* but this is surely to presume upon Spain's weakness. She may be weak, but she is as proud as ever. In fact, there is reason to believe that, as in the case of a decayed noble family, she clings to the last remnants of her former greatness with a pride that is all the fiercer for her enfeeblement. This at least is certain, that Spain would prefer to lose Cuba as the result of a war with the United States rather than surrender the island to the insurgents unaided. So it would be the height of folly for Congress to pass such resolutions as Mr. Taylor urges, without seeing that they lead directly to war with Spain, and without preparing for such a war. Our duty is our duty, whatever the result; but we must not flatter ourselves that we can discharge it with light hearts on account of "sunk Spain's prolonged death-agony."

COLLEGE ENGLISH.

The Harvard Committee on Composition and Rhetoric have made their final report to the Board of Overseers, on "College English"—that is, on the English of the young men who present themselves for entrance to the college. The three previous reports were devoted mainly to the revelations made as to the quality of this English by the freshmen's examination papers and themes. They reflected, many thought, too severely on the want of proper previous training in the preparatory schools which these papers and themes seemed to indicate. Many teachers resented warmly the conclusions of the committee, and some doubted whether there was any sufficient basis for them in fact. The committee then sought to meet these objections by the publication of specimens of the compositions on which they had commented. These specimens were, as a rule, deplorable, but still the use made of them was unsatisfactory to the schoolmasters, who had many ways of accounting for their badness without accepting the blame for their own schools.

Much of this blame was thrown on the practice of testing English by translations from the Greek and Latin, inasmuch as this really imposed on the student the necessity of showing skill in the use of two languages, when he was nominally called on for proficiency only in one. The committee acknowledged that there was some force in this excuse, but the fact still remained that the English of the freshmen was so very poor that the college had been compelled to establish a course called "English A," in which to teach the rudiments of English composition so as to fit the young men to profit by the remainder of the college course. The committee accordingly determined to try to get to the root of the trouble in another way, by addressing queries to the young men and women in Harvard and its annexes, touching the preparation in English they had received in their respective schools. They received 1,308 answers, on which the report before us is based. These answers have been bound together, and have been deposited in the college library, where they will probably afford a useful means of comparison to some future generation. One hundred and fifty-eight of them have been printed in an appendix to the report. They will well repay the perusal of all who are interested in methods of education.

Many of the facts one gathers from them are worth more than a passing notice. One, however, of which they make no mention, and, perhaps, the most formidable, is the hindrance the teacher of English in America receives from the belief of both parents and children, that they know English well enough. Very many of the parents and of the boys who go to college, have found that the kind of English they speak and write has served their purpose through life, and they, therefore, are not deeply impressed with the necessity of better English for their children. Speaking or writing bad English does not discredit a man or woman here socially, as speaking or writing the language of the country badly would in England or France. In most American towns success in life would furnish an ample answer to criticisms on one's speech or letters; in Europe it would only make the want of education more annoying. For somewhat similar reasons, the boy is not apt to carry the teacher's corrections far out of the school-room. He rushes back to his playmates and repeats joyously with them the solecisms against which the schoolmaster has just warned him.

But this is not the difficulty which comes out most prominently in the answers. In fact, it hardly comes out at all, and many teachers' own practice is too faulty for them to plead it. The thing in which nearly the whole body of the students seem to agree as their chief hindrance to acquiring skill in English composition at school, is want of *practice.* They all, or nearly all, say that the main reason why their themes and compositions did them so little good was that so little time was given to them. Once a week or twice a week only, were they called on to write English correctly at school. Next after this comes the futility of much of the instruction—the reading and memorizing of classic and imperfectly understood English authors, and the listening to exhortations about "style" and method, and the correction of English sentences made bad for the occasion. In fact, much of the instruction, considering that it was furnished to mere boys, appears to have been, according to the report, of extraordinary absurdity. The courses of the schools seem to be largely courses in literature given to persons who have still to learn the language. The teach-

ing of the proper use of the language, therefore, has been left to the college, which ought to be able to give all its powers and time to the teaching of literature. Next to want of practice in the schools, there is nothing about which there is so much unanimity as the excellence of this college instruction. Harvard "English A" is the subject of general praise, and not a few gratefully acknowledge the help they have received from it in making up the deficiencies with which they entered, showing that the same method, and especially the same attention to frequent practice, would have produced similar results earlier.

What is probably most surprising in all this discussion is that the supreme importance of practice, in learning to do anything well, with which everybody is familiar in nearly every pursuit in life, has not made more impression on teachers of English. To ride or row, to play billiards, or fence, or make speeches, or make music, practice is well known to be the essential condition of excellence. But a raw boy, who most of his time talks slang with slangy playmates, is expected to acquire a ready and correct use of the greatest instrument of human expression, through which one rises from an Australian savage to Plato or Shakspere, by two or three hours of drill and attention a week, in most of which he is called on to talk about things of which he has only a vague or hazy understanding. Even more surprising than this is the small impression which seems to be made on the mind of teachers by the difficulty of learning to speak a foreign modern language. Most teachers have tried to learn to speak French, or German, or Italian. No man who has ever tried it has failed to find that he might read any one of these languages for years, and study the grammar, and yet be unable to write a decent letter in it or carry on a conversation respectably. If he were asked the reason, he would almost invariably reply that it was want of "practice"—that is, that to speak fluently or write correctly, he must do it every day, must live in the country so as to be obliged to do it, or live with some one with whom he spoke it incessantly, in order to make any progress. That this patent fact, with which everybody is familiar, has not had more influence on school instruction in English is very surprising. The English of youths does not greatly differ from any language in the mouth of a foreigner. Many meanings of words, turns of expression, and idiomatic ways of saying things are all strange to him, and he has to cure himself of his faults of expression, exactly as a foreigner would, by frequent repetition and continuous attention.

Another matter to which the report calls attention is the tendency of the sort of instruction given by the schools to lead young persons to suppose that what they are being taught is to make literature, not simply to use English easily and correctly. All theme and essay writing has this tendency in a certain degree, but when it is literature that is being studied, it is difficult to avoid it. The desire and ambition of most young people who try to write or speak is to be eloquent or make a mark of some kind. The letters in this collection from the Radcliffe students show how strong this tendency is among women. The answers are not plain statements of fact. They are adorned with flowers of rhetoric, with playful illustrations, with striking analogies and reductions to absurdity. Newspaper reporters, as all editors know, labor under the same difficulty. They cannot bear to narrate or describe simply. They love to give the story literary form or ornamentation, and the result is often that the account of a small accident or offence becomes a large structure of fabulous matter, resting on a small basis of fact. In some papers the story is stripped of these accidents, but they are mostly let pass to save trouble, and the result is the prevailing want of confidence in newspaper descriptions. This matter is more important than it seems, for there can be little doubt that the value of truthfulness would be greatly enhanced if the earliest lessons in English were lessons in the importance of seeing things as they are, and telling simply what happened.

THE SCANDINAVIAN EXHIBITION AT STOCKHOLM.

STOCKHOLM, October 5, 1897.

The Stockholm Exposition of Scandinavian Industries was closed on the 3d of October. Every one who visited it must have hesitated which to admire most—the modesty of the people who could conceive and carry out with such perfect taste so striking a display of their handiwork, and yet make so little parade and noise about it, or the wonderful perfection to which they have brought such of the arts as they have long practised. One is also surprised at the ability and skill with which they are adopting and adapting to their special requirements and to their natural products every advance made by others in technical science.

Stockholm is itself an example of a city possessing beautiful natural features, improved by art, as well as of a community which, under a good civil government, displays the virtues of social order; among which not the least are uniform urbanity and courtesy. Built on a group of islands and on the mainland, where the shores of Lake Maelar contract to discharge its fresh waters, with the rush of the Rhone at Geneva, into an inlet of the Baltic, Stockholm greets the eye at every turn with graceful bridges and substantial stone quays lined with shipping, ferries flitting hither and thither, handsome stone buildings, and, as a background, forest-clad hills. Nor is the delight of the eye vitiated by offence to the nose, for in-door and out the most perfect cleanliness prevails. Even the air is not polluted with coal smoke, as wood is the domestic fuel. And, in contrast to the capital of Norway, whether it be due to the Göteborg liquor law or not, a drunken man or woman is rarely seen. Altogether, Stockholm is one of the most charming cities on earth.

On one of the promontories to the south of the city, reached by a horse-car line and by ferry-boats from every section of the city, were laid out the grounds and erected the exhibition buildings. No attempt was made to imitate Chicago, nor was the world invited to display its wares. Russia, on account of her geographical relations to the peninsula, was asked to participate and accepted; otherwise it was an exclusively Scandinavian exhibition, and therefore of so moderate a size that the visitor was not bewildered and wearied to death in trying to drag his heavy limbs through mile after mile of gallery, with the horrible dread ever haunting him of being twitted when he reached home of having omitted to see some trifle or other which his more inquisitive neighbor therefore considered the best worth seeing in the whole show. It is devoutly to be hoped that the forthcoming Paris Exposition will be the last of those stupendous world-shows which have gradually grown so unwieldy as to be beyond the compass of the average human understanding and the limit of human physical endurance, Those stimuli to industry and skill which exhibitions doubtless are should be confined, either, like this, to the natural and industrial products of one section of the world, or to one group only of the objects and aims of human industry.

The setting of the exhibition was simple and in admirable taste. The grounds were laid out with a profusion of flowers, which the spirit that presides over the weather beneficently preserved from frost till the very last day—but only till then. None of the larger buildings was conspicuous for peculiarity of design except that devoted to the industrial arts, over whose large entrance hall there towered a triple dome flanked by four towers occupied by as many elevators and capped by observation-galleries. There was a flavor of Muscovite architecture about the building, though it followed closely no recognized style. Structurally it was notable, for it was the largest wooden building in the world—a forest of 34,000 trees having been felled for its erection. There was, of course, an Old Stockholm, whose walls were defended by genuine old culverins, and whose portcullis was guarded by men in leathern jerkins and armed with veritable old cross-bows. The rooms and kitchen of the castle were stocked with furniture, ornaments, and utensils of the actual age of the building reproduced. The Midway was represented by a very modest puppet-show. On the other hand, the pavilions erected by private firms were numerically on a par with and artistically superior to those of Chicago. The prominent feature, in fact, of the whole exhibition was the high average excellence of everything displayed, and the supreme perfection of certain classes of manufacture.

As might be expected, Sweden made a most impressive display of her iron and steel industry, and she did it in a measure to emphasize the chief characteristic which all her ironmasters aim at, viz., quality before quantity. There were not immense piles of iron and steel ingots, nor huge structures of pipes and bars, but models in glass of all

her principal mines, collections of her ores beautifully displayed, and samples of the immense variety of articles she manufactures out of them. For though Sweden is now exporting from two alone of her newer mines about two million tons annually of ore of high percentage in iron, but otherwise of inferior quality, she reserves for her own manufacture her purest and choicest ores. Out of these she makes, with wood and charcoal as fuel, such iron and steel as no other country attempts to compete with her in manufacturing, and which brings so high a price that she cannot, for instance, afford to waste it upon rails, for she lays down imported iron on the very roads which depend for freight on her own steel mills. The best seamless tubes, which, when drawn, are marvels of lightness and strength, can be made only of Swedish iron, and are imported by American makers, to be returned to Sweden itself as finished bicycles. From Sweden also come the finest watch springs. In making the raw material for such articles no trouble or expense is spared to insure uniformity and excellence; and as the highest quality can be secured only by the use of wood as fuel, the iron companies are of necessity lumbering companies. Hence the manufacture of sawn timber and of wood-pulp and paper have grown up as subsidiary industries to the iron trade, and pulp and paper formed part of their exhibits. But the use of wood as fuel necessarily limits the iron production, which, judged by the American standard, is despicably small. One of Mr. Carnegie's Duquesne blast furnaces makes as much iron in six weeks as the total annual output of the largest concern in Sweden—say 30,000 tons. But if all the Carnegie blast furnaces had to be fed with charcoal and the reheating furnaces with wood gas, the Pennsylvanian forests would be swept away in about a twelvemonth to supply him alone. Extensive as the Swedish forests are, and large as are the timbered domains which each large iron company owns, restriction to the use of wood as fuel will continue to make her production small. As it is, her splendid steel industry would speedily come to an untimely end did not her provident iron and steel companies plant as well as cut, and allow neither root nor branch to go to waste. In this they teach us a lesson. Would that we were not so slow in learning it.

The large iron companies own several hundred thousand acres of timber land apiece. They plant a tree for every one they cut; but they do not wait for the sapling to grow into a tree of giant size before felling it. It is found more profitable to cut it when from eight to ten inches thick at the butt. There is, therefore, no large timber in Sweden. Then, when cut, the best is shipped to the company's paper mills; the rest is made partly into charcoal for use in the company's blast furnace, or sawn into boards and dimension lumber at its own mills for domestic use or foreign shipment. But not a grain of sawdust is allowed to escape into the streams, nor a splinter permitted to go to waste. Everything that will burn is thrown into the gas producer, and is made into pure gaseous fuel, free from the slightest trace of sulphur, to be burnt in the steel works; for there the faintest breath of coal gas would leave a stain. As proof of the sedulous care with which these manufacturers collect every portion of what we call waste, but they call riches, is the fact that salmon still run up the rivers where falls and rapids turn a score of sawmills; for Sweden and Norway have the advantage of possessing boundless water power. Very little fuel is therefore consumed in generating power. Only one large iron company is so situated as to be deficient in water for its total needs. As both steel and paper-making demand such heavy expenditure of power, and as these two industries, though so unlike, have thus become almost essentially dependent on one another, Sweden's large and rapid rivers are as much an element of her prosperity as her forests.

To the initiated the structure of pigs, ingots, and bars of iron and steel exhibited by all the Swedish steel companies was proof sufficient of the admirable quality of their wares; but to the mind and eyes of the uninitiated such a ribbon of steel as that exhibited by the Sandvik Iron Company carried a much more convincing conception of what can be done with the metal when of the highest quality. Up and down and round about the walls of the pavilion there was twined a single 8-inch wide band of steel, cold rolled, 2,354 feet long and weighing 1,146 pounds.

Two large exhibits made by two cream-separating machine companies explained the success of another of Sweden's great industries. Milking cows and making butter do not appeal to the imagination like mining ores and making pig-iron and blowing it up into steel in Bessemer converters amid a blaze of sparks before which a discharge of rockets is dim; but to the people at large the humbler occupation is of as great, if not greater, moment than the more brilliant, for Sweden's export of the produce of her dairies about equals in value that of her furnaces, and her butter is as invariably good as her steel. It is not to the credit of England and Ireland that England should be her best customer.

For the excellence, variety, and novelty of the terracotta, faïence, and porcelain exhibits, Denmark perhaps should be accorded the prize over Sweden; and in the manufacture of enamelled jewelry Norway excels Sweden and aims at even rivalling Russia, especially in articles of transparent enamel. But there was a branch of domestic industry in which Sweden had, at least in the exhibition, no competitor—that of home-woven woollen goods. A large stone building with a wooden annex was devoted to the display of Sweden's educational and sanitary instruction and methods, among which the Swedish-movement cure in active operation was the most attractive. But the most interesting to a foreigner was the large section of the building appropriated to the Swedish provinces for the hand-made tools, utensils, carved wood, and textile fabrics manufactured by the peasantry. The rather too brilliant aprons and petticoats, which are conspicuous in the costumes of the women, did not lead us to expect such artistic subjection and perfect blending of color and such harmony of design as were displayed in the rugs, curtains, and portières which came from every section of the country except from the extreme north. In finish and beauty of pattern, if not in weight and thickness, they would compare with like fabrics of the East. Every cottage has its loom, and nearly every Swedish countrywoman is more or less expert in handling it. Certain very beautiful native patterns, transmitted as traditions, are reproduced in them for domestic service; but of late years this skill in weaving, for the practice of which the long winters give ample time and opportunity, has been encouraged and directed into new channels by an association of patriotic women in Stockholm, the "Friends of the Handicraftsman." Promising girls are taught the higher branches of the art of weaving in a central school, from which teachers are sent to the small provincial towns and villages, where, for a trifling sum, instruction is given to the peasant women in short courses of technical teaching. Thus their inherited skill and natural proclivities receive fresh impetus and are directed by new motives. The danger, of course, lies in a tendency towards imitation, in the corresponding loss of originality, and a too great departure from the patterns and designs which are the expression of the native mind and taste. But the result, so far as it could be judged of from the provincial exhibits in this northern museum, would lead us to expect that, if this wonderful taste should be judiciously cultivated and industriously practised, the products of the looms of the Swedish peasant women will be sought the world over by those who appreciate the beautiful and are willing to pay for it, for their work is by no means cheap. The motto of Sweden, as we have already said, is, "Quality, not quantity," and for quality you must pay.

J. Douglas.

FAGNIEZ'S FATHER JOSEPH.

Paris, October 21, 1897.

Politics extends its influence even into the quiet domain of literature and of history. The Franco-Russian alliance has given great notoriety to the name of our present Minister of Foreign Affairs. It was prepared by his predecessors, but he has been so fortunate as to be the instrument of the final consummation; he accompanied President Faure to Russia, and played his part in the Olympus of Emperors, Grand Dukes, and Grand Duchesses. M. Hanotaux is a scholar, he was at the École des Chartes ; he entered the Ministry of Foreign Affairs, not in the political division, but merely in the division of the Archives. He made himself so useful, however, he showed such a perfect acquaintance with diplomatic documents, that he rose rapidly, and became one of the important officials of the department. He entered for a little while the Chamber of Deputies, but, not being an orator, he made little mark there, and he abandoned his post of Deputy to resume his former duties. The constitution allows the President to choose his Ministers outside of the Chamber; he never uses this prerogative except for three ministries—of War, of the Navy, of Foreign Affairs. M. Hanotaux, who is now Minister of Foreign Affairs, is not a Deputy.

His rapid promotion is explainable by his great knowledge of the diplomatic traditions of the Quai d'Orsay, and by the support which he has consequently received from all those who belong to what is called at the Quai d'Orsay "la carrière." M. Hanotaux never speaks extemporaneously, but when a question is put to him he can always prepare a declaration written with the caution and the mixture of vagueness and precision which are considered necessary in diplomacy. Long before he thought of entering upon his high functions, he prepared himself for the laborious task of writing the life of one of

the greatest ministers—of Richelieu. Richelieu's correspondence was published a few years ago under the editorship of M. Avenel; but there is still in the Archives of our Foreign Office a mountain of what are called the "Richelieu papers." M. Hanotaux has studied carefully all these documents, and is laying the foundation of a very exhaustive biography of the minister of Louis XIII. He has already published two volumes on Richelieu, but they take the reader only to the beginning of Richelieu's first ministry.

The Cardinal had an acolyte, a colaborer, who was familiarly known as the "Éminence grise." Father Joseph remained in the background, but he played a very important part, as is well shown in the work of M. Gustave Fagniez, published in two huge octave volumes, 'Le Père Joseph et Richelieu.' François Le Clerc du Tremblay was born in Paris on the 4th of November, 1577. He was the eldest son of a councillor of the King, first president at the *requêtes* of the Palais, who belonged to one of the old parlementary families, certion of whose members were often employed in diplomacy. François Le Clerc pursued his studies at the University of Paris. The Ligue had divided France into two camps, and the University of Paris had fallen into a state of great disorder. "Indifference to science, brutality of manners—these fruits of civil war had ruined the studies and the discipline." At the age of seventeen François Le Clerc entered an "académie," a sort of military school, where he made the acquaintance of the great Duke Henri de Rohan, with whom he had afterwards so much to do.

He felt very early a religious calling, made the acquaintance of Bérulle, and, after some struggles between his affection for his mother and his vocation, in 1599 he entered the novitiate of the Capuchins of Orléans. In entering the order of St. Francis, Father Joseph had chosen the institute which was most in harmony with his aspirations. A life of contemplation was not intended for him. He was a man of action; he was made for proselytism, ready to start wherever he was called by imperative duties, mixing with the people; he had the soul of an apostle. In 1613 he was appointed Provincial of Touraine, and this dignity gave him occasion to play an important part in the civil wars and commotions of the minority of Louis XIV. The confusion of these wars involved not only the individual aims of the great noblemen, Condé, Mayenne, Bouillon, etc., but also a struggle between the civil and religious powers, between the Church and the State. It was the ambition of the Church to govern the State and to have a cardinal in the ministry. The Duke de Luynes, the favorite of Louis XIII., was the natural enemy of the Queen Mother, who was in the hands of the priests, and who made the fortune of Richelieu. Condé, the father of the Great Condé, was looked upon at first as the natural leader of what might be called the lay cause, the cause of the State. He could have rallied round him the Parlement, which was strongly opposed to the predominance of the Church over the State, the bourgeoisie, the Protestants. Father Joseph was employed to turn him away from the cause which his ancestors had defended, even with arms in hand; he frightened him with a Gallican schism, and finally obtained from him a complete submission.

Father Joseph had engaged in a double crusade—against the Protestants of France and against the Turks for the reconquest of the Holy Land. We find him by the side of the King in his campaigns against the Protestants of Béarn.

"In the campaign of Poitou, Jesuits and Capuchins mingled with the soldiers to encourage them and hear their confession; the expedition had something of the nature of a crusade. At Saumur, it was in the chapel of Notre-Dame des Ardiliers that Louis XIII. held his final council of war, and received the Communion wth all his retinue; he left this revered sanctuary, where Father Joseph felt the first movement which would make him the founder of the Calvary, more excited against the Huguenots. A spirit of fanaticism had entered the army; officers and soldiers mutilate the books of the Protestant Governor, Duplessy-Mornay. From Saumur the army goes to . . . Thouars, where the Duke de la Trémoille opens the gates and where our Capuchin founds a convent of his order."

This extract gives an idea of the work of Father Joseph. The details of these civil wars are only too well known. Father Joseph's efforts against the Turks are less familiar. It may be said that his whole life was filled with the desire to see the Holy Land torn from the hands of the Mussulmans. He founded a congregation whose spiritual merits were intended to obtain the deliverance of the Christians of the East; he tried to unite in the same view all the Christian nations of Europe. It is rather painful to think that, since the seventeenth century, the question which preoccupied Father Joseph has not made a step in advance. The Eastern question was reopened this year, and what has been the result? Turkey has been placed again, by the action of what calls itself the European Concert, among the great Powers, and the Sultan is more powerful now than he was a year ago. "From the day," says M. Fagniez, "when the conquest of Constantinople by the Turks, the last wave of the barbarian invasions, inaugurated modern times, to the day when Father Joseph tried to interest the Powers in his projects, Europe seemed to have nothing more in common with that Christian Republic of the Middle Ages which still kept the mark of the Roman and Carolingian unity, which revered its representatives in the Pope and in the Emperor, and which was led to the crusades by a common faith." With slight alteration, might not this phrase apply to the year 1897? It can even be said that the feeling of Christian solidarity is much weaker now than it was in the time of Father Joseph. "The destruction of the Ottoman fleet at Lepanto, the general reprobation provoked by the alliance of the most Christian Kings with the Sultans, the projects which Sully attributes to Henri IV., numerous writings prove that the divisions of Christendom did not make it forget the solidarity of its members nor the danger of Islamism."

Father Joseph found a chief for the crusade in the person of the Duke de Nevers. Charles de Gonzague was the grandson of Margaret Palæologus of Montferrat; his father was an Italian, Louis de Gonzague, his mother a German, Henrietta of Cleves; he was an ardent Catholic, a man of chivalrous courage and of great ambition. The Duke had made war against the Turks and been wounded in the siege of Buda; the Greeks chose him as a leader in the revolt of one of the provinces of Morea, Maina, a strip of land which was protected by mountains against the Turks. Father Joseph threw himself with great ardor into this movement of the Greeks. The Duke de Nevers prepared an expedition to Morea; his agents visited the bishops and the most important men in Macedonia, Servia, Albania, Dalmatia, and Croatia. Many promises were made them, but always subordinate to the adhesion and participation of the King of France. The complications of the civil wars in France were a great obstacle. Nevers had to take care first of his government of Champagne in France. In 1617 the Duke founded in France the self-styled Order of the Christian Militia, an order similar in some respects to that of Malta. It is impossible to enter here into the details of all the efforts made by Nevers in France and in Austria to organize a crusade against the Turks. Alas! the ships which Charles de Gonzague had constructed for the crusade, instead of showing to the Crescent the Christians united under the Cross, served only against the French Huguenots, who perished miserably in our civil wars.

M. Fagniez, in his elaborate work, gives innumerable particulars about the missions which were organized by Father Joseph in France to obtain a Catholic revival in the provinces where the Protestant faith was still dominant. Father Joseph's spiritual work extended all over Europe, including England, over the East—Asia Minor, Persia, Egypt, Abyssinia, Morocco. The originality of his character is shown in his dual rôle of missionary and of diplomat. His spiritual work was helped by his temporal work. A man of the world, he could be employed in any diplomatic mission, and he became, in fact, the most powerful instrument and sometimes the instigator and inspirer of Richelieu, when the great Cardinal had to conduct a mighty struggle between France and the powerful House of Austria. While we must greatly commend M. Gustave Fagniez's work, which has added so much new material to history, we cannot help remarking the fatiguing confusion which constantly interrupts the natural succession of events—a confusion which arises from the dual character of Father Joseph. The reader will often lose himself in it, and it at times becomes almost inextricable.

Correspondence.

HIGH SCHOOL AND COLLEGE.

To the Editor of The Nation:

Sir: In view of the introduction of the high-school system into New York, the following facts may not be uninteresting concerning the new classical course in the Girls' High School in Philadelphia. The course is intended as a thorough preparation for college and runs through four years. It was organized four years ago, but its success was not fully evident until this fall, when the first students completely prepared by the High School entered Bryn Mawr College, which, owing to its proximity, is chosen by most of those intending to go to college. The course was, in fact, mapped with the Bryn Mawr requirements in view, and was most carefully supervised and gone over by Miss Thomas, the President of Bryn Mawr, in conjunction with Dr. Edward Brooks, the Superintendent of Public Education in Philadelphia.

At the time the course was organized,

the trustees of Bryn Mawr established eight scholarships, of the value of $400 each, to be awarded annually to those students of the school who passed the Bryn Mawr entrance examinations most successfully. The first year of the course is devoted mainly to grounding in Latin and algebra; five hours weekly are given to each branch, the remaining time being taken up by four hours of English, four of French, and one of physiology. The second year is still largely Latin and mathematics, five hours of Cæsar, two of Latin prose composition, five of plane geometry; two hours being devoted to English, five to French, and four to German. The third year, five hours a week are spent on Cicero, three on Latin prose and sight reading (the Bryn Mawr language examinations are now entirely at sight), two hours on English, five on French and German, and five on a mathematical review. The fourth year's course is elective, and those students who do not wish to enter college have the privilege of transferring to the general course preparatory to entering the normal schools. If elected, the fourth year consists of four hours of English, three of physics or some natural science, five Virgil, three Latin prose and sight reading, five German, and five history of Greece and Rome. It has, moreover, recently been decided to admit sufficient Greek to pass a collegiate entrance examination—that is, Greek prose and sight reading in Xenophon and Homer. The Greek may be taken instead of either German or French, the requirement being to present three languages in the matriculation examinations.

The six students who came up for matriculation at Bryn Mawr this fall from the graduating class at the High School were of extremely high standing in the list of the entrance examinations, one of them being first of 250 girls who took the examinations coming from all parts of the country. Her average was 88, the highest ever obtained in the Bryn Mawr entrance examinations. The other five girls passed, one clear of conditions, two with but one-half a condition, two with but one.

The course is complete in itself, and no preparatory work whatever is done in the grammar schools before entering the High School. The girls enter by application for examination, and the number of applicants this fall was unprecedented. Dr. Brooks says that the success of this classical course, and the splendid records made in the Bryn Mawr entrance examinations by the students referred to above, are largely responsible for the unusually great number of applications coming from private schools.

H.

Bryn Mawr, October 25, 1897.

AN ETYMOLOGY.

To the Editor of The Nation:

Sir: Every one who has made the tour of Switzerland will have read in his Baedeker the altogether unlikely stories that seek to connect the rugged mountain near Lucerne, Mount Pilatus, with the name of that worthy Biblical character, Pontius Pilatus. He will soon learn from experience (after it is pointed out to him in the guide-book) the value of the cap of cloud that hovers over Mount Pilatus as a local signal-service station.

In the summer of 1896 my colleague in the law department, Prof. Charles E. Graves, was in Lucerne, and, looking up at Pilatus with its cap of cloud, he translated the phenomenon into Latin: *mons pilleatus*, "the capped mountain." This seems to me a most alluring explanation of the name; and if we may suppose that *pilleatus* was connected by the inhabitants at an early period with the name of Pilate, which must have been well known to even the lowest of them through the medium of Mother Church, all phonetic questions and difficulties will be avoided.—Yours truly, Edwin W. Fay.

Washington and Lee University,
Lexington, Va., October 20, 1897.

NOT GERMAN, BUT AMERICAN.

To the Editor of The Nation:

Sir: John Morley, in his recent Romanes lecture, refers to my book, 'Machiavelli and the Elizabethan Drama' (kindly noticed in the *Nation* of March 25), as "the work of a German writer." Will you kindly rectify the error and state that the author is an American, who wrote his book in London and Heidelberg for the degree of Ph.D. in the latter place, and is at present instructor in Germanic philology at Adelbert College, Western Reserve University? The book was printed in Weimar and recently reviewed at length by Prof. Emil Köppel of Strassburg in the last number of the *Englische Studien*.—Respectfully, Edward Meyer.

844 Logan Ave., Cleveland, Ohio,
October 24, 1897.

PINES AND SPRUCES.

To the Editor of The Nation:

Sir: In the "Physical Chart of the North Polar Regions" accompanying Nansen's 'Farthest North,' the northern tree limits of the species of spruce, *Picea alba* and *Picea nigra*, are carefully outlined; but these trees are called in the chart "white and black pines." Elsewhere in the chart the *Picea obovata* is called a "pine."

Is there any authority for this nomenclature? It will certainly be very misleading to the average reader, if he is not familiar with botanical names, and he will be led to believe that pines are found very far north of their real limits. Incidentally, let me suggest that the lack of description of the northern limits of the poplars and willows leaves out a most interesting feature that should be added to the chart, if the chart pretends to be instructive about tree lines. The willows probably occur farther north than any other trees. Robt. T. Morris.

No. 49 W. 39th St., New York,
October 23, 1897.

[*Pinus* formerly included certain genera which have been separated from it. Among these is the genus which our correspondent cites above as *Picea*. The species of *Picea* are properly called spruces; to call them pines would perpetuate the idea, now generally abandoned, that there are no generic distinctions between pines and spruces. True pines do not reach as far north as the spruces. Willows occur very far north, and are there prostrate, dwarfed shrubs.
Ed. Nation.]

Notes.

The Century Co.'s November list embraces Bryce's 'Impressions of South Africa'; 'Java, the Garden of the East,' by Eliza Ruhamah Scidmore; 'The Story of Marie Antoinette,' by Anna L. Bicknell; 'Forty-six Years in the Army,' by Gen. Schofield; and James Whitcomb Riley's 'Rubáiyát of Doc Sifers,' a long story in verse of a country doctor.

Macmillan Co. will soon publish 'The Early History of the Hebrews,' by Prof. A. H. Sayce; and, in the course of the winter, 'The General Manager's Story: Oldtime Reminiscences of Railroading in the United States.' They have also in hand 'Old English Love Songs,' selected by Hamilton W. Mabie, with illustrations by George Wharton Edwards; 'Practical Ethics,' by Henry Sidgwick; and 'The Making of Abbotsford: Incidents in Scottish History,' by the Hon. Mrs. Maxwell Scott, Sir Walter's granddaughter.

From D. Appleton & Co. we are to have 'Marriage Customs of all Countries,' by the Rev. H. N. Hutchinson; 'English Literature,' by Edmund Gosse; 'Baboo Hurry Bungsho Jabberjee, B. A.,' by F. Anstey; a new edition of F. M. Chapman's 'Bird Life,' with seventy-five facsimile colored plates; a new edition of Alfred R. Conkling's 'City Government in the United States,' with a chapter on Greater New York; and a new uniform edition of Gilbert Parker's novels.

Thomas Whittaker has nearly ready a new (the seventh) edition, revised and enlarged to cover the past quarter of a century, of Dr. McConnell's 'History of the American Episcopal Church.'

T. Y. Crowell & Co. have arranged with ex-President Cleveland to publish immediately his address entitled 'The Self-Made Man in American Life.' This will be added to the "What Is Worth While Series."

The 'Life of Napoleon Bonaparte,' by S. Baring-Gould (London: Methuen & Co.; New York: Truslove & Comba), is a folio of some six hundred pages, illustrated with photogravures from noted historical paintings, and engraved reproductions of portraits, medals, drawings from statues and statuettes, caricatures, etc., almost without end, and in elegant form. The text is a compilation of what bears particularly upon the development of character in Napoleon, professedly restricting the story of his military career to an outline only. The whole is woven together with literary skill, making an anecdotal life of the hero of remarkable fulness, comprising nearly everything that has been told of him by his contemporaries. The view taken of Napoleon's character is the severe one—what may be called the standard English view—corrected by the investigations and publications of the present generation, and reinforced by the judgment of such authorities as Lanfrey and Taine. The gigantic power of the man in intellect and will is fully recognized, but the meanness, selfishness, untruth, unscrupulousness, and immorality are unsparingly exhibited and fix the general tone of the picture.

Ernest Ingersoll's 'Wild Neighbors: Outdoor Studies in the United States' (Macmillan) is for the most part a new use of materials which have appeared in various magazines and newspapers, with such revision and amplification as fugitive pieces are apt to receive when collected in book form.

Mr. Ingersoll is no new hand at the business of what may be called interviewing natural history for the purpose of making readable stories; he always writes pleasantly, and his recent connection with one of the large dictionaries now before the public has widened his zoölogical horizon, besides strengthening his knack of being accurate as far as he goes. The merely "journalistic" element is therefore less evident than it used to be in his writings, with corresponding gain. He has become a more careful and reliable writer, but none the less entertaining. His chapters called "The Service of Tails" and "The Skunk, Calmly Considered," are among the best in this book, and all the defects of his qualities will not prevent many a reader from enjoying the whole of the articles. It is good popular natural history, written with an easy, perhaps free-and-easy, swing. The illustrations do not help us much, and seem somewhat anachronistic in these days when fine work is so readily and inexpensively procurable, being mostly technical cuts made from Baird's plates of 1857. The best of the lot, to our eye, is not in the book at all, but stamped in low relief on the cover, around the back of which the cougar's tail curls so fearfully. The whole appearance of the volume is elegant.

Mr. Edwin H. Higley's 'Greek Prose Composition' (Ginn & Co.) deserves mention because it carries out consistently the plan of a series of progressive exercises, consisting of short narratives based on passages of the 'Anabasis' and the 'Hellenica.' The vocabulary and grammatical notes are carefully prepared and judicious. The plan is, of course, not new; it has long been practised by thorough teachers—it is followed in certain German manuals to which Mr. Higley refers, and it is illustrated in the recent supplement to Dr. Allinson's useful 'Prose Composition.' But Mr. Higley's book furnishes new and useful apparatus for practice in the higher forms of preparatory schools, and perhaps also in the freshman year at college. At the same time, it provides a corrective for the lax knowledge of syntax and vocabulary which is often induced nowadays by too exclusive practice in reading at sight.

The Pamphlet holds its historical position in Germany, and nothing is quite equal to it as a source of information on the questions of the day and the more hidden currents of contemporary civilization. Such publications as Count von Hoensbroek's 'Religion oder Aberglaube? Ein Beitrag zur Charakteristik des Ultramontanismus' (Berlin: Walther) will make most readers stare with amazement at the amount of superstition of the crudest kind still prevalent among a large portion of one of the most civilized nations of the world. The author, a former pupil of the Jesuits, holds Ultramontanism and Jesuitism responsible for the perpetuation of the worst superstitions among the people. He furnishes abundant evidence of the credence and support given by the Ultramontane press and by high Church dignitaries to the notorious, preposterous, and scandalous "revelations" concerning freemasonry by the mysterious Diana Vaughan and by Leo Taxil, the latter (since April, 1897) a self-confessed impostor; he also dwells at length upon the teachings of the Church concerning demonology and Satanism. Among the most astounding productions of modern divines are the 'Purgatory' and 'Hell' of J. Bautz, docent at the Academy of Münster (1883), from which quotations are given.

'Der Katholizismus als Princip des Fortschritts,' by Dr. Herman Schell, Professor of Apologetics and formerly rector of the University of Würzburg (fifth edition, Würzburg: Göbel), discusses, from the point of view of a somewhat liberal German Catholic, the question why Catholics have been relegated to such an inferior position in modern intellectual and social life. This fact, recognized and investigated years ago by Cardinal Manning (see Purcell's 'Life'), is no longer denied. Recent German school statistics, for example, show that, in round numbers, out of 10,000 Protestants 53 are found on the benches of the Gymnasia or Realschulen, while for the Catholics the proportion is only 32. The Israelites leave both the other confessions far behind, 332 out of every 10,000 attending secondary schools. Dr. Schell's views have called forth numerous replies and critiques, from his coreligionists as well as from Protestants and from those sharing neither faith. The most extreme liberal standpoint is occupied by Dr. Emil Wahrendorp in 'Katholizismus als Fortschrittsprincip? Mit einem offenen Briefe an Prof. Dr. H. Schell' (Bamberg: Handels-Druckerei).

The proportionally large number of Semites seeking a higher education is also referred to by M. Anatole Leroy-Beaulieu in 'L'Antisémitisme' (Paris: Calmann Lévy), in which the statement is made that complaints are not infrequently heard from Christian boys and parents in France of the numerous triumphs won by Jewish scholars in the lycées. The little volume is a stenographic report (including the ill-natured and ill-mannered interruptions indulged in by part of the audience) of an address given before the Catholic Institute. It is a vigorous arraignment of the doctrines, methods, and polemical procedure of the anti-Semites.

A good thing has been done by the Hinrichs publishing-house in Leipzig—alike for the work of which it forms a part and for the Biblical student—by reprinting in a separate volume, 8vo, pp. 240, the articles on the original text of the Bible and its translations prepared for the third edition of the 'Realencyklopädie für protestantische Theologie und Kirche.' This volume gives the fullest and latest information about the Bible and more than a score of its translations, by a dozen such scholars as Buhl, Von Gebhardt, Berger, Dalman, Gregory, Nestle, Prätorius, and others, whose names are a sufficient guarantee for the trustworthiness of their articles.

The third and final volume of 'Moltke's Militärische Korrespondenz,' just issued by Mittler & Sohn, Berlin, contains valuable contributions to the history of the Franco-German war from the suspension of hostilities in the spring of 1871 to the complete evacuation of French territory by the German troops on September 13, 1873. Nothing could be more admirable than the combination of tact and energy shown by the great strategist during the peace negotiations, which were complicated by the ascendency of the mob and the temporary supremacy of the Commune in Paris. The value of Moltke's correspondence is greatly enhanced by the fact that no full, official history of this period has as yet been published.

The first full and accurate statistics of losses in life and property caused by the Franco-German war, the active operations of which lasted about six months, have been recently published by Signor Bodio, Director-General of the Italian Statistical Bureau. France lost 136,000 men, of whom 30,000 were either killed or died of wounds received in battle, 36,000 died of disease in France, and 20,000 died as prisoners of war in Germany. There were also 477,400 men rendered unfit for service during the war, namely, 138,000 by wounds in battle, 11,400 by wounds and other injuries on the march, and 328,000 by disease, privation, exposure, and similar causes. The losses of the Germans, as compiled by Bodio from official and thoroughly authentic reports, were 17,255 men killed in battle and 21,023 deceased in ambulances and hospitals, making a total loss of 38,278 by death. The loss of the French was therefore 97,722 more than that of the Germans. The losses of France in money, so far as they can be estimated, were 2,387 millions of francs for military expenditure, 5,743 millions for war indemnity, 1,156 millions for loans and premiums, 207 millions for public works necessitated by war, 605 millions for compensation to private individuals, 2,034 millions for losses incurred by the state through diminution of revenue, etc., and 535 millions for losses incurred by the communes and reimbursed by the state, making a sum total of 12,667 millions of francs. This amount does not include the incalculable damage done to agriculture, commerce, and the various branches of industry and the permanent loss of revenue from Alsace and Lorraine. As to victorious Germany, the war indemnity of 5,743 million francs by no means made good the material losses suffered by that country. We commend these figures to the serious consideration of our Jingoes.

In the sixteenth annual report of the Bureau of American Ethnology, just published, is a paper by Muñiz and McGee on "Primitive Trephining in Peru," giving evidence that this operation as there practised represents a stage in the "gradual transition from thaumaturgic manipulation into empiric surgery." Cosmos Mindeleff describes the "Cliff Ruins of Canyon de Chelley, Arizona," and concludes that the cliff-dwellers were Indians and not a distinct people. "Day Symbols of the Maya Year," by Cyrus Thomas, is a discussion of the origin and significance of the names given to the twenty days of the Mexican month. J. Walter Fewkes describes the "Tusayan Snake Ceremonies," which he believes have two main purposes, the making of rain and the growth of corn, ophiolatry having little or nothing to do with them. The papers are illustrated, the views of the cliff-dwellings being especially interesting.

The California Academy of Sciences has begun publication of its Proceedings in three sections, devoted to Botany, Geology, and Zoölogy respectively. In the first number of the zoölogical series, Gustav Eisen writes upon "Plasmocytes," a hitherto undescribed element in the blood of certain batrachians. "Submerged Valleys of the Coast of California," by George Davidson, and "Scientific Names of Latin and Greek Derivation," by Walter Miller, are among the other papers in the seven numbers already issued.

A geological description of Pachuca, in which the physiography, general geology, mines, metallurgy, and other features of the subject are treated by different writers, is

contained in the latest *Boletin* of the Geological Institute of Mexico. It is illustrated by numerous half-tones and some excellent contour maps.

The *Geographical Journal* for October opens with an interesting account, by Lieut. Vandeleur, of the recent expedition against the Fulas of Nupe and Ilorin in the basin of the Niger. "A Journey in Southwestern Patagonia" is mainly occupied with a description of the physical features of a region in which "five years ago no single white man was living," but where now "the open land is largely occupied" by settlers from "England, Scotland, the Falkland Islands, or Australia." R. T. Günther, holding an Oxford University geographical studentship, gives the results of investigations of the Phlegræan Fields, near Naples, made in order to determine the quantity of volcanic matter erupted and the relative ages of the crater-slopes and the volcanoes themselves. Each of these papers is accompanied by numerous illustrations and maps. We have noticed several discrepancies between the spelling of names in the text and upon the map of the first paper, as, Egbon, Jakpana, and Lokicha in the text, Egbom, Jakpara, and Lokitsha on the map.

The reopening of the medical school for women in St. Petersburg on September 23 may be regarded as an event of historical as well as of educational significance. This institution was founded in 1872 by Count Milyutin, the well-known Liberal Minister of War under Alexander II. With the accession of Alexander III., and partly in consequence of the assassination of his father, a violent reaction set in, which effectually checked the reformatory movements already begun, and in 1882 suppressed the medical school for women as "a hot-bed of nihilism," notwithstanding the earnest efforts of its founder to save it. The revival of the school is regarded as a good omen and is hailed as a decisive proof of progress both in education and in politics.

Women are now admitted to the University of Vienna as matriculated students under the following conditions: (1) They must be Austrian subjects; (2) they must be eighteen years of age; (3) they must have passed an abiturient or final examination in an Austrian gymnasium or in some foreign gymnasium of equal standing. The first of these conditions is thoroughly provincial and preposterous, and will doubtless soon be set aside. Women may be admitted as hearers provided they have finished successfully the courses of instruction prescribed in normal schools for girls or in some other school of equal rank. If they enter, they must attend at least ten lectures a week in some department of the philosophical faculty. The number of women already registered for the winter semester is thirteen, of whom eleven are hearers and two matriculates. Four of them take courses in mathematics, four in philosophy, two in physics, two in history and Germanistic studies, and one in natural science, including zoölogy, botany, and mineralogy.

The session of the Icelandic Althing that has just closed gave promise at one time of settling the question of a revision of the Constitution, with which every session for the past sixteen years has been engaged. In place of the usual radical proposal, a moderate measure was introduced, which included, however, one of the essential features of home rule—an independent resident minister for Iceland, in place of the present Danish Minister, who combines with Icelandic affairs the Department of Justice. Although the bill failed to pass the lower house in a form that made it possible for the upper house to accept it, there seems to be every prospect that a new election will be called, and that the advocates of this moderate measure will receive the support of the people.

The death of the Danish historian Adolf Ditlev Jorgensen, which occurred in Copenhagen on October 5, is naturally connected with that of our own historian Justin Winsor. Nor is the association suggested merely by the accident of their dying in the same month. There was much in the personal character and in the nature of the work of the two men to suggest a comparison. Like Winsor, this Danish scholar was a patient and conscientious student of historical sources, omitting nothing that could contribute to a fuller understanding of the subject under discussion. As Keeper of the Public Records he brought order out of chaos, and thus more than any other one person determined modern historical methods in Denmark. He was also the author of a number of articles, monographs, and independent works, all of which are characterized by thoroughness and originality. At first his attention was directed to the earlier periods in connection with the development of the Scandinavian Church, laws, folk songs, heraldry, etc. Owing to the fact that he was a Schleswiger by birth, he was specially interested in the Schleswig-Holstein question, about which he published several monographs. Of great value as original studies are his biographies of Georg Zoega, Thorwaldsen's early friend in Rome, the poet Johannes Evald, and the statesman Peter Schumacher Griffenfeld. He was also known as the author of popular historical works. At the time of his death, Jorgensen was engaged on the great History of Denmark ('Det Danske Riges Historie'), of which he was one of the editors.

Admirers of Ian Maclaren should be well pleased with the Kalendar for 1898 which bears Dr. Watson's *nom de plume* (Dodd, Mead & Co.). It consists of a dozen folio rubricated leaves loosely bound with corded silk, each having a decorative border and a vignette pertinent to Dr. Watson's writings. These are drawn upon for a daily text, with marginal readings of greater length duly credited to the respective works. The designer, Mr. William Snelling Hadaway, is to be praised in the main, especially in his village and house sketches; but his skill is not equal to mountain delineation with strokes that tell, every one. Other calendars before us for the coming year are from R. H. Russell, No. 9 Rose Street—one, the "Sports and Seasons Calendar," with large colored plates by several hands, and mostly clever and taking; the other, Mr. E. W. Kemble's "Coon Calendar," in which this artist's mastery of the negro physiognomy is kept more in check than in some of his slighter efforts.

—The declaration of the faculty of the Karlsruhe Polytechnic School in favor of the Gymnasia, as compared with the Ober-Realschulen, as preparatory schools for higher technical institutions, is truly surprising. In spite of many points of inferiority in our secondary schools, we have reason to congratulate ourselves on not being hampered in our development by quite such numerous and formidable historical legacies and prejudices—so arduous is the task which has been forced upon the Germans in adapting certain of their educational institutions to modern requirements. Prof. Schöttler of Brunswick shows (in No. 5 of the *Pädagogisches Archiv* for 1897) that the above decision was made mainly in view of the less advantageous position, social and official, of engineers, architects, etc., in comparison with those professions for which a gymnasial preparation is required. In fact, the Karlsruhe faculty admit that their deliberations might have resulted differently were the Government willing to accept the Realschule diploma also for the admission of candidates to other than technical branches, such at least as the higher administration of the finances, the positions of higher teachers of mathematics and the sciences, and the medical profession. It cannot be, and is not, claimed that these schools do not furnish the higher technical institutions with well-prepared students. On the contrary, it is found that the first year's lectures, adapted for graduates of the Gymnasia, are too elementary for those coming from the Realgymnasia and Ober-Realschulen. At the Technische Hochschule of Stuttgart the regular courses for the graduates of these three classes of schools, in the order named, are arranged for nine, eight, and seven semesters respectively, requiring two whole semesters more work of Gymnasium graduates than of those who have completed the course at the Realschule.

—The session of the Académie des Inscriptions et Belles-Lettres held on October 1 was of somewhat exceptional interest. M. Max Collignon presented to the Academy the photograph of a funerary group in limestone which is preserved in the Græco-Roman museum at Alexandria. The monument, the figures of which are larger than life, represents a veiled woman seated in an attitude of mourning near a young girl who is standing. It is a new example of the funerary statues, of which the so-called Penelope of the Vatican is a well-known specimen, which abounded in the fourth century in Greek cemeteries. This type of the draped woman is closely analogous to that of the figures of women which appear on Attic steles of the fourth century, and recalls in certain respects the style of the school of Skopas. The Alexandrian group, executed in Egypt by a Greek artist contemporary with the first Ptolemys, is an interesting document for the history of Græco-Egyptian sculpture. It shows how, at the beginning of the Alexandrian evolution, the influence of types that were strictly Greek still imposed itself on the art of Hellenized Egypt. M. Salomon Reinach followed M. Collignon with a paper entitled "Une Image de la Vesta Romaine," based upon a passage in the 'Fasti' of Ovid which has hitherto escaped notice. Ovid says that there existed at Alba statuettes of the goddess Vesta veiling her face with her two hands. This gesture, anterior to the influences of Hellenic art, was probably borrowed from the old wooden statue of Vesta which stood among the twelve Roman gods in the Forum. It occurs also in the hitherto unexplained altar of Mavilly in the Côte-d'Or. This altar, on which the twelve Roman gods figure, seems to reproduce the archaic images of the Forum. The singular gesture of the goddess who covers her eyes with

her hands, was not understood even by the ancients themselves. M. Reinach explains it by the special function of Vesta as goddess of the hearth: she is protecting her eyes from the smoke. There was a god of the hearth among the Latins called Cæculus, a name which the ancients explained by his half-closed eyes. The god shut his eyes, as the goddess covers hers, to keep the smoke out of them. M. Reinach added that up to now no image of the Roman Vesta has been found, and spoke strongly of the importance of the Mavilly altar, which presents to us this very ancient type for the first time.

—Maurice Courant, the eminent French scholar in Chinese and Korean, has recently completed his magnificent 'Bibliographie Coréenne' (Paris: Ernest Leroux), in three quarto volumes of about 500 pages each. It gives in Chinese, Japanese, Roman, and Korean letters the names of all the books known to have been published in the Land of Morning Calm, from early mediæval times until A. D. 1890, with description and analysis of the more important ones. Besides a luminous and very interesting introduction, there is a concluding chapter surveying the whole field. The occasional reproductions of old maps, tables, and diagrams are also very welcome to the student of Korean history. After a knowledge of this scholarly work of M. Courant, and familiarity with the history of book-making in the once hermit kingdom, it will be difficult to believe that printing with movable types is a purely European invention. Hundreds of years before the use of "living" type was known to Gutenberg or to Koster, the Koreans used it for printing their books, a good collection of which is now in the British Museum. M. Courant (who is interpreter to the French Legation in Tokyo) thus concludes his survey of the fruits of intellect in the peninsula:

"The perspicuity of the Korean mind appears in the fine printing of the books, in the perfection of the alphabet, the simplest which exists, in the conception of movable types, which it was the first to think of. Korea's part in the civilization of the far East has been considerable; if the situation had been analogous to that in Europe, Korean ideas and inventions would have stirred all the neighboring countries, but the barriers raised by pride were higher, and respect for the past imposed immobility. . . . Korea had no dealings with foreigners but to be pillaged and enslaved; she has lived within herself; her inventions have not gone beyond her frontiers."

—In a recent lecture, Dr. Carl Ranke, who two years ago joined Dr. Hans Meyer's expedition for the exploration of Central Brazil, spoke of having paid particular attention to the senses of the Indians, especially their sight. He noticed, as others before him had done, that an Indian can see many things that Europeans cannot; he can follow the course of a fish in turbulent waters and hit it with his arrow; he can spy an animal in a thicket that to our eyes seems impenetrable; he can see in the ground and the grass, and follow them, tracks of man and animals that to us are invisible, and so forth. The psychology of our fathers disposed of these phenomena bluntly by declaring off-hand that savages had sharper senses than we have. But Dr. Ranke examined the eyes of some of these Indians and found, to his surprise, that there was hardly any difference between their direct powers of sight and ours. What enables them to observe those phenomena which elude us is their superior practice and facility in accommodating the vision to different distances. Dr. Ranke holds that this focussing facility is of much greater importance than has heretofore been believed. Moreover, he thinks that what gives the Indians another practical advantage over us in the intercourse with nature is that they are not accustomed to look at a landscape as a whole, as we are, but give their undivided attention to a particular detail. Ranke also declares that the short-sightedness so prevalent in civilized countries is not a disease or a failing, but a salutary adaptation of the eyes to conditions of life that require constant work at close range.

BACON'S AMERICAN CHRISTIANITY.

A History of American Christianity. By Leonard Woolsey Bacon. New York: The Christian Literature Company. 1897.

Published in connection with a series of American Church Histories, Dr. Bacon's book is an attempt to sum up in a single volume the course of events which have been described in the preceding separate volumes, each treating of a particular church. It is a bright and entertaining summary of the general religious history of the United States and the outlying parts, written in a vigorous and slashing style, the homeliness of which, at times, is carried far, as where it is written of Whitefield that "Belcher, the royal governor, fairly slobbered over him, with tears, embraces, and kisses." We do not seem to find much in the book that could not have been gathered easily from the other volumes of the series, and, as compared with those, it is necessarily thin and vague to such an extent that those who have read the other volumes in order will wonder what reason this one has to exist. But in none of the other volumes has the writer been so much in evidence; and his tone, so confident and positive, is, if sometimes disagreeable, frequently amusing and always enlivening.

Considered as a whole, the temper of the book is catholic and irenical. There runs through it a sentiment of regret in view of the divisions of the evangelical churches and the waste of meeting-houses and ministers in the smaller towns and villages. There is more than the desire, there is the disposition, to treat the different churches fairly, both as regards their doctrines, their purposes, and their mutual affinities and oppositions. Nor is this fairness confined to the evangelical churches. Unitarians and Universalists may feel that scanty justice has been done their respective churches in so far as they are very summarily dismissed, but the confession is ample that the moral quality of either sect has falsified all the predictions of their first opponents. The writer quotes his father, Dr. Leonard Bacon, "one of the most strenuous of the early disputants" opposing liberal opinions, as saying of the Unitarians "that it seemed as if their exclusive contemplation of Jesus Christ in his human character as the example for our imitation had wrought in them an exceptional beauty and Christ-likeness of living." This was, however, ill-considered praise, seeing that the early Unitarian contemplation of Jesus Christ was not exclusively that of his human character. It has become so now. So venerable a joke as that about the difference between Unitarians and Universalists is not improved by the removal of its sting. The true reading is, that Universalists think God too good to damn them, while Unitarians think they are too good to be damned. Dr. Bacon has it, "that the Universalist holds that God is too good to damn a man; the Unitarian holds that men are too good to be damned"—which may be a truer statement than the other, but has not its humorous application.

Dr. Bacon is clearly of the opinion that much was lost to either party by the separation of the orthodox and liberal Congregationalists, questioning if the orthodox party "would have been worse off if Channing and his friends had continued to be recognized as the liberal wing of its clergy," and if the Unitarians "would not have been a great deal better off if they had remained in connection with a strong and conservative right wing, which might counterbalance the exorbitant leftward flights of their more impatient and erratic spirits." It is when he comes to these "impatient and erratic spirits" that the strain upon Dr. Bacon's catholicity is greater than he can bear. Thus we read of Emerson:

"Without any formal demission of the ministry he retired to his literary seclusion at Concord, from which he brought forth in books and lectures the oracular utterances which caught more and more the ear of a wide public, and in which, in casual-seeming parentheses and *obiter dicta*, Christianity and all practical religion were condemned by sly innuendo and half-respectful allusion, by which he might, 'without sneering, teach the rest to sneer.' "

This is the kind of thing which is best criticised by merely quoting it. Few will recognize in it the Emerson of their acquaintance, especially where the writer whose main haunt was "the supremacy of ethics," is denounced as an enemy of "practical religion." We also read of his "gay and Skimpolesque reply" to a criticism of his Divinity School address of 1838 as "an illustration of that flippancy with which he chose to toy in a literary way with momentous questions." The page devoted to Theodore Parker is, if possible, more awry in its perspective than that devoted to Emerson. We are told that "he liked 'to make people's flesh crawl,' " and that, "Even in his advocacy of social and public reforms, which was strenuous and sincere, he delighted so to urge his cause as to inflame prejudice and opposition against it." Here is a manifest contradiction in terms and an accusation singularly false, Parker having often kept himself in the background in furtherance of some public end. In the same connection we have a statement which is a tissue of mistakes and misrepresentations. It is as follows:

"The immediate reaction of the Unitarian clergy from the statements of his [Parker's] sermon, in 1841, on 'The Transient and Permanent in Christianity,' in which the supernatural was boldly discarded from his belief, was so general and so earnest as to give occasion to Channing's exclamation, 'Now we have a Unitarian orthodoxy!' "

Now, so far was Parker in that epoch-making sermon from boldly discarding the supernatural that Channing wrote regretting that he did not give some clear expression to his belief in the miracles, adding, "His silence under such circumstances makes me fear that he does not believe them." The fact is that he did believe them at that time as historical events, but as belonging to the "transient" part of Christianity, which got from them no "permanent" support. Channing's "Now we have a Unita-

rian orthodoxy" was no cry of satisfaction over the Unitarian uprising against Parker, but an expression of regret. Unitarianism, he said, "began as a protest against the rejection of reason—against mental slavery. It pledged itself to progress as its life and end; but it has gradually grown stationary, and now we have a Unitarian orthodoxy." He also wrote of Parker: "I trust the account of attempts to put him down is in the main a fiction. Let the full heart pour itself forth."

From the fact that Dr. Bacon passes directly from his account of Parker to some reflections on the relation of the church to slavery, it may be inferred that he was not unaware that Parker had a part to play in this, though mention of it he has none. There is no aspect of the history of American Christianity of which Dr. Bacon writes with so much feeling and passion as of its relation to slavery. He does not make of it a subject by itself, but returns to it from time to time at different stages of his narrative. The general thesis he maintains is, that the conduct of the churches in their concern with slavery was wonderfully fine and brave. There were, of course, individual exceptions, and the whole body of the Southern churches finally pronounced for slavery as a divine institution in the most decisive manner. But, even here, if the manes of the proslavery preachers of the South are not well satisfied with the tribute that is paid to them, they must be exorbitant in their demands. For example: "There seems no reason to doubt the entire sincerity with which the Southern church, in all its sects, had consecrated itself with religious devotion to the maintenance of that horrible and inhuman form of slavery which had drawn upon itself the condemnation of the civilized world." This devout persuasion of the Southern churches that their "peculiar mission" was to "conserve the institution of slavery," as declared by the Southern Presbyterians, is contrasted sharply, as well it may be, with the almost universal anti-slavery sentiment of the Southern churches before 1833, as seen from Dr. Bacon's mount of vision. In the eighteenth century a few instances are given of clerical opposition to slavery, and we are assured that "They are simply expressions of the universal judgment of those whose attention had been seriously fixed upon the subject." But it was in the decade following the adoption of the Missouri Compromise that the American church won its proudest laurels as an anti-slavery organization. "The persistent attempt to represent this period as one of prevailing apathy and inertia on the subject of slavery is a very flagrant falsification of history." Was it not the common practice to take the Fourth of July for an anti-slavery holiday in some New England towns, in Boston several of the churches uniting in a common service? Strangely enough, and yet not so strangely, all things considered, the American Colonization Society is barely mentioned among the anti-slavery forces of the time. This may be because Dr. Bacon, to vary a phrase of Eugénie de Guérin, has a pain in his father's side whenever reference is made to that misshapen darling of his father's heart. Indeed, there is a suggestion of paying off old scores in the whole treatment of the slavery question, and especially of those who showed the pretensions of the Colonizationists to be utterly fallacious and often insincere.

But, if we concede that the few scattered instances of anti-slavery preaching from 1820 to 1830 establish the prevalence of a widespread anti-slavery sentiment in the churches, it becomes all the harder to account for "the Southern apostasy" which Dr. Bacon dates from the year 1833. "Such was the swift progress of this innovation that in a few years, we might almost say months, it had become, not only prevalent, but violently and exclusively dominant in the church of the Southern States, with the partial exception of Kentucky and Tennessee." How to account for this sudden change is a problem to which Dr. Bacon applies himself with easy confidence. He is not of those who feel that "the furious vituperations of a small but very noisy faction of anti-slavery men" are sufficient of themselves to explain the moral revolution, though they were an important factor in the change. Panic terror, caused by the Nat Turner insurrection of 1831, was the most important. Such an explanation, if valid, would prove the utter unreality of the much vaunted anti-slavery sentiment of the preceding period. It takes no account, except a casual mention of the cotton-gin, of the causes which operated in the South to make slavery popular and divine. It does not make plain why "the strange and swiftly spreading moral epidemic" was not confined to the South. "A deep passion of honest patriotism" is set down as the main reason for this; then, too, there was "worthy solicitude lest the bonds of intercourse between the churches North and South should be ruptured."

"Withal, there was a spreading and deepening and most reasonable disgust at the reckless ranting of a little knot of anti-slavery men, having their headquarters at Boston, who, exulting in their irresponsibility, scattered loosely appeals to men's vindictive passions, and filled the unwilling air with clamors against church and ministry and Bible and law and government, denounced as 'pro-slavery' all who declined to accept their measures or their persons, and, arrogating to themselves exclusively the name of abolitionist, made that name, so long a title of honor, to be universally odious."

There is a foot-note to this railing accusation which assures us that the story of Mr. Garrison's life, "as told by his family and friends, is a monstrous falsification," and that "one of the best sources of authentic material for this chapter of history is 'James G. Birney and his Times.'" No mention, however, is made of the fact that, in the history of the anti-slavery conflict, no expression is more classical than Birney's denunciation of the American church as "the bulwark of slavery." The most unassailable position will probably be found somewhere between this extreme and that of Dr. Bacon's eloquent encomium.

It would be a pleasure to follow Dr. Bacon into other parts of the wide field over which he careers so joyously, his trumpet giving no uncertain sound, to whatever onset we are called. The majority of his conclusions would be found sensible and just, especially where principles are involved. Dealing with persons, he is more apt to swing violently to one side or the other, to praise or blame too much. There are points at which the fuller treatment of Walker's 'Congregational Christianity,' Allen's 'Jonathan Edwards,' and Tiffany's 'Episcopal Church' is essential to a good understanding of the course of events. In conclusion there is some discussion of the problem of Christian unity, not without reflections more or less caustic on the absurdities in which this problem has been involved. Dr. Bacon does not think that a quadrilateral of four tremendous sects would be an improvement on the 143 enumerated in the eleventh United States Census. It is a sign of the times deserving notice that any union of Christians not including the Roman Catholics is deprecated by this New England Congregationalist as an unworthy end; and it is another that the Chicago Parliament of Religions is hailed as preeminently a triumph of the most wholesome and beneficent forces working in the body of religion as the history of an eventful century draws onward to its close.

MR. LODGE'S ESSAYS.

Certain Accepted Heroes, and Other Essays in Literature and Politics. By Henry Cabot Lodge. Harper & Brothers. 1897.

This volume contains essays of two different sorts. If, in ignorance of their authorship, we were to confine our attention to those of a literary, critical, and historical character, we should be inclined to pronounce them the work of a clever but somewhat audacious beginner, determined at all hazards to attract the public attention. Published anonymously, they would have attracted notice and aroused some wonder as to their authorship, on account of a vein of boyish sophistry running through them, remarkable less often for its plausibility than its transparency. In his essay on "Certain Accepted Heroes," Mr. Lodge holds up to contempt the literary tradition which makes heroes of Achilles and other classical characters, whom he demonstrates to have been in reality bullies, blackguards, and cowards. In "The Last Plantagenet" his thesis is that Richard III. deserves our admiration as a statesman, and that "in the supreme moment" we sympathize with him and not with his critics and opponents, such as "the respectable Richmond." In "Shakespeare's Americanisms" the argument is pressed with such vigor that it results in seeming to prove that there is no such thing as correct usage in language. In "English Elections" Mr. Lodge maintains that less money is spent on elections here than in England. The reader will find, however, that the verified statistics given relate only to English elections, and that the author's proof is made by his own unsupported assertion that the expenditure in one country is "just about the amount" actually spent in the other. If the ideas and theories which have inspired these essays are not original, their method is very much so; the style is clear, and were they the ventures of an unknown tyro, many a puzzled reader would certainly exclaim, "Well, well! What next?"

But Mr. Lodge is no young and unknown man. He is one of the Massachusetts Senators, a man of mature age, and a successor of Webster and Choate. The volume contains other essays than those just mentioned, which set forth his views on graver matters connected with the commonweal. The book, therefore, must be taken on one side as a literary excursus by a public man of a rather old sort, and, for the remaining essays, as a statement by a Senator representing one of the most important communities in the Union of his opinions on some of the leading questions of the day,

especially higher education and foreign affairs. In these lies the real interest of the book. They are public declarations by a public man, designed to illuminate and throw into strong relief, not merely the author's view of certain public questions, but his estimate of his own career, position, and relation to them.

Mr. Lodge is a graduate of Harvard, yet in public life he is known as a beneficiary and defender of "machine" politics, as a protectionist, and as a Jingo. Though connected by birth, training, and social life with all the interests and ideas in the community he represents for which his University stands, his career is that of a strict party man, dependent for place on the continued favor of that *quasi* corporation one of the main functions of which is to stifle independence of thought and action, such as a university is designed to foster. In the world to which Mr. Lodge naturally belongs he has, through this circumstance, as he has advanced in power, become gradually less and less at home, until it is mainly by non-political means, such as literature or social life may afford, that he is able to maintain his connection with it. He is, at the same time, one of a small band who reconcile themselves to this situation by cultivating the conviction that only by this sacrifice can they benefit their fellow-men and country according to the designs of Providence. This conviction it is which enables them to claim whatever good they accomplish as their own; the evil that ensues they attribute to the necessity to their high aims of constant coöperation with baser natures. A liberally educated man in such a situation, turning essayist and publicist, would be likely to betray in some way a sensitiveness to the criticism which his attitude must naturally call forth, and such sensitiveness Mr. Lodge does show. Indeed, these essays may be described as a covert *apologia;* any one who desires to understand them must put himself, as far as possible, in the author's position, and bear in mind the powerful impulses to self-exculpation of some sort which alone can explain much of what he says.

The essay on "A Liberal Education" was originally an address, delivered before the Phi Beta Kappa Society at Harvard in 1894. It was reported at the time to have caused surprise among the members of that learned society—why, it is difficult to see, for it is exactly what might have been expected by them from the source from which it came. Though not so in form, it is in substance a defence by the author of himself in the guise of an attack on a body whom he describes as critics of America and American institutions. This is a well-known rhetorical device, and its value depends wholly on the skill with which it is used. Of this the reader will judge for himself. A good illustration of the way in which he employs this weapon is found in the statement that the "national self-assertion" of Jefferson Brick and Elijah Pogram was "infinitely better" than "the opposite spirit, which turns disdainfully even from the glories of nature because they are American and not foreign, and which looks scornfully at the Sierras because they are not the Alps." What he desires to do evidently is to divert the attention of the hearer from the charge brought against himself of being the spokesman of the ideas of Brick and Pogram, and to arouse indignation against the person making the charge, to whom he accordingly imputes a character and motives of the most odious kind. The whole essay is full of remarks about the superiority of Performance to Criticism, which would be rather mysterious without this key. He talks about the work of criticism as if he thought that the true object of a liberal education was to teach the young to do something or other without any critical inquiry into the nature of the means to be employed—a manifest impossibility; and his statement that it was not Criticism that won the battle of New Orleans, though true, does not throw much light on his drift. What he really means here is not that criticism in itself is bad (the whole essay being a criticism of the present management of Harvard and of his audience, that would be out of the question), but that it is bad when directed against himself. The moment that this is understood, the obscurer passages of the essay become perfectly clear. They should be compared with some of those in the essay on Richard III., through which the idea seems to run that if the author can show that the critics of the accepted villain of early English history were mistaken, his own are probably at fault. The chain of reasoning is: Richard III. was criticised as a villain; the facts now show that his critics were wrong, and that he was a statesman; I too have been criticised; this shows that my critics are wrong, and that I am a statesman.

Directly connected with Mr. Lodge's sensitiveness to criticism is another characteristic trait. He evidently in his own mind personifies his country as himself. This substitution of the Ego for the non-Ego throws an enormous amount of light on his method of reasoning in politics. When he wishes to investigate a question of public policy, he is obliged to examine it only so far as to enable him to detect what view of it suits him; the view in question is at once imputed to "America." Whenever he wishes to tell us what America thinks, he tells us what he thinks himself; the "true American" is really no other than the author. Conversely, to be anti- or un-American is to criticise the author. In the same way, of course, "the people" means Mr. Lodge; any one who wants to know their aims, hopes, fears, and desires can very easily ascertain them by ascertaining those set forth in this book. When he denounces as too "abundant" the current criticism of America, what he means is that his own critics are too abundant; when he warns the Phi Beta Kappa that the great danger of the time is that they will undervalue "their country," what he has in mind is the danger that they will undervalue him. This patriotic identification runs through the essay on what he calls "Our Foreign Policy." In it he advances the proposition, which no one is likely to dispute, that the United States has a distinct historical foreign policy. He then describes a Jingo foreign policy of his own, calls it "ours," and pronounces it to be the true American policy; the inference being that no true American is at liberty to criticise him for stating it.

The fact that public men, whether in Church or State, gradually come to identify themselves with what they represent, is well known, but we have never met with so remarkable an instance of it as in Mr. Lodge's book. Were his subordination to himself of the State more veiled, it would be rhetorically more effective, but it seems to spring from an uncontrollable tendency. The author has gone far beyond "L'État c'est moi," and identifies with himself not merely the United States, but a whole hemisphere. It is on the truth of this implied premise that his conclusions really depend. If he is right, the future of the western half of the world is bound up in his own, and it is natural enough that he should think his foreign policy more important than that of Washington, and should seize the opportunity afforded by the invitation of his University to lecture it on its hostility to and ignorance of the true American view of the higher education. In the end we see very plainly how Mr. Lodge's critical is connected with his political position. A statesman's power must rest on the support of those who think him a patriot, and not on the favor of those to whom what he calls a patriot is nothing more than a bully or an egotist.

LAND POWER AND SEA POWER.

The Effect of Maritime Command on Land Campaigns since Waterloo. By Major C. E. Callwell, R.A. With Maps and Plans. Charles Scribner's Sons. Pp. 380.

Major Callwell's book is in the nature of a supplement to Captain Mahan's brilliant work on the influence of the Sea Power. Taking up events where Mahan dropped them, at the fall of Napoleon, an outline is given of the wars waged since that time in which naval power played a part.

It is not strange that military men should feel the impulse to continue the story, though the effect of doing so may not turn out to be quite what is intended. It may be questioned whether Captain Mahan was not as wise in choosing the limit of his work as he was able in its presentation. He covered the period of the great naval wars when sailing ships were at the height of their glory and romance, when the old seamanship fascinated the imagination, and when great fleets rivalled land armies in the hosts of combatants engaged. Left where Mahan left it, the effect was a most stirring one, and the reader was persuasively induced to leap to the conclusion that great peoples should rival each other in building great navies as sedulously as they have run the race of turning ordinary standing armies into armed nations. When, however, the argument is applied to a long list of great and petty conflicts of modern times, the intellectual process results in a certain amount of disillusion. We find ourselves returning to the older opinion that, for nearly all the nations of the world, a navy is only ancillary to the army, with a partial and exceptional rôle to play; that Continental Powers have not been unwise in avoiding the enormous burdens which the building of great fleets would add to their budgets; and that it is doubtful if any nation can be at once a great land and sea power. There is a limit to the expenditure for military purposes which even the richest nation can make. There is also a limit to the extent to which it can saddle the cost of its present armaments and wars upon posterity. More than one European Power is perilously near the brink of insolvency, and the gravest question which living statesmen have to meet is this of the extent to which public debts can be increased if the necessity shall arise to meet the cost of a great war. Everybody knows that this consideration is

perhaps the most potent in preserving the general peace, even at the cost of many a sacrifice of national pride and interest.

Before yielding to the impulse to try to rival Great Britain upon the ocean, statesmen of other countries will carefully analyze the asserted influence of dominant sea power on land operations. Major Callwell's book, by the very extent of its claims, tends, as we have said, to weaken the effect of the more plausible general argument which Captain Mahan had so well put. He claims for naval armaments the credit of success when their work has been the convoy of provisions as much as if they had won a battle between fleets. An improvised flotilla on a river or a gathering of private armed vessels in the Ægean Sea helps the theory as well as the formal array of ironclads. It is hard to say why the laying of a common pontoon bridge or using a flatboat ferry may not be called a naval operation and be cited also to show the influence of sea power upon land operations. There is a certain degree of truth in all this, but the truth is not found in the implied conclusion that great navies are a necessity to modern nations. We are led to discriminate, and to separate the operations of war which call for fleets from those in which some inferior or temporary use of water transportation may be useful. The uses of these last are interesting, but it is not worth while to claim that they show the advantage a great nation has in being dominant in sea power.

To "rule the waves" properly means to be superior in organized squadrons of ships-of-war, as Great Britain now for some generations has been. What would be the consequence of France, Germany, or Russia trying to excel her in this respect? If done at all, it must be thoroughly done. Half measures are worse than none. If the naval supremacy is to be taken from England, her rival must be prepared to beat her in number of ships and in their fighting efficiency at all times and places. Napoleon, by combining the fleets of France and Spain, succeeded in sending to sea more ships and guns than England could give Nelson, but Trafalgar proved that this was not enough. The fact is, it is doubtful if any of the great Continental peoples of Europe takes kindly to the sea.

Then England herself is the best proof that even the richest nation cannot stand the strain of trying to lead in armaments both by land and sea. It was only the other day that the *Spectator* said that England frankly disclaims the wish or the ability to land on a foreign shore an army large enough to be seriously formidable to a powerful neighbor. Her naval power is in chief measure a defensive power. The old name of "wooden walls" truly showed that it grew out of her insular position originally, and has progressed by the action and reaction of her colonial policy. Because she was strong on the ocean, she successfully planted colonies when others failed; and because she nourished many and distant colonies, her fleets were increased and made stronger and stronger. So long as wars are waged, dominance in ships will be a necessity of British policy, and whoever would rival her in it must calculate upon going beyond not only all she has hitherto done, but all that her wealth would make possible in a further struggle for leadership. She now acts on the policy of being able to put in commission a heavier naval armament than any two of her possible rivals could do. She thus provides for any probable combination against her, for it would be a very strange conjuncture of European affairs in which she could not find one ally out of three great Powers.

This condition of things is fortunately one that tends powerfully to preserve the peace of the world. The dominance of the seas is not an end in itself, but a means to an end. The great peaceful mercantile commerce of the world, and leadership in it, are of capital importance to the richest commercial nation of the Old World. She could greatly annoy any opponent, but a conquest such as France inflicted upon Prussia at Jena, or Germany upon France at Sedan, is wholly beyond her power. She knows this so well that it never enters into her plans. It was the combination of all Europe against Napoleon's unbridled ambition that made a Waterloo possible, and there is little danger of the rise of such another conqueror.

But it is not only true that a great naval power cannot afford to be also the organizer of vast land armies: there is a limit soon reached in the possibilities of transporting armies to distant shores. Even when England and France united in the invasion of the Crimea, the army that fought at the Alma bore no proportion to the military strength of Russia. Russia's fatal weakness was that she had aspired to be a naval power, and had just fleet enough at Sebastopol to commit her to fighting the duel out at that remote outpost. Had she been without it, and tolled on her adversaries into the steppes of southern Russia, a very different story of that war might have been written. It was the point of honor to protect her few ships and dock-yards in the Black Sea that proved her ruin. A great naval power may land a comparatively small army almost where it will, but when the small army advances into the interior, it meets a large one and retreats to the cover of its ships or is captured. The boot is then on the other foot, and the theme of an entertaining book would be the importance of land power to the ultimate success of naval incursions.

History, then, seems fairly to teach the comfortable doctrine that it is not given to a colonizing nation to be at once a great sea and land power, and that this natural determination of the direction of its energies tends to preserve the peace of the world by making commerce its supreme material interest, as well as by making it unable to rival a Continental power in the concentrated weight of military strength upon the land. Under these circumstances, in spite of the most taking of Jingo essays, practical statesmen in Continental nations will conclude that they find no call to exhaust their exchequer in chase of the will-o'-the-wisp called Dominance of the Sea Power.

In his general outline of recent military history Major Callwell is clear and interesting, with one exception, which will go far with American readers to discredit the whole work. The sketch of our civil war is written from the standpoint of the prejudice and very imperfect knowledge of 1866, and must be regarded as a burlesque in its characterization of men and of events. A serious writer owes it to himself to keep more abreast with the progress of investigation and discussion.

Bertrand du Guesclin: His Life and Times. By Enoch Vine Stoddard, A.M., M.D. Illustrated. G. P. Putnam's Sons. 1897.

It is an observation of Henri Martin that when the Middle Ages were regarded as all alike, Bertrand du Guesclin was erected into a type of the chivalrous knight. The truth is, on the contrary, that his influence tended to destroy the French chivalry of his day, and to substitute for the hero of the tournament the professional captain of Renaissance times. His manners from childhood resembled those of, let us say, Bayard little more than the manners of Father Damien (depicted by Stevenson in his open letter to the Rev. C. M. Hyde) resembled those of the conventional "plaster saint." He disconcerted his parents by extraordinary roughness of demeanor and peasant tendencies. Among the great men of France, he was second only to Mirabeau in plainness of feature. He was not a native of the Île de France. He had an apparently falling cause to support. With such long odds against him, the degree of his force, determination, and bravery can be measured only by a detailed examination of what he accomplished for himself and his country. He did more than win the Constable's sword, in spite of court opposition, and wield it with distinction under circumstances which would have taxed the address of Turenne. He was one of the chief agencies in the achievement of French nationality; and ever since the process of consolidation has been understood, his countrymen have assigned him a place next and close to Joan of Arc among the worthies of the Hundred Years' War.

Dr. Stoddard's sketch of Du Guesclin's career is, with the exception of a short chapter on social conditions in the fourteenth century, occupied with its hero's own undertakings, to the exclusion of political issues in their wider sense. Its avowed aim is to disentangle the Constable from "the influences of an inadequate estimate of the actual social and political conditions of his time, and from the false conceptions of character which naturally arise from the distance in time between the living present and remote past, as well as from the distortion produced by the roseate mists of a romantic atmosphere which envelop it." For our own part, we should be disposed to leave aside this somewhat indistinct definition of purpose to say that Dr. Stoddard has prepared for popular use a narrative that combines sufficiency of biographical information with a full measure of biographical sympathy. The writer seems to us to belong to a class which we only wish were larger—the class of men who, without being trained historians, are moved by the events of distant centuries to undertake some special study in them. The interests of history suffer when historical reading is held to be the property of a close corporation. The amateur may fall into an occasional slip which in the professional writer would be heinous, without incurring quite the same censure. One is only gratified that his tastes lie in the right direction. We state our impression that Dr. Stoddard is a volunteer historian, because, without habitual inaccuracy, he once in a while errs in a fashion that marks him off from students who have served an apprenticeship. For instance, on the last page of the preface he styles Cuvelhier, one of his chief authorities, a Troubadour, and then more correctly, in the first line of chapter i., a Trouvère. But a determining proof of inexperi-

ence is the following account of the Jacquerie:

"The occurrence at this time of what is known as the 'Insurrection of the Jacquerie' introduced a startling element into affairs. This was an uprising aimed against the nobility, and was led by one Jacques Bonhomme (James Goodman). This insurrection was mainly participated in by the lowest and most ignorant orders of society. The ravages committed were not confined to any class, but were equally violent and destructive among all conditions of society. Like all movements of a similar character by an ignorant populace, the effort was a failure, and those concerned in it were dispersed by the organized effort of the intelligent classes. Its end was hastened by its excesses, which united the better elements of society in suppressing it."

In a critical age this identification of the proverbial Jacques Bonhomme ("Jacques Bonhomme a bon dos, il souffre tout") with an individual leader, illustrates the process by which folklore is begotten and extended. In comparison with this mistake, Dr. Stoddard's failure to dilate satisfactorily on the peasant revolt is less glaring. Among other marks of the novice in setting forth French history, we may mention an arbitrary use of accents, or, rather, their omission from many vowels with which they belong if French forms are not to be frankly discarded.

The modern biographer has only to present facts in dealing with Du Guesclin. He has few judgments to revise. One seldom encounters a case where the opinion of contemporaries has endured till now without greater modification. As with Joan of Arc, the sources are full and the literature excellent. Dr. Stoddard has fortified himself by careful reference to the chief authorities. and if we have treated some features of his work rather slightingly, we can commend its main outlines with heartiness. Probably the most important consideration which he urges is that Du Guesclin was far from being a mere leader of *coups de main*, and a champion against such knights as Sir Thomas Canterbury and Sir William Brambourg. He was a strategist superior in tactical skill to the best of the English, even superior to the veteran Sir John Chandos. "Common sense, not aphorisms drawn from the tournament, guided his campaigns. He would fight if necessary, but was just as ready to reach his goal by craft as by hard blows." Yet how terrible he was in person, the vogue of his proud battle-cry shows. "Notre Dame, Guesclin" almost drove "St. Denis" out of the field.

In specifying what seem to us Dr. Stoddard's best chapters, we should give praise to his account of the reverses which Du Guesclin suffered, especially Auray and Navarrete. In both cases where conspicuous failure fell to his lot, his judgment had been overruled, and the large ransoms immediately raised to redeem him prove how indispensable he had made himself to his employers, whether French or Spanish. The fourteenth century comes in for more copious abuse than any other mediæval period, and is usually made to suffer by comparison with the age immediately preceding it. So regularly is it decried that one is tempted to plead a little in its behalf. Its love of splendor and luxury did more for the revival of literature and the arts than any amount of scholastic philosophy had been able to effect; it suffered untold misery from pestilence; it revealed marked democratic sentiments; and, finally, it furnished a small quota of notable men. Among these Du Guesclin looms up well, and the three hundred pages which Dr. Stoddard devotes to him are none too prolix.

Studies in Psychical Research. By Frank Podmore, M.A. G. P. Putnam's Sons. 1897. 8vo, pp. 458.

This pleasant volume may be recommended to those who desire to inform themselves concerning the progress of psychical research since the publication of 'Phantasms of the Living.' It must be acknowledged that in the meantime the reasons for believing in something which may vaguely be called telepathy have been considerably strengthened. This has, in part, been due to the influence of facts already in print before that publication, but which had not yet been sufficiently digested even by those who knew them best. Among the corroborations the first to be mentioned is the enlarged census of hallucinations. It is true that this did not strictly conform in its scheme to the logical requisita—so much so as to bring its authors in some quarters under suspicion of dreading to meet the facts face to face; and, in consequence of its defects, the new census leads to no decisive conclusion. Yet it was certainly an improvement upon the first one, and did contribute something to the evidence for telepathy. But that which has strengthened the case much more has been the multitude of experiments, mostly unreported, which have been undertaken of late years. Almost everybody, roughly speaking, who has been interested in the subject, has made such experiments for himself. These experiments, too, have often been conducted with a measure of good sense, not in mechanical routine (which is as unfavorable to any other mental phenomena than those of fatigue as can be), but with some appreciation of the style in which telepathy, granting it to be a real action, appears as a matter of fact to operate. The results of the best of these experiments have usually afforded what appear to be indications, though extremely slight ones, of some tendency to something like telepathy. Now it was precisely such very slight phenomena, occurring with a certain frequency, that were wanting a dozen years ago to bridge the chasm between the ordinary course of nature and the apparently supernatural. In the third place, the decade has not been altogether barren of striking phenomena suggesting telepathy, which, though less probative than the more ordinary results just mentioned, yet, as being open to experimental tests, are infinitely more so than all the ghost stories that ever were told. The striking phenomena can amount to nothing until they are welded into continuity with ordinary experience. Finally, the very simple mechanical philosophy which was in high vogue still a dozen years since, though it had already been weakened by physical investigations, has now suffered serious dilapidations. It is now doubtful whether the conservation of energy can be regarded as the original and ultimately fundamental law that lies hidden beneath the corner-stone of the universe. The hypothesis which it behooves science provisionally to adopt is not in every case the most probable theory.

One source of pleasure in reading Mr. Podmore's present book is that, from beginning to end, there is scarcely a decided flaw in his inductive reasoning. He judges of a conclusion, not by his inclination to think one way or the other, nor by any rule of thumb, but by the necessities of the case. The general plan of the book is to proceed from beliefs which the author refutes or only partially accepts, first to those which seem to him undeniable, and finally to those which try his faith. The first chapter sketches the history of the movement in psychical research. The second, upon "Spiritualism as a Popular Movement," shows the extravagant hardihood of the credulity of the spiritualists of the last generation. The next chapter criticises the experiments of Thury and Gasparin, of Dr. Hare, of Lord Lindsay, of Crookes, of Stainton Moses, and of Zöllner. The next chapter shows how the more severe investigations of the Society for Psychical Research refuted apparent phenomena of like description, sometimes identical. Chapter v. explodes Poltergeists. Chapter vi. shows how the Society exposed Madame Blavatsky's fraud. It concludes with these words:

"Of the later history of the Theosophical movement, and of the revelations made by Mr. Edward Garrett in 'Isis Very Much Unveiled,' it is not necessary to speak here. And it would be rash to prophesy even now—notwithstanding all the damning evidence of fraud, notwithstanding the loss of the unique personality of the foundress—that the movement is near dissolution. To most men who have given themselves over to a false belief, there comes a time when the ears are deaf and the eyes are closed and the heart is hardened, so that they will not believe even the testimony of the false prophet against himself. For are there not, as we have seen, black magicians and other powers of darkness who may transform themselves into the likeness of angels of light? With such men and against such a contention, argument is no longer even possible. *Discipiantur.*"

With chapter vii. the constructive part of the book begins. Experimental Thought Transference is rightly taken up first, since it must form the logical basis of the whole doctrine of telepathy. The results of the experiments are very slender, and any one series is quite inconclusive. The circumstance that two minds of the same level living constantly together will, under given circumstances, be apt to notice nearly the same sequence of ideas, is left out of account. But then, on the other hand, were such phenomena more than just discernible in the long run, they would stand in flat contradiction to the ordinary course of experience. Their slightness is thus negative evidence of the veraciousness of the effects.

Telepathic hallucinations are next taken up. What the judicious reader will think of this chapter will naturally and logically depend upon the impression made upon him by the direct experiments. If these, upon the whole, can be considered as establishing telepathy as a real phenomenon, however slight it may ordinarily be, this conviction will be drawn upon to explain the highly intensified phenomena narrated in this chapter. In regard to hallucinations, it is to be remembered that while most men never have them at all, many others have so lively a visualizing power that they may be said to live amidst hallucinations all their lives. Others, such as many painters and chess-players, have ordinarily no hallucinations about ordinary things, yet habitually behold as real the imaginary objects concerning which their brains are chiefly exercised. It is probably mostly among men of this intermediate class that visions of dear friends occur at times when their hearts are excited, whether through ordinary or telepa-

thic channels. Ghosts are next considered, and strong reasons are shown for believing them to be merely hallucinations. Haunted houses is the next topic. Nothing is said about the great number of houses which are inhabited or frequented by tramps and squatters. In the first case mentioned in this chapter, a Miss Laurence was going up stairs:

"When she reached the second-floor landing, she saw a cotton skirt, of a lilac shade and indefinite pattern, disappearing round the bend of the stairs leading to the top floor. Supposing it to be the housemaid, she called to her; and the housemaid appeared from a door close to her on the second floor. The only other servant was the cook, who was down stairs. Miss Laurence told the housemaid of her experience, and the housemaid replied, 'Oh, that's nothing, miss; I often see a skirt go round that corner.' "

Now is it natural the housemaid should think that "nothing," unless she knew it was a natural appearance? It was a house in Hyde Park Place; and intruders into city houses generally pass from one to another by the roofs. It often happens.

The author next considers Premonitions and Previsions. Here we meet with a number of stories marked by all the general characters of those relating to telepathic hallucinations. But the difference is, that these are not backed up, as those were, by experiments. Nobody has experimented upon premonitions and previsions, simply because the ordinary course of life has too thoroughly prejudiced everybody against any such thing. Yet it is hard to say how prophecy runs more counter to experience than does telepathy. It is, however, interesting to see that Mr. Podmore draws back before prevision, and wishes to consider this class of events as chance coincidences.

The next chapter, upon Secondary Consciousness, which has no obvious connection with psychical research, seems to be inserted merely as an introduction to the final chapter, which relates to Impersonation, Obsession, and Clairvoyance. It is the clairvoyance which particularly belongs to the questions here considered. As these phenomena, real or fraudulent, stand at present, they are too isolated to be brought under the dominion of science until further research shall discover other phenomena bridging the gap.

Sweet Revenge: A Romance of the Civil War. By F. A. Mitchel. Harpers.

Hell fer Sartain. By John Fox, jr. Harpers.

From the Land of the Snow Pearls: Tales from Puget Sound. By Ella Higginson. Macmillan Co.

Perennial as the pension list, the war romance appeals not less directly to the forbearance of the public. But the purest patriotism must find it difficult to justify the increase, at this late day, of both these burdensome results of our civil conflict. In its construction the war romance follows simple and unvarying lines. The hero, whose hurts are healed by the maiden of fiercest Southern sympathies, reveals his connection with the Northern army and his undying passion for herself. She flouts and insults him. The two armies manœuvre in the background. There is much mutual saving of life on the part of the lovers, and the curtain falls on a union of problematic happiness. 'Sweet Revenge' departs in no important particular from the accepted traditions, but some uniqueness may be allowed to its scenes of guerilla warfare, which are of a diverting improbability. The author's military titles afford, together with his book, satisfactory proof that with him the sword was mightier than the pen.

The well-sung Southern mountaineer has found in Mr. John Fox his latest and not least competent chronicler. Under a title of rather unjustifiable luridness, Mr. Fox presents ten sketches of life in that Cumberland Gap which he knows so well. Slight in form, they afford no opportunity for the display of constructive skill, but in accurate reproduction of dialect and custom, in swift and successful characterization, they leave little to be desired. "Courtin' on Cutshin" is "courting as she is wrought" along many a creek and in many a cove of the Southern Appalachians. The mountain white has already undergone apotheosis and vilification in turn; that he is a man who can see a joke, who can even originate one, has been left for Mr. Fox to bring out. Other resources than those of dialect are shown in the effective English of "The Purple Rhododendron." The theme is a pretty one, and the flower may serve Virginia lovers as a test of devotion; but any one who has seen its acres of bloom mantling the shoulders of Roan or Craggy in North Carolina, will be inclined to doubt its entire fitness for the rôle of American edelweiss.

The Puget-Sounders are unmistakably people of like passions with ourselves; their remoteness is merely geographical. Nothing is more clearly revealed in Miss Higginson's book than their affinity with New Englanders—Miss Wilkins's New Englanders. Theirs is surely the land whither have strayed the wandering sons and derelict lovers of Miss Wilkins's widows and maids. The New England fibre has somewhat coarsened, the dialect roughened, as indicated on Miss Higginson's page; but the Christmas cranberry-sauce still casts its heart-softening radiance over family reunions in the valley of the Willamette. The people of the West have recently shown symptoms of a revolt against their dialect writers. The uncouth representations of their speech—the "choos," "yuhs," and "hunh uhs," which affront the eye more than the ear, they have suffered in silence. But Nebraska has risen up to protest against Octave Thanet's imputation that "Ma" is the ordinary filial utterance within her borders. "Ma" is, however, a pleasing and decorous form of address compared with that in vogue with the Puget-Sounders. Can a people poetic enough to speak of their mountains as Snow Pearls profane the parental relation by the hideous monosyllable "Maw"? The question is not one with which a stranger may safely intermeddle. Miss Higginson evidently shares George Moore's recently expressed conviction that "the sadness of life is the joy of art." Most of her stories wail themselves out in minor cadences—the deserted maiden, the jilted lover, the ingrate child. Something too much of this, one is tempted to cry out in the presence of these numerous and familiar sorrows. It is no slight proof of the author's skill that she has been able to invest with so much interest her rather trite motives.

The Brontës: Fact and Fiction. By Angus M. Mackay, B.A. London: Serviss & Paton; New York: Dodd, Mead & Co. 1897. xii, 187.

This important addition to Brontë literature derives its value, not from fresh information conveyed as to the Brontë family, but from its able exposition of fiction claiming to be truth, and from the light it throws upon the life and writings of the author of 'Jane Eyre.' It consists of two essays. The second, the longer—"A Crop of Brontë Myths"—is an expansion of one which had already appeared in the *Westminster Review.* It deals with Dr. William Wright's book. Few that read it will not agree "that the facts set forth . . . will carry complete conviction with them, and that those who possess 'The Brontës in Ireland' will henceforth merely treasure it for what it is—one of the curiosities of nineteenth-century literature." The general acclaim with which this book by Dr. Wright was received, and the several editions through which it has passed, must now be held as a warning to critics and the public to let no name, no apparent honesty of purpose, or protestations of care in the collection of materials by an author, dull vigilance in the comparison and testing of statements and dates and nice weighing of likelihoods and possibilities.

If the second essay is destructive, the first—"Fresh Light on Brontë Biography," a charmingly candid and intelligent piece of writing—is essentially constructive. It deals with what Mr. Mackay entitles "Charlotte Brontë's Secret"—a secret which the appearance of Mr. Shorter's book, written with the sanction and assistance of Mr. Nichol, renders it desirable to explain. Mr. Shorter's views regarding inferences to be drawn from passages in Charlotte's life are well summed up by Mr. Mackay as: "The story is not true; but if it were true, it would be discreditable." Mr. Mackay has gone far to establish his thesis that "The story is probably true, but if true is not discreditable"; and, with him, while feeling for and understanding Charlotte Brontë the more, we love and esteem her none the less.

"Charlotte Brontë's writings have proved a palimpsest, and scholars have from time to time hinted of the older sentences they could discern beneath the present characters. More recently there have been signs that hints are to be replaced by innuendoes, and I have therefore endeavored to restore the whole of the old text as far as it is still decipherable. It turns out to be a tragedy which for human interest equals anything in the novels, and which cannot but render those who peruse it wiser and stronger. Its central figure is Charlotte herself, as noble and brave a heroine as any which her imagination created. We see an acute sensitiveness which attracts our pity, wedded to a dauntless fortitude which compels our admiration. We see her sore wounded in her affections, but unconquerable in her will. The discovery of the secret of her life does not degrade the noble figure we know so well; it adds to it a pathetic significance."

This is as thoughtful an essay as has come into our hands for some time. We light upon sentences such as the following: "It is needful to remember that persons of strong intellect are apt to vindicate their right to freedom of thought by adopting some other opinions than those offered by their environment." "He taught her the sweet and tranquil pleasures of an affection which is almost more precious than love." "The flame, it would seem, had already passed on her, and left behind nothing that was inflammable." Respecting Anne Brontë's genius we read: "Upon those bright twin stars [Char-

lotte and Emily] many telescopes are turned, and then there swims into the beholder's view this third, mild shining star of the tenth magnitude, which otherwise would have remained invisible." While in no degree concerned to defend the character of Bramwell Brontë, we cannot take Mr. Mackay's view that his letter to Hartley Coleridge, which appears on page 120 of Mr. Shorter's book, exhibits him as "capable of the worst which has been imputed to him."

We unhesitatingly recommend this little book.

BOOKS OF THE WEEK.

Dr. Jaeger's

SANATORY UNDERWEAR

AS USED BY

Dr. Nansen

on his famous Arctic sledge journey.

"The result of all this experimenting was that I made up my mind to keep to my woollen clothes, which would give free outlet to the perspiration. Johansen followed my example, and on the upper part of our bodies we each had two Jaeger Undershirts next the skin, etc., etc."—"Farthest North," Vol. II., p. 115

This Applies to You.

Jaeger Underwear allows the skin to breathe freely, at the same time absorbing its exhalations, leaving the body dry and warm. Gives the greatest warmth with the least weight.

READY ON FRIDAY.

Sarah Grand's New Novel,

THE BETH BOOK.

By SARAH GRAND, Author of "The Heavenly Twins."

12MO, CLOTH, $1.50.

"'The Beth Book' is distinctly a notable achievement in fiction. . . . 'The Christian' and 'The Beth Book' will be the two English novels to attract the most attention and widest discussion this year."—*Philadelphia Press.*

This is the life history of the heroine, Beth. Since the publication of "The Heavenly Twins," Madame Grand has been at work upon this novel, which will be her most important literary undertaking. The new novel traces the development of a woman of genius from her birth to her marriage, and afterward. It is a most subtle and extraordinary study of a woman's psychological evolution, while as a story it is characterized by an abundance of delightful humor and incident. No book of recent years has been written with more care. With remarkable fidelity and a singularly graphic power of expression the author depicts the attitude of the child toward the outer world and toward her parents, the effects of increasing knowledge upon the young girl, the married life, the acquaintance with a larger world, the attitude of men toward women, and the position of women in modern society. Questions of intimate consequence are treated with courage and dignity. Her novel is a book of serious import which will furnish abundant reason for thought and discussion. The closing chapters suggest an effective contrast between the attitudes of Englishmen and Americans toward women.

MISS MONTRESOR'S NEW NOVEL.

At the Cross-Roads.

By F. F. MONTRÉSOR, author of "Into the Highways and Hedges," "False Coin or True?" "The One who Looked On," etc. 16mo Cloth, $1.50.

"Miss Montrésor has the skill in writing of Olive Schreiner and Miss Harraden, added to the fullness of knowledge of life which is a chief factor in the success of George Eliot and Mrs. Humphry Ward. She is very minute in her analysis of life, and hardly ever strikes an obviously false note. As I cannot understand how a woman of her age and gentle upbringing could have become personally acquainted with the multifold aspects of life which she describes so faithfully, I am compelled to put it down to the sheer instinct of a great writer. . . . There is as much strength in this book as in a dozen ordinary successful novels."—*London Literary World.*

"The story is a delightful one. I commend it to all my readers who like a strong, cheerful, beautiful story. It is one of the truly notable books of the season."—*Cincinnati Commercial Tribune.*

Miss Providence.

By DOROTHEA GERARD, author of "A Spotless Reputation," "An Arranged Marriage," "The Rich Miss Riddell," etc. No. 229, Town and Country Library. 12mo. Cloth, $1.00; paper, 50 cents

This accomplished writer is so well established in the favor of readers of fiction that it is only necessary to announce her new novel, which deals in large part with English country life. The story is full of interest, and is certain to increase the author's popularity.

R. W. CHAMBERS'S NEW BOOK.

The Mystery of Choice.

By R. W. CHAMBERS, author of "The Moonmaker," "The Red Republic," etc. 16mo. Cloth, special binding, $1.25.

"Probably Mr. Robert Chambers is to-day the most promising American writer of fiction of his age. . . . 'The Mystery of Choice' reveals his most delightful qualities at their best. . . . Imagination he has first of all, and it is of a fine quality; constant action he achieves without apparent effort; naturalness, vividness, the power of description, and especially local color, come to him like delight in one of those glorious mornings when distance seems annihilated."—*Boston Herald.*

"Mr. Chambers's perception of color and the picturesque, often phrased in a few short but felicitous sentences, is purely artistic, while the easy, graphic vigor of his style when he is at his best is essentially literary."—*Philadelphia Press.*

Baboo Hurry Bungsho Jabberjee, B.A.

By F. ANSTEY, author of "Vice Versa," "The Giant's Robe," "The Tinted Venus," etc. Illustrated. 12mo. Cloth, $1.50.

In this irresistibly amusing picture of the educated Baboo in England Mr. Anstey's delightful humor finds its happiest expression. The impossible language of Jabberjee, his extraordinary adventures in the streets and shops of London, and on railways, his ridiculous social mischances, his *début* as a sportsman, and his exhibition of legal acumen in the courts, are perfect in their ingenious absurdity, and make up a chronicle which will be laughed over and quoted by many a reader.

Industrial Freedom.

By DAVID MACGREGOR MEANS. With an Introduction by the Hon. DAVID A. WELLS. 12mo. Cloth, $1.50.

Mr. Means deals frankly and directly with questions which are now uppermost in the public mind. In a fair and candid manner he discusses the present relations of labor and capital, the efficacy of legislation in dealing with economics, the results of interference with the natural laws of trade, the advisability of restricting the accumulation of wealth, the rights and wrongs of corporations, and kindred topics. His arguments deserve the attention of those sincerely benevolent persons who have been led to give support to socialistic remedies because of their sympathy with the poor. Many considerations are presented showing that these remedies tend to aggravate the evils which they are advertised to cure.

APPLETON'S HOME-READING BOOKS.

Two New Volumes.

Uncle Robert's Visit.

The Third Volume in Uncle Robert's Geographies. By FRANCIS W. PARKER. Illustrated. 12mo, Cloth, 50 cents *net.*

These books of Colonel Parker, if read by the school children, and especially by the older youth who have left school, will suggest a great variety of ways in which real mental growth and increase of practical power may be obtained. The reading, so far as possible, should be accompanied by personal observation, investigation, and experiment.

Harold's First Discoveries.

The first volume in Nature-Study Readers. By J. W. TROEGER. 12mo. Cloth, 30 cents *net.*

The first of a progressive and graded series of books for the study of natural objects that present themselves to children in their ordinary surroundings and occupations, and that are generally within their reach.

For sale by all booksellers, or will be sent by mail on receipt of price by the publishers.

D. APPLETON AND COMPANY, 72 Fifth Avenue, New York.

HOUGHTON, MIFFLIN & COMPANY'S NEW BOOKS

Old Virginia and her Neighbours

BY JOHN FISKE

Two volumes, crown octavo, gilt top, $4.00. These volumes cover the settlement and growth of Virginia, Maryland, the Carolinas, and Georgia nearly to the Revolution. It is a most interesting story, and has never before been told with the critical insight, the philosophic grasp, and the distinct literary charm with which it is here told by Mr. Fiske.

The Critical Period of American History, 1783-1789

BY JOHN FISKE

Illustrated Edition. With about 170 Illustrations, comprising Portraits, Maps, Facsimiles, Contemporary Views, Prints, and other Historical Materials. 8vo, $4.00; half calf, gilt top, or half polished morocco, $6.25. This volume is illustrated in the same style as the "American Revolution," published last year.

Aldrich's Works

Complete Poetical and Prose Works of THOMAS BAILEY ALDRICH. *New Riverside Edition*, thoroughly revised by the author. (*Sold only in sets.*) Poems in 2 vols., 12mo, with portrait, $3.00; Prose Works in 6 vols., 12mo, with another portrait, $9.00. Complete Works, 8 vols., 12mo, $12.00.

Large-Paper Edition, limited to 250 copies, $32.00 a set, *net.*

This is an entirely new and complete edition of Mr. Aldrich's admirable Poems, Novels, Short Stories, and Travel Sketches. All have been carefully revised, and the edition presents in unusually attractive form these delightful writings.

Gondola Days

A charming book on Venice and its attractions, by F. HOPKINSON SMITH, author of "Tom Grogan," "Colonel Carter of Cartersville," etc. With illustrations by the author. 12mo, $1.50.

Walden

By HENRY D. THOREAU. *Holiday Edition.* A very interesting edition of Thoreau's most characteristic book, with an Introduction by BRADFORD TORREY, and 30 full-page photogravure Illustrations, including Walden Views, Concord Views, Portraits, etc. 2 vols., 12mo, $5.00.

Seven Puzzling Bible Books

By WASHINGTON GLADDEN, D. D. $1.25. Illuminating lectures on certain books of the Bible which in various ways puzzle their readers, — Judges, Esther, Job, Ecclesiastes, The Song of Songs, Daniel, and Jonah.

The Juggler

By CHARLES EGBERT CRADDOCK (Mary N. Murfree). 16mo, $1.25.

"The Juggler" is one of the most dramatic and powerful novels Miss Murfree has yet written.

SOLD BY ALL BOOKSELLERS. SENT, POSTPAID, BY HOUGHTON, MIFFLIN & CO., BOSTON; 11 E. 17th ST., N. Y.

The Macmillan Company's New Books.

THE LIFE OF ALFRED, LORD TENNYSON.

By His Son. Two Volumes. Cloth, $10.00 net.

The First Edition was published October 12.

This, the most famous biography since Lockhart's Life of Scott, comprises many hitherto unpublished poems, letters, and the personal recollections of old friends, such as Professor Tyndall, Mr. Aubrey de Vere, Mr. Lecky, Professor Palgrave, etc.

The portraits and views illustrating it are uncommonly fine.

The Second Edition was published October 23.

"Two salient points strike the reader of this memoir. One is that it is uniformly fascinating, so rich in anecdote and marginalia as to hold the attention with the power of a novel. In the next place it has been put together with consummate tact, if not with academic art. . . . It is faultless in its dignity."—*The Tribune*, New York.

The Third Edition was ready November 10.

"The chief worth of the book, of course, is its minute and illuminating portrayal of Tennyson himself. Its value is only less for the glimpses it affords of other men of his time. Both make it a biography that is likely to be more than the book of one year, or of two."—*The Evening Transcript*, Boston.

"Easily the biography, not only of the year, but of the decade."—**The New York Times.**

BIOGRAPHIES OF UNUSUAL INTEREST.

THE LETTERS OF ELIZABETH BARRETT BROWNING.

Two Volumes. Crown 8vo. Price, $4.00,

Edited by FREDERIC G. KENYON.

Simple, natural letters, telling of the mature life of an observant woman, a poet, who was thrown among some of the most interesting people and stirring events of her time.

THE STORY OF GLADSTONE'S LIFE.

By JUSTIN MCCARTHY, M.P., author of "A History of Our Own Times," "The Four Georges," etc. Fully Illustrated.

Cloth, 8vo, $6.00.

The story of Mr. Gladstone's life is of necessity, because of the prominent positions which he held during so many years, to some degree a History of England for those decades.

The Old Santa Fé Trail.

The Story of a Great Highway.

By Col. HENRY INMAN, late of the U. S. Army. With eight full-page Photogravures from sketches by FREDERIC REMINGTON, besides numerous initials, tailpieces, etc., in which appear views of points of special interest along the trail, portraits of famous government scouts, trappers, Indians, etc. There is also a Map of the Trail and a portrait of Col. Inman. The book is full of thrilling stories of Indian fighting, of the Mexican War, and of hunting.

Cloth, Extra, Medium Octavo. Price, $3.50.

Old English Love Songs.

With an Introduction by HAMILTON W. MABIE, by whom also the selection is made.

A COMPANION TO

Cloth, Price $2.00.
Limited Large-paper Edition, $5.00.

Old English Ballads

Published last season, on which the *Nation* commented: "A most charming book, of the very best Old English and Scotch ballads."

Both volumes are illustrated and decorated by GEORGE WHARTON EDWARDS.

F. Marion Crawford's New Italian Novel: CORLEONE.

Completing the Saracinesca Series.

"The mere 'story' is of absorbing interest, and possesses the transcendent merit that even a blasé or veteran reviewer is altogether unable to foresee the conclusion. . . . Our author has created one of the strongest situations wherewith we are acquainted, either in the novel or the drama. . . ."—*The Bookman.*

Two Volumes, Cloth. Price, $2.00.

IN THE PERMANENT WAY.

SHORT STORIES OF LIFE IN INDIA.

By FLORA ANNIE STEEL, author of "On the Face of the Waters," "The Flower of Forgiveness," etc.

Cloth, 12mo, $1.50.

"Mrs. Steel does not introduce us to, but into her characters. We do not look at them, but with them. We think their thoughts, suffer with them, and are merry with them. We know them from the inside, not the outside."—*The New York Sun.*

YANKEE SHIPS AND YANKEE SAILORS.

TALES OF 1812. By JAMES BARNES.

Cloth, Crown 8vo, $1.50.

A lively series of sketches of the troublesome times of 1812; a good means of arousing interest in the history of the war in which the sailor played so great a part, therefore a valuable addition to any library consulted by young people.

Singing Verses for Children.

With Music and Illustrations in Color. Verses by **Lydia Avery Coonley.**

Illustrations and colored borders by ALICE KELLOGG TYLER. Music by FREDERIC W. ROOT, ELEANOR SMITH, JESSIE L GAYNOR, and FRANK H. ATKINSON, JR.

Songs and Music with Pictures and Decorative Borders

The verses are simple and natural, full of the pleasures of child-life, outdoor or indoor, bright, and varied. The music is admirably suited to the verses.

"One of the most imaginative and exquisite publications of this or any other season. It is poetry, music, and fine art all in one."—*The Inter Ocean*, Chicago.

Every Page Specially Designed. Cloth, 4to, $2.00 net.

Citizen Bird.

SCENES FROM BIRD LIFE IN PLAIN LANGUAGE FOR BEGINNERS.

By MABEL OSGOOD WRIGHT, author of "Birdcraft," etc., etc., and Dr. ELLIOTT COUES, author of "Birds of North America."

Cloth. 12mo, $1.50, net.

"There is no other book in existence so well fitted for arousing and directing the interest that all children of any sensibility feel toward the birds."—*Chicago Tribune.*

Wild Neighbors.

OUTDOOR STUDIES IN THE UNITED STATES.

By ERNEST INGERSOLL, author of "Friends Worth Knowing," "Country Cousins," etc. Fully illustrated.

12mo, cloth, price $1.50.

"The book is full of curious information, and no reader, however well up in natural history, will lay down the book without having learned something from it."—*Boston Transcript.*

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 11, 1897.

The Week.

Spain is naturally incensed at the articles, interviews, and letters of ex-Minister Taylor, but no international appeal lies to the sense of propriety of a private citizen. If Mr. Taylor thinks it fitting to go on speaking of what came to his knowledge through his official position, no power on earth can stop him as long as the newspapers are agape for his views. All that Mr. McKinley needs to say to Spain is that this is a free country, and that he has no more control over Mr. Hannis Taylor, now that this gentleman is out of office, than he has over the Ohio election. He might add, however, an appeal to the forbearance of Spain on the ground that she knows how it is herself. She has the spoils system in as great perfection as we have it. With a change in the Spanish Administration, the public service has to undergo upheaval just as with us. There is no permanent diplomatic service in Spain any more than in the United States. The new cabinet has to give up all its time, there as here, to office-seekers. The boss system, as Mr. Lowell found out, is as flourishing in Spain as in our own proud republic. Even Gen. Weyler's recall, over which so much fuss has been made, seems to have been more the seizure of good places for original Sagasta men than anything else. In fact, Mr. McKinley might make out a powerful argument that the two countries ought to be good friends, as both have, under different forms, the same idea of destroying continuity in the public service, and of gracefully stretching out their necks for the bosses' heels.

The severe shaking of Wall Street on Friday by unfounded rumors of war with Spain was a prelude of the shaking that all business interests would receive if those rumors should be confirmed. Wall Street is only a barometer that serves to forewarn the public of disturbances in the upper regions before they manifest themselves in tempest and tornado. We do not believe that there is any foundation for these rumors. Mr. Hannis Taylor's indiscretions may probably be explained by a personal desire not to be forgotten by the political party to which he and Senator Morgan, the leading Democratic Jingo, belong. It is not likely that the Administration would choose a shirt-sleeves statesman of the opposite party for its mouthpiece. Moreover, there has been a decline in Jingoism perceptible to the journalistic sense during the past three months. Even the *World*, valiant organ of Cuba Libre as it has been, perceives the change. The coming together of Congress, we are sorry to say, is viewed with alarm by all business interests; that is, by the orderly, industrious, God-fearing portion of the community. If a vote could be taken by this class of citizens on the question whether there should be any meeting of Congress during the coming twelvemonth, it would be decided in the negative by so large a majority that the affirmative would not be worth counting; and among the reasons for not wanting a session would be the fear lest some wanton outbreak of foreign embroilment should take place in consequence. But, says some one, no such thing can happen if the President stands firm. That is true. Congress has the power to declare war, but Congress is not likely to declare war without some aggressive act on the part of Spain. There has been no such act, and there is no likelihood of it. If there were any such act for which prompt reparation could not be obtained, then the responsibilities of war would not rest upon the conscience of the nation. The case would wear a very different aspect from that of a war in which we were the aggressors. The question, therefore, which agitates Wall Street is whether President McKinley has the firmness to prevent those steps leading up to war which lie within his own discretion. That his private inclinations are strongly for peace, and that the Jingo sentiment in the country is not so strong as it was some months ago, are facts upon which good hopes may rest.

Friends of Hawaiian annexation in Washington now report a new reason for the President's anxiety that the treaty be speedily ratified. He wants it safely out of the way before the Cuban business gets acute. That is to say, two ugly foreign complications are better than one. Hawaiian annexation, if it stood alone, is confessedly a subject requiring the closest study and the fullest debate; but if it can possibly get in the way of our going to war with Spain, why, agree to it at once and in the dark. This is a marked change, be it noted, from what was said last May to be the President's idea of the relations of the Hawaiian question to the Cuban question. Then he was going shrewdly to head off the Cuban Jingoes by drawing the Hawaiian herring across the trail. There was bound to be some kind of annexation, some kind of Jingo explosion, some occupation for the navy and naval editors; so how fine and sly it would be to divert all the bottled Jingo fury towards the Sandwich Islands, with only 100,000 aliens unfit for self-government, and so save us from taking in Cuba with her 1,500,000 unfit aliens. But it appears now to have been found out, even in Washington, that Jingo appetite grows by what it feeds on, and at present the argument is that we must hurry up and bolt Hawaii in order the sooner to set our teeth to Cuba.

We are glad to read that in the new negotiations for a treaty of arbitration between England and the United States care will be taken at Washington not to "press the subject unduly." We all know that undue pressure was what killed the other treaty. If the people had not been so eager and unanimous in expressing their desire for its ratification, the Senate might have agreed to it. As Senator Hoar explained, when churches and colleges and boards of trade and chambers of commerce and State Legislatures began petitioning the Senate to ratify, the cause was at once lost; there was nothing for a self-respecting Senate to do but refuse to ratify. This fatal error, it is gratifying to be assured, will not be repeated. The new treaty will be devised in a casual, nonchalant way, turned over to the Senate with an indifferent air, with assurances that the people are taking no interest in it whatever, and then, by not being unduly pressed, it may stand a chance of being ratified. It is certain that thereafter, at any rate, the people will take no interest in it whatever.

Cornelius N. Bliss, after several days of silent meditation, is able to remark about the Tammany victory:

> "It is simply what might be expected from a division in the ranks of the people who won the victory last year. This is all there is about it. When it became impossible to make a union of forces opposed to Tammany, defeat was inevitable. As to responsibility, every man will have to decide that for himself. We hope that before another election takes place we will be able to get these divided forces together."

Has Mr. Bliss decided for himself what his responsibility is? And if so, is his sense of it likely to prevent him, when the time for another city election arrives, from again using all his influence to delude 100,000 Republicans into an alliance with a "rotten" machine, and into the support of a hopeless candidate who is put in the field by a boss "who deliberately acts so as to make it impossible for self-respecting men to be allied with him even for a good purpose"? Is Mr. Bliss a "self-respecting man," or did he perform the "impossible" when he joined forces with Platt for the purpose of defeating Mr. Low and putting Tammany in possession of the city for four years? An entertaining rumor comes from Washington that

President McKinley is so disgusted with the result of our election that he will not bestow any more New York patronage on Platt. He has ample cause for disgust, but he should visit his wrath mainly upon himself and Secretary Bliss. He did what he could to aid Platt by giving him the Brooklyn appointments at the very moment when the Brooklyn Republican organization was halting between Platt and Low, and he allowed Mr. Bliss to give the impression that the national Administration was on Platt's side by coming here to speak for Tracy.

The fact that there is a large anti-Tammany majority in this city now jumps into our eyes, through figures, as it has never jumped before. We have always believed and maintained that it existed, but never before has there been a movement like the Low movement to bring out the fact mathematically. Here it is mathematically:

Low	148,585	Van Wyck	228,688
Tracy	101,571		
George	19,864		
	270,020		

For a beginning of an entirely new system of nomination, and for a canvass conducted largely by inexperienced amateurs, we hold that the Low vote of 148,585 is splendid and full of hope. There is great ground for encouragement, too, in the fact that Gen. Tracy's Republican vote was lower than it has ever been for any Republican candidate in the old New York since the Wicked Gibbs ran for the mayoralty in 1884. Gibbs polled 44,000 votes in a much smaller electorate in 1884; Roosevelt polled 60,000 in 1886; Erhardt polled 73,000 in 1888; Tracy only 55,000 in 1897. This shows that an impression may be made on the Republican column by steady effort. Four years is a long time to wait, undoubtedly, for another attack on Tammany, but in those four years Tammany will be furnishing us with plenty of ammunition, and Republicans will be seeing and thinking, and the Citizens' Union will be learning how to fight.

The great hindrance to all continuous and persistent reform agitations in America hitherto, except the anti-slavery agitation, has been the national tendency to sit down quietly under accomplished facts, to accept defeat with a laugh, say it "will all come out right in the end," and turn attention to something else. The readiness of the press, after opposing a candidate tooth and nail for good reason, to congratulate him on his victory, and promise to support him if he is good, is a comic illustration of the same thing. There is a little trace of it in Mr. Low's pledging to "the new Mayor and his associates the coöperation of all my supporters in any effort they may make to administer the government of the city in the interest of the people." All talk like this, however courteous it may seem, takes the heart out of a steady and continuous criticism and opposition. If there be the smallest probability that Mr. Van Wyck and his associates will do anything of the kind, two-thirds of our talk about Tammany in the late canvass was pure campaign "guff." We fought and have lost on the theory that there was no such probability; that Van Wyck's associates would be the old gang as we know them, and that "the administration of the government of the city in the interest of the people" would be the last thing they would think of. Croker and Van Wyck have both discarded any such idea, in their talk with the reporters since the election. Our duty to the new government is not to "coöperate," because we do not know in what we should have to coöperate, but to watch, and criticise, and expose, and defend the people whom Tammany may annoy or persecute, and see that its majorities do not affect the imagination of the courts; above all, keep alive the opposition, if not in the character of patriots, in that of civilized men who refuse to live quietly under the rule of barbarians and thieves.

When Mr. Croker, speaking in that authoritative voice which he always uses in his deliverances as the King of New York, says that "*we* have plain, practical men in Tammany Hall; the men that *we* need at the head of the departments will be found in Tammany Hall without drawing upon the Citizens' Union," who are the men that he has in mind? There has been no time since Tweed's day when the number of really respectable Democrats in Tammany Hall was so small as it is to-day. How many such were among the Tammany orators in the late campaign, or even appeared on the Tammany platform at its meetings? The leading orators were Tom Grady, Birdie Gardiner, and Sulzer. Not a Democrat of first-rate character and ability appeared as Tammany's champion anywhere. This being the case, who are the "plain, practical men" with whom Mayor Van Wyck is to fill the forty great positions which will be at his disposal on January 1, and the thirty or more minor ones? There is nobody in Tammany except the old gang—Gilroy, the Martins, Grady, Scannell, Koch, and the rest. They are all there, and they are all determined to have places. If Van Wyck were a man of great strength of character and of high purpose, he would be incapable of successful resistance to the "pressure" of his associates. Even if he wished to put fit men in the forty chief offices, where is he going to find them among his followers? Croker says he will not be allowed to go outside for material, and if he is not the real Mayor, he speaks as if he considered himself so.

Full returns of the Iowa election show again that courage pays in politics. Mr. Shaw, the Republican candidate for Governor, got his nomination against the opposition of the party machine, and then made his campaign as the open and avowed champion of the gold standard. The opposition succeeded in combining the Bryan Democracy, Silver Republicans, and Populists pretty successfully on one ticket, and induced many Gold Democrats to support this ticket by the claim that the contest was purely a State one. Nevertheless, Mr. Shaw polled a vote far larger that was ever secured by a State ticket, and his plurality over the fusion ticket is fully 30,000, or larger than the record for the Republican candidate over the combined Democratic and Populist vote since the silver issue came up. The contrast between Iowa and Pennsylvania, where the Quay ticket was left in a minority this year, tells a story which even the dullest politician cannot fail to comprehend.

The lower branch of the Georgia Legislature voted last week in favor of making the birthday of Jefferson Davis a legal holiday in that State. But any fearful soul at the North who may fancy that such a vote signifies devotion to "the lost cause" ought to be reassured when he learns that during the same week the Board of Supervisors of Warren County, Miss., which includes Vicksburg, the chief city of Jefferson Davis's own State, adopted unanimously resolutions declaring it "the deliberate opinion of this board that the entire subject of quarantine against yellow fever and other infectious diseases of foreign origin ought to be under the paramount control of the United States; the experience of the present system and spread of yellow fever this year furnishing conclusive evidence that the several independent Boards of Health of the States bordering on the Gulf of Mexico cannot be safely relied upon to prevent the introduction and spread of infectious and contagious diseases." When this official expression of preference for federal control of quarantine is endorsed by so representative a Mississippi newspaper as the Vicksburg *Herald*, which says that it "strikes a keynote that is commended to every county and municipality in the lower valley," the most timorous can dismiss all apprehension as to a revival of "the State-rights heresy."

Mr. Edward Atkinson has published a small pamphlet to prove a thesis which he has heretofore maintained in reference to the silver question, namely, that some of the largest mines in the world are now worked in such a way that the silver produced by them is merely a by-product—the other ores yielding enough profit to make it worth while to work

them, even if no silver at all were produced. Among these are the Broken Hill Proprietary of New South Wales and the Anaconda of the United States. When Mr. Atkinson first advanced this statement it was questioned by a writer in the *Financial News* of London, who insisted that the cost of operation ought to be charged to all the metals produced, and that if this rule were followed, it would be found that the cost of silver to the Broken Hill Company for the year 1896 was 22½d., or 45 cents, per ounce. Mr. Atkinson now proves that the cost of all silver produced by this company from 1891 to 1896, according to the customary method of crediting the bye-products to the cost of the principal product, namely, silver, has been less than 25 cents, or 12½ pence, per ounce. Also, that the copper production of the Anaconda mine in Montana, in the last fiscal year, ending June 30, 1897, yielded a profit over and above all charges of every name and nature, without regard to the silver production. Also, that in that year of low prices the sale of the largest silver product ever made at that mine in one year—namely, 6,057,067 ounces fine—yielded $3,881,551.75 in gold; the whole of this sum received for silver bullion being in addition to the profits upon copper. As the Anaconda property has been sold to an English syndicate, it follows that the largest share of the silver production of the world, something more than one-half, is now centred in London, that the silver so produced is a clean profit to the owners, the cost of operation being nearly all borne by other products of the same mines, and that the principal seat of bimetallism as a money-making venture is in London, and not in Colorado or in any other part of the United States.

Sir Michael Hicks-Beach, the English Chancellor of the Exchequer, has been addressing his constituents on various topics, and naturally enough touched on the recent bimetallic flurry in the Bank of England. He said, among many other things:

> "The letter of the Governor of the Bank of England caused great excitement in the City of London. There is a reasonable, aye, and to my mind a very proper and wise, feeling in the City of London, in favor of the maintenance to as great an extent as possible of the gold reserve in the Bank of England. I do not think there can be a question, I think even I might put it now to my bimetallist friends who may happen to be present, that if we have a gold standard we must have an adequate stock of gold; and, that being so, I am quite sure that neither the Government of this country nor the Bank of England ought for a moment to consent to anything that would prejudicially affect the amount of our stock of gold in this country, either in reserve or in circulation among the people."

Now this shows two things. One is, that the talk of bimetallic philosophers, though Sir Michael treats it respectfully —too respectfully, we think—produced no effect until the Governor of the Bank of England wrote a letter; secondly, that the minute he wrote the letter, it "caused great excitement in the City of London." In other words, the minute it appeared that these silly speculators meant business, the business world rose in arms. He might have added that the minute the business world rose in arms, the Cabinet squelched the bimetallists, inside and outside, and all said "gold." Now this once more confirms what we have been saying for the last two years to the American bimetallists who have been running over to England to get comfort from Mr. Balfour, and Mr. Moreton Frewen, and Mr. Gibbs, and so forth, and then hurrying home to tell their bimetallic brethren here that England was on the edge of bimetallism: "When you arrive in England, do not go to the Treasury in Downing Street to see Mr. Balfour, or to the library of any bimetallic philosopher. Take your gripsack and go straight to the City."

A letter which John Bright wrote in 1884 about imperial federation has lately been given to the press. In it he spoke of the project of bringing colonial members into Parliament as "absurd," and went on:

> "These ideas of 'federation' between England and her colonies are equally visionary and valueless. What is intended by 'federation' I do not know. But surely trade is meant, and surely free trade—not a Canadian or a Victorian tariff. We now give the colonies everything; we buy almost all they have to sell, and levy no duty on their exports—none for protection. What can we do more? If they want a nearer alliance with us, they can give up their tariffs; we can give them nothing more. Our people are all friends of the colonies, but common sense in dealing with our brethren in distant regions is worth far more than the feeble sentiment which some dreamers seem anxious to encourage."

For a Little Englander, this was a remarkable forecast of all that has really happened. Canada has simply given up her tariff, as against England, and the Jubilee-makers could not contain themselves for joy. But a little of John Bright's common sense would have shown them that a trade arrangement for common profit was all there was in it.

The Powers have at last pulled themselves together and named a Governor of Crete. He is a Col. Schaefer of the Duchy of Luxemburg. Coming from a small and neutral state, he is expected to arouse no jealousies among the Powers; and the only question is how the Sultan will take his nomination. His appointment is, in fact, announced as only "provisional," but the Powers think that it ought not to be a "difficult task" to induce the Sultan to consent to it. If he does not, there are their Admirals still on the spot, there will be "energetic action," and so on. He that sitteth in the Yildiz Kiosk shall laugh at all this. He will believe in energetic action when he sees it, and will snap his fingers at all the Admirals in the world until they begin to turn their guns his way. Thus far the Admirals have done nothing but bombard Christians and help the English Liberals carry parliamentary elections. Another Conservative seat was lost in a bye-election on Thursday.

The continuous turmoil and rioting in the Austrian Parliament has, no doubt, causes in the sharp racial divisions which have long made the problem of Austrian government so difficult; but the inability of the presiding officer to keep order betrays a defect in the rules and parliamentary practice which Austria seems to share with France. The President of the Reichsrath, as of the French Chamber, appears to have no resource except to ring his bell, or say, "Sh!" or, as a last resort, to dissolve the sitting. No representative body in England or America is so left at the mercy of unscrupulous brawlers. A sergeant-at-arms, or some equivalent functionary, is at hand to suppress or remove them. Vienna, so long reputed the politest court in Europe, may have thought itself beyond the need of such protection against disgraceful riot in its Parliament; but the fierce struggle of races has evidently broken through the ordinary restraints of decency. A writer in the last *Revue des Deux Mondes*, commenting upon the extraordinary diversity and the extraordinary jealousy of the different nationalities in the empire, says that if local factions could have their way, we should soon be reading of the Austro-Hungario-Bohemian monarchy, or even, we may add, of the Austro-Hungario-Bohemio-Croatian monarchy.

Protection in Germany is like protection everywhere else. "Der Bund der Industriellen" (The League of Industrial Workers) met in Berlin on October 3 and 4. One of the most prominent matters under discussion was the importation of American bicycles, which has grown from $1,898,012 in 1896 to $7,000,323 in 1897. The German bicycles are clumsy and heavy wheels, which even the German cyclists, loyal as they are to German industries, will evidently not buy. The natural inference that most people would draw from this marked preference for the American article is that it is better than the German at the same price, and that the German makers should change the designs and improve the workmanship of their wheels. But instead of reading this lesson to the manufacturers, the League calls on the Government to raise the duty on American wheels because it is lower than that which the United States and some other countries impose. Certainly a high import duty laid by a large exporting community like the American is an anomaly; but it is not confined to the bicycle trade nor to Germany.

THE REVOLT AGAINST BOSSISM.

The most striking feature of the recent elections, as their results become clearer with fuller returns, is seen to be the tremendous revolt against bossism wherever it was in issue. Among the few States where contests took place were four which had each its boss well known to the country at large, and every one of these four bosses encountered a revolt so strong as to show that public sentiment was the same, North and South, East and West.

Platt controlled the Republican party in a State which gave the Republican candidate for President 268,469 plurality over Bryan last year, and chose an Assembly with 114 Republicans out of 150 members. This year the Republican candidate for Chief Judge of the Court of Appeals, whom he named through his State committee, is beaten by about 70,000 plurality, and the opposition secures more than half of the next Assembly, while his personal nominee for Mayor of the Greater New York gets only two-thirds as many votes as the candidate of the Citizens' Union. Instead of having a majority of seventy-eight members in the Assembly, as was the case last winter, Mr. Platt will be short of any majority whatever this winter. What is especially bad for him is the fact that the balance of power in the new Assembly will be held by a handful of members who have been elected because they were avowed opponents of his system of government. These members believe that the government belongs to the people rather than to Platt, and they have had the impudence to hold a conference and pledge themselves to act upon that belief. Of course, men suffering under a hallucination like this will not consent to go to Platt every Sunday for orders; and the consequence will be that his system of government will have to be abandoned.

Just how many of these members will be found acting for the people when the Legislature meets, cannot be predicted now; but that there will be enough of them to prevent Platt from organizing the Assembly unless he makes an open alliance with Tammany members, there appears to be no doubt whatever. Several of them, notably Messrs. Laimbeer and Weekes of this city, are men of such force of character and of such high purpose that any attempt to swerve them from the course they have entered upon will be futile. They are not unlikely to have allies from other parts of the State than Brooklyn, for dissatisfaction with the results of Platt's leadership is very prevalent and strong above the Bronx as well as below it. And it would be surprising if this were not the case. The party has lost everything in the election. It has lost control of the Legislature this year, and has thrown away irrevocably all hope of electing a Governor next year or a United States Senator in 1899, or of carrying the State for a Republican Presidential candidate in 1900. There is not a Republican politician in the State who believes for a moment that there is any chance that his party, during the next four years, will be able to poll above the Bronx a Republican majority which will be large enough to overcome the Democratic majority of Greater New York.

In Ohio, Hanna was the absolute dictator of the Republican organization, and sought the endorsement of the people as a candidate for the United States Senate. The last Legislature contained 110 Republicans and 28 Democrats on joint ballot. The best that is now claimed is a majority of five for the Republicans on joint ballot, three of which come from counties where changes of from 15 to 45 votes would have elected the Democratic candidates and given that party an unquestioned majority of the Legislature. Except for the feeling that Hanna represented an endorsement of the McKinley Administration which McKinley's own State could not afford to refuse only eight months after his inauguration, he would evidently have been beaten. Even as it is, his success is not assured, as more than one Republican member-elect is personally opposed to the boss.

Gorman has been the commander of the Democratic organization in Maryland for twenty years. During the latter part of this period his rule has been despotic. Eight years ago he signalized his power in the way that most delights a boss, by having a subservient Legislature give the other United States senatorship to a man who was simply his "Me Too." Two years ago this tool was repudiated, a Democratic State preferring a Republican in his stead. This year the same Democratic State again elects a Republican Legislature to fill the senatorship which Gorman has held, as the only way of getting rid of the boss himself.

Quay controls the Republican organization in Pennsylvania so openly that, when the last Legislature was in session, the Republican majority made no secret of the fact that it did nothing without orders from the boss. He named his men for the State ticket without the slightest difficulty, and President McKinley improved the opportunity to show that the national Administration favored him by naming a disreputable henchman of his as consul during the campaign, against the earnest protest of leading business men of Philadelphia, who furnished evidence of his gross corruption as a legislator. But the returns show that the Quay candidate for State Treasurer fell considerably short of a majority at the polls, the Democratic vote combined with that cast for an Independent Republican and a Prohibitionist who appealed even more strongly to the independent element, aggregating 377,203, against 371,053 for Quay's man. The plain-spoken clergyman who ran as a nominal Prohibitionist, but really as an anti-machine candidate, though without any effective organization or campaign fund, polled 117,430 votes, or nearly a third as many as Quay's man. In its way the blow dealt bossism in Pennsylvania was as stinging as in either of the other States.

Never before has bossism presented itself so offensively as this year. In the past there has been more or less pretence of reserve. This year the bosses threw off all disguise. They declared that bossism is the ideal perfection of government in a democracy. Hanna summed up their creed in these orders to his subjects a few days before the election:

> "Every Republican should remember his duty. It doesn't make any difference about persons, or if the candidate don't suit you exactly. The Republican organization must have the same discipline as we had in the regular army, when the boys in blue marched with their gallant leaders. As Chairman of the Republican national committee, I have the right to command, and you must stand by me in the dual position I now occupy. It doesn't matter whether you like my personality or not. I have no patience with the man who bolts his party because he is not satisfied with the candidate. If you expect business men to take part in politics and come among you, it is your duty to submit to the discipline of the party."

It is well for the country that bossism has thus been carried to its logical conclusion. The great thing is to have the Quays and Hannas and Gormans and Platts come out into the open, where the people can get at them. The late elections show that the strongest boss cannot long survive the firing which he thus invites.

THE TARIFF AND THE CITY.

When we come to hunt up the remoter causes of the difficulty of setting up decent government in this city, the first obstacle that confronts us is the fanatical devotion of a considerable body of Republicans to their own party—a devotion which in its outward manifestations more nearly resembles the devotion of religious men to a church, two hundred years ago, than anything else in modern times. That is to say, it can hardly be shaken by argument or by any exhibition of consequences. We know of no political or economical considerations which would have any effect on it; and as to its influence on the city, Republicans say simply, as the martyrs said about Christianity, "Perish the city provided the Republican party be saved." In fact, support of the Republican party seems to be an awful duty, the "stern daughter of the voice of God," to be discharged though the sky should fall.

Now, what is the explanation of this extraordinary phenomenon? Well, it is far simpler than it seems. The term "Republican party" does not really mean a party in the ordinary sense of the term, with a body of political doctrine

of its own and a set of distinctly defined aims. As a party it does not differ much, if at all, from the Democratic party, barring the recent adhesion of the Democratic party to silver. To all outward appearance, the Republican attitude towards all questions except the tariff—its view of public office, of foreign policy, and of taxation—appears to be substantially that held by the Democrats. The tariff apart, there is no difficulty for an honest man in passing from one party to the other. He might any day doubt to which party he belonged, as far as opinions are concerned. Even as regards silver, enough Democrats to enable it to elect its President had no difficulty in acting with the Republican party last year.

We are thus driven by a process of pure reasoning to the conclusion that the proper name of the Republican party, the distinctive aim which would best describe it, is the Tariff party. Its distinguishing trait is devotion to the tariff. This is the one thing which differentiates a respectable, intelligent Republican from a respectable and intelligent man of any other sect or creed. It is by this trait we know him, just as an early Christian was known by his refusal to sacrifice to the gods. It was by requiring him to burn incense to Jupiter or Apollo that the cruel Romans found him out. In like manner a Republican would be found out by requiring him to curse the tariff, or say it was a bad thing for the country. He would sacrifice himself, his aged mother, or loving wife, or innocent children, or the city of his birth, sooner than do this. The Republican party is the party which has the tariff in charge. To weaken it for any purpose is to put the tariff in peril. To join forces with the Democrats or Mugwumps for any purpose, is to weaken it; therefore "voting straight" becomes the most solemn and sacred of all political duties.

We shall not consider this so very extraordinary as it seems at first sight if we remember that we have now been living under a high tariff for thirty years; that during that period an enormous amount, practically an incalculable amount, of money has been invested under it in every species of manufacture; that a generation has grown up under it who either owed, or believed they owed, their subsistence or their comfort to it. It has naturally become linked in their imagination with everything good and "American" in the world. The mental process by which this takes place is one of the most familiar in the history of the human mind. All old institutions—the old British Constitution, the old French monarchy, the old Catholic Church, the Inquisition even—got support in this way from large bodies of persons who had been born and prospered under them. If the tariff had failed to induce large bodies of persons in this country to look on it as the source of their own comfort and success in life and of American prosperity, it could not have lasted very long. As a matter of fact, it has become identified in the eyes of such persons with property and order. To attack it is, as Sheil said of the enemies of Catholicism, to "furnish help to those miserable men who are the enemies of human hope, the apostles of desolation and despair." Its safety becomes a concern so weighty as to make all other interests seem trifling. It seems silly to talk about city government, Tammany, plunder, or dirt, with men who you know cherish, in their secret hearts, dark designs against the wool and cotton duties, and the duties on knitted goods and other textiles, and who would, if they could, take the duty off steel. It seems like discussing alterations in church ritual with a shameless infidel.

It sounds fantastical, we know, and yet it is our solemn conviction, that the march of political progress has for thirty years at least been arrested in America by this tariff fanaticism; by the erection among us of something sacrosanct which we cannot alter or dispense with, and the safety of which must not be endangered by any other change whatever. It is in reality the substitution for theocracy of a form of government closely resembling it. The tariff is, in the eyes of the Platt Republicans in New York, somewhat in the position of the Koran in the eyes of good Mussulmans at Constantinople. No matter what beneficial change you propose in the government of the latter city, two objections to it at once arise. The first is that it comes from a Giaour (Mugwump or Democrat); the second is that, there being no mention of it in the Sacred Law, it would probably endanger the true faith if adopted. Better dirt and poverty, ruined bridges, venal courts, and a declining state, than that the Prophet's idea of a political community should be departed from. Many of our people would sooner see everything that used to constitute American greatness and glory depart from us, than even endanger the chance of levying 60 per cent. on all the instruments and results of civilization. In their sad and softened fancy they would be reconciled to seeing the republic perish if in its last moments the appraisers and gaugers and inspectors were still busy on the wharves, and the giddy travellers from foreign ports were still mulcted on their silks and their gewgaws. It is an odd political ideal, belonging rather to the fifteenth century than to ours; but God is great and Mohammed is his prophet.

SECRETARY GAGE'S PLAN.

The plan of currency reform presented by Secretary Gage for the consideration of the cabinet begins with a strong argument for retiring the demand liabilities of the Government. The first of these to be redeemed and cancelled are the greenbacks and the Treasury notes of 1890, amounting to $460,000,000. That these are a menace to the Government's credit and to general prosperity the Secretary shows in an unanswerable way. He estimates the losses suffered by business interests in consequence of the doubt thrown on the Government's intention and ability to keep the currency at par with gold during the past four years at a greater sum than the outstanding paper, including the silver certificates, viz., $900,000,000. We think that this is an underestimate, but all persons of sense will agree that the losses have been enormous. The purchase of silver alone has been a direct and dead loss to the Government of $460,000,000—*i. e.*, more than one-half of the total loss estimated by Mr. Gage to have been incurred since 1893. It may be contended that the condition is now fairly satisfactory, as gold is flowing towards the Treasury, not away from it. Mr. Gage gives a more ready assent to this proposition than we should be inclined to do, but he shows that present conditions cannot be expected to last for ever. Circumstances will not always be in our favor. A change for the worse may come at any time. It is the statesman's duty to foresee such changes and to provide against them.

Mr. Gage's plan for meeting future adverse conditions is evidently based upon the idea that Congress cannot be prevailed upon now to take radical action, but may be induced to take steps that shall minimize the evils of which we have had recent experience. So, while endorsing the proposition advanced by so many of his predecessors in office, that the demand notes of the Government ought to be paid and cancelled, his specific propositions come somewhat short of this. In other words, his remedy does not correspond to his diagnosis. Perhaps if his plan had been prepared in the light of the recent elections he might have adhered more closely to first principles. These elections teach, in our opinion, one lesson, viz., that the Republican party may be beaten in 1898 and 1900 even if it reforms the currency meanwhile, but that it will surely be beaten if it does not. Therefore, we may indulge the hope that Secretary Gage will even yet adopt the more radical measure which his cabinet paper shows that he favors, and which his utterances as a private citizen have aforetime more explicitly promised.

Turning now to the specific plan, we remark that he recommends that the business of supplying a currency to the country be separated from the ordinary business of the Treasury by the creation of a department or division of issue and redemption. To this division he would transfer $125,000,000 of gold and $200,000,000 of greenbacks, the latter to be

issued only in exchange for gold. This will be not exactly equivalent for redemption purposes to $325,000,000 of gold, but it will be an immense gain over the present condition of things. The sum of $325,000,000 gold would exercise a more powerful influence on the imagination of the public than the same sum composed partly of gold and partly of greenbacks, but the withdrawal of $200,000,000 of the latter from the channels of circulation would diminish by so much the demand upon the Treasury for gold, and would have nearly the same effect as though the whole mass were gold.

How are these greenbacks to be obtained? By refunding the national bonded debt in a new gold bond bearing 2½ per cent. interest, and allowing the national banks to deposit greenbacks instead of bonds, to the amount of $200,000,000, in the Treasury to secure their circulation, these greenbacks to be subsequently converted into the new bonds and held for account of the banks. This seems like a roundabout way of selling the new bonds to the banks for greenbacks to the amount named and allowing them to issue circulation against them at par. We think that the simpler way would be preferable, because more easily understood, and hence more likely to be acceptable to Congress. The kernel of this refunding plan, however, is the proposal to insert the word gold where we now use the word coin. This change would enable the Government to save about $15,000,000 per annum in the way of interest, but it is so opposed to the congressional way of looking at things that we doubt if it could be carried into the forms of law. The average Congressman wants to pay $15,000,000 extra to the bondholders in exchange for the privilege of saying coin instead of gold, when in practice the two words mean the same thing.

Secretary Gage proposes no radical change in the banking system except that he would authorize the national banks which have deposited bonds or Government notes to the amount of 50 per cent. of their capital, to issue notes to that amount and 25 per cent. more, the latter to be issued against their general assets, the Government to be responsible for the notes and to have a first lien on the assets for its own security. To this he would add a tax of 2 per cent. per annum on the unsecured circulation, to be kept as a safety fund for all of such outstanding unsecured circulation. This has some features in common with the so-called Baltimore plan. It bears a closer resemblance to Secretary Carlisle's plan, in which deposited security was required to the amount of $30 instead of $50, against $75 of notes. The Baltimore plan requires no deposited security, but a 5 per cent. safety fund. We shall consider this part of Secretary Gage's plan at greater length hereafter. Meanwhile we express our preference for the more radical measure of taking the Government out of the currency-issuing business altogether by the retirement of all of its legal-tender paper, believing as we do that business can never be on a sound bottom so long as the question of redeeming our paper in gold is essentially a political one, depending on the chance of a majority of voters being in favor of such redemption.

THE LOST ART OF LETTER-WRITING.

"Nobody writes letters," sneered Cecil Rhodes before the parliamentary commission. He meant, of course, no public man—especially no Imperial statesman like himself, at one moment dictating the fate of the Matabele to his typewriter, the next ordering a raid on a friendly state in stock-broker's cipher. But what he asserted of his ilk, others declare mournfully to be the case with all the world. Even professional writers no longer write letters. An edition of eighteenth-century letter-writers is announced as a reprint in a kind of literature that is now a lost art in English. Even from the land of Madame de Sévigné comes the plaint that the epistolary style is no more practised. In fact, so universal is the conviction that the art of letter-writing has gone out that no one stops to question the fact; all the dispute is over the explanations of the fact.

These are various. Cheap postage has wrought the ruin, say some. When you knew that your correspondent would have to pay a shilling or eighteen pence for your letter, you were in duty bound to give him at least his money's worth. Now the writer pays the charges himself, has to expend but two cents, and thinks any curt stupidity will do. This doctrine of the cheap postage making the cheap letter will not, we fear, satisfy the truly ingenuous inquirer. He will point out the fact that if, in the eighteenth century, postage was at a high rate, the frank was common, and that some of the most delightful letters in the language were written under frank. Costing nothing did not make them worth nothing. On the other hand, if wits have not cheapened as postage has, why should we not jump at the opportunity to shower lively letters on all our friends when it can be done at so little cost? It really looks as if the trouble were to be located in the skull rather than in the pocket.

Well, but there are our demoralizing and dissipating mental habits. We live in such a whirl that we have no time to write. And oh yes, there is the diffusion of popular knowledge, the daily and periodical press—really, you know, with so much thought at everybody's disposal, it would be very like an impertinence for a man to sit down to compose an instructive or amusing letter. The fact is the telegraph has killed letters. "I telegraph, therefore I am," has, as a witty French writer says, taken the place of the Cartesian "Cogito, ergo sum." It we have not a telegraph blank or a code handy, we instinctively make our letters as short and cryptographic as possible. But even this explanation does not pierce to the centre. Here are but ways of thought-saving in the business of life; why should they leave us with less thought to bestow on the æsthetics of life? Does a copy of a weekly paper, even of our own, so fill the soul's thirst for literary joys that a witty letter from a brilliant friend would seem a great falling off by comparison? To a candid judgment the common literature of the day leaves plenty of room for the uncommon literature of good letters, instead of putting a fatal extinguisher on them. If we perforce telegraph more than our ancestors, it does not follow that we should less enjoy a letter full of wise amenity and flashing insight—if we could only get some one to write it to us.

As for the growing tendency of literary men to make their letters mere business scratches or formal notes of thanks, the reason for this is more evident. Literature is now more of a business, the one thing a man does, if he does it well; and, as Mérimée says, a man must be rather stupid who does only one thing. "How can I write letters," cried Victor Hugo, "when I have proofs to correct, and calls to receive, and big books to write, and business affairs to look after?" Then there is a subtler force at work. Why waste on a friend what would easily make salable "copy"? Dr. Holmes jokingly remarked on the improbability of an author's squandering in conversation or in a letter what he could get $50 for from a publisher; and he himself certainly did little such squandering in his letters. Apart from this, there is a feeling that a writer who has put his best into his books can have little but remnants to offer in private. "A letter!" exclaimed Gautier, when a friend urged him to correspond; "would you ask a carpenter to send you some shavings?"

A hint here in passing. Literary repute may in the long run depend more upon a man's letters than upon his books. M. René Doumic has lately said that Mérimée's volumes of letters are really carrying better than his other works. Mrs. Carlyle published nothing, but look at her letters. Edward FitzGerald persisted in the pride of printing no books except privately, but he went on writing letters to all the best of his time, which are among the raciest ever penned. The rule is not invariable: Tennyson appears to have been an inferior letter-writer; Matthew Arnold was dull enough in his letters. But it

may well be that many an author filled with longing to join the choir invisible of the immortal dead would be given a much more prominent part in that posthumous chorus if he would suppress his books and wreak himself on letters. Letters lend themselves so much more easily to preserving—or to burning!

All this brings us to what might have been said earlier, that explanations why letter-writing is a lost art are unsatisfactory, because letter-writing is *not* a lost art. Some of the names already cited show that it at least did not go out with the eighteenth century—with shilling postage and the monthly *News-Letter*. Mrs. Browning's letters, only now published, bring the succession near our own day, and Motley's, and Lowell's profuse flinging about of his mental largess, nearer still. Who can doubt that when Gladstone's biography comes to be published, we shall see a noble series of letters spanning almost the entire century? The long and tiresome letter, its back broken with the weight of humdrum it attempts to carry, may have gone, and a good riddance it is. But the letter, as yet the choicest vehicle (conversation being impossible) for the conveying of undress thought between equal minds; the letter, as the safe receptacle for the incisive comment and the witty fling that cannot be spoken or printed; the letter, in which friend strikes out the spark from friend as iron sharpeneth iron, in which confidences are shared, judgments exchanged, the form and impress of the age given record—that this is an art no longer cultivated by the discerning, we, for our part, flatly refuse to believe.

WHO ARE THE PEOPLE OF ASIA MINOR?

AMHERST, Mass., October, 1897.

However much it may deserve such honor, Asia Minor has not yet been invaded by the tourist, for, in fact, the country is little known to the world at large. We of the West labor under the belief that Moslem fanaticism makes travel in that country dangerous to the life or limb of the venturesome traveller. Ever since the time of the Crusaders, the impression has been traditional that the Moslem in general and the Turk in particular are professional cutthroats, who ask for no higher enjoyment than the opportunity to carve up a Christian dog of a giaour every day. The assertion, therefore, that the Turk, and certainly the peasant Turk, is preëminently a man of peace, is not likely to find favor in any quarter just at this juncture, since for some years past the world has been horrified by the accounts of awful deeds of murder and rapine committed by the Turks upon the Armenians. Recent events in Thessaly have not served to efface this impression. And yet, for all that, it is a fact that the Turkish peasant is peace-loving and averse to bloodshed. He is merciful to a fault, and his false mercy makes him incapable of putting a suffering animal of any kind out of its misery. Storks cannot abide the Greeks, but they are found quietly nesting on every house in a Turkish village. Even hawks, which in other countries are so careful to avoid contact with man, build their nests under the eaves of Turkish houses. An experience among the Turks that extended over several years has given me no cause for entertaining an unkindly opinion of them. But still every one who has had to deal for any length of time with the people who call themselves Osmanli (for the word Turk is unknown to them except as a term applied to a stupid fool) notices that they betray a twofold character, in which fierceness, cruelty, and official corruptness intermingle strangely with gentleness, kindness, and goodness. Few attempt to explain the phenomenon.

The inhabitants of Asia Minor do not represent a homogeneous population, nor even an aggregation of peoples of kindred stock. On the contrary, that unfortunate country is peopled by a number of tribes which are without racial, and originally without linguistic, affinity. This is a fact that was noted long ago by Strabo, though the Roman sway and the spread of Christianity both tended to obliterate those racial differences which originally prevented intercourse and intermarriage between neighboring village communities. But not only was this process of the obliteration of racial distinctions stopped with the advent of the Turks in 1070, but the distinctions were emphasized, and new tribes have come in to add to the racial chaos.

A rapid survey of these new tribes will show that they consist of Turks, Turcomans, Avshars, Yuruks, Circassians, Kurds, not to speak of the old Greeks and Armenians, nor of the Tatars, Noghai, Ansarieh, Yezidi, and Jacobites, which, with the exception of the Tatars, are found only along the southeastern fringe of Asia Minor and in Syria and Mesopotamia. The Osmanli Turks themselves exhibit a variety of types, though for our purposes they may be divided into two classes: the dwellers in cities and the dwellers in villages, the former class representing the official and governing class. The Turcomans are of kindred stock with the Ottoman Turks, but differ from them in this that they are still wholly nomadic; the Osmanli have long since become residents in fixed abodes, but for all that even the urban populations have not wholly abandoned nomadic habits. The spirit of the thing still lives, for not only do the villagers abandon their villages for the Yaïla during the heated season, but even the great officials of Stambul are in a mild way true to the nomadic instincts of the conquering shepherds. During the summer the traveller will see the harems of the wealthy city gentlemen encamped in tents along the entire line of the railway from Constantinople to Nicomedia. The Turcomans also fall into two classes: the orthodox and the heterodox Turcomans. The latter, called Kizil-Bash (Red Heads), are heartily detested by the Ottoman Turks. Like most nomads, the Turcomans are very hospitable, and rarely accept money for their rude but kindly hospitality. The Avshars came originally from Persia; they, too, are nomadic, though they are beginning to adopt the settled habit. They are found chiefly in the mountainous regions of the Antitaurus, where I came into constant contact with them. They are sturdy, courageous, and hospitable. The Yuruks, also nomads, dwell chiefly in mountainous regions, and by some are regarded as Mongolians, while others think them a race akin to the Gypsies. They are said to have no religion whatever, and to practise incestuous marriage; but I am not competent to speak either of their religion or of their racial affinities. They are inoffensive, but are universally despised.

The Circassians are Moslem refugees from Russia; they are now found all over the peninsula, and even in Syria and Mesopotamia. They are feared and detested by all alike as thieves and cutthroats. I came into frequent and intimate contact with them, even in the wildest districts of the Antitaurus, but I was everywhere received with welcome and a lavish hospitality. My Asiatic friends told me that my immunity was due to the fact that my chief servant was a Circassian, fierce-looking enough, but in reality the mildest of men. But however that may be, and as an offset to the universal hatred felt for the Circassians, I have no evil to speak of them; certainly it was refreshing to accept the royal hospitality of a Circassian village, with its cleanliness, thrift, and providence, after the filth, lice, and other vermin of the Turkish villages. Like the Circassians, the Kurds are our own brothers, racially speaking; their language is a dialect of the Persian. Outside of Kurdistan and Armenia they are nomads, and are found in numbers in Catalonia, northern Cappadocia, and Galatia. They are a murderous set of filthy villains, who, with the exception of the nomads (in whose tents I have been entertained handsomely), have not even the primitive virtue of hospitality. History has nothing good to relate of them from the time when the Ten Thousand forced a passage through their country, down to the time when they became the butchers of the Armenians. The only time in all my travels in Asia when for a half-hour I thought that Atropos was about to use her shears, was in a Kurdish village in Catalonia, not far from the Euphrates.

These, then, are the new elements brought in by the Turkish conquest to complicate the racial problem. None of them practise intercourse or intermarriage, and all of them except the Circassians are nomadic. For years the central government has been trying to abolish nomadic life in Asia Minor, and from time to time an order is sent out to the provisional governors to confiscate the costly and serviceable black hair tents of the nomads. But little is accomplished thereby except untold misery among the poor nomads, who, in spite of the loss of their tents, simply will not settle down into fixed villages, but live beneath wretched bowers of brush and leaves until with time their women have woven new tents. Recent events have made it unnecessary to speak of the Greeks and Armenians in Asia Minor. I may say, though, that Greek and Armenian merchants, especially men of the latter nationality, are found throughout the peninsula, while in Cappadocia and Pontus Greek-*speaking* communities are common.

The inhabitants of Asia Minor have never at any period been a homogeneous population; they have never been an independent, sovereign people. From the dawn of history they have been subject to foreign rule, if we may except such kingdoms as those of Midas, Gordius, Crœsus, etc., foreign dynasties which themselves soon succumbed to more forceful foreign dynasties. At the opening of history the Asiatics were a wealthy people; in fact, commerce was invented by them, and to a late date the "Lydian mar-

kets" were well known. Indeed, it may not be controverted that, although the people of Asia Minor were never independent, and, therefore, presumably, never capable of self-government, yet they were ever prosperous and rich whenever they were living under a strong, paternal government that, even in a half-hearted way, secured the individual in the peaceful enjoyment of his earnings. Even in Roman times their wealth was proverbial, and a Roman proconsul or proprætor wished for no greater stroke of luck than to be appointed to a post in Asia Minor for a season. The pickings were fine, and the post was as good as the ownership of a mint. But under the ignorant and rapacious government of the conquering shepherds, who were quick enough to seize the pickings, but incapable of improving or exploiting their conquered property, the people of Asia Minor have become familiar with a depth of poverty unknown before in the history of that still fertile land.

And herein lies the kernel of my contention, which is that the Moslem peasantry in the villages of Asia Minor are not Turks at all, but simply the lineal descendants of the old aboriginal inhabitants, with their traditional exclusiveness, that was originally based on racial differences; with their traditional and inherited inability to assert their independence and govern themselves, being driven, now as ever, by interloping taskmasters. Throughout all history their very long-suffering gentleness, stolidity, and honesty have made them a peculiarly facile prey to robber officials, and this character they maintain to the present day. There is no more fruitful field for the ethnologist than Asia Minor, and ethnology has much to tell us about the problems which that curious complex of nationalities propounds to us; but still there is much evidence to prove that, as the years have rolled on, the aboriginal people of Asia Minor have repeatedly changed their language and their religion. Whatever may have been their primitive worship, they certainly accepted from the Hittites the worship of the Chaldean Istar, and we may infer from the analogy of their subsequent history that they also adopted the Hittite language, at least in central Asia Minor. At the bidding of the Phrygians, the successors of the Hittites, a large portion of them changed their language again. But if it be said that this is partly conjectural, it is at all events certain that they readily exchanged their language and their worship of the great Asiatic goddess of fecundity for the Greek language and the galaxy of Olympian deities, to whom they transferred many of the characteristic features of their old religion. In its turn this religion was readily supplanted by the state religion of Rome, that universal, all-embracing cult known as the worship of the Roman emperors. They accepted Christianity just as readily, and though they clung to it for a thousand years, yet the Turks, by opening to them all the privileges and honors that were the right of the conquering race, found little difficulty in inducing the rural population to embrace Islam and adopt the language of their shepherd conquerors.

At first all these various changes were slow of progress, and in the change to the Greek language, for instance, we have many traces of a struggle long kept up. In the case of the last change the process had been going on for several centuries before the fall of Constantinople, at which time it had been virtually completed. As might be expected of densely ignorant people, they have utterly forgotten this change of language and religion, and they would be swift to resent the imputation that they are not Osmanli Turks, but simply the same patient, good-hearted, and stolid people whose forefathers dwelt in the land thousands of years before ever the Turks were heard of. It was in this way that the whole Christian population of Asia Minor became Moslems, with the exception of comparatively few districts and villages. So true is this that scholars have even claimed that it is still possible to differentiate the nationalities that occupy different localities in Asia Minor, and herein is a great field for the ethnologist. Who ever heard of a blonde and blue-eyed Turk? And yet there are such men in Galatia today, men who stoutly claim that they are Ottoman Turks, whereas in point of fact they are almost certainly the lineal descendants of the old Gauls, or Galatians, as the Greeks called them. They might even be called French Turks.

This peasantry, which has accepted Islam and the Turkish language—and, when the tide turns that way, will quite as readily re-accept Christianity—is still in the main an Aryan race, now ruled by a handful of officials, the hybrid remnant of the shepherd horde that conquered the peninsula. If this be true, we begin to understand the reasons for that two-fold character of the Turk which has been commented upon so frequently. Mongrels have ever had a bad name. The peasant is not a mongrel; he is, therefore, honest, sturdy, peace-loving, long-suffering, and slow to anger, whereas the official or ruling Turk, who is at all events the traditional representative of the blue-blood of the conquerors, is exactly the opposite. Indeed, the Turkish peasant is oppressed and plundered by the official Turk quite as unmercifully as is the Christian subject; the only difference, so far as I could discover, being that the Christian has to pay a war capitation tax in lieu of service in the field, and in so far he is better off than the Moslem, his turn-coat brother. This ruling class is itself not of pure Turkish origin, for intermarriage with women of every conceivable stock, from Ethiopia to Circassia, and from 1070 A. D. down to the present day, has brought about the virtual extinction of Turkish blood. The Padishah himself can make no claim to purity of blood; he is more Circassian, more Greek even, than Turk. The purest Turkish blood is found only in the tents of the Turcomans and in Turkistan.

If the ruling class are not Turks any longer, no more are the peasants, for they never were Turks. While the conquerors might, and always did, take wives from the conquered natives, the principle did not work both ways. But it may be claimed that, after the original status of the peasantry had been forgotten by master and subject alike, then the aboriginal inhabitants, now turned Moslem, might marry Turkish women. True, they might; but if there is one social feature that forces itself upon the attention of the traveller more than another, it is the astonishing exclusiveness prevalent in Turkish communities as regards neighboring communities. The peasants live and die within the territory of their own villages, having neither intercourse nor intermarriage with neighboring villages. They get their sole glimpse of the world when they go off to the army. Indeed, the traveller who seeks for topographical information is often exasperated to find in village A a total ignorance prevailing in regard to village B, only ten miles distant. This exclusiveness is as old as Strabo certainly, and it goes to prove that racial differences, though long since forgotten, are traditionally still existent, and prevent intermarriage between villages. All of which argues strongly for the theory that the peasants are not a homogeneous race—that is, are not Turks. In-breeding prevails, and intermarriage between the ruling class and the ruled was limited to the period before the final adjustment of interests and the definite settlement of the ruling class in fixed abodes. It is still true that the harems of the wealthy class of officials and the gentry are stocked with beauties of any and every extraction. But there is a sorrowful absence of beautiful or even handsome women in the homes of the villagers. Amongst the nomads one often sees women who are splendid animals, splendid breeders, who might readily find housing in the harems of the great, but centuries of grinding drudgery have driven comeliness from the face and the person of the peasant woman, who is, therefore, rarely a candidate for harem honors. So that if an intermingling of blood still goes on, it is wholly one-sided. Intermarriage may take women from the village to be wives or concubines to the wealthy in the cities, but it brings no women to the village to break the traditional exclusiveness of the non-Turkish villagers.

The Turkish peasant, while a faithful Moslem, is no fanatic, under ordinary circumstances at least. In fact, according to his poor lights, he is very liberal-minded. On a hot summer's day without any hesitation he will quarter a foreign giaour in the mosque, because that is the coolest place in the village. This liberal-mindedness is very pronounced in comparison with the fanaticism say of the Persians, who account a mosque defiled if entered by a Christian or a pig. However, the non-Turkish peasant can be a fighter, and if his religion be insulted or he be prodded on to fanaticism by the superior or ruling class, he will defend himself until he is cut to pieces. His stolidity and his religion make him an excellent soldier, but, until further light be given me, I shall continue to believe that the *non-Turkish peasant* had no share in the Armenian massacres.

J. R. S. STERRETT.

THE RAWLINSON MSS. IN THE BODLEIAN LIBRARY.—I.

LONDON, October, 1897.

Once upon a time a party of Americans who were on a visit to Oxford were being shown over one of the beautiful colleges for which that ancient city is famous. As the visitors were walking on one side of the quadrangle, a window was suddenly thrown up on the opposite side. "Oh, my! are these ruins inhabited?" exclaimed an American belle who was one of the party. In much the same way would American students be surprised if they knew what vast numbers of unpublished documents that tell of persons and things American during the colonial period are preserved in the various college libraries of the University, and, above all, in the Bodleian. As regards the contents of Sir Thomas Bodley's fane of

learning, the authorities of the Library and the Syndics of the Clarendon Press have, by the printing of admirably prepared catalogues, done their best to bring their hoard of manuscript treasures within the ken of historical students. But, whether it is that the prices at which the catalogues are published are not "popular," or that reviewers do not find catalogues a sufficiently tempting subject for review, it is a fact that the treasures of the Bodleian are not known far and wide as they ought to be. In manuscripts the Bodleian ranks as a very good second to the British Museum in numbers; and in the rarity of some classes of documents, such as Oriental MSS., the Bodleian surpasses the great National Library of the United Kingdom.

It is practicable, at present, to deal with but a single class of MSS. in Oxford's principal library, and with an individual collection of that one class. With the help of the catalogue published by the Clarendon Press, and its admirable index, it is easy to bring before the eyes of readers of the *Nation* the contents of the manuscripts in the Rawlinson Collection. Subjoined will be found a list which, while it does not pretend to include every document, supplies particulars of most of those that relate to the colonial period of American history. Some talk of individuals—of simple colonists, or of clergymen, or of Governors or other officials. Others tell of towns, or districts, or of whole colonies. Administration, civil, military, or ecclesiastical, is described. In fact, the documents noted supply materials that cannot but throw fresh light on the personal and public transactions of the colonial period. Many, relating to the West Indies, have not been noted in the list subjoined.

The Rawlinson Collection includes a vast number of manuscripts besides those relating to America. It was bequeathed to the Bodleian Library by Richard Rawlinson, who died in 1755. The son of a wealthy Lord Mayor of London, Rawlinson was himself a non-juring bishop. His life was mainly devoted to the collecting of books, manuscripts, seals, and curiosities. Some of his books, and most of his manuscripts and other collections, were, by his will, left to the Bodleian. The estimable collector was a bit of a crank, as is shown by certain restrictions he imposed upon some of his endowments. By his will, natives of Scotland, of Ireland, or of the Plantations could not fill particular offices endowed by him. Legislation, however, has annulled those restrictions.

All libraries of repute should possess the admirable catalogues issued by the Clarendon Press, and especially that of the Rawlinson Collection of MSS., which is sold at the price of ten dollars, but, to students, is worth its weight in gold. Inquirers living in the United States can there learn of the materials for history awaiting employment. It is not necessary to cross the Atlantic to get copies of the documents, for there are persons in Oxford who, for a modest charge, will make all transcriptions required.

D. D.

Allen, Samuel, proprietor of the colony of New Hampshire: *v.* Vaughan, Major Will.

Orders of Privy Council, etc., on an appeal in Allen *v.* Waldron, 1701-8 (*copies*), C. 379. 6b—12.

Correspondence.

THE AGRICULTURAL DEMAND FOR MORE MONEY.

To the Editor of The Nation:

Sir: I have been a subscriber to the *Nation* so long—more than fifteen years, I think—and a constant reader more than twenty-five years, ever since I was a schoolboy, that, for many reasons, though I have not the honor of your personal acquaintance, I regard you as my stanch friend. More particularly is this true, as I have all these years considered the *Nation* as the best of American journals, and when in doubt, or when difficult political, financial, or other questions were before the minds of the people, have always deferred to it, and invariably found it correct, and unquestioned by fair minds in its positions. In the last Presidential canvass it was masterful. If I am not right politically, financially, and in other ways, you are most to blame for it, as you have, through the columns of the *Nation*, been my teacher.

Now can I interest you somewhat, through me, in my immediate section of the country in a financial way? We are needing money to do business. Many farmers have money locked up in the bank-vaults; they really do not know what to do with it; but there is not, by any means, enough of that, even if they knew how to lend it, to supply the needs of the community, which is a comparatively new one, and as a farming section is very fertile, and is destined to be, in the near future, one of the foremost agricultural regions in the country. It now yields per acre, in its yet primitive development and crude culture, from twenty to forty-five bushels of wheat and from fifty to seventy-five bushels of corn, and other cereals and crops of the middle temperate zone in the same high proportion. Fruits, berries of all kinds as fine as anywhere, all kinds of stock, can be raised and fattened here as profitably as anywhere. We have land that will grow grapes as fine as any in Steuben County, New York, or anywhere in the grape region. No stones, or gravel, or sand to contend with. The soil on the undulating surfaces is a rich dark loam, and underlying it a firm yellow clay that holds the fertilizers and prevents their waste. The level or "bottom" lands are a deep alluvial deposit, inexhaustible and easily drained. We are sixteen to twenty miles from the Mississippi River, whose waters can at no time come any nearer, because of the bluffs and hills between us and the river near its bank.

Even the crops raised to fertilize the soil, peas and red clover, pay as well when harvested in their use and sale as the other crops. So there is always a profitable inducement to keep the soil in good tilth. This section is getting better every year; no such thing now as failure in crops; invariably plenty to spare to pay any debts contracted, over and above the needs of the community.

Can you put me in communication with parties who would lend money in this section? I can easily show any one there is absolute safety; no community could be better in paying debts. Money lends here at 8 and 10 per cent. per annum, and the bank rate is about 1 per cent. a month. The legal rate is 6 per cent. No question about the land titles. The people are as frugal, industrious, and law-abiding as anywhere in the Union. I never knew any trouble about enforcing a mortgage debt. I cannot call to mind any foreclosure on land if the party kept his health; and there is no healthier section anywhere.

I have seen this country from Minnesota to Mississippi and Missouri to Massachusetts, and no section I have seen can surpass

this in the ease and certainty of acquiring a competency. So there can be no doubt about meeting, with regularity, any mortgage debt or interest. This, like all new countries, with great agricultural advantages, needs capital to develop it rapidly. The silver craze is subsiding, never to trouble us again in our day, and the people in these parts are now ready to go to business, thanks to the thorough campaign of education.

The editor of a periodical such as the *Nation* is, can have a great influence wherever he may choose to exercise it. I should be highly gratified if you could be interested in our section. Lend your influence in binding us by financial links to the great city; it has a plethora of capital; we need some of it. A. M. HANCOCK, Attorney.

UNION CITY, TENN., November 4, 1897.

[All that Mr. Hancock says about the condition of his part of the country is undoubtedly true. But his ideas about banks and their functions seem to indicate that he has not, in common with a large number of others even here, sufficiently considered the subject. Banks are enterprises started everywhere all over the world, since the close of the Middle Ages, for the purpose of making money, just like opening a dry-goods store or a restaurant. They make this money by using the money of depositors, in conjunction with their own, for the purpose of discounting bills, and buying securities for the purpose of selling them again at a profit. But it has been found by long experience that they cannot safely lend money without security, and that the security they lend on must be realizable *immediately*, in case the loan is not paid at maturity. Consequently banks of discount do not lend money on land, because the security is not realizable at once, and may not be realizable for years. For this reason farmers in all countries have long been clamorous for banks, and have never yet been successful in getting them, because the only security they can offer is land which cannot be sold, and cattle which may disappear, and crops which may fail.

This question has long been known in France, and made a great deal of rumpus under the name of "crédit agricole." Every now and then there is a proposal both there and here, that the Government should be compelled to establish country banks at the public expense, and lend money to all citizens without security. What the farmer needs, even more than money, as a silver statesman remarked some years ago, is "collateral." Now, business men will establish banks in no place where there is no collateral. In vain you tell them about the prosperity and productiveness of your region. They will coldly answer, "Have you plenty of collateral? Are there among you plenty of men to borrow, whose credit is such that they will be sure to pay on the day named, or who can put up securities which we can sell at a moment's notice?" Mr. Hancock may be assured that if this is true of his region, he will find any number of men to establish a bank. The sole reason why banks do not exist in any locality is that the number of borrowers who have credit and collateral is not large enough to make them pay. Bankers are not philanthropists. Show them, not that you would like a bank, but that a bank in your neighborhood can make money by the ordinary banking business, and a bank you will have, without any introduction or inquiry from us.

An effort, and a very successful one, has been made in Italy, and is being made in Ireland by Mr. Plunkett, the member for South Dublin, to meet this difficulty of "crédit agricole," or farmers' banks, by starting coöperative banks, which substitute moral for collateral security. A certain number of farmers, who "have money locked up in the bank vaults," form an association which jointly is probably able to borrow some more capital, as an investment, if they need it. They start a bank and make loans to their neighbors, but each borrower's application is considered by the whole corporation with reference to what they *know* of his character. He has to tell what he wants the money for, and it has to be a productive enterprise, and his business and moral character have to be such as to convince the bank that he will keep his engagements. In this way a farmer of good character who wants money for business purposes, and has shown himself capable, rarely fails to get it. But it is not a regular banking business, for the bank does not lend to anybody whom it does not know well. We do not see any other way in which farmers' banks can be established, and we advise our correspondent to write to Mr. Horace E. Plunkett, 104a Mount Street, London, for his experience and documents. A good many such banks are working successfully in Ireland.—ED. NATION.]

PENNY WISE, POUND FOOLISH.

TO THE EDITOR OF THE NATION:

SIR: The price cotton is selling for is a great disappointment to the South. It was not anticipated, as consumption and production were close on each other's heels, and the stock on hand was of extremely meagre proportions. Judged in the light of past experience, it looked as if the crop would bring two cents per pound more than it is now bringing. However, in the factors that formerly fixed the price of cotton, one element differs now, and to this difference, in the estimation of many, is due the low price now ruling.

The difference consists in the way the bulk of the cotton crop is now marketed as compared with the method in vogue seven or eight years ago. Formerly the crop was marketed through the cotton factor in the cities of the South. Now it is done largely through the local buyer at the "cross-roads" depot. The advent of the local buyer was hailed with great rejoicing. The farmer could then sell direct to the "spinner buyer." The cotton factor would be eliminated as a useless expense, and the one-half cent per pound cost of marketing saved. In the light of recent events it looks as if the farmer had to a considerable extent accomplished his purpose of saving the two and one-half dollars in commissions and charges, and lost ten dollars per bale in the value of his cotton; a delightful bit of rural financiering.

Formerly the crop was concentrated in the large cotton centres with cotton factors. It was in strong and comparatively few hands. The higher the price of cotton, the better it was for both factor and grower. Factors having control of the spot cotton, declines in price could often be successfully resisted and advances in values maintained. How different the conditions now! The cotton is scattered in the hands of many, many thousand cotton-farmers, each marketing his cotton alone and without reference to the other; in the hands of parties mainly who are in debt and must sell their cotton to pay the country merchant's store-bill.

The thousands of little railroad stations each has its little local buyer. Each country buyer is a force continually acting to lower the price of cotton. He is either endeavoring to get the farmer to accept the extremely low bid of the shrewd spinner at a price that will net the buyer twenty-five or fifty cents a bale, or he is flooding the different markets with telegraphic offers, wildly endeavoring to pluck orders from his almost innumerable competitors. The number of offers alone causes the amount of cotton offered to be largely magnified. In many instances the local buyer is impecunious, and has adopted cotton-buying after having failed in every other line. This has, however, not prevented him this year from selling ahead thousands of bales of spot cotton, which it would be impossible for him to deliver were the market to advance. He can readily do this, as he has nothing to lose; and if the market goes his way, as it has done, he is so much the gainer.

During the present crop the price has been put down notch by notch by the enormous offers of spot cotton by these local buyers, in spite of the fact that the size of the crop is purely prospective and the actual movement is smaller than with the crop last year, a crop which, although a large one, lacked three hundred thousand bales of supplying consumptive requirements.

That cotton should bring the best possible price is a matter of national concern. Many schemes have been proposed for marketing the crop, but, on account of the large area of territory involved and the number of parties in interest, nothing feasible has been proposed. Laissez-faire must be trusted to bring a solution of the problem.

W. COLLIER ESTES.

MEMPHIS, TENN., October 26, 1897.

THE THORVALDSEN MUSEUM.

TO THE EDITOR OF THE NATION:

SIR: A recent number of the *Berlingske Tidende* of Copenhagen contains a communication that should be of interest to American art lovers and technicians. It is sent out by a committee, of which the architect, F. Meldahl, is the chairman, to which has been intrusted the restoration of the decorations on the outer walls of the Thorvaldsen Museum. These pictures were executed

at the time the building was erected, a few years after the death of the sculptor, and represent the most important events of his life. For a number of years it has been felt that some steps would have to be taken to prevent the obliteration of the colors, and in order to reach the best results this committee calls upon technical experts throughout the world to offer suggestions. All persons able and willing to assist in this important undertaking are requested to communicate with the committee under the address, "The Thorvaldsen Museum, Copenhagen, Denmark." Prompt attention will be paid to all such communications, and any required information as to the present condition of the decorations and the manner of their original production will be freely given.

Yours respectfully,

DANIEL KILHAM DODGE.

UNIVERSITY OF ILLINOIS, November 6, 1897.

MONS PILATUS.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of November 4, 1897, Mr. Edwin W. Fay, of the Washington and Lee University, gives us an etymology of Mount Pilatus on the Vierwaldstätter See, deriving the name from *mons pilleatus*. This etymology has long been known to and accepted by scholars: it is to be found in any reliable book on "Deutsche Volksetymologie" of recent years. Thus, in Andresen's 'Ueber Deutsche Volksetymologie' (Heilbronn, a.-N., 1883), p. 27: "Der Berg *Pilatus* in der Schweiz heisst nicht nach dem bekannten römischen Landpfleger, obgleich die Sage sich auf ihn bezieht, sondern ist der *Pilatus* (der Behutete)." Early commentators derived the word from *pila*, often used to denote a mountain-pass; scholars are now agreed, however, that it is from *pileus*, a hat, referring to the mighty cap of clouds which usually covers its bald summit completely. Hence the old French couplet:

"Quand Pilate a mis son chapeau,
Le temps sera serein et beau."

The Germans have another name for this same mountain, namely, "Frakmont," from *mons fractus*, indicating its rugged and broken aspect. There is an interesting article in *Bentley's Miscellany*, i., 608, on the above-mentioned mountain.

Respectfully, EDWARD MEYER.

WESTERN RESERVE UNIVERSITY,
CLEVELAND, OHIO, November 6, 1897.

Notes.

The lectures which Prof. T. K. Cheyne of Oxford is now delivering in this country at various colleges and elsewhere, on 'Religious Life and Thought among the Ancient Hebrews in Post-Exilic Days,' will form the third volume in the series already begun with Prof. Rhys-Davids's 'Buddhism' and Prof. Brinton's 'Religions of Primitive Peoples.' The publishers will be G. P. Putnam's Sons.

'The Story of Gladstone's Life,' by Justin McCarthy, and 'The Social Mind and Education,' by George E. Vincent of the University of Chicago, are in the press of Macmillan Co.

Fleming H. Revell Company will shortly publish, in connection with John Murray, London, 'Korea and her Neighbors,' by Mrs. Isabella Bird Bishop, with numerous photographic illustrations and two new maps.

'In Tune with the Infinite,' by Ralph Waldo Trine, is to be issued by T. Y. Crowell & Co.

The Whitaker & Ray Company, San Francisco, will have ready next month the Complete Poetical Works of Joaquin Miller in one large volume.

Smith, Elder & Co., London, are just bringing out 'The Autobiography of Arthur Young,' with selections from his correspondence, by Miss Betham-Edwards. Two portraits and many unpublished letters enhance the value of this work.

George Redway's autumn list includes 'Reminiscences' of Miss Betham-Edwards; a new translation of Voltaire's 'Candide,' with introduction and notes by Walter Jerrold and sixty-two vignettes by Adrien Moreau—in a limited edition; 'The Morality of Marriage, and Other Essays on the Status and Destiny of Woman,' by Mrs. Mona Caird; and 'The Story of Our English Towns,' by P. H. Ditchfield.

The fifth edition of Prof. Saintsbury's 'Short History of French Literature,' to be soon issued by H. Frowde for the Clarendon Press, is marked by thorough revision, especially in the section on the nineteenth century.

Those interested in the history of the exploration of Australia in the first half of the seventeenth century, and of the doings of the Dutch East India Company of that time, will be glad to learn that the long-promised work upon Tasman may be confidently expected to appear early in 1898. The recently discovered Journal of Tasman's discovery of Van Diemen's Land and New Zealand, in 1642-43, signed by Tasman himself, with fifty-three drawings and charts, will be reproduced by photolithography. A word-for-word translation of the Journal into English will be given, and of the letters of instructions for the voyages of 1642 and 1644. It has been revised by Mr. Coote of the British Museum, an expert in cartography. Tasman's own observations with the compass will be given. A very valuable memoir of the Life and Labors of Tasman will be supplied by Professor J. E. Heeres, who possesses exceptional knowledge of the colonial archives at The Hague. Four large reproductions of charts of Tasman's exploratory voyages in 1634, 1639, and 1642-44 will form part of the work, which Muller & Co. of Amsterdam will publish. Those who desire a copy of this luxurious work can have it on payment of £6 sterling.

In recognition of his valuable historical work, Mr. George McCall Theal, LL.D., historiographer to the Government of Cape Colony, has been elected by the Council of the Royal Colonial Institute, London, to be an honorary fellow of that society. Dr. Theal's 'History of South Africa' is a standard work. Its author has been for many years settled in South Africa, but is at present in London, charged by the Cape Government with the duty of scanning the records of the British Museum and the Public Record Office for papers illustrative of the history of South Africa. The extent to which the Colonial Government has been amassing papers connected with that part of the world may be gathered from the fact that between five hundred and six hundred volumes of copies of old records have been sent from The Hague alone to the Cape. Dr. Theal is a native of the Dominion of Canada, whither his family, who were loyalists, removed from the United States, and it is more than two hundred years since their progenitor removed from England to North America.

Little more need be said of the four-volume edition of Rousseau's 'Confessions,' published in London by Gibbings & Co. and in Philadelphia by Lippincott, than that it is handy in form and well printed. It is a patchwork upon the anonymous English version of a hundred years ago, and so far an improvement; but no translation will supply the peculiar charm of the original, in which the style is in the highest sense the man. A few illustrations (besides a portrait) have been inserted, reductions from the ten-year-old designs of Maurice Leloir; and there is an index of names which is passable. But an analytic index is the boon which a not indolent editor might have earned gratitude for, and we ought at least to have had a table of contents. There yet remains to be made an edition of the French, annotated from all the other biographical sources of this author, and even then for the true character we should have to go also to the correspondence.

The 'Works of Rabelais' have nothing intrinsically in common with the foregoing, but are issued by the same publishers in five volumes, following the version of Sir Thomas Urquhart and Peter Motteux, and have the same merit as specimens of bookmaking.

'Shakespeare's London,' by T. Fairman Ordish (Macmillan), appears to be the introductory volume to a new series, to be entitled "The Temple Shakespeare Manuals." Its scope is rather less than might be inferred from the title, embracing little more than a somewhat rambling attempt to explain the background of the scenes in Shakspere's plays which are laid in London. A few, but far too few, illustrations add to the interest of the book. An outline map of old London is especially needed. Attention disproportionate for a "Manual" is given to recent theories of the allegory of contemporary life and politics in Shakspere's plays. In style and arrangement the book is neither sufficiently lucid nor sufficiently entertaining to be altogether successful. The student may more profitably consult the pertinent chapters in the larger works of recent date on the London of old, by Wheatley, Loftie, or Besant, or even the original descriptions in Stow or Harrison.

The fall trade is bringing out the usual number of picture-books. First in order of time and easily first in order of merit is Boutet de Monvel's 'Joan of Arc' (The Century Company), the quality of which should not be judged from the black-and-white reproductions that have appeared from time to time in the *Century Magazine*. This artist's style is essentially decorative, and his line is but a skeleton for his color. What seems, in black and white, the ultra simplicity and almost affected naïveté of his drawing, reveals itself in the colored prints as the appropriate boundary of his exquisitely selected and balanced tones and colors; and the result, though between the covers of a book, is truly mural and even monumental. It is interesting to compare some of these drawings with the treatment of similar themes by Mr. Abbey in his "Holy Grail" series in the Boston Public Library, and to remark how the American artist, notwithstanding his ability and the great merits of

his work, remains, conversely to his French confrère, the illustrator of books, even when painting vast compositions upon the walls of a noble building. The story of Joan is simply told for children in the accompanying text by M. Boutet de Monvel himself.

'An Alphabet,' by William Nicholson (R. H. Russell), introduces to the American public an artist of a very different type, whose portrait of the Queen, in a style similar to these drawings, had a great vogue in England during the Jubilee celebration. Mr. Nicholson affects the manner of rude early wood-engraving in which outline, light and shade, and local color are all indicated by and merged into fat, flat blacks. The crudity of contrast is then overcome by the use of broad tones of brown or gray over the whole surface, and there is an occasional note of red or blue to enliven the somewhat sombre pages. These twenty-six drawings, from the "Artist" at the beginning to the "Xylographer" and the "Zoölogist" at the end, vary much in quality, some of them being richly decorative and some almost stupid; but the coloring, in its deadened, Whistlerian key, is nearly always good. The "Flower Girl" and the "Trumpeter" may be mentioned as two of the best, and the "Urchin" as one of the least interesting, of the series. Judged by a short experience in one family, the book is remarkably and somewhat unexpectedly successful in its appeal to children—especially to very young children.

From the same publisher comes another work, whose appeal is to the elders, or at least to "boys" rather than to "children"—a collection of 'Drawings by Frederic Remington.' In a short note "Concerning the Contents" Mr. Owen Wister eloquently sets forth the truth to life of Mr. Remington's cowboys and soldiers and Indians, and this may be accepted as expert testimony on the matter.

We confess ourselves unable to discern in 'Phil May's Graphic Pictures' (Routledge) the merit that has been found by many in that artist's work. His drawing is undoubtedly accurate, but to us it seems neither humorous nor beautiful, but simply commonplace, while his manner is inflexible and lacking in charm.

The Macmillan Company are the New York agents for 'Portrait Miniatures,' by George C. Williamson, Litt.D., the latest addition to the "Connoisseur Series," published by George Bell & Sons, London. The book, besides some hints to "the amateur collector," contains a history of miniature painting in England from Holbein (1531) to Sir William Ross (1860), and a briefer account of foreign miniaturists and of the present revival of miniature art in England. Naturally there is no mention of American work of to-day, some of which is of excellent quality. The book contains very good collotypes, process cuts, and woodcuts of more than a hundred and eighty well-chosen miniatures; and an examination of them throws light on the curious difference between merit and reputation. Holbein and Cooper are indeed great names as well as great artists, but Cosway, whose name dominates the eighteenth century, and who may almost be called *the* miniaturist *par excellence* in popular opinion, is, as an artist, vastly inferior to such less-known contemporaries as George Engleheart, Ozias Humphrey, or William Grimaldi. The sub-title is "A Handbook for Collectors," and the work should prove useful in that capacity.

The Century Co. have reproduced in book form Mr. La Farge's delightful 'Artist's Letters from Japan,' with the original illustrations that appeared with them when they were running in the *Magazine*. The letters gain in interest, read consecutively, but they are still somewhat desultory, and the book is not one for the searcher for information. Mr. La Farge writes always as the artist, more interested in colors than in facts, and much of what he has written is an attempted record of visual impressions, charmingly done, but not always quite successful in reproducing the thing seen to another's eyes. There is always a subtle and flexible style, and there is a good deal of philosophizing and suggestive criticism by the way, some of which is of real value. Part of the chapter on "Japanese Architecture," which deals with the whole question of right and wrong methods in art and what art is, may be especially recommended as wholesome and stimulating reading for students of art, and even for many professional artists who may be in danger of forgetting the truths Mr. La Farge teaches. They are truths which have been attempted to be enforced again and again in these columns, though with less distinction of manner, and Mr. La Farge is almost as good as Fromentin in his treatment of them. More than this it would be difficult to say.

Mr. F. C. Selous, the well-known African sportsman and traveller, puts a low estimate on the agricultural value of Rhodesia in the *Scottish Geographical Magazine* for October. The superficial area of that part above the fever-belt (4,000 feet) and accordingly adapted to European colonization, is approximately 26,500 square miles; but, whatever the fertility of the soil, the cost of transport to Europe will prevent the cultivation of any agricultural product for export. The two great evils under which the country is suffering at present are the rinderpest, which has practically destroyed all the cattle and large game, and the locusts, which for seven years have made agriculture well-nigh impossible. These evils Mr. Selous believes to be temporary and not likely to recur for many years, possibly centuries. A useful orographical map adds to the value of the article. Prof. W. M. Davis of Harvard University discusses the relations of the winds to ocean currents. His conclusions are that the "surface currents are ruled by the winds," but that the movement of the deep water is probably due to oceanic convection. This is followed by an account, by Prof. R. E. Dodge of this city, of what has been done recently to improve the teacning of geography in our schools.

The water on the Banks of Newfoundland is the subject of an article by Dr. G. Schott in *Petermann's Mittcilungen*, No. 9, which is accompanied by an interesting series of six maps showing the direction of the warm and cold currents, the temperature of the surface water in February and in August, the extent of the floating ice, the percentage of fogs, and the steamer-routes from January to July and from July to January. Other articles are a physical description of Tierra del Fuego by Dr. O. Nordenskjöld, with a map, and the conclusion of Dr. Fischer's investigations into the geological development of Italy.

Medical journals are countless as leaves in this country, but the rapid growth of interest in pure science in recent years has at last made necessary (in the opinion of its promoters) the foundation of an American journal devoted solely to Physiology. The first number of the proposed journal will appear in January; the editors will be Bowditch of Boston, Chittenden of New Haven, Howell of Baltimore, Lee of New York, Loeb of Chicago, Lombard of Ann Arbor, and Dr. V. I. Porter, No. 688 Boylston Street, Boston, to whom the subscription price of five dollars should be sent.

The *Monist* has begun its eighth year with a very engaging list of contributors, past and future. This journal, which is devoted to the discussion of the fundamental principles of scientific inquiry, fills a most useful office, and is an instance of how much can be done by the devotion of a single individual, if he is an editor, to add to the amount of intellectual work which is brought to the light in a given country. Dr. Paul Carus is deserving of the earnest support and encouragement of those who believe in furthering intellectual pursuits. The October number of the *Monist* reprints Prof. Eimer's Leyden address on Orthogenesis, by which he means definite evolution occasioned by organic growth. Prof. Mach expresses his adhesion to the view that the ear, which, in its several parts, is now known to be the organ for orientation as well as for hearing, had the former of these two functions for its original one, and that even so high up in the animal scale as in fishes, hearing, as a distinct sensation-quality, does not exist.

In the face of the agitation which has been carried on by well-meaning persons who have succeeded in making instruction regarding alcoholism compulsory in several States, it is extremely desirable that the physiologists *von Fach* should tell us distinctly just what science has to say regarding the deleterious effects of alcohol in small quantities, and to what extent the argument in favor of total abstinence can be made sound. Children are peculiarly keen at detecting any forcing of the note in the incentives which are put before them towards virtues of any sort, and there is an intellectual honesty which it is of more importance to propagate than abstention from alcoholism. It is therefore a matter of importance that the Committee of Fifty has commissioned Prof. Hodge of Clark University to make a thorough study of the subject. Prof. Hodge's discoveries regarding the immediate and marked effect of alcohol on nerve cells have made it natural to regard him as an expert on the subject.

The Quarterly Statement for October of the Palestine Exploration Fund contains the final report on the excavations at Jerusalem by Dr. Bliss, and a description of portions of the great mosque at Damascus by Mr. Dickie and Mr. R. P. Spiers, illustrated by numerous drawings to scale. This building, which was nearly destroyed by fire in 1893, is now being slowly restored. Col. Goldsmid makes an interesting statement as to the increased number and improved condition of the Jews in Palestine. "Where there were three little needy colonies [in 1883] there are now over a hundred, some of which are nearly self-supporting, and the output of wine in the Jewish colonies is something enormous at the present time."

Seven years ago we called attention to the merits of Gottfried Keller as a story-teller, and it is with interest that we note

the appearance of one of his best-known tales in the October-December number of *Poet-Lore*. The editor, however, is in error in accepting, and confirming, the statement of *Cosmopolis* that no translation of his work had ever appeared in English. The same tale, which is here given in an abridged form, was published in the *Century*, a high-class weekly of New York, in the issues for August 23 to September 13, 1860. In 1885 a three-part tale, "The Flag of the Seven Upright Ones," appeared in *Outing*.

The Society of Natural and Economical Sciences of Palermo has resumed the publication of its *Giornale*, six years having elapsed since the appearance of volume 20. The twenty-first volume contains seven papers, including a continuation of Gammellaro's account of fossils from the Sosio valley.

—If any settlement of the Bacon-Shakspere question were possible, Mr. John Fiske's entertaining 'Forty Years of Bacon-Shakspere Folly' in the current *Atlantic* would dispose of it. The difficulty is, as any one can see who reads the history of this curious narrative of delusion, that the gift of weighing literary evidence is not coextensive with that of reading and writing, nor even with that of a very high degree of general education. One of the oddest facts in the story is that one of the books produced to prove the case for Bacon was written by a judge who was also a lecturer on evidence; yet he would probably have passed on the question (had it come before him judicially) with perfect sanity, because, in that case, he would have felt forced to allow himself to be governed by the weight of authority, which is all one way. Outside the articles in this number which may be regarded as instalments of books, one of the most valuable papers is F. J. Stimson's "Democracy and the Laboring Man." He shows that during the last ten years some 1,639 laws have been passed in the various States and Territories affecting laboring interests. Of these, 114 specific statutes have been declared unconstitutional, while "of the forty-three lines of action in which legislation has been essayed, the constitutionality of no less than twenty-three is, mildly speaking, in doubt." If we assumed that each court decision was right, and would be followed in other States, 56 per cent. of the whole legislation would turn out invalid. This cannot be presumed, especially as the courts of all the States do not take the same view of the same law. But, according to any test, an immense proportion of the legislation has been upset. If we inquire on what ground, the answer is in nine cases out of ten that the Legislature has attempted to give the laborer special privileges, or to interfere with his actions, or the actions of employers, in his peculiar interest. Hence these statutes, when they have not been set aside as interfering with rights of contract or property, have been nullified by the courts as invasions of individual liberty; all this activity of the Legislature representing tyranny against which we have to struggle as our ancestors struggled against the tyranny of their day. A more shocking exposure of the modern Legislature has never been made. The invasions of liberty which it describes stand, the reader will notice, not so much for that tyranny of the majority which Socialism would introduce, provided the majority favor it, as for the corrupt influence over the legislative body of a special class. Nine-tenths of the laws would probably never have commanded a majority vote of the electorate had the question been thoroughly canvassed.

—The *Century* for November prints the report of an interview extraordinary with the Sultan of Turkey, by Hon. A. W. Terrell, late United States Minister at Constantinople. It is virtually a communication from the Sultan to the American public. There is nothing in it of much importance or novelty, except some significant evidence that Mr. Terrell knew that the later Armenian massacres were to be set on foot some time before they actually occurred. He quotes from a letter of his written in December, 1895 (U. S. For. Rel., Pt. II.), in which he declared that as early as August of that year he had been convinced that "the so-called reforms would, when announced, be followed by a massacre of Armenians." He was led to this conclusion, he says, by reflection on the Ku-klux outrages in the South at the close of our war, following upon "enforced reforms," but he evidently had better warrant for his foresight than this, because he says that it was "known here that at least one of the Powers would not consent to the use of force to make the reforms proposed for the benefit of the Armenian race effective." And so, in advance of the massacres, he "demanded and obtained," on October 21, "telegraphic orders to every civil and military chief in the Ottoman Empire to protect American missionaries." Abdul wishes it to be known that he does not "have it in his nature to be wilfully cruel." "Thus," says Mr. Terrell naïvely, "does this isolated ruler, who is regarded by very many persons as a throned assassin, give utterance to the noblest sentiments." An article on Mrs. Julia Margaret Cameron, by V. C. Scott O'Connor, gives some interesting reproductions of her famous photographic portraits. The heroic "Story of Chitral" is told in all its details by Charles Lowe.

—In *Harper's* an illustrated article by Richard Harding Davis gives an amusing and at the same time sad account of the Greek soldiery. "The New Japan" is the subject of an intelligent but not very informing article by Toru Hoshi, Japanese Minister at Washington. If Japan is to become one of the family of nations, the questions which need to be answered are not merely historical or diplomatic, but legal; and on the most elementary questions of common right the article throws no light. We are reminded that Japan has a "constitutional" form of government, and that in 1899, by virtue of the recent treaties, for the first time in history an Oriental nation will be received by Christian Powers on a footing of perfect equality. So far as the relations of the United States with Japan are concerned, the treaty, which was negotiated during Mr. Cleveland's second term, bears out the statement of the article. Ex-territoriality goes by the board, and for the protection of Americans in Japan we are to look in future to the Japanese Government, exactly as in the case of Americans in England we look to the English. George Wharton Edwards gives an illustrated account of "The Pardon of Sainte-Anne d'Auray in Brittany," a festival which for the day revives or perpetuates the old Catholic peasant world in that out-of-the-way corner. Primitive Brittany is not so accessible in reality as it looks on the map, and on most days of the year the local costume is little worn; but on the occasion of a Pardon the scene is bright with color, and while the ceremonial is Catholic, there are certain accessories, especially the sacred fountain or spring and the surrounding sylvan-terraced hillsides, which take the spectator back to still more primitive times and worship, before there was any Catholic religion or French language.

—William Allen White, in *Scribner's*, gives an account of "The Business of a Wheat Farm," which exhibits by text and illustrations the present condition of agriculture in the far Northwest. What will strike everybody is the picture of Adam's occupation turned into a modern industry carried on on a great scale with capital, machinery, and the complete subordination of the original husbandman to the conditions of a new economical cosmos. In fact, in the process the original husbandman, farmer, agricultural laborer, and peasant, attached to the glebe, for life if not by inheritance, has disappeared, and in his place we have a quantity of "hands," hired for the ploughing or the reaping, who may for the occasion camp on the territory which embraces the "farm," but who have very little more vital connection with it than the hands of a factory or a railroad with their particular mill or line. Perhaps the most curious thing in the article is that the author evidently thinks the present system not necessarily final. The average farm in the Red River valley is a property of 7,000 acres, but as the land has been taken up the price has increased, and this is a temptation to sell. "Hence one finds the large farms gradually crumbling." But the fact that the work is so extensively done by machinery, one would think, would tend to a régime of large farms, in the long run, in that part of the world, more strongly than any rise in value could tend to break them up. "No Continuing City," by Blanche Willis Howard, is a painfully clever story, which recalls the pathos of a situation made familiar by Dickens, but now not much in use by writers of fiction. William B. Bigelow has an article which is worth examination on "The Country Church in America." It has many illustrations of typical churches. As for exterior design, the writer comes to the conclusion that "there is no peculiarly American church architecture." The characteristically American churches of an earlier day, such as the New England meeting-house, are rapidly disappearing before a species of art too eclectic to be called national.

—Blue Hill Observatory, near Boston, founded in 1885 by Mr. A. Lawrence Rotch, and liberally maintained by him ever since, has given more attention to cloud study than any other institution in the United States. Personal estimates during the day, and automatic photography of the stars at night, have furnished a long record of local cloudiness. Certain high and uniform cloud strata are measured at night by the light reflected upon them from cities; the angle is found which the illumination makes with the horizon, and, the distance of the city being known, the right-angled triangle is solved. Lower clouds are studied by kites bearing self-recording instruments. Cirrus is judged to be, on an average, about 29,000 feet high, but is sometimes found as high

as 49,900. Cumulus, on the other hand, is often less than a mile above the earth, although thunder-shower clouds sometimes reach into the cirrus region. Nimbus (rain cloud) is but 2,300 feet in altitude. The velocities at which these various clouds move are also very different. Generally the high cirrus travels about eighty-nine miles an hour, but in winter this speed occasionally rises to the surprising rate of 230 miles, the entire atmosphere moving twice as fast in winter as in summer; and at altitudes between two and nine miles an almost continuous westerly current of great speed prevails. Changes in barometric pressure, air temperature, and humidity with height are even more important in the science of the weather, and these are now most accurately found by elevating delicate instruments by means of large and powerful kites. With winds varying from fourteen to forty miles an hour, about 130 records have been made, many times at heights exceeding a mile. At such elevations both cold and warm waves are shown abruptly, and long before they are felt below; and in fair weather the days are damp, the nights dry—the reverse of surface conditions. So the upper air is now sounded by devices similar to those of Lord Kelvin in reaching abysmal depths of the ocean, and within the past three weeks the observers at Blue Hill have secured perfect records at vertical heights exceeding two miles, or rather more than 11,000 feet.

—An interesting instance of the elusiveness of scientific researches is furnished in a paper by Sir William and Lady Huggins, recently presented before the Royal Society and since published in full. It had long been known that certain two lines of the spectrum of calcium were remarkably conspicuous in the chromosphere and prominences of the sun, appearing when the other lines were hardly visible at all. To account for this it had been suggested that the lines did not belong to calcium, but to some hitherto undetected impurity (as argon in nitrogen), or else that calcium was itself (after the hypothesis of Lockyer) a compound substance, and that it became dissociated at certain temperatures. But the observations of the above-named investigators have shown that it is solely a question of the density at which the calcium gas is examined, and they have produced in their laboratory, and photographed, a spectrum of calcium in which other lines are almost entirely wanting. The discovery may prove to be one of great importance, because the calcium spectrum in its different phases can very likely be used as a criterion of the density of stellar atmospheres. Why density should be the quality to play so important a part, it is difficult to understand.

—Don Pascual de Gayángos died in London on the 4th of October, in his eighty-ninth year. Those familiar with the historian Prescott's works will remember the frequent acknowledgments made by that author to Don Pascual, who collected materials that were used in the writing of the histories of 'The Conquest of Mexico' and 'The Conquest of Peru.' Don Pascual's life-work was, in fact, to a great extent the collecting, the calendaring, and the indexing of historical manuscripts, and in these labors he was employed, not only by private individuals, but by the authorities of the British Museum as well. For the latter he prepared the valuable calendars of the Spanish manuscripts in the Museum, which cover nearly 3,000 pages of letter-press. Before his engagement with Prescott, he had already been employed by an American gentleman who was collecting documents relating to the history of the United States. Among the private undertakings Don Pascual carried out was that for a wealthy London wine-merchant named Cosens, who believed that fresh light might be thrown upon the life of Shakspere by documents preserved in Spain. To this end Gayángos copied a vast number of papers from the archives of Spain, among them the dispatches of the Count of Gondomar, when Ambassador in London. When Mr. Cosens died, his heirs, who did not set much store upon the collections, put them out to sale, when the British Government secured a portion at a great bargain. American students will find them in the Public Record Office, London, beautifully calendared and indexed. It is from this collection that Major Martin Hume has drawn some of the fresh details that appear in his recent 'Life of Sir Walter Ralegh.' Gayángos translated into Spanish Ticknor's 'History of Spanish Literature.' Among his other works was 'La Gran Conquista de Ultramar,' and a translation into English for the Hakluyt Society of 'The Fifth Letter of Cortes to the Emperor Charles V.' His death was the result of being knocked down in the street by a horse.

THE LIFE OF ALFRED TENNYSON.

Alfred Lord Tennyson: A Memoir. By his Son. In two volumes. The Macmillan Co. 1897.

No biography has for many years past been expected with so much curiosity and interest as this one. Tennyson was (unless an exception is to be made for Ruskin, who has been silent for many years) the last great literary man who used the English tongue. There is not now, either in Great Britain or in America, any poet high even in the second rank, and no prose-writer in the first rank. Tennyson had, moreover, so outlived all his eminent contemporaries (except Mr. Gladstone) as to have become a somewhat strange and mysterious figure to the new generation in both countries. No one remembered him as a young man. No one could recall the impression which his early poems made. To everybody he had been already famous from the time when they first began to care about poetry. Besides, he led an extremely secluded life, hated publicity, hated even to be seen by passers-by when he took his twilight walks on the down above his house at Freshwater, so that less was known regarding his appearance, character, and habits than in the case of any other person who approached him in eminence.

These two volumes, if they do not fully satisfy the curiosity of those indiscreet people who want to know everything about the great, give quite as much as needs to be known by those who desire to connect a poet's life with his verse, and to understand the conditions under which his genius worked. In general, a near relative makes a bad biographer, because he can seldom see his subject in due perspective, and because he—and still more she—cannot becomingly set forth a comment on those flaws which go to make the truth of the picture even where they are mere foils to surpassing excellence. Despite these difficulties, the poet's son, the present Lord Tennyson, has performed his task with great skill, judgment, and taste. There is hardly anything inserted which a fastidious critic could wish removed—one or two of the letters from the Queen are perhaps the only exception; and while the domestic life of the poet is given fully enough to make it real to the reader, five-sixths of the two thick volumes is devoted to tracing the development and illustrating the working of his poetic faculty.

Tennyson's life was not an eventful one, and almost the only dates that stand out like milestones along it are those that mark the publication of his greater works. He was born in 1809, that famous year which, besides Mendelssohn and Dr. Oliver Wendell Holmes, ushered into the world Abraham Lincoln, Charles Darwin, and W. E. Gladstone. His father was a Lincolnshire clergyman, a man of marked character and a considerable scholar; and the poet would seem to have drawn his intellectual gifts more from his father than from his mother, for the latter is described as a woman of singular sweetness and gentleness rather than of any conspicuous talent. Both he and his brothers "lisped in numbers." Charles and Alfred published their first volume of verse when the elder was only eighteen and the younger (Alfred) only seventeen, and, strange to say, they obtained one hundred dollars for it from a local bookseller. At nineteen Alfred went to Trinity College, Cambridge, but left it before taking his degree, being recalled by his father's weak health. Of his life there less is told than one could have wished for. The university at that time contained a group of men more distinguished than either it or Oxford has since seen, eight or nine of whom attained deserved and permanent fame, and Tennyson was looked upon by them all as the most brilliant genius among them; Arthur Hallam as the most winning and gracious personality. A tender reciprocal devotion united these two from the first. But though most of the group continued to maintain their friendship with one another, it does not appear that Tennyson was much affected in character or opinions by any one except Arthur Hallam. His own individuality was too strong to be moulded by others, and maintained its own well-marked lines through the whole of his career.

From boyhood, or at any rate certainly from his college years, he had felt poetry to be his vocation. Though his private means were slender, he seems never to have thought of entering any profession. Poetry, like music and painting, is an art in which the special gift makes itself very early felt, and it may be doubted if any one has ever attained high excellence in it who did not prove his gift before he was twenty-five. The volume entitled 'Poems, Chiefly Lyrical,' which he published in 1830, when twenty-one, was enough to prove his gift to be real; that published in 1832 (including "Oenone," "The Lotos Eaters," "The Lady of Shalott," "The Palace of Art," and "The Dream of Fair Women") placed him at once at the head of all the poets of his generation, and contains some work which he never afterwards surpassed. Looking back after more than sixty years, one is amazed that the extraordinary merit of these poems should not have been immediately recognized by cultivated people, as it was by the little Cambridge group. But nearly twenty years were to elapse before Tennyson's appointment as

Poet Laureate, after the death of Wordsworth in 1850, made his name familiar to the general public in England; and his American popularity came still later.

In 1837 or 1838 he became engaged to Miss Emily Sellwood, but it was not till 1850 that his circumstances permitted him to marry. His wife was a woman of singular refinement and charm, and their wedded life was one of unclouded happiness. In 1845 Sir Robert Peel had advised the Queen to grant Tennyson a pension of £200 a year; and within the four following years the sale of his poems had so far increased that it became possible for him to maintain a household. After 1850 his income from his books steadily increased, and from 1860 onwards he had no need to think about money. In 1853 he went to live at Farringford, near Freshwater in the Isle of Wight, and in 1868 he built a house at Aldworth on the top of Blackdown, a lofty hill near Haslemere in Surrey, and thereafter spent his time between these two country-seats, with occasional short trips to the continent of Europe. He died in October, 1892, having enjoyed good physical health through nearly his whole life, and retained his intellectual powers to the last. His latest volume of poems was published in the year of his death, at the age of eighty-three—an almost unparalleled instance of the prolongation of poetical power into extreme old age, for of the other great poets who have passed threescore and ten, which indeed not many have done, Sophocles is perhaps the only one who, according to the famous anecdote about the "Oedipus Coloneus," retained his gift in all its fulness.

There are not many letters of the poet's in this Life, for of the earlier ones few seem to have been preserved, and in his later years he wrote extremely few. Those printed are admirable, and more helpful to a comprehension of his character than the Reminiscences printed in the appendix. Of these reminiscence articles, those written by Mr. Myers, the Duke of Argyll, and the late Mr. Jowett are interesting, but two others are injured by the intrusion of the writer's personality, and one of these two, that by the late Mr. Tyndall, adds so little that it might with advantage be omitted in future editions. On the other hand, all that the biographer himself records—conversations with friends and opinions delivered by his father (such as the criticisms on Milton) —is admirably given, and makes us wish for even more of the same kind. Of the personal recollections happily introduced here and there through the book we have found those contributed by Edward FitzGerald and Aubrey de Vere, together with Mr. Sidgwick's remarks on the impression produced by "In Memoriam," the most interesting.

As already observed, it is in the history of the poet's mind and opinions, in the explanation of his modes of working and his self-criticism, that the chief interest of such a Life as this is to found. The biographer has most wisely devoted great pains to this branch of his task, giving us so much matter that is both new and instructive as to make it hard to select any parts for special notice. Four topics have, however, struck us as of eminent and peculiar interest. One is the opinions Tennyson held on religion. Another is his method of composition. A third is the origin of the several chief poems, *i. e.*, the conception or suggestion whence each sprang. A fourth is the poet's own judgment and taste in poetry.

The religious sense—that is to say, the impulse to look to and turn to a higher power—was strong in Tennyson from his childhood; and though he early divested himself of the dogmatic forms in which Christianity had been taught to him, he clung all his life to the belief not only in the existence of a Deity, but in the divine government of the world. His mind was incessantly occupied, from early manhood onwards, by the problems which the advance of physical science had raised. In the days between 1833 and 1845, when he was composing at intervals (and at first with no thought of publishing them) the poems afterwards entitled "In Memoriam," he had already begun to muse on these problems, and nothing in this Life is more interesting than the account given of the way his mind played round them, dramatizing the various moods through which he passed and the phases of doubt or hope that successively emerged. Somewhat later, he began to study metaphysics more regularly than before, and to read a good many scientific books. Neither of these influences altered the settled tendency of his mind. In old age he seemed more than ever concerned at the growing scepticism of the age. It cast a shadow over many hours, yet his own convictions did not falter. There are few of his later poems in which his disquiet at the decline of faith and his own belief in the power and guiding hand of a personal Deity are not indicated.

Being a man of very simple tastes, loving nature and quiet, indifferent to so-called sport and the other dull amusements of his social class, averse to city life, and not drawn to any kind of practical work, because he felt that his own gifts lay in a different direction, he was able to devote the whole of his time to reading and thinking and musing. The gift of versification came so naturally to him that to reflect meant almost necessarily to compose verses, and this spontaneous fertility would have been dangerous but for the extreme fastidiousness of his taste. He criticised his own work as closely, and with almost as much detachment, as the work of another, constantly rejecting what he had composed, recasting it, or polishing it to a higher finish. No other great modern has taken so much pains to revise his work in new editions, so that many of the best-known poems are now, in the later issues, very different from what they were in the earlier ones. It was a habit—it was, indeed, almost an instinct—with him, when some impression or thought flashed into his mind, to turn it at once into verse, and often to write down and lay aside the line or lines which he had thus struck off, keeping them till some fit occasion should arise for using them. One remarkable instance is given (vol. i., p. 218) of three magnificent lines in "Vivien" which were thus composed at a visit to the caves of Ballybunnion on the west coast of Ireland, composed in 1842 and incorporated in "Vivien" fifteen years afterwards. These two volumes contain a good many hitherto unpublished poems—some never used because they were alternative versions of poems published; some because their author thought them scarcely good enough. Their quality approves the poet's judgment, for none among them reaches the level of his best work; yet many have the charm of graceful thought and melodious rhythm, and a few may deserve to be included in future editions of the 'Opera Omnia.' One of the finest, which well deserves to be so included, consists of some stanzas (given on p. 120 of vol. i.) written for the "Palace of Art."

Of the many interesting facts stated regarding the growth and development of the larger poems, we have space to note one only. "Maud," which Tennyson himself always rated highly, and which it always pleased him to find any one genuinely appreciate, grew out of a single poem, that which begins—

> "O that 'twere possible,
> After long grief and pain,"

and was, so to speak, written back from that piece, which (it will be remembered) comes near the end of the book. There is in the Life a short but instructive analysis of "Maud" from Tennyson's own pen, intended by him to correct some of the common misunderstandings of the poem. A curious account, too long to be abridged here, is given of the way in which the Arthurian Legend had occupied his thoughts from early youth, and of the various ways in which he had proposed to handle it. Of all his poems, none embodies so much of his philosophy of human life as the "Idylls of the King," and none shows more strikingly the change that passed on his poetical style.

Lastly, this biography contains a large number of critical dicta, most, and the best, of them by Tennyson himself, some others by the friends who surrounded him. The bard's own preferences are clearly marked. Besides Shakspere, whom he regarded as an almost superhuman intellect, he honored Milton most among English poets; next to him Wordsworth and Keats. "There is something of the innermost soul of poetry in almost everything he [Keats] wrote." He used to say in early life that he doubted if he should ever do anything as good as Keats's "St. Agnes's Eve." Among the older singers, he especially loved Homer, Virgil, and Dante, and never ceased reading them. Byron he put comparatively low, calling him "endlessly clever, but not an artist or thinker in the higher sense." Among American poets he held Edgar Poe to be, "taking his poetry and prose together, the most original American genius." However, the value of these literary judgments lies so largely in the quotations which illustrate them that they suffer by detachment from their context. The lover of poetry will find these volumes rich both in the light they throw on the workings of an intensely poetical mind, and in the profusion of acute critical observations scattered through them. There is hardly a page in which one fails to find something that deserves to be remembered.

One is struck all through the book by the way in which Tennyson's poetry was his life. He thought of nothing else; or, rather, all that he thought of turned itself into matter for poetry. He needed nothing else to occupy his mind and time. Whether he travelled or read, whether he smoked alone in his upper chamber or wandered at night beneath the stars, he was always absorbing impressions which he turned as naturally and instinctively into musical verse as a plant breathes carbonic acid and turns it into vascular tissue. The fertility of his genius and the ease with which he composed would have been formidable enemies to excellence. But he was happily no less an

artist than an inventor, and his power of self-criticism was joined to a noble diligence in seeking to bring all the work he put forth as near to perfection as he could bring it.

The reader, who feels in every page that this biography is written with the reverence as well as the intimate knowledge of a son, may, perhaps, ask what were the shadows on a character which is here presented in so favorable a light, and may distrust the picture because it does not show the shadows. If he does this he will err. Against the many noble qualities which Tennyson's career showed him to possess, there are really no serious defects to be set. He was so direct in manner as sometimes to appear brusque, and, therefore, rather formidable to strangers. He was all his life over-sensitive to criticism to an extent extraordinary in one who had reached a position of such undisputed preëminence. But he was not vain, though, like Dante and Wordsworth, he knew when he had done a thing well and was not afraid to say so; nor was he jealous, for no one was more ready to acknowledge the excellence of other men's work, no one more free from petty spites and hinted disparagements. He was upright, simple, honest, truthful, affectionate, a hater of injustice and cruelty, a friend to all good causes, a man who lived his life in the spirit of his own poetry, and retained, all through, the uninterrupted love and respect of those who had known him in his youth. There is nothing in the picture of this life, so full of tranquil dignity, more beautiful than the friendship which united him to three of the greatest of his literary compeers, Thomas Carlyle, Robert Browning, and Edward FitzGerald; nor do any records of those three men's lives set them in a more attractive light than what we find here as to their relations with Tennyson. The friendship of Browning and Tennyson, as we have it here set forth, deserves to take its place beside the friendships of Virgil and Horace, of Goethe and Schiller, of Wordsworth, Coleridge, and Southey. Such instances show how far from being generally true is the judgment expressed in the familiar phrase, *genus irritabile vatum*. There was a strong dash of melancholy in Tennyson's character, which produced in him moods of depression faithfully reflected in his poetry. But apart from this, and from the two great sorrows of his life, the death of Arthur Hallam in 1833 and the death of his son Lionel in 1886, his life was serene, as should be the life of a great artist, consecrated to the work in which he excels, honored in his own time, and destined to the crown of undying fame.

TWO BOOKS ON SPAIN.

Across the Country of the Little King. By William Bement Lent. Bonnell, Silver & Co.

In Northern Spain. By Hans Gadow. London: Adam & Charles Black.

Mr. Lent's title is not such as to prepossess one in favor of a book; nor is the prejudice created by it removed by its contents, which are in harmony with the title. It is possible to write a book on the most beaten paths in Spain and yet find plenty of new things to say. Mr. Lent follows these paths, but he saw only what the most commonplace "personally conducted" tourist would notice, and his style is that of the most rambling domestic letter-writer. Even in a private letter one would hardly look for such literary slovenliness as that which makes the author run on from p. 30 to p. 38 without a break or a paragraph. The volume is adorned with a dozen illustrations.

A very different sort of book is Mr. Gadow's. It takes us into mountainous regions of Spain of which the ordinary tourist does not even know the existence, and where Spanish life may be studied in its unadulterated mediæval backwardness. Once Mr. Gadow took a peasant companion to Riaño, where the latter for the first time saw a telegraph wire.

"The *guardia* at once ventured to explain the meaning and working of the telegraph. 'If I want to speak to my chief in Madrid, I go into that house to the postmaster. He makes click (accompanied by manual demonstration), click, click, and they have my message in Madrid.' 'Then the wire must be hollow?' 'No, you stupid, it is done by electricity.' Poor Miguel, he did not even say, 'Oh, I see,' but shook his head and thought Riaño was a very queer place."
